The linking of misbehavior to maladjustments and to forces beyond the control of the individual offender may frequently be justified, but not so often as to warrant a general philosophy of law which loses sight of the normal facts of individual responsibility and of personal freedom. Misbehavior, whether sinful or criminal, always includes an element of maladjustment, but sometimes there are adjustments which the individual must make on the level of the spiritual in order to meet the test of the material and the trial of the evil.

We must ameliorate bad conditions. We must strive by social action to lighten the load where it is unjust or unsafe, but we must recognize that in all this adjustment there are adjustments expected of the individual as well. We have rationalized too many ruthless tyrants in terms of their adolescent frustrations. Too many maladjusted criminals have been explained in terms of the conflicts and tensions of potentially great artists who were forced to be obscure paperhangers in Austria; potentially great leaders of social movements who were destined to become gangsters and leaders of anti-social rackets which tore American communities apart. Too much gangsterism and sheer criminality on the obscure levels of the underworld and on the higher levels of international action and diplomacy have been encouraged by this philosophy of excuse in the realm of conscience and on the level of courts. The war crimes trials have caused to resound in our century some echo, at least, of that voice of responsibility which spoke centuries ago with accents divine: "This night do they require thy soul of thee." They have reminded public servants of that accountability which is imposed on every free agent: "How is it that I hear this of thee? Give an account of thy stewardship, for now thou canst be steward no longer."

It is good for civilization that the philosophy of responsibility should be reaffirmed and that the philosophy of excuse should be subordinated to it, cut down to size. Civilization was not achieved by any such philosophy as that of excuse, by vagueness about accountability. Mankind did not emerge from recurring periods of social decline and even savagery by any such formulae. Social progress has not been accomplished by swinging along with impersonal destinies, by riding the wave of the future, by the blind operation of uncontrolled biological, economic, or social forces. It has been achieved by the vision and determination, by the self-knowledge and self-discipline, of single individuals and of individuals in groups who have understood the meanings of the words: "I know. I will. I do."

"'Lord, if thou wilt, thou canst make me clean.' And stretching forth His hands Jesus touched him saying: 'I will: be thou made clean.' And immediately his leprosy was cleansed." (Matthew 8: 1–4.)

"And returning to himself, he said: * * * 'I will arise, and will go to my father, and say to him: "Father, I have sinned against heaven and before thee. I am not worthy to be called thy son; make me as one of thy hired servants."'" (Luke 15: 17–19.)

"It is for us, the living, rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us: that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this nation, under God, shall have a new birth of freedom; and that Government of the people, by the people, and for the people, shall not perish from the earth." (Gettysburg Address—Lincoln.)

"Poverty is the northwind that lashes men into Vikings. * * * What we call evils, as poverty, neglect, and suffering, are, if we are wise, opportunities for good. * * * If I am left alone, yet God and all the heroic dead are with me still. If a great city is my dwelling place, the superficial life of noise and haste shall teach me how blessed a thing it is to live within the company of true thought and high resolves. Whatever can help me to think and love, whatever can give me strength and patience, whatever can make me humble and serviceable, though it be a trifle light as air, is opportunity, whose whim it is to hide in unconsidered things, in chance acquaintances and casual speech, in the falling of an apple, in floating weeds, or the accidental explosion in a chemist's mortar." (Opportunity, John Lancaster Spalding.)

It is easy to satirize these valiant concepts of an age perhaps more rhetorical, but also more resourceful, more self-reliant, more imbued with the philosophy of responsibility, more contemptuous of the philosophy of excuse. But the whole history of human achievement gives meaning to that rhetoric and attests to the worth of those who indulged it, who taught their children and told their fellow citizens and trained themselves to recognize that they could do evil, but must not, that they could transgress, but would not.

So we in our legislation, in our law courts, and in our social theory must recognize and make allowance for the inadequate and the unfortunate, but we must not treat their condition as the normal condition of mankind and we must not spin our moral philosophy around ther deficiencies. In our sympathy we must not place emphasis on excuse rather than on responsibility and thus spread a demoralizing social philosophy. We must make responsibility the universal norm and excuse the challenged exception. We must state the rules rather than constantly find reasons why they do not apply. We might well return to a bit of the rhetoric that glorified heroism and achievement and tone down the rhetoric lavished on those who lack the moral wherewithal by which to try or who, having it, prefer to serve themselves and blame society rather than serve society and honor themselves. We must recognize how the philosophy of responsibility enabled boys with withered legs to become useful citizens, leaders of their community, but above all masters of themselves—while the philosophy of excuse has allowed men of real intelligence and potential parts to become the instruments of society's confusion and of their own damnation. Social stability and individual salvation still depend on the recognition of the central place of individual responsibility in whatever good may be accomplished or whatever evil must be suffered on the face of the earth over which God gave man dominion.

Specifically, it was the philosophy of responsibility that made America great. It is the basis of free self-government as free self-government in turn has been the basis of American greatness. Woodrow Wilson said some wise things about the relationship of self-government to the kind of character produced by the philosophy of responsibility. He said: "Self-government is not a mere form of institution, to be had when desired, if only the proper pains are taken. It is a form of character. It follows on the long discipline which gives a people self-possession, self-mastery, the habit of order and common counsel, and a reverence for law which will not fail when they themselves become the makers of law."

I offer this as a legitimate social and political conclusion from the moral philosophy of responsibility. If we are to acquire or keep the kind of character which Wilson said was essential for self-government, we must preserve the disciplines by which that character is built and the moral philosophy which dictates those disciplines. Church, state, and home must unite in happy understanding to teach each generation the "self-possession, self-mastery, the habit of order and peace and common counsel which will not fail them when they themselves become the makers of law." Thus will our citizenry become the men of glory who could transgress, but will not do so; who could do evil things, but will not do them; who use their freedom, fortified by God's grace, to do God's will on earth unto the temporal stability of their nation and the eternal salvation of their souls.

Wisconsin's Unemployment Insurance System

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, January 17, 1949

Mr. WILEY. Mr. President, the January 8, 1949, edition of the Milwaukee Journal contained a very stimulating article regarding the Wisconsin system of unemployment insurance credit ratings and regarding efforts here in Washington to end such system and substitute a strictly federalized unemployment insurance set-up.

I think this editorial is a real contribution to our thinking on this vital subject, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A NEW JOBLESS PAY MANEUVER

Unemployment Benefit Advisers, a private organization in the unemployment compensation field, reports that it has foreknowledge of a new dodge to force ultimate complete federalization of unemployment compensation.

The advisory council to the Senate Finance Committee, it says, will presently suggest two fundamental changes in the unemployment compensation set-up: (1) A recommendation that a 1.5 percent minimum be set for unemployment compensation taxation

all over the country; (2) a recommendation that half the tax be collected from the employed.

At present the average of the tax over the country is 1.4 percent but hundreds of thousands of employers, through experience rating, are paying much less than the average. At present the whole tax is paid by the employer.

The net effect of these changes would be to destroy experience rating as a part of the plan. After that, employers would no longer have much incentive to stabilize employment; they might soon cease to have any definite interest in how unemployment compensation was operated. A second effect would be to increase labor's influence on unemployment compensation legislation, due to the fact that workers would be financing half the cost.

There have long been two schools of thought in the basic philosophy of unemployment compensation. One school may be called the Wisconsin school, for it started here. The Wisconsin idea is that unemployment compensation should first of all be a plan for stabilizing employment and only secondarily a plan for indemnifying the worker who loses his job. The vital feature of this conception is experience rating—letting the individual employer with a good employment record have a cash benefit because of that record through a lower tax rate.

The other school, supported by the Federal Social Security Administration, views unemployment compensation entirely as a relief set-up, the whole purpose being to keep the covered unemployed off relief rolls. Proponents of this conception frown on experience rating and want to get rid of it. They feel that it is the chief stumbling block to the complete federalization which would give the Washington philosophy and the Washington bureaucracy full say.

Up to now the Federal Social Security Administration has had little support for its plan. The report of the advisory council is, therefore, of great importance, since it appears to come from a wholly unbiased source.

When the report is made public, every person interested in job stabilization should study it and measure its effects, both immediate and ultimate. One thing seems sure, it would end the Wisconsin system once and for all.

Economic High Lights

EXTENSION OF REMARKS

OF

HON. ZALES N. ECTON

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, January 17, 1949

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Economic High Lights," received from Mr. Dan B. Noble, of the Pacific Northwest Development Association, Portland, Oreg. This article, I feel, contains significant historical information which is related to our present-day foreign situation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

At extended intervals, Marshal Stalin has met and talked with foreign interviewers. Among the Americans so favored have been Roy Howard, Elliott Roosevelt, Harold Stassen, and Walter Duranty. In every case, Stalin's remarks for foreign publication have been of an amiable and conciliatory character. Their basic theme has been an expressed desire for peace, buttressed by the statement that communism and capitalism should be able to exist together in the world in harmony.

These interviews have always been happily received in this country and elsewhere. They seemed to contain grounds for an optimistic estimate of future world trends. Unfortunately, however, there is an amazing contradiction in what Stalin has said for foreign consumption, and what he has told the millions of Russians he rules at home.

That contradiction is the subject of a long article in Foreign Affairs, signed with the nom de plume Historicus. The magazine believes this is the first time a documented study has been made of the matter. In order to obtain his material, the writer examined everything published by Stalin since February 1919, which was in itself a heavy job of research. In this connection, it should be recognized that Stalin's writings are practically required reading in Russia. One of his books, History of the All-Union Communist Party has had a distribution of 31,000,000 copies. Another major work, Problems of Leninism, has been published in 11 editions, and the 1947 printing alone totaled 4,000,000 copies. It is extremely significant that none of his interviews with foreign reporters has been reprinted in his voluminous works in Russian.

A typical and much publicized Stalin interview was that given to Roy Howard. This was in 1936. He said that the Soviet Union never had plans for fostering revolutions in other countries because exporting revolution is nonsense. In 1943, in a letter to a Reuters correspondent, he stressed the alleged fact that the Comintern had been dissolved, and said that this "exposes the lie * * * that 'Moscow' intends to intervene in the life of other states and 'bolshevize' them." Numerous other statements made by him follow about the same line.

So much for what the marshal wishes the people beyond the iron curtain to believe. Historicus cites passage after passage from Stalin's published and enormously read works which show that a central feature of his theory of revolution is that the Soviet Union must be used as the base for the development of world revolution—and, if necessary, by armed force. This idea is repeated constantly, in various forms and phrasings.

Thus, in a passage which has been in print from 1924 to the present, Stalin says that "after organizing its own Socialist production" the victorious proletariat in one country should stand up "against the remaining capitalist world, attracting to itself the oppressed classes of other countries, raising revolts in those countries against the capitalists and their governments." Certainly nothing could be plainer than that. It is a clear call to arms against capitalism. Of it, Historicus writes: "The supreme aim of world revolution is the logical outcome of Stalin's entire theoretical position, notably the thesis that capitalism is a single world system fatally torn by contradictions which can be cured only by a consciously directed Socialist revolution. Granted these assumptions, the determination to use the foothold won in the Soviet Union as a base for world revolution is elementary common sense."

Historicus states that one of Stalin's favorite passages was written by Lenin and goes as follows: "We live not only in a state but in a system of states, and the existence of the Soviet Republic side by side with the imperialist state for a long time is unthinkable. In the end either one or the other will conquer. And until that end comes a series of the most terrible collisions between the Soviet Republic and the bourgeois states is inevitable." Stalin quoted this bit of prophecy in an article of his own and commented, "Clear, one would think."

The substance of Historicus' study is summed up in these words: "The ultimate resort to armed force is a logical development of the Leninist thesis that only consciously led revolution can drive the capitalists from the stage of history. The assumption that the world has been fundamentally divided into two camps since the October revolution runs through Stalin's writings from his early days and is grounded in his Marxist philosophy. In other words, he has never ceased preaching the hard gospel of Soviet-directed war and revolution to the Russian masses."

Historicus' article is important as a contribution to modern history. It is also important as a guide to the way this and other western nations should regard pronouncements of policy from Stalin and the other top Communists. The obvious fact is that Stalinist tactics call for building up hatred and distrust of the capitalist world at home, even as an attempt is made to quiet the fears and suspicions of the people in other lands.

Federal Aid for Education

REMARKS

OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. SCRIVNER. Mr. Speaker, although most State treasuries are in better shape financially than is the Federal Treasury, there is no doubt but that in many States the demands, especially for education, call for more finances than the States are able to raise to provide needed buildings, maintenance, improved equipment, increases in teachers' salaries, and other items.

With the enormous increase in Federal expenditures over the past 16 years the Federal Government has tapped every possible source of tax revenue, with little consideration for the needs of State and municipal governments. The States are dependent almost entirely upon direct taxes on real estate and personal property, and sales taxes which fall heavily on persons of low income. In seeking new revenue they find other sources already drained by Federal taxation—income taxes, admission taxes, beverage taxes, gift taxes, communications taxes, luxury taxes, transportation taxes, excise taxes, to name but a few. Enormous sums, billions of dollars annually, are siphoned out of the States in individual and corporate income taxes. The remaining revenue available to the States is inadequate to meet rising local costs of government and provide adequately for growing educational needs. By the Revenue Act of 1948 some $4,000,000,000 were left in the hands of the taxpayers of the Nation which, if allowed to stand, might have provided the cushion to take up the shock of increased cost of State and local government. This will not be possible with mounting Federal expenditures.

It is neither economical nor efficient to withdraw these huge sums from the States and then have funds trickle back under a so-called program of aid to education. Besides involving large overhead expenditures for administration, plans which have been proposed have at least two compelling objections: (1) The compulsory requirement that each State meet conditions imposed by law and regulations of the administering bureau to qualify for benefits; and (2) the opportunity which would be presented for the channeling of propaganda into the curriculums of the schools. The training of our youth throughout the Nation could some day be directed from one central bureau, and that bureau would be headed by someone appointed, and thus not responsible in any way to the taxpayers whose funds he was spending.

To easily, simply, cheaply, and efficiently provide the States with aid for meeting their needs for the improvement of their respective educational programs without building up a huge bureaucracy, without imposing fear of Federal controls, dictators, or propaganda, I am, by a joint resolution which I am today introducing, proposing a simple, direct, unrestricted plan for providing aid to the States and the Territories for meeting the educational demands within their respective borders.

Whereas the Government of the United States, through taxes, is siphoning a great part of the wealth of our Nation out of the several States and Territories into the Federal Treasury; and

Whereas the Government of the United States is collecting taxes from nearly all sources of revenue, including taxes on individual and corporate incomes, on admissions, on beverages, on communications, on gifts, on luxuries, on transportation, and from excises and other taxes, leaving to the States little but real and personal property and consumer sales as sources of tax revenue; and

Whereas at rates even approaching confiscation on property, the States are still not able to raise revenue sufficient to carry the rising costs of State and local governments, and especially not to meet the demands for needed improvements and higher salaries for the training of our youth; and

Whereas it has been proposed that the Federal Government grant aid to the States for educational purposes; and

Whereas it is neither economical nor efficient to withdraw huge sums out of the States and Territories and redistribute funds under bureaucratic regulation from the Federal Treasury; and

Whereas it is desirable that such aid be accomplished by a simple, easy, direct, and efficient method, not hampered with bureaucratic restrictions, directions, or dictation: Therefore, be it.

Resolved, etc., That 1 percent of all income taxes collected on individual and corporate income under Federal statutes shall be deemed to be revenue for the State or Territory within which it is collected, for use for educational purposes only without any Federal direction, control, or interference.

SEC. 2. Collectors of internal revenue are hereby authorized and directed to transfer to the treasurer, or corresponding official, of the State or Territory within which their respective internal-revenue districts are situated at the end of each quarter an amount equal to 1 percent of the taxes from individual and corporate income collected within such State or Territory during said quarter.

SEC. 3. For purposes of information only, collectors of internal revenue shall report the amounts transferred to State treasurers, or corresponding officials, as authorized in section 2, to the Department of the Treasury, accompanying such report with receipts from the proper State officials verifying the amounts received by said State official.

Under this plan the handling of funds through Washington and back will be eliminated; the amounts available to each State will be determined by individual and corporate incomes within that State. The money will remain in the several States where it was collected. The total amount to be thus collected through Federal facilities for the States each year will automatically be geared to the national income for that year. There will be less danger of Federal control or dictation, and little opportunity for channelized propaganda from one central source. In most instances it will provide each State with a larger amount than would be available under other plans which have been proposed. There would not be a growing bureaucratic horde with insatiable hunger for power ready to consume ever-increasing amounts of taxes.

For example, in fiscal 1948 the Collector of Internal Revenue for Kansas collected in individual and corporate income taxes, $286,148,316.06. On this basis there would go to the State of Kansas under this plan, $2,861,483.16, every cent of which would be available for use within the State.

The immediate total amount returned to the States would be somewhat in excess of the amount suggested in S. 472, which passed in the Senate in the Eightieth Congress. Under that measure the estimated initial contribution to the Federal Treasury by Kansas to support the plan would be $2,552,000—only slightly less than the amount to be collected for the State under the plan here proposed. Under S. 472 Kansas would receive in return as aid to education $1,960,000—$900,000 less than under the plan here proposed.

Certainly under such a plan the States generally, by having this 1 percent of the individual and corporate income taxes paid by its citizens held for its use for educational purposes, would be much better able to cope with their educational problems than they would under a program directed from a Washington bureau.

This proposal will be a step toward retaining our Constitutional Republic and a move away from centralized government.

Such legislation will be in keeping with suggestions made by Gen. Dwight D. Eisenhower, by keeping the control and responsibility local. He said:

When financing of schools is turned over to the Federal Government you get bureaucracy, and this is the approach to statism.

Every advocate of aid to education to whom I have talked insists he wants no Federal control, no bureaucracy. This resolution will meet that desire, for it will not add a single person to the Federal pay roll and will certainly eliminate all possibility of Federal controls—even those found in former proposals before the Congress.

Figure this out for your own State and see if the logical appeal and the elimination of the danger of Federal bureaucratic controls under this plan would not enable your State to provide more adequately and more efficiently for the needed enlargement of educational facilities and the necessary increase in salaries of teachers.

This suggested approach is new. As here presented it may be subject to a question of its constitutionality. If that is so, the slower process of a Constitutional amendment would be in order. The proposal is offered for the serious consideration of the Congress.

Privation Among the Indians of North Dakota

REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. BURDICK. Mr. Speaker, I want to bring to the attention of this Congress two cases of near starvation among our citizen Indians. At the present time the snow is deep and the weather is extremely cold on the reservation in North Dakota. Let me advise you of the situation at the Turtle Mountain Indian Reservation, Rolette County, N. Dak., where the Chippewa Indians live:

At one time this tribe of Indians owned all the land from the Red River of the North half way across North Dakota, and from the Canadian line on the north to 75 miles south of that line. By the process of treaty making and congressional and Indian Bureau dodging, this great tribe of Indians have finally found themselves living on two townships of land, where about 2 percent of the soil is fit for cultivation. On these two barren townships 8,100 Indians are trying to survive. The old people and many of the young ones still remain on this barren pasture. Do you say they can survive on this sort of area? Do you say they are to blame for not having more, when this Government itself is responsible for taking away their good land? Land in the Red River Valley that we tricked them out of at 5 cents per acre, the garden spot of the United States, now in the hands of white men, sells at $150 an acre. This land is where 40-bushel wheat per acre is produced; this is where flax yields $100 per acre annually.

If what the Indian has left of land in the Turtle Mountains had been of any value we would have found some way to drive him off.

The situation this minute is that these people are desperately hungry, desperately in need of clothing and better housing. All available funds I am informed officially have been either expended or

earmarked for other purposes. If you as Members of Congress disapprove permitting these Indians to starve, get busy at once and make money available for relief. We can't wait for appropriations—as they usually go—we need funds now. Can this be done? It has been done. During the dust-bowl days, Governor Moses, of North Dakota, wired me that there were 3,800 more families in North Dakota who must be assisted and that the funds for relief had been exhausted. I acted at once. I saw the relief administration, the PWA, and the Works Progress Administration, and all the alphabetical outfits in Washington—not all, because I don't think I called on the APA. The same answer was given at each stop. No funds. This was December 20. No funds until Congress reconvened and held hearings on appropriations. I called on Speaker Joe Byrnes and he said there was one chance, and one only, and that was for me to see the President. He arranged a meeting and I saw the President. He listened to my story, and at the conclusion he says, "All right, BURDICK, you wire Governor Moses that the funds will be available in the morning." And they were.

There are a lot of loyal Democrats on the majority side who can see the President and explain the situation to him. If he has any of Franklin D. Roosevelt's tendencies to help those who need it, these Indians will get relief. There is no other way. The citizens of Rolette County and surrounding country are now giving them anything they can spare to assuage their suffering, but there are too many Indians to feed.

The same situation exists on the Fort Totten Reservation but in a lesser degree, for there are fewer Indians. It will require fully $250,000 to carry these Indians through the winter and the total combined fund of Federal and State funds adds up to $43,000. The situation has emergency written all over it.

Can Uncle Sam proudly pound his chest and say we are feeding the people of the entire world—we are giving them the four freedoms, while at the same time our own people are starving here at home? This starving condition of our own people has stripped me of any enthusiasm I might have had for the brilliant and costly inaugural which is about to be staged here at the Capitol.

[From the New York Times]

TWELVE HUNDRED INDIANS FACE COLD AND HUNGER—$43,950 WINTER AID GIVEN, BUT $213,348 IS NEEDED IN NORTH DAKOTA

BISMARCK, N. DAK., January 15.—On two North Dakota reservations, more than 1,200 Indians are struggling against cold and hunger to survive a winter that is only beginning to turn on its most frigid blasts.

Indian Agency and State welfare officials estimate that $213,348 will be needed to carry them through the winter, but so far only $43,950 in Federal and State emergency aid funds have been made available, and there is no sign of more.

The Indians are on the Turtle Mountain Reservation, where some 6,000 Chippewas are crowded on inhospitable land close to the Canadian border, and on the Fort Totten Reservation, larger but with a much smaller number of Sioux.

A joint agency with C. H. Beitzel as superintendent serves both reservations. Aid is channeled through his office at Belcourt, N. Dak., and through county welfare boards.

Urgent appeals for more relief money have been sent to the Office of Indian Affairs in Washington, but the Government has been slow in responding. Originally it allotted only $16,950. In November it sent another $6,000 and since then two more allotments totaling $9,000.

STATE PROVIDES $12,000

Meanwhile, the State public welfare board has stepped in with $12,000 to be used when Federal funds are exhausted. This was done almost over protest, as it were, because State funds are small and the Indian historically has been the ward of Federal Government. But Carlyle D. Onsurd, executive director of State public welfare board, sees the State's dilemma this way.

"It is distinct and immediate responsibility of the Federal Government to care for Indians, but we can't sit by and watch any citizens of North Dakota—and Indians are citizens—go miserably hungry just waiting for Uncle Sam to get busy and help them. We won't let any of our people starve as long as our money lasts."

Conditions are particularly desperate on Turtle Mountain Reservation. There population has grown from 2,838 enrolled Indians in 1913 to 8,900 in 1948, of whom about 6,000 are on the reservation.

Rolette County, in which the reservation is situated, has 25 townships of land. On 23 townships outside the reservation, 4,500 white people live. The 6,000 Chippewas are crowded on the two remaining townships, said to be the poorest land in the county. Only 5 percent of it is suitable for cultivation, the remainder being mostly brush or grazing land.

Chippewas are known as industrious, ambitious Indians, but welfare officials point out that under such circumstances not even the most able, hard-working farmer could make a decent living.

WORK IS SEASONAL

Such off-reservation work as is to be had is mostly on farms, and that is almost entirely seasonal. Years ago, Indians sold some cranberry bark and wood, and trapped for animal pelts during the winter, but these resources are now mostly gone. When winter comes, they are entirely without income.

The result is that most Indians require relief several months of every year. Last year, when starvation was even more imminent for Turtle Mountain Indians than it is now, $100,000 was subscribed by individuals and private relief organizations to tide them through. Then it was estimated that 600 of the 1,100 families there attempt to farm, but only 200 could be considered reasonably self-supporting.

On Fort Totten Reservation, one report stated that 141 of the 334 families get some income from agriculture, but for 102 of these it was less than $250 and for only two was it above $1,500 annually. Eighty percent of Fort Totten Indians depend on wages for support, and these averaged only $400 per year, the report stated. The Indian Office in Washington has said its relief funds are allocated or exhausted and that Congress must act before more are available. The last sum sent to Turtle Mountain, it said, scraped the bottom of the barrel.

To the Indian shivering in his draughty shack, explanations are no help. While the Indian Office explains and Congress organizes, he is still hungry and cold.

[From the Hillsboro Banner]

THE INDIAN AGAIN

Once again, the Indian food situation is serious. Newspaper reports indicate that there is not sufficient food to carry the Indians of North Dakota through the winter.

A year ago this community joined with scores of others in all parts of North Dakota to go to the rescue with donations of food and money. Before the drive had ended, a veritable deluge of food and provisions had swamped those in charge of the project.

Our Government, which is responsible for the care and welfare of the Indians, is not doing a good job if we have this problem recurring annually. Why can't enough funds be appropriated? Why must it become an annual calamity, this neglect of the Indian?

If the men who have the responsibility of administering to the wants and needs of the Indians cannot calculate their budgets accurately, we should replace them with others who can. And if Uncle Sam doesn't want to appropriate enough money to handle this budget, we are sure it can be raised in the Northwest. We over-subscribe every other plea for help, and there's no reason why we can't do the same in an Indian appeal.

Let's do this thing right, however. Set up a budget that will take care of the Indian. If Uncle Sam fails to do his duty, then we, as individuals, can step in with contributions. We are generous in donating food for European relief; we will be equally generous in meeting an appeal for our Indian friends.

Analysis of the American Character

EXTENSION OF REMARKS

OF

HON. RAYMOND E. BALDWIN

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, January 17, 1949

Mr. BALDWIN. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an excerpt from an article entitled "Analysis of the American Character," by Henry Steele Commager, published in the New York Times Magazine of January 2, 1949.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

The American is politically mature—a statement which will seem palpably mistaken to outsiders who are accustomed to regard American politics as childish. Superficially—and sometimes more than superficially—American politics are childish: the conventions, the campaigns, the antics of Congressmen, of State legislatures and governors.

Yet it is simply a historical fact that the American people have had longer experience in self-government than any other people. The American is the oldest Constitution, the oldest federal system, and the oldest democracy in the world. While people like the French, the Germans, the Italians, who pride themselves on their political wisdom, have gone through revolution after revolution, the Americans have never known a revolution, unless the Civil War be regarded as one, and American political history has been singularly peaceful and even placid.

In America, as in Britain, change has come through evolution, rather than through revolution, and on the whole it has kept pace with the will of the people. The American Congresses can hold their own with any other

legislative body in the world; American Presidents have been as able, on the average, as the Presidents or Prime Ministers of any other nation. In every crisis Americans have chosen courageous and bold leaders. There is no reason to suppose that this capacity for political maturity is on the wane.

Responsibility in the Air

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, January 17, 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news column written by the distinguished newspaper columnist, Mr. Marquis Childs, which relates to the recent chartered airplane disaster in Seattle, Wash. The column appeared in the Washington Post of Saturday, January 15. The column also contains a paragraph near the end, which has aroused some curiosity in that it links campaign contributions with a charge that an attempt is being made to eliminate the competition of nonscheduled air lines. I know nothing of the facts which might support such an assumption, but I strongly feel that any such rumor ought to be carefully examined by competent congressional authority.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON CALLING—RESPONSIBILITY IN THE AIR

(By Marquis Childs)

The way in which the continuing wave of the news closes over even a major disaster is well illustrated by the disappearance from the pages of the newspapers of the disaster in Seattle, Wash., that cost 16 lives, 13 of them students from Yale returning to college.

This is, of course, very convenient for the bureaucrats who are supposed to have regulatory responsibility over the air lines. They are grateful for the shortness of public memory which obscures each succeeding tragedy.

The Civil Aeronautics Board is still gathering data preparatory to a hearing in Seattle that opens next Tuesday. In time the board will write a long report phrased in Government gobbledygook with blame duly parceled out, including a share for the Civil Aeronautics Administration, which sets up regulations.

But here, as anyone knows who read the accounts of the disaster, is a case where regulations were plainly inadequate. The pilot of the plane was cleared for a take-off by the control tower even though weather conditions were below the safe minimums. It was apparently "legal" to send 16 young men to their deaths.

This is no regulatory system, and an overhaul is long overdue. Nor have recent appointments to air regulatory bodies been such as to inspire confidence.

If it follows present intentions, the Hoover Commission on Reorganization of the Executive Branch of the Government will recommend establishment of a Department of Transportation. Into that department under a Cabinet officer would go all Government agencies covering every form of transportation.

This recommendation represents a compromise among various factions urging specific action on air regulation. But for several reasons there is little likelihood that either the administration or the Congress will get behind such a sweeping proposal.

President Truman has already recommended a Department of Social Welfare, and that probably will receive congressional approval. It is very doubtful if Congress would add a second Cabinet post at the same time.

Such a move would be opposed by most of the transportation interests involved. Both railroads and air lines would feel that their claims would be submerged in a common agency. It appears, therefore, that no change is in prospect.

The answer of the Civil Aeronautics Board is a new regulation that would have the effect of eliminating irregular or nonscheduled air lines. The plane that crashed at Seattle was on charter from a company operating nonscheduled flights.

This, it seems to me, is not enough. Perhaps stricter regulation of nonscheduled flights is essential. Certainly, it would please the air lines. Senator OWEN BREWSTER, who has been such a kind friend of Pan American Airways, has long planned a move that would practically eliminate nonscheduled competition.

The safety regulations need to be tightened for all lines. Fortunately there has been no major disaster on scheduled lines in recent months. But it was in June of last year that the crash of a DC-6 in Pennsylvania killed 43 persons.

The competition offered by nonscheduled lines is quite another matter. Operating without the large overhead spent for publicity and lobbying that the scheduled lines incur, the little companies, many of them run by veterans, seem to make a go of it by charging rates well under those of scheduled lines.

This may be unfair competition or such competition may be justified within the framework of the American competitive system. A thorough congressional investigation into the air-line industry, with safety a major consideration—unbiased by the special prejudices of friendly Senators, if that is conceivable—should point the way to reforms.

There have been disturbing rumors lately of a major contribution last fall to the Truman campaign that was made through carefully concealed channels by a major air line. This is linked by rumor with the drive to eliminate the competition of the unscheduled lines.

More investigations and more reports are not the answer to disaster. They are part of the process by which tragedy is conveniently filed and forgotten until the next time the headlines spell out a new accident.

A Warning to the Spenders

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend, heretofore granted, I am inserting in the RECORD a very timely statement by Virgil Jordan, president of the National Industrial Conference Board:

God is not mocked when men are seduced by falsehood or driven by delusion to make a greater god of government and to worship Caesar as the mightier Mammon of our time, nor when they can be bribed to accept the insidious bondage of dependence upon the benevolent state and barter their birthright of liberty for the modern mess of pottage which they call political power and social security. In these days of fear and confusion let us remember that the endless repetition of a lie or the multiplication of an empty promise does not make a truth. Truth is something more than the greatest common denominator of mass ignorance and greed. It is never determined or demonstrated by majorities or pluralities of popular error and appetite. Ultimately, with God's aid, it always emerges and finally prevails, supreme in its power over the destiny of mankind, and terrible in its retribution for those who deny, defy, or betray it.

VIRGIL JORDAN.

Eighty-first Congress

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following remarks of my recent radio broadcast:

Ladies and gentlemen of the radio audience, the record of the Eightieth Congress was the major issue in the recent election.

President Truman did a great service to the cause of representative government by explaining how Congress works.

By turning the spotlight on the Senate and the House, he revealed, step by step, how the National Legislature solved, or failed to solve, those problems which affect the lives of all Americans.

This resulted in a political upheaval.

Those legislators who had blocked measures which the people wanted were defeated.

The Nation voted for an advance, and not a retreat.

Thus aroused, it is safe to predict that the people will keep in close touch with the Eighty-first Congress, and will make certain that it lives up to its promises.

With this in mind, I want to outline some of the stern challenges which this Congress is getting ready to face.

And may I suggest that you give earnest thought to these problems, for the good of our Nation and for the good of the western world which looks to us for leadership.

It was never intended that the citizen should fulfill his obligations to our Federal union by simply voting once in every 2 years.

The price of freedom places upon each man and each woman the responsibility of a continuing interest in that government which "derives its just powers from the consent of the governed."

The Congress is not an assembly of super men and women.

It needs your cooperation at all times.

Public opinion, based on free access to all the facts, and expressive in its decisions, is the life-blood of our society.

Our first job is to maintain security for our Nation, while we work toward the goal of world peace.

This requires vast expenditures for our Army, Navy, and Air Force.

To halt the spread of communism, we have appropriated billions of dollars for the economic recovery of nations which might otherwise surrender to the doctrine of despair.

It is probable in the near future that we shall be called upon to authorize more funds to see this program through.

I advise you to follow the hearings on this vital subject so that you may determine how far we can go without endangering our domestic security.

There are those of us who think that the Communists are provoking one crisis after another, short of war, with the sole purpose of forcing us into bankruptcy.

In the present state of world affairs, no one would recommend that we reduce our Military Establishment.

But, as the President has said, we cannot increase it without putting a strain upon our ability to pay for it.

Clearly, this armed truce cannot go on indefinitely.

The burden of it would weaken us at home.

War is not the way out of this stalemate. Peace is.

Therefore I look for a concerted effort, and soon, to get together with the Russians in an effort to find common ground for a world policy of live and let live.

This does not mean appeasement.

It does mean that both ourselves and the Communists must be prepared to make some concessions in the name of that peace which all the world hungers for.

This will not be easy.

It will call for a new, patient, and realistic approach.

The people expect redoubled efforts in that direction.

Here in the United States we are confronted by many domestic problems.

There have been mixed reactions to the President's State of the Union message.

But bear in mind the fact that the President, even with his party in control of the Senate and the House, does not have a rubber-stamp Congress.

There are Members who will go along with him on some issues and not on others.

There will be variations of opinion which will reshape his original proposals.

I feel sure that the net result will be a well-balanced legislative program which will largely succeed in promoting the general welfare.

One year ago our chief worry was the steady climb in the cost of living.

Today there are signs that supply is catching up with demand in some commodities, and this will take the steam out of inflation.

It may be, before the end of 1949, that we shall be faced with an opposite problem, that of deflation.

Therefore, any immediate measures to impose controls over prices and wages will be of a stand-by nature at best.

All of us want to maintain a high level of production, employment, consumption, earnings, and wages.

We differ only as to the means by which we can maintain and increase prosperity.

Business has a program, labor has a program, and open conflict between the two would only succeed in hurting the general public.

It is the function of government to regulate these differences when business and labor cannot reach voluntary agreements.

The last Congress penalized labor by enactment of the Taft-Hartley law, which discriminated against unions.

The reaction to this was vigorous and effective.

Labor campaigned as never before, and, winning much public support for its views, helped to unseat many Members of Congress who had voted for that law.

The majority in the Eighty-first Congress is pledged to repeal the Taft-Hartley Act.

It will be done.

Now business fears that it will be the target for one-sided legislation.

It is waiting to see what Congress will do on the proposal to saddle it with an excess-profits tax.

Business argues that such legislation would slow the wheels of industry and endanger the solvency of many corporations.

If business cooperates, it doesn't have to fear that it will be burdened with an excess-profits tax.

Once Congress is convinced that prices have passed the peak any thought of such legislation will be abandoned.

However, the Federal budget will edge upward, due to increased commitments abroad.

At the same time, to meet some long-delayed needs of our own people, we will need more revenue.

It is likely, therefore, that there will be higher corporation taxes (as distinct from the excess-profits tax) and higher levies on the upper income-tax brackets.

All over the world people are looking for security.

In Communist Russia this assumes an extreme form.

There the people have sacrificed every freedom to a master state for the mere promise of security.

Theirs is the security of a slave, without hope or incentive.

In the United States we are endeavoring to provide a minimum security without sacrifice of our basic freedoms.

We know that enterprise has made our country great.

We intend to keep that spirit alive.

The industries of our Nation will never be socialized.

However, we recognize that there are certain minor evils in our system against which our people must be protected.

Let me quote to you the words of a man who may be considered as a spokesman for free enterprise.

His name is Emil Schram, president of the New York Stock Exchange.

On December 14, 1948, speaking at a luncheon given by the New York insurance industry, he said: "Maybe we can resolve the problem of security and freedom, and, in the process, level off the extremes of boom and bust.

"While the rewards may not be as great as we should like in any one year, the average result will be more satisfactory.

"To summarize, let Government not ride roughshod because of its power and let business not take the attitude of the youngster who broke up the baseball game and went home with the ball because he was not permitted to be the pitcher."

Before 1935, there was no old-age insurance program, which would guarantee to Americans some economic security in their old age.

What people got was on a charity basis.

In January 1948, however, over 2,000,000 people received monthly benefits, for a total of $39,000,000 that month.

In 1947, almost one-half billion dollars was paid to people in such insurance benefits.

This included benefits for more than one-half million children of workers who had died.

It also meant insurance payments to retired workers and their wives, and aged parents.

By January 1, 1948, over 76,000,000 people had social-security accounts, and over 50,000,000 were active.

Now this is a fine beginning.

In the light of present-day prices, we find that the average individual benefit is hardly enough to keep body and soul together.

In other words, we have a program, but it is inadequate.

The new Congress will devote special attention to this need.

Old-age and survivors insurance benefits will be raised by at least 50 percent.

The eligibility age for women will be reduced from 65 to 60 years.

Old-age, survivors, and unemployment insurance will be extended to many workers not now covered by the law.

There will be some provision made to insure against loss of earnings due to illness or disability.

There will be improved public assistance for the needy.

Fundamental to our way of life is the right of every American child to obtain a good education.

Through depression and war, our educational system has suffered severely.

Teachers' salaries have failed to keep pace with our economic development.

School buildings and equipment are in sad disrepair.

Under the Constitution, the Federal Government is authorized to levy taxes to provide for the general welfare.

By the same authority, the Federal Government has the right to dispense money to the States for purposes not within the constitutional power of the United States to control or regulate.

Education is included in this category.

During World War II, 1,750,000 young men fell short of the Army's minimum standard of a fourth-grade education.

This illiteracy was not a State or local problem.

It was a national one, and the cost of teaching grown men to read and write was a national expense.

Education is also the basis of our economic welfare.

Without it, men and women lose a great degree of their ability to be self-sufficient and may become burdens upon the community and the Nation.

Many State and local areas are unable to cope with the problem because they cannot foot the bill.

Therefore, I expect that the Congress will appropriate $300,000,000 as a beginning of Federal aid to the States, for education, to be administered by and under the control of the States.

The enactment of a national health program for expanded medical research, medical education, hospitals, and clinics is reasonably sure to pass.

Legislation to provide for national health insurance, however, will meet with stiff opposition from the medical profession.

There will be extensive hearings, during which this question will be explored from every angle.

As a consequence, I doubt whether such a measure will pass during the coming session.

Housing is still a critical need of the Nation.

A bill to provide a remedy for this situation was held up by a few men in the last Congress.

Public dissatisfaction with such delaying tactics was reflected in the election results.

In the Eighty-first Congress, a bill to encourage and stimulate the building of low-cost rental units will have top priority on the schedule, and a majority in its favor when it comes to a vote.

Agricultural problems, conservation, reclamation, and public power projects will receive more sympathetic attention from the new Congress.

The coverage of the Fair Labor Standards Act will be extended.

The Department of Labor will be rebuilt and strengthened.

The yardstick of the minimum-wage law will be raised to provide 75 cents per hour in place of the present obsolete minimum of 40 cents an hour.

Civil rights, pensions for World War I veterans, revision of the Displaced Persons Act, and a reform of the procedures under which the Un-American Activities Commit-

tee operates—all of these will come in for a large measure of debate.

At this moment, it is difficult to predict what progress may develop on any one of these issues.

How to coordinate a program for domestic reform, world recovery, and peace, depend upon our present economic foundation—that is the central problem which must guide us in our approach to each separate bill.

Strengthened by the support of an alert public, the Eighty-first Congress is going to work with energy, and with confidence in the mandate it has received from the people.

Help it with your constant and constructive criticism, for the sake of ourselves, and the world.

Social Security

EXTENSION OF REMARKS
OF
HON. FREDERICK C. SMITH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend, I am inserting a pertinent excerpt from Dr. Edward H. Ochsner's book Social Security and recommend reading of the complete book:

SELECTIONS FROM PAGES 202 TO 210 OF SOCIAL SECURITY

(By Edward H. Ochsner, B. S., M. D., F. A. C. S.)

The whole social-insurance scheme is based on the ethically indefensible theory that individuals are entitled to things that they have not earned and on the politically unsound doctrine that society owes every citizen a comfortable living whether or not he repays society by doing his fair share of the world's work.

Under compulsory health insurance the individual who works only half-time is entitled to just as much free medical service and is likely to get much more in sickness benefits than he who works full time. Not only this; it actually encourages immorality and riotous living as the following well illustrates. As a young man, I worked 2 seasons in a lumber camp. The camp in which I lived comprised between 32 and 40 men. Of this number only 1 did not use intoxicating liquor; only 2 did not use tobacco.

A just and humane government protects the weak from oppression and exploitation by the strong and unscrupulous; but a just and wise government does not penalize the strong, industrious, clean-living, and thrifty and favor the weak, lazy, shiftless, and immoral.

Man has an inherent, inalienable right to life, liberty, and the fruits of his labors and the right to such contracts as will insure him the fruits of his labors. The Constitution specifically guarantees to every citizen these rights and assures every citizen that these shall not be taken away from him except by due process of law. From this it is evident that no human being or no association of human beings, such as the state, has any right to infringe upon any inherent right of another. The state has no legal right and certainly no moral right to take the result of one man's labors and give it to another and yet this is just exactly what every form of social insurance actually does.

We have all repeatedly heard the statement that the aged are entitled to a pension as a matter of elemental justice. Let us analyze this general claim critically. Many years ago the following incident occurred within my own personal knowledge. A man of 45 and a youth of 18 were working together in the month of July, 1886 for a large lumber company in the upper Mississippi valley, the elder man measuring the logs that were floated down the waters of the Eau Claire and Mississippi rivers and the youth acting as his bookkeeper.

The elder man received a salary of $75 per month and the other $30 per month. Both received board and lodging. The elder man was a high school graduate and had worked at approximately the same wage for about 20 years but had saved practically nothing during all these years. He told the young man on one occasion during the period they worked together that all he had in earthly possessions was a gold watch, his satchel full of clothing, the clothing on his back and less than 10 dollars in cash. The youth was trying to earn and save enough money to go to college.

One day the men were informed that the camp would shut down and all the men be discharged at the end of the week. The elder man asked the younger one what he intended to do when the work ended. The younger man said he would go into the back country and try to get a job on a farm in the harvest fields. The elder man said: "I will tramp, beg, yes, even steal before I will work on a farm." The younger man did get a job as a farm hand at $17.50 a month with room and board working from 5 a. m until 9 p. m., 6 days in the week and about 2 hours on Sunday, did go to college, and by the hardest kind of work during a period of 45 years acquired a competence.

The elder man was lost sight of, but unless he mended his ways before it was too late he probably ended in some county poorhouse. What right would a just government have had to compel the younger man to contribute to an old-age pension fund for the elder man? Would that be justice?

It would be better if the huge sums of money or the equivalent in service which are given to the shiftless and immoral in free medical and dental services and all sorts of pensions were spent in teaching the public in general how to spend its money wisely instead of wasting it on things that are not only of no real benefit to them but are actually often even harmful. It would not only be much better, but much fairer to encourage the frivolous and extravagant. When more money is being spent on tobacco and cosmetics every year than on medical fees the whole propaganda in favor of compulsory health insurance, so the poor may get medical services free, is not only ridiculous but childish to say the least.

Anything which makes easy money easier and encourages wasteful spending and which as an inevitable consequence will make well earned reward more difficult to procure and which will leave less money to the hard-working member of society for sensible expenditures should as a matter of common fairness and justice be unequivocally resisted by all right-minded persons.

Thomas Jefferson made the following observation: "The earth is given as a common stock for man to labor and live on. To take from one because it is thought his own industry and that of his father's has acquired too much, in order to share with others, who, or whose fathers, have not exercised equal industry and skill, is to violate arbitrarily the first principle of association, the guaranty to every one of a free exercise of his industry, and the fruits acquired by it."

Any law or system of government which ignores basic principles of justice as between man and man is not only wrong but will ultimately fail, for justice is the main purpose of government, and if it fails in accomplishing this, it cannot survive for long.

Probably the worst of all the bad features of social insurance is the fact that when this parasite once gets its suckers well fastened into the vitals of a nation nothing short of either national bankruptcy, a dictatorship, or a revolution will be able to loosen its hold.

There are many reasons why it is almost impossible to repeal the laws governing such practices. One reason is that executives and legislators do not want them repealed because it reduces the power which they derive through political patronage. The more patronage the individual in office has at his disposal, the more difficult it is to dislodge him. Even today it is very difficult to defeat a public officeholder with large political patronage, no matter how inefficient he may be, except by another who either already has large political patronage or who promises jobs to his supporters irrespective of their qualifications. Thus in many elections the voter is simply left to choose between two undesirable candidates. Already the number of payrollers has become so large and so politically active and influential that they wield great power in both political parties.

If we then add compulsory health insurance we will add further thousands to the lists of our civil employees. Those who are not in Government employ will be powerless to control Government and their only function will be to pay the taxes which others impose upon them. Instead of increasing the number of Government officials and employees, the ideal to be constantly kept in mind and striven for in this country is to permit the private citizen to perform all those functions that he can best perform, and that makes for independence, self-reliance, and strength of character; and to have the Government do only those things which the individual cannot do satisfactorily.

We maintain that centralization in government and paternalism have already gone much too far and that social insurance would simply be another step in the wrong direction.

The Nebraska Legislature Opposes National Compulsory Health Insurance

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. CURTIS. Mr. Speaker, one of the early actions of the Nebraska State Legislature was the passage of the Legislative Resolution 2. This resolution takes a firm position against compulsory health insurance.

I wish to extend my remarks by including herein a copy of said resolution:

Legislative Resolution 2

Resolution memorializing the Congress of the United States with respect to a national compulsory sickness insurance program

Whereas the American people now enjoy the highest level of health, the best standards of scientific medical care and the finest medical institutions ever attained by any major country in the world; and

Whereas these accomplishments of American medicine are the results of a free people working under a system of free enterprise; and

Whereas the experience of all countries where government has assumed control of medical care has been a progressive deterioration of medical standards and medical care, to the detriment of the health of the people: now, therefore, be it

Resolved by the members of the Nebraska Legislature in sixty-first session assembled:

1. That the Legislature of the State of Nebraska respectfully request the Congress

of the United States to refrain from imposing upon the citizens of this nation any form of compulsory insurance, or any system of medical car designed for national bureaucratic control.

2. That Nebraska Senators and Representatives now in the Congress of the United States be and are hereby respectfully requested to use every effort at their command to prevent the enactment of such legislation.

3. That copies of this resolution be transmitted by the Clerk of the Legislature to the President of the United States, the presiding officer of the United States Senate, the United States House of Representatives and to each Senator and Congressman from Nebraska.

CHARLES J. WARNER,
President of the Legislature.

Cheap Power

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in the Boston Sunday Post, January 16, 1949:

CHEAP POWER NEEDED HERE—INDUSTRIES, LIKE ALUMINUM AND STEEL, DRIVEN AWAY BY LACK OF ENOUGH ELECTRICITY

(By Lester Allen)

In New England where highly skilled labor and industrial developments have struck a fine economic balance, making the region dependent upon other sections of the country for its food and materials to make its shelters, one survey for establishment of new industries succeeds another. But each survey winds up with the same inevitable conclusion—not enough cheap electric power.

New England might have had an aluminum industry, but there was not enough cheap electric energy available. New England might today have a specialized steel industry producing high grade steels from its own scrap and with cheap electric power in modern electric furnaces, but there was not enough cheap power.

There is a stringent shortage of aluminum in the United States, a shortage caused by expanding uses of the metal, by world demands for aluminum, by lack of capacity to produce aluminum. There is room somewhere for an aluminum industry producing 164,000,000 pounds of aluminum a year, which at the present price, 15 cents a pound, would mean a gross value of $24,620,000.

Bauxite deposits, from which aluminum is extracted, exist in generous proportions all over the world, but the most productive deposits are all within very cheap water transportation distances from any New England port. But there isn't electrical energy enough in cheap surplus in New England to make development of an aluminum industry here either economical or feasible.

SELDOM HEARD

All the opponents of increased electrical generating capacity, either hydroelectric or steam plant generation, hold to the theory that New England can't use any more power. But those who hold that the more and cheaper electrical energy produced, the more industries will seek to locate here, seldom are heard above a whisper.

Not long ago, the New England Council paid for a survey of the possibilities for establishing a steel industry in New England. The reasons presented why such an industry could not be established were many. The reasons why such an industry should be established here were soft-pedaled—and through no fault of the New England Council.

It was plain that New England could not and should not try to compete in mass tonnage of steel—general purpose steel. But scant attention was given to the fact that New England is an immense reservoir of high grade scrap from machine shops and other metal plants. This surplus of high-grade scrap goes into steel making, it is true, but it is hauled to Pittsburgh and Gary and Cleveland.

RATHER SENSELESS

Modern electric furnaces producing high-grade tool steel could place New England in direct competition with producers of high grade steels the world over—if—and this is the catch—if there were cheaper electrical energy available.

It seems rather senseless for New England to go on indefinitely playing the cautious game of seeking only sure-thing bets, while other sections take the risks and bring off real economic triumphs for their people and for their investors. In Brazil, for example, a short water haul from New England, there is a deposit for high-grade iron ore that makes the Mesabi Range look like a mud puddle. The ore is 200 miles from the sea and would require the building of a railroad to get it to tidewater.

Boston capital built thousands of miles of railroad, but that was almost 100 years ago, and the railroads built with Boston capital actually led to nowhere, if the then existing undeveloped West is considered.

GREATER ADVANTAGES

The best estimates of the cost of building a New England steel industry is $50,000,000. Not much when you say it quick—and, $50,000,000 is not now regarded as a prohibitive sum of money, when Members of Congress can calmly discuss billions without a rise in temperature.

The establishment of an aluminum industry in New England, which, during World War II, was discussed by the Government as a possibility, promises even greater advantages than a steel industry, because of the cheapness of sea-borne supplies of bauxite. There are deposits of bauxite in British Guinea and Dutch Guinea, in Alabama, Georgia, Tennessee, in Canada, Haiti, and the Dominican Republic.

There's ample indication that the steel bottleneck, which has caused a 3-year steel shortage since the end of hostilities, may give industry a nudge that will compel more and more uses of aluminum.

Aluminum can be moulded, rolled, or hammered into plates, sheets, bars, rods, and even reduced to a foil so thin that 10 sheets would be required to make the thickness of one page of this newspaper. It can be drawn fine as a cobweb, blended with other metals to increase its tensile strength, hardness, or malleability. It is only a third as heavy as steel and resists rust, corrosion, and weathering.

DIVIDE BUSINESS

Three companies divide the aluminum business in the United States—and they all operate where there is cheap power. Alcoa has 50 percent of the present American capacity. Reynolds Metals has 30 percent, and Henry Kaiser's Permanente 20 percent.

Aluminum is the only metal in use today with a price that has gone down instead of up, due to cheaper processes of producing the ingots of aluminum. Industries in many fields are trying out its uses. It is even used to make heavy industrial equipment, buildings, machinery, and pipe lines.

Streamlined trains are being made of aluminum—at least 10 percent of the trains being constructed. Even freight cars may be made of aluminum, saving immense weight in hauling. The oil industry is experimenting with aluminum drilling rigs for operations from barges on the Continental Shelf. Chicago's transit system recently ordered aluminum cars for its elevated lines.

But it is in the aircraft industry that aluminum has made the greatest strides. Lightweight metals are essential for building planes—and nothing has yet been found, including magnesium, that matches the serviceability of aluminum.

POWER IS DRAW-BACK

Immense strides for industry are possible in New England—except for the almost fatal lack of generating capacity to produce cheap excess power to establish industries. Over and over again the industries that move away tell the same story—it is possible to buy cheaper power elsewhere.

New England opposition to the development of the St. Lawrence River and the development of Quaddy plus the failure to organize river-power and flood-control authorities stems chiefly from the fact that there is no assurance that the cheaper power thus produced would benefit New England.

Rural electrification in New England has made greater strides than in any other section of the country. It can be stated that rural electrification is virtually completed in New England, but cheap industrial power is not yet available in sufficient quantity to attract heavy electrical energy users.

The farms of Massachusetts, Rhode Island, Connecticut, New Jersey, Ohio, Indiana, Michigan, and Oregon are 96 percent electrified, according to the figures of the electrical industry. Any future power developments must be concerned with large users of electrical energy, and not with expansion of service to domestic consumers. But the rude fact is that with cheaper electrical rates, electrification of New England homes could be carried out to the *n*th degree.

RATES BARRIER

The more power used the cheaper its cost per kilowatt-hour—except in New England. This was true of Commonwealth & Southern when it drove forward on electrification of a backward area under the spur of competition from the Tennessee Valley Authority.

There are too many communities in New England where only electric lighting is used and a minimum of appliances are owned by electric consumers. The barrier to the use of more appliances is high power rates.

In fairness, it must be considered that the power companies have immense investment in plant and transmission facilities, that they have overcome almost insurmountable obstacles to build and develop the New England power grid. The hydroelectric developments built at Government expense have thrust into areas where there was no similar installation.

If the public credit is to be used for expansion of power-generating capacity in New England, the capital outlay of the power companies must be considered. Yet the region cannot be hooked forever on the horns of this dilemma. Cheaper power produced at generating points built by Government outlay should, in New England, be transmitted over existing power grids at a predetermined charge per kilowatt-hour, which would permit both public and private power companies to remain in business at a profit.

ATOM PLANTS

The location of profitable industries today is not dictated by whim, but by the stern realities of the amount of cheap power available. No better proof of this is needed than the location of the atomic-energy plants. They were sited at their present locations only because cheap power was available in large quantities.

Steel and aluminum industries, and, indeed, a great many other industrial lines, develop, or are attracted to cheap power as iron filings whisk to a magnet. New England is a logical site for large-scale power development for industrial purposes, because, with its domestic electrification virtually completed—the needs of industry can be considered without any extraneous factors, or any diversion of power produced to other than industrial needs.

The Congress will consider various plans for public power projects, two of which, 'Quoddy and the St. Lawrence, are bound to affect New England. It is time that public opinion was shaped by realistic and factual discussion of all the aspects of the matter.

Political Medicine

REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. WOODRUFF. Mr. Speaker, one of the finest analyses of the proposal to socialize medicine I have seen came to my attention when I received from the National Economic Council an article entitled "Political Medicine."

Realizing the importance of Members of Congress being fully advised as to the dangers of this proposal, I have requested unanimous consent to extend my remarks in the RECORD and include therein this article:

POLITICAL MEDICINE

American medicine—except for the licensing of physicians and nurses and certain restrictions on harmful drugs—has always been free from the meddling of government.

If a member of your family falls ill, you get a doctor. If hospitalization is required, you can get a free bed, if you cannot afford to pay; or you can get a private room if you can pay. The services of the best surgeons are available. If you are well-to-do, you pay a good fee for a serious operation. In most cases, if you are of moderate means, you get the same services for less. If you can't afford to pay anything, you can get them for nothing.

Many thousands of the finest men and women in the land give their services free as trustees of hospitals.

Roughly 160,000 physicians and surgeons are today taking care of the sick and injured in America and are rendering them better service than in any other country in the world.

We can remember 45 years ago, when Germany led the world in medical development, listening in Berlin to a well-informed German medical man explaining to several surprised medical colleagues that American medicine was offering great promise of improvement. Since then German medicine and surgery have gone down, and American practice has risen to its present high level.

American medicine thus gained ascendancy because American doctors have been capable, earnest, and ambitious, and have had a high sense of duty. It happened, too, because they were practicing medicine in a free country where as yet Government bureaus have been prevented from extending their tentacles over the care of the sick. Save in rare and isolated cases, government has had no part in, and can claim no credit for, its astounding development. In fact, the contrary is true: for in those countries where the medical profession has been placed under the dictation of the state, political control has been stultifying and disastrous.

Of course, American medicine and surgery have not been perfect—what human activity is? Of course, faults can here and there be found. Some neighborhoods are without enough capable practitioners or lack an adequate hospital. Some doctors are better than others. It is true, too, that those able to pay most often get the best services—though this advantage is tempered by the earnestness and high character and the desire of most doctors to minister to the sick whatever their economic status or station in life.

In all these respects, though further improvement is still to be accomplished, great advances have already been made.

America's supremacy in the field of medicine has been possible largely through two factors. Since nowhere else on earth have these factors existed in comparable measure, nowhere else on earth have the same good fruits appeared.

The first factor is the complete liberty our fathers won for us. Liberty places in human hands the power of choice—the power to excel, the will to excel. It is the mainspring of creative effort—the power that inspired a young race to conquer and people a virgin continent, to perfect communications, invent new ways of doing old tasks, and then, still unsatisfied, to dream new dreams and bring them to amazing fulfillment. Save for the dynamic energy released by the practice of liberty, little progress might have been made in the standard of life and living upon the American Continent.

The second factor is the profound impulse of Christian philanthropy. Often other peoples, usually the less successful, have condemned Americans as money getters and profiteers. Nothing could more clearly show the falsity of this charge than the lavish manner in which the fruits of American business have been poured out for humane causes. Wherever human needs have appeared, Americans have been warmhearted and generous, giving freely of the substance earned by foresight and industry. As in no other land on earth, the earnings of Americans have been given to erect hospitals, sanitaria, medical schools, and foundations for medical research. It is this profoundly Christian impulse, made possible by the economic freedom that alone implements the will to give, that has provided American medicine with the physical facilities necessary to its development.

The important fact is that the practice of medicine and the care of the sick have reached in the United States the highest level any country has ever seen. We may be sure continued effort along the same lines will bring ever greater improvement.

CLOUDS ARE GATHERING

But there is trouble on the horizon. Politicians, at the instance of Marxist schemers, have long had their eye on this whole business of the care of the sick. Great Britain has politicalized her medicine, which means simply that political bureaucrats have stepped in, and from now on will tell doctors, dentists, nurses, and patients what to do to the very last detail.

And the same political move threatens here and now in the United States. It will rise to full height during the coming session of Congress. A supreme effort is to be made to convert our magnificent system of caring for the sick into a Government-run machine of political medicine.

The fate of 160,000 doctors is at stake. But, more important still, is the stake of the 148,000,000 people to whom they minister.

If you, Mr. and Mrs. American, are willing to let Government bureaucrats tell you just how your sick and injured are to be cared for, then pay no attention to this letter. But if you are not willing, now is the time to do something about it.

It may shock many to be told that the incomparable fabric of American medicine has enemies, and that these enemies wish first to destroy it, and then replace it by something else under their own control.

Who are these enemies? They are certain groups now high in the Federal bureaucracy. And behind them, directing the fight, are sinister persons and forces of whom we shall speak presently.

What do they wish to do? They wish to destroy the freedom of American medicine by placing it under the political management and control of Government—that is, themselves. They wish to destroy the most successful medical system the world has ever seen, and substitute for it a system that has failed everywhere else.

The physicians of America, who are probably in a better position to see the disastrous consequences of political control than anyone else, are doing what they can to fight this evil thing. But they can devote little energy to it: they are out on the firing line every day in their battle against sickness and death. The whole burden of the fight to keep medicine free should not be left to them.

The National Economic Council does not enter this fight in the special interest of the medical profession. The politicians who seek to "muscle in," try to smear the medical profession by sneeringly accusing the doctors of being selfishly concerned with profits in opposing political control. That's just the old Marxist tripe. We believe there is no more unselfish profession, taken as a whole, than the medical profession, and that there is no more power-hungry, grasping type of person in the world than the political bureaucrat. Yet it is not to protect one group against the predatory spoliation of the other, that we raise our voice.

We are against political control of medicine because it will be disastrous to the American people. It will inevitably lower the standards and efficiency of medical care. It will in the long run cost every American family many hundreds of dollars more each year, for the offer of free medicine is only a sucker's come-on. It will, if adopted, destroy American freedom, not only as it relates to medicine, but as it relates to our whole life. It is the door to the police state.

In the last several sessions of Congress a bill for political control of medicine has regularly been introduced. With minor alterations it will be introduced into the forthcoming session of the Eighty-first Congress. In the last session it was called the Wagner-Murray-Dingell bill. Powerful forces are arrayed behind it. The President will call for its adoption—he thoughtlessly promised it in the campaign, unquestionably at the instance of left-wingers at his elbow. Unless the American people rise, and rise now, to defend their liberties as they rose at Lexington and Bunker Hill, this measure will be fastened upon them.

WHAT THE SCHEME IS

Just what is proposed in this scheme to politicalize American medicine?

First of all, a National Social Insurance System would be set up. The Federal Security Agency would collect all security taxes. It would be closely integrated with the other security programs—for disability and old age. Vast sums of money would be required, both to support the horde of new officeholders necessary to run the system, and to build up reserve fund accounts in the Treasury. Perhaps for the first year or two, taxes would

be small. But that is just bait. Commissioner of Social Security Arthur J. Altmeyer, chief advocate of political medicine, who would probably administer the whole program, proposed to the Advisory Council of the Senate Finance Committee on December 4, 1947, that the pay-roll tax should be 6 percent on employees and 6 percent on employers on the first $4,800 of income.

To administer the proposed system the whole United States would have to be divided into administrative districts, each of about the population of a city police precinct. There would be many thousands of administrative offices, together with administrators, assistants, clerical help, and investigators to staff them. Before its return to the States in 1947, the United States Employment Service had over 3,000 employment offices in operation to take care of the needs of a few million unemployed.

The administration of political medicine would be infinitely more complex, for people consult doctors far more often than they change employment. And with 15 to 20 times the number of people to handle as were handled by USES at its peak, political medicine would probably require 100,000 field offices alone. It is likely that within 5 years of coming into operation, political medicine would have at least a million persons on its pay rolls.

Now the chief appeal of the advocates of political medicine is, that low-cost medical coverage will be supplied to all. But it hardly takes a wizard of finance to see that if you add a million more persons to the number who have to be paid to furnish medical coverage, the total cost to all the people will be not less but more. Some of it will be taken from pay-roll taxes, and the amounts will be more than the average family now spends in a year on medical fees. But part of the cost will be hidden in income taxes, which must inevitably be increased to pay for the mounting expenses of the ever-growing bureaucracy.

In New Zealand, where political medicine was set up less than 10 years ago, the expense today absorbs 40 percent of all revenues collected by government, and deficit financing has been resorted to in a desperate attempt to furnish the benefits promised. Forty percent of the comparable revenues of the United States would exceed $15,000,000,000 a year.

WOULD THE HIGHER COST BRING BETTER SERVICE?

But even if the cost were several times greater than the present cost of medical service to the American people, might it not be worth it if everybody got better medical care? Let's see.

In the first place, there is no magic in the mere spending of money. The Government cannot create more physicians or nurses by appropriating vast sums to bureaucrats for the control of physicians and nurses. Only medical schools and hospitals can produce such qualified practitioners, and no Federal funds can make the numbers who will graduate greater than they will be anyway.

In the second place, the history of political medicine in every country where it has ever been tried has presented one outstanding fact. Nothing is so dear to the heart of a bureaucrat as rules and regulations. There is no record in any department of any government telling of rules that have at first been long and complicated, and have then been made short and simple. It always works the other way.

The pioneer country in political medicine was Germany under Bismarck. There, the early rules were simple. Forty years later, they had become so complicated that no single mind in the land knew them all. Dr. Walter Sulzbach, a recognized authority on the subject, has said that in the 1920's "so many changes in laws on social insurance were made that the pertinent commentaries were no longer published in book form but in loose-leaf catalog form, so that any entry could quickly be replaced by another."

The story is the same everywhere. In England at first national health insurance covered only 20,000,000 people, yet within 30 years the rules and regulations required a volume of 1,300 pages to set them forth.

In the United States, less homogeneous, where there is greater variation in every way, and where 148,000,000 people would be affected, rules and regulations would pass beyond the power of any individual to understand and interpret. Physicians, dentists, pharmacists, nurses, hospitals, and applicants for medical treatment would alike be overwhelmed by them. A vast policing system would have to be set up to enforce them. Such matters as the number and cost of all prescriptions issued by physicians and the prices the 80,000 pharmacists could charge the Government for every "free" prescription, would be among the many matters to be controlled. Every item of expense in every hospital would be subject to bureaucratic scrutiny. Such a system, in which physicians would have to spend hours daily writing out reports, would lead to deterioration of medical service, if not to downright disintegration.

One major respect in which political medicine would work adversely to the interest of the individual patient would be in the freedom of choice in selecting his physician.

Despite assurances that freedom of choice will be preserved, such freedom is impossible if the system is to work at all. Many advocates admit as much privately. It is generally agreed that a "capitation" system will be used in the beginning, though later it is probable that all physicians will be salaried Government employees. A capitation system means that each physician will be permitted to have so many patients sign up in advance to be treated by him, and when his quota, to be fixed by the bureaucrats, is filled, he may take on no more. He will be paid so much per person, or head, each year.

So, the only free choice the individual might have would be at the moment of signing up. If the physician were known to be a good one, his list would be quickly filled, and the patient would have to go looking for another whose quota had not yet been filled. If he still wanted to consult his favorite physician he would have to do it at his own expense (assuming the bureaucrats would permit it at all), and so pay twice—once in taxes and again in fees.

It is contemplated that, in time, all patients will have to visit the doctors in public health clinics. This is the plan followed in Great Britain. There, according to a noted actuary, Elizabeth W. Wilson, writing in the Christian Science Monitor for September 18, 1948, "Any Britisher can go to, and not—except under unusual circumstances—send for the physician of his choice. He waits possibly an hour or more in a queue for a visit which lasts, on the average, 4 to 6 minutes." Seventeen minutes has been considered the average necessary in America for diagnosis and adequate treatment.

WHAT IS BEHIND THE DEMAND FOR POLITICAL MEDICINE?

Only in Soviet Russia has political medicine been thoroughly carried out. If the United States of America adopts political medicine, as called for in the Wagner-Murray-Dingell bill, it will have taken a long step toward state medicine as rigidly controlled as Russia's.

It is therefore no surprise to find that American Communists are working hard for political medicine. If political medicine comes, the eventual socialization of American business will be so much the easier. Conspicuous among Communist influences working for such a bill is the Morning Freiheit of New York, a Yiddish-language daily read by over 300,000 persons. Alexander Bittelman, notorious Communist now under deportation proceedings, is the moving spirit of this journal.

Louis F. Budenz, ex-Communist editor of the Daily Worker, has stated that in 1930 Manuilski, then secretary of the Communist International, told a gathering of American agents in Moscow, "In the United States * * * the Communists must launch a powerful movement for social insurance." Manuilski added that state medicine would be used to promote communism in the United States.

We have had occasion more than once to mention the ILO (International Labor Organization). The United States of America joined ILO in 1934, at the instance of Frances Perkins. And ever since that time ILO, directly and through numerous affiliates, has engaged heavily in propagandizing for social insurance, including political medicine. First fruits of its effort was the original Social Security Act. Since then it has worked for the Wagner-Murray-Dingell bill. Indeed, it is known that ILO publications furnished much of the material from which the bill was drafted, and there is more than a suspicion that the bill was drawn in collaboration with ILO personnel.

We pointed out in letter 200 that a pending convention of ILO, if ratified by the United States Senate, would mean the abdication by the American Government to an international body of all control over relations between American employers and employees. It is this same ILO that seems to be the author and prime mover in the present drive to fasten political medicine on the American people.

A powerful influence for the adoption of political medicine has come from within the Federal Government itself, notably from the Public Health Service and the Federal Security Agency, whose top directors have an incalculable amount of power to gain if the scheme is adopted. These persons have, in violation of the criminal statutes, been using the money of the taxpayers to influence legislation and enhance their own prestige, power, and emoluments. Conspicious among these are three officers of the Federal Security Administration: Arthur J. Altmeyer, Commissioner, Isidore S. Falk, Director of the Bureau of Research and Statistics, and Wilbur J. Cohen, Falk's assistant.

Representative Harness, of Indiana, has exposed the so-called physicians forum, which has been advocating political medicine, under the chairmanship of Dr. Ernest P. Boas, of New York—identified by the House Committee on Un-American Activities as being a member of no less than eight Communist-front organizations.

WHAT YOU CAN DO

Against all the sinister forces working together for enactment of political medicine, those striving to defeat it have one chief reliance. That is in the innate good sense and love of liberty of the American people.

The American people do not have to have this scheme, fathered by communism, mothered by socialism, and wet-nursed by power-hungry bureaucracy, imposed upon them. It is not inevitable. Nothing that limits freedom is inevitable so long as enough free men and women have the courage to stand up and fight against it. The hour is late, but there is still time. There is still time if every American who reads this letter will order at least 10 copies and send them to 10 friends with a letter of his own asking them to do likewise, until all America is covered.

Let every man and woman who reads this letter and values his liberty do something about it. Let each write his Congressman and his two Senators and tell them what he thinks.

A million thoughtful letters to Members of the Eighty-first Congress can kill this evil measure.

Will you be one of the million?
Will you help to enlist others?
The time is short.

MERWIN K. HART,
President, National Economic Council, Inc.

Douglas Hartman and FTC

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Watertown (Wis.) Daily Times, one of the leading newspapers of my district, published under date of January 11, 1949, and headed "Douglas Hartman would be good selection for FTC."

Robert E. Freer, Chairman of the Federal Trade Commission, has resigned from the Commission. Chairman Freer came up through the ranks, and because he came up through the ranks he has been able to perform valuable services to our Government.

He should be replaced by someone who understands the Federal Trade Commission and who has a good workable knowledge of our Federal Government and its agencies. Mr. Freer should be replaced by a career man. A candidate for the appointment is Douglas Hartman, formerly of this city, who, with 26 years of experience behind him in Washington, would amply qualify for this important post. Hartman, an attorney, began his Washington career in the State Department, where he served as a clerk and trade-letter analyst from 1923 to 1928. For the next 5 years he was secretary to Representative George J. Schneider, and for the two years following served as secretary to Representative C. W. Henney, of Portage.

From 1935 on he has had a notable career in several different Federal agencies. He was an attorney for the Securities Exchange Commission from 1935 to 1941, and for the next 4 years was an attorney for the Federal Trade Commission. When he left this post, he became an attorney and trade conference officer for the Foreign Economic Administration. For a period after he left the FEA he was a trade conference officer and export-import specialist for the Department of Commerce. From April of 1947 until late last year, he was administrative assistant to Senator OWEN BREWSTER, of Maine.

We have known Doug Hartman intimately during almost all of the 26 years he has been in Washington. We have had many visits with him during his annual trips to Watertown. He has always deeply impressed us as being a conscientious, capable, and honest public servant—one thoroughly interested in government service. His sincerity and earnestness are characteristics that always made a profound impression upon us. And his vast knowledge of the various phases of our Federal Government, and its activities, always made Doug Hartman a welcome visitor to our office.

We can't help but feel—and deeply so—that Doug Hartman would be an excellent selection for the Federal Trade Commission. And we feel that anyone who has followed Doug's career in Washington would feel the same way as we do. Hartman, with his long and varied career, possesses the background that a position of this importance calls for. President Truman would make no mistake in selecting this former Watertown resident to fill the vacancy.

An Iowa Judge Speaks

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, a recent letter from our former colleague, Samuel B. Pettengill, reads as follows:

A JUDGE AND A MOB

This is about mob law and an Iowa judge—a real judge, of which there are many who are, unfortunately, too little known and appreciated.

A mob had taken possession of a packing plant. They resisted the police. They assaulted law-abiding workingmen and wrecked property. One man was killed. The rioting was similar to the recent wrecking of the Shakespeare factory, makers of fishing tackle, at Kalamazoo, Mich.

One of the Iowa rioters was indicted, tried, and convicted. In pronouncing sentence, Judge Shannon B. Charlton, of Waterloo, Iowa, said something to the defendant and to the community that deserves wide reading:

"Your forefathers and mine braved the perils of a wide, uncharted sea and a vast, unexplored continent that they might escape oppression. They knew first-hand that too much liberty in the hands of too few was productive of conditions akin to slavery. They knew from history that too much liberty in the hands of too many was productive of savagery or anarchy. They realized that true liberty carries with it a corresponding responsibility. Drawing upon centuries of human experience and endeavor, and mindful of the teachings of the Man from Galilee, they drafted a set of rules, a system of law, under which a new nation might operate upon the principle of a maximum of liberty with a minimum of interference with its people. To apply and to enforce such rules they established a system of courts as impersonal as it was possible to create any institution which must, of necessity, be administered by human beings.

"After a hundred and seventy-five years both the strength and the glory of that nation so conceived is the freedom of thought and action enjoyed by all its people."

These words, calmly spoken, are worthy of the American bench at its best. They are timely, today, for no week goes by without fresh evidence of labor-union gangsterism whether on the New York waterfront, or in smaller towns like Waterloo, Iowa, and Kalamazoo, Mich.

Certain judges on the United States Supreme Court could read this thoughtful utterance with profit. They, especially, for Federal judges are appointed for life, whereas a State judge elected by the people takes his official life in his hands when he upholds the law against gangsters. Federal judges have been too lenient with mob rule. They have drawn no sharp boundaries around what some of them piously call the permissible areas of industrial conflict.

America's greatest labor leader, Samuel Gompers, said no permanent good ever came from compulsion or violence. Gompers is dead.

Today, we witness the spread of private fascism, miniature Black Shirt armies using violence to attain their ends, committing mayhem, blocking streets, and telling public officials what food or milk they will permit a city to have, or what hospitals can stay open.

This movement will spread unless there are more Judge Charltons and more citizens who will see to it that those who stand for law and order are not driven from office in the next election.

A Federal judge in Oregon calls attention to mass picketing of courthouses. He says picketing of courts must stop. If such picketing is not contempt of court, nothing is.

SAMUEL B. PETTENGILL.

Character Is the Poor Man's Capital

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. PATMAN. Mr. Speaker, regulation W is against the interest of many poor people. Character is worth as much as money. Many good people who have excellent reputations and good character in every respect cannot obtain needed automobiles and other durable goods because of regulation W.

On January 10, 1949, my home-town newspaper, the Texarkana Gazette, published by Mr. C. E. Palmer, contained an interesting editorial on longer credit on cars. It is as follows:

LONGER CREDIT ON CARS

Congressman WRIGHT PATMAN says from Washington that longer credit terms should be allowed on the purchase of automobiles. He says the present 18-month payment limit is depriving millions of the chance to buy cars and carries the threat of a serious depression.

Although we doubt the threat of a serious depression, there is no doubt that the short-term credit on cars is working a hardship on many people.

Under the present 18-month payment limit, the minimum monthly payment on a new automobile runs at least $70 and most of them are from $80 to $90 a month. The ordinary salaried worker doesn't need but one look at his income and his family budget to decide that he can't possibly afford to own a new automobile.

Many salaried workers use automobiles in their work and to many other people an automobile has ceased to be a luxury but is now almost a necessity.

New automobiles are expected to become more plentiful as 1949 production shifts into high gear but that will mean little to the rank and file of the people if the credit terms are so severe they cannot purchase them.

This is not to say that long-term credit practiced generally is a good idea. In many instances, it tends to encourage unwise and thriftless people to overextend themselves. An automobile, however, and many household appliances can be considered in the realm of investment. Many people will make a monthly payment on an automobile and an electric refrigerator while at the same time they cannot or will not save the equivalent in cash money.

Prior to the establishment of Government controls, automobile dealers usually sought

an 18-month payment schedule but in some cases would extend the payments over 24 months.

It seems to us that Mr. Patman's suggestion of an extension of the 18-month limit to 24 months is a good one and should be put into effect.

After all, a dealer usually knows his prospects pretty well and should know the prospective buyer's ability to pay.

What Price Freedom?

EXTENSION OF REMARKS
OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. PLUMLEY. Mr. Speaker, under permission heretofore granted, I include an address I made at Norwich University on Navy Day, October 27 last, entitled "What Price Freedom?"

WHAT PRICE FREEDOM?

On Navy Day, which was selected and so designated as of October 27 because it marked the anniversary of the birth of that great friend of the Navy, former President Theodore Roosevelt, it is peculiarly appropriate that we discuss seriously some of the situations which today confront us both domestically and along the far-flung fronts which mark the boundaries but not the limits of our activities and responsibilities.

"If a nation values anything more than freedom, it will lose its freedom; and if it is comfort or money that it values more, it will lose that, too." It behooves us to think seriously on those words of W. Somerset Maugham.

In his work, Education in a Divided World, James Bryant Conant said:

"The stream of history is fed by many rivulets and springs; until the river disappears, each source can claim its share of credit for the mounting power. But it has been given to some people at certain times, as it were, to open a mighty sluiceway. The waters they have liberated soon lose their identity, but the sudden swirl of the new currents has become legendary with the course of time. So it was with the Greeks more than 20 centuries ago; so it is with the democratic nations of the world today, and above all with this Republic of free men. Our unique contribution is not in abstract thought nor in art nor poetry. It is rather in a demonstration that a certain type of society long dreamed of by idealists can be closely approached in reality—a free society in which the hopes and aspirations of a large fraction of the members find enduring satisfaction through outlets once reserved for only a small minority of mankind. To bring us still closer to this reality should be the aim of educators in the United States. To assist them in this undertaking, all thoughtful citizens might well rally to the support of public education. For only by their labors can this vast instrument of democracy be made responsive to the needs of a free nation in a divided world."

Freedom is the most precious heritage of America. Free government is the target of attack over a large part of the world. Here at home are those who would barter freedom for security. We can—we must—have both.

We must protect our form of government against those who would destroy it by force, from outside or inside, and those whose purpose it is to make it the primary function of government to guarantee support and social security for everybody, instead of affording everyone an equal opportunity and maximum freedom consistent with the same freedom for all others. Both groups and all other groups similarly minded are political termites which, unless eradicated or controlled, will topple the temple of freedom, justice, and equality for all, which is democracy as our founders established it.

Senator Ball, of Minnesota, hit the nail squarely on the head when he spoke at Minneapolis almost a year ago, and then said:

"The promises of those who told us that we must relinquish some freedom in return for security have been proven false again and again. But heedless of this plain lesson of history, millions of Americans seem to have forgotten that freedom and security are inseparable, that they must grow hand in hand. They listen to the siren promises of all the little political groups seeking power, who pay lip service to freedom, while at the same time advocating a whole series of measures, like socialized medicine, price control, planned production, and government subsidies, which are sure in the end to liquidate freedom."

There can be no question as to the correctness of his statement. We have seen it proven.

All these minority groups stem from that same philosophy under which and by reason of which we find ourselves where we are today exemplifying the fallacy of such a philosophy of government. Those who subscribe to such programs and doctrines, economic and political, want the Government to do everything for everybody; to guarantee jobs for all regardless of individual effort; to fix wages and prices; to decide what and how much of everything we should produce; and to provide food, shelter, and clothing for all regardless of individual effort, at the high standards the rest of us achieve only by sweat and toil.

TOO MANY PEOPLE SOCIALISTIC-MINDED

Any system of government that offers the same rewards to the man who loafs as to the man who works is going to kill the greatest force that has made the United States the country the whole world envies.

They want to change our social security system from its sound function of providing a minimum floor under living standards, which we are productive enough to afford, into a guaranty of high living standards for everyone, regardless of effort.

I am opposed to all attempts of those people who talk about what the Government should do. They undertake to regiment the people. They set up bureau after bureau, commission after commission. The agents of these bureaus tumble all over themselves as they duplicate effort and spread themselves all over the country at the taxpayer's expense.

There are already too many people in this country so socialistic-minded as to be glad to live in this country so long as they can live off it, that is off those who pay taxes. All revenue is derived from work. It is your money which is scattered in subsidies and grants too often to those who do not need them. We are the most wasteful Nation which ever existed under the sun. It is time to stop because there is bound to be that day of reckoning to which Communists and Socialists look forward with pleasant anticipation unless we put our house in order, and soon.

It is socialism—pure, simple, and undefiled—whether recognized as such or not. I am opposed to its continuation. Such planning and such philosophy does not fit the America we know and hope to protect against such efforts to socialize and to destroy thereby this country of ours. What the people should have is what they can get for themselves, plus such aid from others as their needs may demand from childhood to old age. That is a burden and a responsibility which rests on those who can do. Nobody is or should be entitled to live off his neighbor. Work is the genius of all accomplishment. We need no more planned economies and no more gratuities or subsidies. Who pays for them? You do. Why should you? Not unless there is a real reason.

We have 300,000 more Federal employees today than are necessary or can be used advantageously for the interest of all. These people who have been living off the Government—that is off you—should be set to work digging a Nicaragua Canal or doing something else where they can be useful instead of ornamental.

The program they have followed and would still follow offers dangerous ground on which to tread or on which to take the first step. I subscribe to the doctrine and political philosophy found in the life and policies and declarations of Calvin Coolidge. Do you recall what he said?

"The America which Washington founded does not mean we shall have everything done for us but that we shall have every opportunity to do everything for ourselves. Sovereignty, it is our belief, is vested in the individual, and we are going to protect the right of the individual."

And to the farmers he said: "No complicated scheme of relief, no plan for Government fixing of prices, no resort to the Public Treasury will be of any permanent value in establishing agriculture." He spoke, when he did talk, always with authority; he knew whereof he spoke. He was for economy and more of it, and for freedom and free enterprise; against socialism, fascism, and communism.

It is true that the greatest hoax of this century is the theory that socialism, straight or modified, is the alternative which will save us from communism. What these naive theorists overlook is that political dictatorship, whether Fascist or Communist, is simply the political counterpart of a socialistic economic system. One concentrates absolute power in the state, the other, absolute political power. That is the way it worked in Italy, Germany, and Russia. That is the way, unfortunately, it is working today in England.

ENTERPRISE AND INITIATIVE BRING HIGH PRODUCTION

We have a lot of people in this country who are Socialists but do not know it, nor do they realize the peril involved in their loose economic theories—always ready to pay out your money to help somebody who does not help himself.

The United States has achieved the greatest production and the highest standard of living of any people in the world because more than any other nation we have freed the individual initiative and enterprise of all the people. All the rest of the world, which has been experimenting for several decades with various socialistic and planned-economy schemes, is now looking to America with its free system to help feed and clothe their people.

It is supreme irony that, despite these facts, we have a substantial political group in this country urging us to kill the goose that lays the golden eggs by traveling down the same socialistic path to stagnation, privation, and dictation. That is the great challenge to freedom today.

Do you realize what and how much we have done for our friends in war and peace, despite the fact that the United States is caricatured as a "money grabber" and "imperialist"? Bernard Baruch of the War Mobilization Committee tells you that with 14,000,000 men and women mobilized we produced 60 percent of all allied munitions. We contributed $50,000,000,000 to our allies. The 5,800,000,000 barrels of oil pumped from

American earth for the conduct of the war would keep all the automobiles in the country running for 12 years.

For what went abroad we were paid virtually nothing, the bulk going to American forces or as gifts to allies. For what we imported we paid dollars. Our public debt jumped five times. In 1939 taxes took one of 13 dollars of our national income; today they exact one of every four dollars Americans earn. Still the American people have continued their giving into the war's aftermath with additional loans and gifts, so far, of $21,000,000,000 in UNRRA grants, the British loan, surplus-property credits, and ERP. To Europe alone, last year, individual Americans sent more than 23,000,000 parcels through the mails and CARE, plus an estimated $120,000,000 in remittances to relatives and friends, and another two hundred and fifty million of relief through private organizations.

One could search vainly mankind's whole history for comparable generosity. Yet, to some critics abroad and apologists at home, this is the record of a nation scheming to "exploit" and "enslave" the world.

Of our lend-lease aid, about a fourth—$11,000,000,000—went to the Soviet Union. Since the Soviet Government has chosen to dismiss this assistance as "incidental," these facts might be brought forth:

Our aid was concentrated upon filling Russia's most critical needs, such as night-fighter airplanes which the Soviets could not produce, and aviation gasoline, in which Russian output was woefully deficient. The 1981 locomotives and 3,786,000 tires we shipped the U. S. S. R. were more locomotives and tires than the Soviets had produced in any full prewar year. Soviet truck production before the war ran around 200,000 units a year; we sent 375,000. Nor should it be forgotten that we stimulated Russia's own productivity through nearly $500,000,0000 worth of American machine tools and another $2,500,000,000 of industrial materials, like armor plate, aluminum, copper, and zinc.

Without American trucks and locomotives and such items as 52,000 jeeps, 35,000 motorcycles, 415,000 telephone sets, 15,000,000 pairs of soldiers' boots, and 4,000,000 tons of food, the Red army never would have achieved the mobility which was one of its principal military advantages over the Germans.

"ONLY UNITED STATES FOUGHT GLOBAL WAR"—BARUCH

Mr. Baruch goes on to say:

"It does not lessen our appreciation of the incomparable courage and stamina of the Russian people in defense of their homeland to say they fought with one foot on home base, while our offensives had to leap two oceans. Nine days after we landed in Normandy, more than 3,000 miles from the United States, we were assaulting the Marianas, 6,000 miles from home. That we could undertake two such operations, at opposite ends of the world, at the same time, has never ceased to be a source of marvel to me. Of all the belligerents, only the United States fought a really global war.

"First, there was production. In every field we set new records. With fewer farmers, our output of food was lifted one third. Off the assembly lines of our arsenal of democracy during the five war years rolled nearly 300,000 airplanes, 319,000 pieces of field artillery, 64,500 landing craft, 52,000,000 tons of merchant shipping—three ships a day. The Navy grew from 1,900,000 tons to 13,600,000 tons, greater than all the other fleets of the world combined.

"The mainspring behind these actions is the American passion for freedom—that and the fact that war is the complete opposite of our normal ways.

"Only great dangers will cause us to accept the restraints on freedom which mobilization entails. When we go to war we do so to banish the danger which forced us to band together, so we can go back to our normally free, individualist habits. We fight not to implant ourselves on foreign shores, but to come home; not to impose our will upon others, but so we can continue governing ourselves as we wish.

"The American system hasn't produced perfection. But it has brought the people further along in their pursuit of happiness than any other system. More important than material benefits, the people still hold the power to change anything. They can revoke any law, fire any official, tax the rich, succor the poor. Under a police state, once imposed, the people lose all ability to determine their future.

"Equality before the law and change through the law are the two sides of the American coin. Americans can make no greater contribution to mankind than to demonstrate that these qualities will survive as the last best hope on earth."

UNITED NATIONS MUST HAVE FORCE

Careful and thoughtful students of history see us well on the road which 20 dead civilizations have traveled. Must history repeat itself? The struggle between the east and the west; what may be accomplished by the United Nations organization which has been described as a political machine for putting into effect the maximum possible amount of cooperation between the United States and the Soviet Union? (And in this connection the similarity between the United Nations organization and that set up by us after the Revolution is to be observed, in which the fear of a common enemy was the life belt which kept such a confederation afloat.)

These comparisons suggest that experience teaches that sooner or later such an organization as UN must either break up or become a genuine and effective federation; and if anybody can see how at this date any federation between us and Russia could be federated they know more than anybody who has ventured to discuss the possibility of the federation of these two states which has to be accomplished if Federal union is to save us from a third world war.

That the United Nations should be strengthened and furnished the necessary support to put into effect its decrees, by force if necessary, is a foregone conclusion.

The conflict which exists in the United Nations, now meeting in Paris, is not in its essence between Russia and the United States as such. It is a conflict between the majority of the UN members, acting in support of the Charter, and a group of governments who refuse to abide by its provisions or to recognize the overriding international obligation which the Charter constitutes.

We should deal with Soviet Russia, as with all other nations, frankly and forcefully as does become our powerful place among the nations. We should restore the respect of the Russians for us. Of course, we should deal with Russia in a spirit of fairness and friendship, but we should long since have made it perfectly plain to Joe Stalin that we do not propose to be bullied or bluffed.

Either we must find means to bring wisdom to those whose thoughts are today oriented solely to the pursuit of political greatness, in the form of world dominion, or, if we cannot do this, and if these people remain stubbornly unwise, then we must persuade them, in their own interest, to stand aside and to permit the other peoples of the world to proceed at last with this business of the development of international association for which the conditions of life in our time cry out so urgently and which have been so long delayed.

Above all other purposes we must labor by every peaceful means to build a world founded upon justice and righteousness. That kind of peace will be worth having. That is the crowning responsibility the people have laid upon us. That is the task to which we must dedicate ourselves.

Lest we forget we must remind ourselves over and over again that we were asleep when we might have entered to end a war, both in 1916 and again in 1939, had we been adequately prepared or had we appreciated the responsibilities of our greatness or the tremendous possibilities and potentialities of the dangers that threatened us. This is particularly true as to 1939 when we sought to avoid armed conflict and participation in the second war. We tried to be neutral. God hates neutrals. What has happened to us is a result of our stupidity.

What is going to happen? I think that nobody knows—but, if we are to learn anything from experience, while we speak softly yet firmly we should carry a big stick.

It is universally agreed that the economic situation, world-wide, is much worse than in 1939.

Since I wrote the foregoing I have seen a statement made by an eminent British historian, Prof. E. L. Woodward, of Oxford University, which bears repeating at length and will stand a lot of study on this side of the sea. He says:

"In the first place the economic situation is much worse than it was in 1939. The material damage done during the war is severe; the confusion resulting from the war is even greater and more difficult to repair. The maladjustment of the exchanges, in other words, the lopsided distribution of gold, sets a problem in psychology as well as in international trade; it is easier to rebuild a thousand bridges than to restore confidence in a shaky national currency.

"Thus, if the war had settled the political conflicts out of which it arose, it would still have left us with the most complicated task of economic recovery. Unfortunately the war has not even resolved this primary political conflict between totalitarianism and democracy. We do not yet know whether fascism in Germany and Italy has really been destroyed, and not merely defeated in battle. Most of the evidence from Germany is extremely disquieting. One would neither expect nor want the Germans to wallow in humiliation, but it is disturbing to find so few signs of a consciousness of collective responsibility for the suffering which the German people have brought upon the world. Obviously it would be a political mistake of the gravest kind to entrust the Germans—as a kind of short cut to European economic recovery—with the means of reconstructing the instruments of aggression which they know all too well how to employ.

"Elsewhere the ideological conflict is unresolved. Hitler is dead, Mussolini is dead, and yet over vast areas of Europe there is no more freedom than there was at the height of the German-Italian domination. In Asia, Japanese power of aggression has disappeared for years to come. There are no Japanese soldiers in China. Nevertheless in China also the area of political freedom—such as it was—is less than at the height of Japanese domination.

"The methods and materialist basis of Russian totalitarianism are unchanged. The danger still exists that this unresolved conflict between the police state and democracy will end in war. As in 1939, those who regard power as limited by justice and tempered by mercy are face to face with those whose philosophy has led them to consider power as the one real motive and mainspring of human action.

"One asks whether the democracies are more aware than in 1939 of the dangers in front of them. In most respects the answer is 'yes,' but there are still cross-currents of opinion which bewilder the average man, and especially the millions of average men whose standards of living have fallen and who see no way of regaining what they have lost unless there is some total change in the order of society. Furthermore, it must be remembered that the materialism which lends theoretical support to the Russian police state has been borrowed from western Europe, and that it had gained widespread support among sections of opinion in western Europe long before it became the new orthodoxy of the Soviet Union.

* * * * *

"On the political side the tendency toward closer international union is obvious. If Russia had not been able to block and distort the whole working of the United Nations, the movement for closer union might have developed where it was expected to develop—in the sessions of the Council and Assembly. As things are, this movement has manifested itself mainly outside the United Nations.

"It would be unwise to expect too much too quickly; nationalism is not wholly an unhealthy thing, and the complete disappearance of its historic expression in Europe would create more problems than it would solve. The significant fact is that the will toward western European cooperation exists to a much greater extent than in 1939.

"The greatest difference between 1939 and 1949, however, is that the American people are now aware of the paramount power of the United States, and that they have shown not only a high sense of responsibility over the use of their power but also a high degree of intellectual comprehension in the choice of ends and means. I speak as a European, and in case it should be thought that I am employing terms of polite flattery, let me add that I do not regard American policy as always wise and infallible.

"Nonetheless American policy, taken in the large, is deeply impressive to an Englishman. There is a certain magnificence about it, a sense of hope and idealism which, in the drab years following a cold victory, must strike hope in the hearts of other nations. Above all the full exercise of American power has regained the initiative for the democracies. The greatest political danger is that owing to domestic reasons the United States may be led even temporarily to abandon this initiative.

"It is possible that in the perspective of the humiliation of my own country in 1938, I exaggerate this danger. At all events if Americans remember that those who cherish the idea of right are living in an iron age—the fact is too obvious to be ignored on the European side of the Atlantic—the prospect in 1949, uncertain as it must be, is less sinister than it was a decade ago."

If we cannot federate, can two separate political worlds be carved out of the world situation which obtains? One under the hegemony of the United States, the other under the domination of the Soviet Union?

In the successful answer to these two questions is found the price of freedom, and the guaranty that our alleged civilization shall not be buried in the ashes of 20 others which have preceded us.

It is our solemn obligation and duty, yours and mine, to preserve here at home the sacred freedoms for which we have fought, the while we seek to procure freedom for all, by such means as the occasion and necessity may suggest and require.

We must be prepared to meet any emergency in order to fulfill our God-given destiny.

"They build too low who build beneath the stars."

Strong Efforts Being Made To Mislead and Deceive the People on the Basing-Point Question—It Is Old German Cartel System Used by Pittsburgh-Plus Method To Prevent New Industries, Destroy Competition, Fix Extortionate Profits, and Promote Monopoly—Supreme Court Decision Outlawing Such System When Wrongfully Used a God-send to United States

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. PATMAN. Mr. Speaker, I am inserting herewith a copy of a speech delivered by Robert Elliott Freer, Chairman of the Federal Trade Commission, before the City Club, of Denver, Colo., December 28, 1948. I desire to invite attention to the following points brought out by Mr. Freer:

First. Mr. Freer delivered the speech 3 days before retiring from the Federal Trade Commission after 12 years of service.

Second. The Commission's decision on the basing point, which is the old Pittsburgh-plus system, does not require uniform f. o. b. mill prices.

Third. The decision does not prevent the absorption of freight to meet competition.

Fourth. The recent decisions apply only to situations in which there is organized monopoly and conspiracy to suppress and restrain competition.

Fifth. The years of investigation and study, long public hearings, and the huge record of testimony.

Sixth. The Supreme Court of the United States sustained a decision of the Federal Trade Commission in 1948 in the Cement case.

Seventh. Soon after Cement decision, chairman of the board of United States Steel Corp. and chairman of the board of the National Steel Corp. commenced campaign to change the law.

Eighth. That "this whole controversy has been generated by the large producers in the steel and the cement industries for the openly announced purpose of persuading Congress to legalize their basing-point practices."

Ninth. An illustration of how the decision helps steel producers in Colorado.

Tenth. An illustration of how this system worked on consumers and its deadening effect upon the development of western industries consuming steel.

Eleventh. The answer to the fallacious argument that confusion has resulted in the Court's decision.

Twelfth. Preservation of the competitive system is in jeopardy if large concerns are permitted to return to the wrongful use of the basing-point system.

Discussion of basing-point question also appears in the Appendix of the CONGRESSIONAL RECORD, page A178.

THE BASING-POINT PRICING SYSTEM

(Remarks of Robert Elliott Freer, Chairman, the Federal Trade Commission, prepared for delivery before the City Club of Denver, Denver, Colo., Tuesday afternoon, December 28, 1948)

A little over a year ago I came to Denver and spoke to the Purchasing Agents' Association of Denver on the subject Markets—Managed or Free. In that talk I sought to explain some of the Commission's cases and decisions involving so-called basing-point pricing systems and other forms of price fixing by a geographical formula.

Since that time a great deal of water has flowed over the dam, and these activities of the Commission, which had very little public notice at the time I spoke, have become the center of a veritable storm of controversy in the press and in business circles. I have reread that 1947 Denver speech in the light of all the unkind things which have been said about the Federal Trade Commission since then, and would not change a word of it now.

I will be a member of the Federal Trade Commission for just three more days now, after which I will resume the private practice of law, a decision which was forced upon me by some 13 years of trying to live in Washington on a salary which was fixed at a not too munificent level back in 1914. Since this is my swan song as a member of the Commission, I want to speak as frankly and forthrightly on this question as I can, free from the fear that anything I say will be thrown back at me either in a congressional hearing or in the brief of some party before the Commission in a later case.

There is a great and burning question which has been posed to the small-business man and the general public in recent months and it is that sort of a question which supplies its own answer. The entire business community appears to have been blanketed by questionnaires from congressional committees and various trade organizations, either stating or implying that the Supreme Court and the Federal Trade Commission have now declared freight absorption to be illegal and have required that every businessman sell uniformly at f. o. b. prices and refrain from competitively meeting lower prices in distant areas. On the basis of this startling pronouncement businessmen are asked what the effect of this decision will be upon them; will competition be stimulated or will business be affected adversely?

During all of the time that this uproar has been going on officials of the Federal Trade Commission have been stating that the law does not require uniform f. o. b. mill prices, that the law does not prevent the absorption of freight to meet competition, and that the recent decisions apply only to situations in which there is organized monopoly and conspiracy to suppress and restrain competition.

I would like to tell you how this whole controversy started and explain some of the factors which may be behind the attempts to confuse the business community about the state of the law.

In 1937 the Federal Trade Commission, after several years of investigation and study, issued a complaint charging the entire portland cement industry with having engaged in a combination to fix prices and restrain competition. Public hearings were conducted for more than 3 years, the record consisting of some 50,000 pages of transcript of sworn testimony and about an equal number of pages of documentary evidence. The largest bulk of this record is that which was offered by the cement companies by way of defense to the charge of price fixing and discrimination. After an exhaustive study of

the record the Commission made detailed findings of fact, consisting of nearly 200 printed pages. The various overt acts so found to have been done by the industry clearly indicated that there existed a combination to fix prices, effectuated principally through cooperative employment of the basing-point system. Based upon these findings, the Commission entered an order requiring the industry to cease doing certain things pursuant to "any planned common course of action, understanding, agreement, combination, or conspiracy."

This case was litigated fully before the Commission, the circuit court of appeals, and finally before the Supreme Court of the United States.

In the spring of 1948 the Supreme Court handed down a decision affirming the Commission's order in the Cement case, the opinion agreeing wholeheartedly with the Commission's conclusion that the basing-point method had been employed in the industry pursuant to a combination and conspiracy and for the purpose of fixing prices. The same arguments were made to the Supreme Court that are now being made to the Capehart committee—that the Commission's order had the effect of preventing any freight absorption in individual situations and would require uniform f. o. b. mill selling. The opinion of the Supreme Court specifically pointed out that this was not the case and that the Commission's order only forbade acts done pursuant to the conspiracy and combination.

Shortly after the Supreme Court decision the Commission was sustained in a case against the producers of rigid steel conduit on review in the Circuit Court of Appeals. In this case it had entered an order against a well-defined conspiracy and combination to fix prices through the basing-point system, and the Commission's order forbade the future use of that basing-point system by each of the companies for the purpose of matching delivered prices and suppressing competition.

There is now pending before the Commission a similar proceeding involving the entire iron and steel industry on charges of a combination and conspiracy to fix and maintain prices through a basing-point system and other practices, and testimony therein still remains to be taken before a trial examiner.

Frankly, it was no surprise to me that the Commission's success in the Cement case in the Supreme Court generated so much heat in the business community. I was certain that success in this case would result in organized pressure on the public and on Congress for an amendment to the antitrust laws which would permit the practices of the cement industry. After the Cement decision, Mr. Irving S. Olds, the chairman of the board of United States Steel Corp., was quoted in the New York Journal of Commerce as announcing a drive for legislation to legalize basing point methods of pricing, and Mr. Benjamin Fairless, the president of United States Steel, announced on the same day not only that the steel company was abandoning the basing-point system, but also that one of the considerations motivating the abandonment was the plan to get immediate congressional action to legalize basing points.

The type of pressure that was immediately applied is typified by a letter which Mr. E. T. Weir, chairman of the board of National Steel Corp., dispatched to that company's customers at a time when steel was in extremely short supply and customers were fighting for favors. Mr. Weir's letter contained the following description of the basing-point system:

"The basing-point system permitted the buyer to secure required materials from any steel-producing plant at delivered prices competitive with the prices of the steel producer closest to the buyer's plant. This was possible, of course, because distant steel producers absorbed the excess in the cost of freight from their plants to the buyer's plant over the cost of freight from the plant of the closest steel producer.

"The Court decided that this could no longer be done. Instead, one f. o. b. price must now be established for each product at each point of production which each and every buyer must pay. The actual cost to the buyer, therefore, must be this price plus freight from the point of production to the buyer's plant, because, under the decision, there can be no systematic freight absorption on the part of the steel producer."

Of the Supreme Court's decision in the Cement case, Mr. Weir stated:

"Now, with one stroke, the Supreme Court has wiped out these systems at the behest of bureaucrats and on a basis of theory which has never been proved by practical experience anywhere or at any time. In doing this, the Supreme Court has usurped legislative functions to establish a rule which Congress, the proper agency, explicitly refused to enact time and again, although strongly urged to do so by the bureaucrats of the Federal Trade Commission."

Mr. Weir then proceeded to give his solution for the problem in the following language:

"Congressmen, therefore, should be contacted promptly. All trade associations should be aroused to the seriousness of this situation and the necessity for constructive action. The public should be shown that this is not a mere legal action with limited effect of a technical nature, but a matter of vital importance to everyone.

"Your help is not only important; it is essential. You can communicate with your Congressmen and Senators to give them specific information regarding the effect of this Supreme Court decision on your business and, therefore, on your employees and community. You can keep in continuous touch with them at each step as this matter progresses to final legislative action. You can communicate with your trade associations to urge that they make legislative contact and public information on this subject a first order of business. You can talk with the editors of your community newspapers and give them information which will be the basis for editorials and articles which will educate the public as to the vital importance of this situation and the necessity for its correction."

The above instances, multiplied many times, have led me to the conclusion that a great deal of the so-called confusion about the state of the law has been deliberately created by parties who have been using the basing-point system as a price-fixing device, in the hope that some amendment can be written into the law which will legalize the basing-point system.

The industries from which the initial clamor has come are those which do not want competition and whose leaders have in the past expressed their idea that price competition is a ruinous process which must be systematically restrained and prevented. This type of thinking is completely foreign to the fundamental policy of the law of the land, and it is not at all surprising to see these persons in the front ranks of those who cry that the law is confused.

As an example of the confusion that exists on this subject, I have here the front page of the New York Journal of Commerce for December 8, 1948. Side by side on that front page there are two stories. One of them has a headline "FTC chief confusing issue, business says, in demand for clearer pricing rules." This story refers to a speech which I made in New York the day before and contains the following statement:

"Businessmen said in reply that they are not trying to obtain legalization of the basing-point system, as charged by Mr. Freer."

Exactly one-half inch away, in the next column, is the following statement:

"Two railroad-management officials and one labor leader urged the Senate Interstate Commerce Subcommittee investigating Federal Trade Commission pricing policies to preserve the use of free pricing systems in determining the cost of consumer goods by legalizing specifically the basing-point method in the coming session."

The real question in this controversy is not whether uniform f. o. b. mill selling is desirable; it is not whether freight equalization should be permitted; it is not whether one particular area has been benefited by the basing-point system or whether another has been hurt by it. The real question is whether the Federal Trade Commission and the courts are to remain free to examine the facts in each individual case and, on the basis of a public record of evidence taken and considered according to law, ascertain whether particular pricing systems have been used as cooperative price-fixing devices or whether discriminatory prices under the Clayton Act have had the effect of injuring or suppressing competition. Thus, while Senator CAPEHART and Mr. Simon, the general counsel of his committee, have repeatedly stated that they are against conspiracy to restrain trade and that they have no sympathy for the steel and cement industries and the basing-point practices that have been employed by them, the fact remains that this whole controversy has been generated by the large producers in the steel and the cement industries for the openly announced purpose of persuading Congress to legalize their basing-point practices.

The advisory council of the Capehart committee numbers among its members officials of nearly a dozen large corporations which are or have been party to price-fixing cases involving geographic price-fixing systems before the Commission, and the general counsel of the committee was, until the time of his employment by the committee, representing clients in price-fixing cases before the Commission.

I am giving you these facts, not to indicate any lack of good faith on the part of the members of the Capehart committee or of its staff or the witnesses who have appeared before it, but only to show that in some quarters at least there is more than meets the eye in the present cry of confusion.

As I mentioned, the question of whether the basing-point system penalizes or benefits any particular section of the country is really not a part of the controversy, but since so many statements have been made to the effect that elimination of the basing-point system would penalize the intermountain territory, I wish to point out some of the means by which, in my opinion, the basing-point system has held back the industrial development of the West.

The best illustration can be found in the basing-point system of the iron and steel industry. At Pueblo the Colorado Fuel & Iron Corp. maintains a plant with a present ingot capacity of more than 1,200,000 tons. During the late thirties, a study was made by the Temporary National Economic Committee of the operations of this company in relation to the industry, and the figures I shall cite are those to be found in its proceedings. The Temporary National Economic Committee, I might explain, was a nonpartisan agency consisting of representatives of the United States Senate and House of Representatives, and of various Government departments which studied the whole question of pricing practices as they relate to our economic system just prior to the war. Among the committee's members whom I might mention were such leading

westerners as Senator JOSEPH C. O'MAHONEY, of Wyoming, and such conservative Republicans as Representative Carroll Reece, of Tennessee, subsequently chairman of the Republican National Committee. This National Economic Committee recommended unanimously that the basing-point system be made illegal, per se. Such a law would go far beyond anything the Federal Trade Commission has ever required by any decision or order.

In 1938, the Colorado Fuel & Iron Corp., which had been through the "wringer" just a few years before, had an ingot capacity of 888,000 tons and was operating at only 38 percent of this capacity. Its prices in the Western States were calculated on the base prices of the eastern producers at such points as Chicago, Pittsburgh, Buffalo, and Cleveland, with the addition of full rail freight to destination. The effect of this situation was that, although Colorado Fuel & Iron Corp. was operating at only 38 percent of capacity, nearly half the steel sold in Colorado in 1938 originated with eastern producers who could realize fully as much for steel sold in Colorado as for steel sold in the eastern producing centers. While it was required to share the Colorado and inter-mountain market with eastern producers, Colorado Fuel & Iron Corp. found itself shut off from eastern markets since delivered prices went down sharply, with freight rates from Pittsburgh or Chicago, and in order to do business to the East, the company was required to quote a lower delivered price, and, on top of that, to further reduce its mill realization by the full amount of eastbound freight.

The net effect was to build a one-way westbound conveyor belt permitting eastern mills to penetrate freely and to share profitably the intermountain territory market, while preventing western producers from seeking business to the East without sacrifice of profit. Not the least of the effect was to require every Colorado consumer of steel to pay a large amount of so-called phantom freight, or freight charges included in the price over and above the actual freight charges involved in shipment.

As an illustration of how this system worked on consumers and its deadening effect upon the development of western industries consuming steel, I would like to cite to you the recent testimony before the Capehart committee of Miss Ann Olson, secretary-treasurer of Wire Specialties & Manufacturing Corp. of Denver, producers of wire coat hangers. Miss Olson traveled all the way from Denver to Washington to tell the Capehart committee of the effect of this so-called phantom freight on her company's competition with eastern competitors. She presented figures to show that her raw material and transportation cost in Denver, although using steel originating in Pueblo, was more than 25 percent greater than that of her Chicago competitors, while at the same time these Chicago competitors could lay down their finished products in Denver at raw material and transportation costs only 1 percent greater than hers. She stated:

"Denver cannot even ship to nearby towns in Colorado and be competitive with Chicago, even though the raw materials and finished products were shipped some 2,000 miles less distance."

She also stated that:

"If the old basing-point system with its 'ghost' freight is reinstated, we again will be handicapped or we will be forced to move into the large industrial centers where we can buy our raw products, now produced in Colorado, at the same prices our competitors pay."

Yet in the face of such testimony, it is proposed right here in Denver to support the drive for restoration of the basing-point pricing system—or its equivalent—in industries where it has been condemned as a monopolistic price-fixing device.

To share in or dictate the management policies of industry is not the function of the Federal Trade Commission, nor that of any other Government agency, under our present system of free competitive enterprise. Whatever I might think personally of the wisdom of any western steel company going along with the pricing methods of its eastern brethren, the law requires only that its methods of pricing shall not be the product of conspiracy with other producers and, furthermore, that the company shall not make unjustified discriminations in price which have the effect of suppressing competition in any line of commerce. In other words, the law sets down certain basic standards of fair play. And subject only to these basic standards, it is entirely up to the steel producers, or the cement producers, or any other producers, to determine how they shall make their prices and conduct their business.

The Capehart inquiry appears to have started off on the premise that the Commission's order in the Cement case would revolutionize American industry, and reasoning from there, along the line taken by some steel and cement producers, it would seem that its conclusion would be that it would wreck our economy. As more and more details of the nature of the price-fixing conspiracies which the Commission found to exist in the Cement and Rigid Steel Conduit cases have come to be understood, however, this premise largely appears to have been abandoned, and now no one seems to have anything good to say about the former practices in either the steel conduit or cement industries. The present premise appears to be that the law is so confused that the small-business men in other industries do not know whether, or to what extent, they can absorb freight or meet competition.

This question of confusion is nothing new. As early as 1912 there was a great wave of protest from many businessmen for amendment of the Sherman Act to make it certain just what a businessman could or could not do. The plea for certainty has been renewed periodically.

In no branch of American law is there an absolutely certain, hard and fast line that can be drawn which will inevitably separate violation of the law from full compliance with the law. In order to accomplish any such certainty, it would be necessary to sit down and draft a code of business law consisting of several volumes covering every situation or combination of circumstances which has been decided by the courts to be violative of the Federal Trade Commission, Clayton, or Sherman Acts in the past 50 years. In addition, it would be necessary to anticipate and specifically prohibit future practices use of which appeared likely to restrict and restrain competition and tend to make our machine of free enterprise break down. And when we got done, it still would not be simple. In fact, it would be, I fear, a great deal more complicated than the present situation.

While I am in complete sympathy with any honest effort to make the law clear and understandable to those who must be subject to it, we must recognize that certainty in complex legal matters is impossible to attain.

Mr. Justice Douglas of the Supreme Court recently made the following statement in a case wholly unrelated to this field:

"* * * But there are few areas of the law in black and white. The greys are dominant and even among them the shades are innumerable. For the eternal problem of the law is one of making accommodations between conflicting interests. This is why most legal problems end as questions of degree." (*Estin* v. *Estin*, decided June 7, 1948, 68 S. Ct. 1213, 1216.)

In an article in Fortune magazine for October 1948, there is a statement by Fowler Hamilton on this question of certainty:

"True, if he cannot have freedom, the businessman generally will settle for certainty. But the lawyer must frequently frustrate even this desire. The ifs and buts of legal opinion are inevitable results of the lawyer's awareness of the uncertainty of the law and of the even greater uncertainty of the future facts and forces upon which the legality of action may finally turn. Mr. Justice Brandeis, during his days of private practice, said to clients who insisted upon an unqualified opinion as to the legality of a proposed business program: 'I can tell you where the edge of the cliff is, but I cannot tell you how hard or in what direction the wind will be blowing when you pass by it.' "

This leads me to what I consider to be the crux of this whole problem—the extent to which the Government should interfere with the rights of the individual engaged in business. The Federal Trade Commission is not equipped to run the cement industry or the steel conduit industry—nor, for that matter, is any tight little group of men in or out of the Government. The basic principle of our system is freedom of enterprise, with the principal regulatory forces being those of the free market and real competition. It is regulation by forces other than those of competition in the free market which the Commission has proceeded against in some of our basic industries.

It is not enough, then, for us to say "keep the Government out of business." If we are to be successful in keeping the Government out of business, we must keep business free from monopolistic controls imposed by businessmen themselves. Monopolistic controls by private business have the sure and necessary effect of inviting Government regulation of all phases of business activity. If a little group of men is permitted to run the steel conduit industry or the cement industry pursuant to understanding and agreement among themselves and without regard to the forces of free competition in the market, then inevitably Government must control the action of the monopolists. When that day comes, our system of free enterprise will have disappeared and we will have embarked upon the same course of paternalistic Government controls that have marked such states as Germany, Russia, Italy, and Japan.

It is the principal characteristic of the American system that a man can still open up a retail store, a factory, or almost any other kind of business on his own responsibility and take his chances in the market. It is obvious that an integral part of this right is also the real risk of failure and bankruptcy through mismanagement, insufficient capital, or for any one of a hundred different reasons, so that if we are to have benefits of competition, we must endure also its temporary discomforts.

I feel very strongly that this problem of preserving our competitive system is the foremost domestic problem today and that the public must soon decide whether we honestly intend to try to obey the rules of the economic road we so far have traveled or whether we are willing to recognize that the alternative route is one of all-out Government regulation. Unfortunately, there seems to be no middle road in this situation. If we continue to give lip service to the competitive system and provide only token enforcement agencies under the antitrust laws; if we continue to cry against monopolies and at the same time refuse to provide the means of curbing them, we will continue to coast down hill without conscious resolution into a valley from which we must be towed because the spark of competition neither exists nor can be restored to its proper function in our economic motive power. When that point is reached we will have no choice but to acquiesce in a system of permanent peacetime Government control which will shift the responsibility of management to the Government.

I am not concerned at all about the possibility of any such system of Government control resulting if it were left as a matter of free choice to the American public today. My concern is that if there continues much longer the present trend of concentration of power in fewer and fewer hands and the present trend of sniping at the antitrust laws and seeking by every means to avoid competition, the power of choice between all-out Government regulation and a free competitive system will have been removed. Thus, we will have actually made a choice of all-out Government control of business through our very lack of appreciation of the problem and our consequent failure to do anything about it.

Preservation of the competitive system is the basic philosophy which has moved the Federal Trade Commission. The Commission is not an agency which is seeking power or control over industrial decision and discretion. It has been motivated by the principle that the coming of the day of Government regulation can be postponed or forestalled by prevention of those practices which operate to destroy the competitive system by depriving the individual businessman of his freedom.

In conclusion, let me express my opinion that the price of economic freedom, like that of political liberty, is eternal vigilance.

Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. FORAND. Mr. Speaker, the arrest and imprisonment of Joseph Cardinal Mindszenty by the Hungarian Government is causing a great deal of resentment toward that government by the people of my home State of Rhode Island.

I, therefore, submit as part of my remarks the following telegram which I have received from the Monsignor Peter E. Blessing Division of the Ancient Order of Hibernians in the city of Providence, R. I.:

PROVIDENCE, R. I., *January 4, 1949.*
Hon. AIME FORAND,
House Office Building,
Washington, D. C.:

Following is a resolution believed self-explanatory:

"Whereas the Christian world is angered and saddened by the flagrant disregard of the dignity of the human personality in the arrest and imprisonment of Joseph Cardinal Mindszenty by the Hungarian Government: Be it

"*Resolved*, That the Monsignor Peter E. Blessing Division of the Ancient Order of Hibernians in Providence, R. I., protests this latest outrage of Hungarian communism and asks that our Representatives in Congress direct the appropriate authorities to take immediate steps to register this country's formal protest and to exert the influence of the United States through its representatives in the United Nations to probe the charges leveled against this stalwart proponent of Christian ideals in Hungary and to secure his release if they are found false; and be it further

"*Resolved*, That copies of this resolution be sent to the congressional Representatives of Rhode Island and to the United States Senate Foreign Relations Committee.

"Unanimously adopted by Msgr. Peter E. Blessing Division in meeting duly assembled this 3d day of January 1949."

JAMES F. SHIEL.
EUGENE F. COCHRAN.
PETER C. MORAN.

Geology in War and Peace

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, Dr. Carey Croneis, president, Beloit College, Beloit, Wis., has rendered a real service to his country by calling attention to the importance of a study by our country of its petroleum resources. An excellent editorial appeared in the Beloit Daily News of January 10, 1949, and I am including it as part of my remarks:

An idea, like a seed, can germinate, grow, and then flower.

Almost 7 years ago now Dr. Carey Croneis, president of Beloit College, spoke before the American Association of Petroleum Geologists on Geology in War and Peace at its convention in Denver. That was in April of 1942, only a few months after the fateful day of December 7, 1941. He proposed that the various geological societies coordinate their knowledge and efforts in a central agency.

Dr. Croneis continued to stress this theme in addresses before other geological groups on the subject Geological Warfare. So much interest was created that all national and local scientific societies that had geology as a major interest were invited to send a representative to Fort Worth, Tex., for a meeting in April of 1943.

The Oil and Gas Journal, an authoritative and leading publication in the field of the petroleum industry, says:

"From that point on, considerable hard work has gone on in committees and with various proposals thrashed out among officers of 11 different professional societies. Six and a half years from the original suggestion of Croneis, all 11 of the national societies originally considered eligible have joined the new institute.

"The new institute makes the third such federated organization in which all societies of one science are joined. The Union of Biological Societies was founded nearly 29 years ago, and the American Institute of Physics is now in its eighteenth year.

"What will the new Geological Institute do? The original program listed nine possible objectives. Frankly, it seems likely that the first objectives will have to be tied into the preparedness program in the cold war against communism. Cold war calls for preliminary organizing in case shooting war should come. Modern war is total war. Total war means total organization and mobilization of scientific resources as well as manpower and material. That is what the authorities on total war tell us.

"One of the original tentative objectives was phrased this way: 'To serve as a single, unifying, and authoritative source for all branches of geologic sciences in relation with government, in military circles, and to the general public.' That sentence was written in 1944, but it sounds quite timely in 1948."

"The results will mean much in peace, even more should war arrive," Dr. Croneis, one of the Nation's leading geologists, says of the Geological Institute, which will have its headquarters in Washington and which will be able to provide interested departments of Government data on natural resources in this country as well as in many other countries of the world.

Thus an idea fathered in wartime will certainly be beneficial in peacetime and will be of incalculable value should this country be called upon to defend itself again in war.

The United States and Panama

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. MARTIN of Iowa. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following editorial which appeared in the Panama Star and Herald on December 13, 1948. The editorial is in English, translated from the original editorial, in Spanish, which was carried in La Estrella de Panama—The Star of Panama—on December 10. The Star and Herald is the English edition, and La Estrella de Panama, the Spanish, of the very influential daily published in Panama City, and now nearing its centenary mark. Through the years this newspaper has been the stout and effective advocate of good relations between the United States and Panama; and its present editorial, apropos of the tension recently arising between the two countries over the question of air bases to protect the Panama Canal, is written in a wise and helpful spirit, and should do much good. I believe it deserves a wide circulation in the United States, and to this end it is now inserted in the CONGRESSIONAL RECORD.

[Translated from La Estrella de Panama of December 10]

OUR RELATIONS WITH THE CANAL ZONE

As a result of the negotiations which for some time were conducted between Washington and ourselves to reach an agreement on a convention for the lease of defense base sites in the national territory; and, more concretely, when our country rejected the formula proposed, a sector of the citizenry devoted itself fully to the task of hurling against North America the most violent accusations and of fomenting amongst us a sentiment of hostility toward the United States and this, naturally, had to produce regrettable results.

With an absurd concept of what should be the dignity and sovereignty of a country—because in order to defend a point of view or a position, it is not necessary to resort to insults or libel—some elements expressed their aversion to North America and the North Americans in such rude manner that many residents of the Canal Zone decided to abstain from visiting the interior and to come as seldom as possible into our terminal cities to so avoid the repetition of incidents which should never have occurred.

That campaign of hate and aversion toward the United States—continued tenaciously by those who still dare to brand that country

as imperialist, though they have no censure for Russia and preserve a malicious silence in the face of the crimes against humanity which Russia is committing to advance the insatiable ambitions of the Soviet—produced as a result of the prudent abstention decided on by the North Americans, the effects which we all can now perceive in our economy; because the Zonian has been for many years the main support and the principal client of a series of local businesses the fate of which, at present, is being reflected in the state of the national treasury.

Without any other protest than that of a few who, like ourselves, expressed inconformity with the anti-American campaign and were accused of disloyalty to our country; without any energetic public reaction from all those who were sincerely convinced of how unjust and prejudicial was that attitude of hostility to the United States, there was formed on the Canal Zone and in certain circles of North America the erroneous belief that the sentiments of aversion toward the Americans was generally shared in our Republic and, therefore, the logical attitude of the Zonian was that which we are now strenuously trying to rectify.

At present it seems that no one now dares to follow the erroneous course of vociferations and insults. The conviction that this attitude was unjustified and damaging seems now to be general and everywhere we see clear demonstrations of a sincere and fervent desire that Panamanian and North American shall once again live, as in the past, on a plane of harmony and mutual friendly understanding because destiny has united our countries in an indissoluble manner through the Canal. Nevertheless the damage has been done and rectifications are not always easy, especially as in the present case where there are many residents of the Zone who have formulated the determination to visit our cities and the interior as infrequently as possible and have organized their habitual way of life so as to eschew all that refers to our country.

When the proposed convention on defense base sites was rejected by Panama and when in view of said determination the United States proceeded to evacuate the defense bases which it had temporarily occupied, the North Americans continued to visit our terminal cities and the interior with all naturality, until they began to notice those manifestations of hostility toward their persons and toward their country to which we already have referred. Then, of course, on observing that their presence was non grata and on realizing that that which was .o ostensible, so apparent, and so manifest was really a sentiment of aversion, of hostility, of antipathy, they decided in great numbers to abstain from frequenting the Panamanian centers, with the regrettable results which now have led to the present campaign of attraction in which certain national institutions somewhat tardily are engaged.

With satisfaction must be received the news that at last we all are realizing that the United States not only is the best ally of our country, the best power on which we can most depend for the defense and protection of our vital interests, but also that the North American elements must be able to live together with the national elements on a plane of frank and fruitful friendship. However, had the errors indicated not been committed, if public opinion had reacted in the necessary manner against the minority manifestations of inflamed hostility toward the United States, when without cause or reason there was made evident in our midst the anti-American sentiments of a few groups, there would not have been lost the work of many years, and it would not be necessary now to hang our posters bearing phrases of friendship and welcome, nor to organize this or that "week" in an effort to again attract the Zonian element which hitherto had encountered in Panama a most friendly ambient.

We do not doubt that there will be a return to that cordiality so indispensable between the North Americans and us and that the plausible attitude of all those who are trying to again attract the North American to the path of friendship and concord will bring advantageous results. But it is time to reflect also as to where the real patriotism, the real devotion to Panama is to be found. Whether it lies with those who fomented misunderstanding and hostility toward a country whose characteristic is its essentially democratic organization and its impeccable international policy of respect for contractual obligations and so have caused grave damage to the general interests of the country, or if it resides among those who, like us, at all times have endeavored to maintain the bonds of friendship and mutual respect and understanding such as should exist in our inevitable relations with the United States.

Not a Large but a Steady Rate of Procurement of Aircraft, in Peacetime, Is the Key to a Stabilized Industry—An Air Industry That Is Expected To Produce 1,000 Planes One Day and a Dozen the Next Can't Stay Economically or Financially Sound—Steady Production Means Steady Jobs and Lowered Costs—That's True Whether You Make Peanut Bars or Pursuit Fighters

---

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. RICH. Mr. Speaker, under leave to revise and extend my remarks, I include therein an article abstracted from a brochure published by the Williamsport (Pa.) Community Trade Association, entitled "Air Power, Williamsport, and You":

Seldom do we stop to think how this old world of ours is shrinking. Not in actual size, of course, but in our ability to get around on it.

We have planes that fly faster than the speed of sound—hundreds of miles faster, the United States Air Force guardedly reports. Their rockets can now go 3,000 miles per hour—three times as fast as this globe upon which we live revolves.

Truly, we travel fast—And we travel far. One day a few weeks ago 50 United States Air Force B–29 bombers took off from their bases on the other side of the globe. Carrying pay loads of bombs, they landed within minutes of the planned target times—at cities in the United States scattered from Alabama to Minnesota and from New York to California.

Feats like these make us realize just how near—to each of us—is the modern way of waging war. No longer are tanks and battleships the prime military objective. Instead it is now the factory next door—the mill down the street—the men and the jobs and the resources that supply the military might. Cripple these, and divisions and fleets die like fruit on an uprooted vine.

Our national security demands that we have the air power in such strength as will enable us to stop such a thrust from abroad and then to strike back and destroy the enemies' ability to wage war. Air power, also, says the report of the Joint Congressional Aviation Policy Board, is the one thing "most likely to discourage an aggressor against attack upon this Nation."

Right after the war the United States Air Force shrank from 243 combat groups down to 2. Our aircraft industry, which had turned out 95,000 military planes in a single year, collapsed to an annual production of 1,300 planes.

The deliberative bodies, concerned with our survival in the air age, concluded that for peacetime security we must have an air power based on a minimum of 70 Air Force combat groups. Those bodies were the President's Air Policy Commission and the Joint Congressional Aviation Policy Board.

This recommended 70-group program would not enable us to win an aggressive war. It would give us hardly a third of our 1945 combat strength, only a fifth the number of the men, and less than one-sixteenth the 1944 aircraft production peak.

But it would enable us, however, to resist a major aggressor; moreover, it would provide us with the framework on which we could expand rapidly in an emergency.

Our Government, as a start toward building our strength to 70 groups, this year adopted a $3,000,000,000 measure for the procurement of aircraft.

In contrast, Russia is spending seven billion five hundred million—58 percent of its entire defense budget—on its air forces. The three billion would represent only 33 percent of our armed services' procurement budget. Note this well—even Britain—faced as it is with serious economic problems—is maintaining a more modern air force than we are.

What few people realize is that Congress hasn't authorized a 70-group air force—that it has merely provided funds for the first year of a 5-year program looking toward that objective. With those funds we have built our strength to 57 groups.

That is woefully short of the minimum air power recommended for our national security by the President's Commission and the Congressional Aviation Policy Board—a 70-group air force, adequate National Guard and Air Reserve groups, an enlarged modernized naval air arm, and an aircraft industry producing 6,000 planes a year.

In this age of modern jet power and rocketing speeds it is a fact that today 95 percent of all Air Force planes are old, obsolete World War II types.

Why? Well, for one reason—you can't squeeze new-model aircraft out of plants like squeezing toothpaste out of a tube. It takes years to get a plane from the idea state to the production line.

The B–29, developed with top war priority, went into combat 7 years after the design was started—and that was when we really needed bombing planes.

As aviation progresses, aircraft become more and more complicated. A supersonic plane, for example, has to have refrigeration equal to 20 family-size ice boxes to keep the cockpit cool. It has to have complicated radar and electronic equipment, automatic guns and firing mechanisms, parts that must work either at 65 below or 160 above zero—machines such as these can't be rolled out like model T Ford cars.

An industry that is expected to produce a thousand planes one day and a dozen the next can't stay sound. Steady production means steady jobs and lowered costs. That's true whether you make peanut bars or pursuit fighters.

Not large, but steady, procurement of aircraft is the key to an industry capable of

sharing the research into such challenging fields as supersonic flight and atomic power, capable of producing the planes that will keep our air forces constantly modern, of holding together the core of men and equipment on which emergency expansion must be built.

The President's Commission and the Congressional Board recommended a minimum annual production vital to maintaining such an aircraft industry. That minimum is 6,000 planes. Yet this year's production will total less than half that amount.

Modern aviation's speed and reach was brought strikingly home to the public by an aerial demonstration given by the United States Air Force and the Pennsylvania Air National Guard at Williamsport, Pa., but a few weeks ago.

A huge B–36 flew up from Fort Worth, Tex., and returned—a trip of 3,200 miles. Jet planes dashed up from Washington in a scant 15 minutes at 600-mile-an-hour speeds. A flash from Bolling Field announcing the take-off of the jets from the Nation's Capital was broadcast over Williamsport's radio station WRAK. At the same time sirens and whistles at industrial plants and fire stations sounded.

School children marched from their classes to school grounds and offices and factories recessed work. Even the jail inmates were allowed to go from their cells into the courtyard. Hardly had this public alerting been completed when the jets made their first pass over the city. The B–36 and P–47's came over shortly afterward.

An estimated nine-tenths of the city's 50,000 population watched from streets, windows, and housetops.

Thousands also saw the ground exhibit set up on a roped-off downtown street. An average of 500 persons an hour visited the exhibit, which opened on Air Power Day and continued two additional days. They filed past a fuselage of a B–29 bomber, into which special windows had been cut, and they heard explanations of such modern missiles as a buzz bomb and a ROC—a radio-controlled flying weapon whose television-equipped nose enables its launcher to "see" the target as he guides the missile.

Civil leaders heard the story of air power at a luncheon December 2. Brig. Gen. Albert A. Kessler, Jr.. Director of Procurement and Industrial Planning, USAF, was the speaker. The 225 attending included members of the Kiwanis Club, the Air Reserve's local Five Hundred and Twentieth Composite Squadron, the Civil Air Patrol, the Williamsport Airport Authority, and other civic groups and individuals. They received a souvenir brochure explaining air power and Williamsport's part in it.

The program included publication of photographs, news stories, special articles, and editorials in the community's newspapers and promotional lines in local merchants' advertising. Altogether some 30 stories appeared, most of them in the final week of the campaign. Station WRAK carried spot announcements, items on daily newscasts, and mentions on a popular morning commentator's show. Special broadcasts were made of the luncheon address, a high school air power day program, the aerial demonstration, and an airport arrival interview with Brigadier General Kessler.

Tomorrow's citizens learned about air power through special programs in the schools. Thus did the Williamsport community of industries inaugurate Williamsport air power day—a city-wide program to educate civic leaders, the public, and school children to the meaning of air power.

On December 2, 1948, Williamsport, Pa., became the first community in the Nation to hold a city-wide program focusing public attention on the importance of air power to our national security. It was sponsored by the aviation committee of the Community Trade Association—the local chamber of commerce.

But why, you ask, did the aviation committee of the Williamsport Community Trade Association want to sponsor an air power day? What did Williamsport have to gain? The answer is simple. Williamsport has reason to know what a stable aircraft industry can mean. One of their factories makes power plants—engines for light planes.

When the aircraft industry shrinks, the effects are felt in Williamsport. Only half as many men work at that engine plant today as in the years before the war. A stabilized industry nationally would help provide steady jobs, a steady source of machines and technicians contributing to our air power.

But to talk about air power in terms of a single factory is a narrow viewpoint. There are a hundred other plants in Williamsport, grouped together into half a dozen or so broad classifications. What about them?

Well, look at the leather and rubber goods classification, for example.

Fighter planes need leather muzzle covers for wing cannon and cooler pads for machine guns. Bombsight cases have to have straps, and duffle bags have to have handles. Hydraulic packings, webbing, cot covers, shoe soles, grips—all are made from leather.

These items were produced in Williamsport during the war. They could be produced there again as part of the city's contribution to an Air Force adequate for security.

You wouldn't readily think of lumber and its remanufacture as a classification which would have anything to do with aircraft.

But Williamsport plants made aviation engine crates, radio-tube boxes, bunks, folding cots, and other items for the air forces. Those industrial contributions could well continue on a peacetime level.

The making of metal products is Williamsport's biggest single industry, with a current employment of 4,224.

Valves, shells, bomb fuzes, rocket grids, radar cabinets, stands, racks, carriers, generators, motors, condensers; what a list could be written of this group's wartime contributions.

The 19 plants in the classification range from large prime contractors to small subcontractors—the little shops that helped bigger factories by making such things as cables for flight control mechanisms, parts to go into machine guns, tools for radar tube sections or experimental items for jet motors.

Just as these plants could rise to meet wartime demands, so can they contribute to an air-power-secured peace.

Next to the metal-working industry in community importance comes textiles.

Williamsport's textile plants produced bomb parachutes, flare cloth, parachute tape, fragmentation cloth, neckwear, shirting, pajamas, cordages and tubulars and tapes, to mention only a few. Some of these things could be needed again in a sound air-power program. And the industry has 3,000 employees who could be called upon to do the job.

Radio tube cartons, food cartons, aircraft instrument panel lamp boxes—those are some of the things that Williamsport's paper and printing industry produced for World War II.

We can't have the minimum air strength needed for national security without similar things being produced again.

Even such classifications as chemical products or clay, glass, and stone were part of the team that won the industrial supply race against Germany and Japan.

Williamsport's mirror plant made mirrors for use in aircraft. One of its chemical plants made a coating for keeping leather articles at tropical air force bases from molding. A glass plant made radio tubes by the millions. Those products and the skills of the men who made them can be used again for keeping strong our place in the air.

The list could go on. There is hardly a plant in Williamsport that could not contribute, at least in some slight way, to a sound air-power program.

But of greatest importance is the fact that our community and our American way of life might be stricken if this Nation fails to build the air power we need. It must take the place of the buffer nations we once depended on to keep an aggressor from our shores.

We cannot start a war with our programed air power. But with it we can discourage an aggressor from attacking. Air power is peace power.

All of us have got to realize our stake in air power. We have got to want it. And we have got to see that we get it.

No one believes a next war will see us given time to build up our industrial might as we did against Germany and Japan. Nor will outlying spots like Pearl Harbor be the first target of attack.

If we are to be secure, we must add air power dominance to our accepted ideas of land and sea strength. Congress has approved the objective of a 70-group air force and provided funds for the first step toward it. Senator STYLES BRIDGES says the prime order of business of the new Congress should be actual authorization of that strength and adoption of a 5-year plane-production program.

Our peacetime security and world leadership among nations demands that minimum for a sound air commerce, a stable air industry, and a strong Air Force—put together, our air power.

Merchant Marine

EXTENSION OF REMARKS
OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to say that I have introduced H. R. 501, to exempt from the draft men who served in the merchant marine during the last war, and who had substantially 18 months' service, and I am calling this matter to the attention of the Members of the House, as I feel that, in all fairness and justice, these men who previously served in this hazardous branch of the service during World War II for substantially 18 months should not be called upon for further service at this time. Many of these men had ships shot from under them during their service of from 1 to 5 years, and it is my opinion that these men should not now be called upon to give further service at this time. Practically all of those with whom I have spoken tell me that, of course, if our country should go to war again that they will not wait to be called but will all volunteer to fight for their country again.

Mr. Speaker, I noted an article in the voice-of-the-people column in a local newspaper which, in my opinion, is a good argument for my bill, and I ask permission to include the same, as follows:

MERCHANT MARINE

During the war everyone heard about the merchant marine and the wonderful job

they were doing for the war effort. First quite a bit was heard of practically unarmed ships being sunk with vital cargoes aboard. That ceased to be news, but men were still needed.

When the war was over they brought the boys home. Some of these ex-seamen had good enough jobs aboard ship that they could save sufficient funds to enter college for a year or two at most.

Others weren't able to finish high school, which they had left at 16 to man the ships. They didn't have a GI bill to help them. They didn't say much, just kept hoping for a better world to live in.

Today they have a new twist. It seems that the Eightieth Congress forgot them again when they passed the Draft Act. They didn't say one thing about the heroic men that sailed the ships that brought the supplies.

The Government worries about the merchant fleet. What about men to sail them in the next war, or are they going to be robot-driven ships with men that can't drown?

DON J. VERHURG.

Not as Painless as It Looks

EXTENSION OF REMARKS
OF
HON. WILLIAM L. PFEIFFER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. WILLIAM L. PFEIFFER. Mr. Speaker, under permission to extend my remarks, I include an editorial from the Buffalo Evening News of Wednesday, January 12, in relation to the President's budget to the Congress:

NOT AS PAINLESS AS IT LOOKS

The graphic arts can be quite an aid to budget-boosting. The Budget Bureau has used them well in picturing for the public where next year's United States Government dollar will come from and where it will go. With mounds of dollars, and then with typical ones cut in pie-like pieces, it shows how trifling is the spending that could possibly be regarded as "nonessential" and how relatively insignificant are the proposed new taxes (which, as the News has pointed out, will amount to approximately $6,500,000,000.)

Probably the most misleading of the graphic symbols, however, are the diamond ring and luxury luggage chosen to illustrate the 19-cent piece of the revenue dollar that comes from excise taxes. Actually, the total Federal take from all luggage (including handbags and wallets) will amount to but $82,000,000, out of the excise tax total of $7,800,000,000. The estimated tax on all jewelry (including the dime-store variety as well as expensive diamonds) totals $227,000,000.

Had the Budget Bureau wished to be realistic in illustrating the take from excise taxes, it would have pictured a bottle of beer and a cigarette. The tax yield from all the showy luxuries put together—jewelry, furs, cosmetics, luggage—doesn't make a drop in the bucket compared with the tax on liquor and tobacco.

Compared with the $82,000,000 on luggage, handbags, and wallets, for example, next year's budget puts the tax on liquor at $2,419,000,000, on tabacco at $1,363,000,000, on gasoline and oil at $616,000,000, on motor vehicles (new cars, parts, and tires) at $713,000,000; on local telephone service, etc., at $538,000,000; on theater and other admissions at $485,000,000; and on transportation of freight and passengers (such as commuters) at $617,000,000.

Many of these articles, to be sure, are properly taxable as luxuries. But they are things that everybody buys, whereas the Budget Bureau chose to illustrate the whole field of excise taxation with the most easily recognizable examples it could find of "rich men's luxuries." Surely it wouldn't want the public to get the impression that this $7,800,000,000 in excise taxation is all painlessly extracted from the conspicuous extravagance of the leisure class, if there be any left. Or would it?

Poor Old Farmer Has His Troubles

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. JENKINS. Mr. Speaker, my long time friend Dan T. Davis, a scholarly newspaperman and a man who thinks he is also a successful farmer, although I doubt that very much, has had his troubles with preparing his income-tax returns. He has employed his literary talents to give expression to his feelings. He is one of these fellows who can make his prose read like poetry. This is what he says:

PRESS PRATTLE

The melancholy days are come, the taxiest of the year; with dog tax due right over there, and income tax right here. Heaped in the hollows of our desk, my bank checks are a mess; I fail to find a single one that's filled with blessedness. And looking over last year's tax, dear Tom, I started so, to think how very much more I paid, than forty years ago.

The spring that bubbled 'neath the hill, has now a ram; it cost me just one hundred bucks, but now, I see, I swan, I've got to pay improvement tax, upon my hilly farm, and on that furnace that I bought to keep me nice and warm.

You ought to see the figures on the table where I set; I've filled three Copco tablets full and my work ain't finished yet. I plum forgot the price I got for those six yearling steers, you know, dear Tom, we didn't have to, back in former years.

My dog's a shemale and I hear, though she's a faithful hound, I'll have to pay three dollars else they'll put her in the pound. I'll never vote for Jake again, the auditor, you know, things ain't dear Tom, what they used to be, forty years ago.

Next time I see Tom Davis, the revenue man, you know, I'll wring his neck as sure as sin, and tell him where to go; for he's the guy that sent me all those letters which I got, to start the kitchen fire and that made the grate so hot. I didn't even look at them when I found them in the mail, I sort o' thought some feller'd like to get me by the tail, and wring some money out of me, but now I've learned indeed, not to ever fool with Uncle Sam, what he sends you better read. If the letter ain't a stamp on it, you better read it through, and hire a clever lawyer to tell you what to do.

I'm very sorry now, dear Tom, I ever sought for wealth, and nearly worked my fingers off to salt down a little pelf; for the fellers who were settin' round while I was broilin' in the sun, are still a settin' round with their hand toward Washington, and getting monthly just what you and I are sendin' in, tell you Tom, I think that that's just an aggravatin' sin. When it comes to penalizin' fellers for thrift and economy, it's high time stoppin' singin' My Country 'Tis of Thee.

I hate to kill old Queen, my hound, and lie about my tax, but that feller, late of Washington, taught us that, by Jacks, and it makes me mad to know that those in high authority, have made their millions offen' us, who've been busy as a bee.

I'd like to write you more, dear Tom, but the 15th's drawin' near, and I've got to get back to figures scattered there and here. I've added and subtracted, divided then again, but I can't see I'm any nearer the end than when I first began. I've carried back to page 1–B, then change to page 2–C and the pages look like thumbprints of one caught for robbery.

I'm longing for that happy time when I reach my sixty-five, so I'll have my double zemption, if I happen to be alive. I can thumb my nose and grin, at any deputy then, that comes a snoopin' round, tryin' to tax me again.

And when our time shall come, Tom, and we are called to go, I hope we'll reach that land like which we knew 40 years ago; when we walked to church and singin's, literaries, and spellin's gay, and bought "sen sen" for sweethearts as homeward we showed them the way. There was a heap of living' we were accustomed to you know, there's now a heap of travelin' among folks we do not know. But the friends we cherish most and the ones we love the best, are the friends we made in early years when living was a zest; when freedom was a heritage and from bondage we were free, asking nothing for ourselves except for a chance to be, free as the very air we breathed and to choose and permit to play, the way that sealed our destiny in our own untrammeled way.

The Battle of Cowpens

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. BRYSON. Mr. Speaker, this is the one hundred and sixty-eighth anniversary of the Battle of Cowpens. The thriving town of Cowpens, situated in my district, is observing the day with a program designed to inspire greater interest in Revolutionary history.

The Battles of Cowpens and Kings Mountain turned the tide for the Revolutionary War. Attached hereto is an appropriate editorial from a Spartanburg, S. C., newspaper.

Too long have we delayed in establishing a suitable national park commemorating this significant battle which was fought so successfully toward winning the Revolutionary War.

THE BATTLE OF THE COWPENS

Tomorrow, January 17, is the one hundred and sixty-eighth anniversary of the Battle of Cowpens. The town of Cowpens is observing the day with a program of events designed to inspire greater interest in the Revolutionary history of this region.

Dr. D. D. Wallace, in his history of South Carolina, concludes his chapter on the Battle of Cowpens with this paragraph:

"King's Mountain called Cornwallis back from his first movement northward; Cowpens led him, in pursuing its victors, upon a course which ended 20 months later in his ruin.

"In the view of the English historian Stedman, 'the defeat of his Majesty's troops at the Cowpens formed a very principal link in the chain of circumstances which led to the independence of America.'"

It is now generally realized that King's Mountain and Cowpens represent turning points in the War of the Revolution. These came in this Piedmont country, about the base of the mountains. These hills and mountains have been termed the "Walls of Liberty."

So tomorrow the whole region should join with Cowpens in the observance of the one hundred and sixty-eighth anniversary of the surprising victory of the Americans under Gen. Daniel Morgan. In that battle the British lost, according to General Tarleton's report, 550 men. The American losses were 12 killed and 60 wounded.

The National Park surrounding the Cowpens monument the Cowpens Chapter of the Daughters of the Revolution are asking should be realized.

Indonesia—A Shocking Situation

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, as a nation that has always taken great pride in doing the right thing, we must be shocked by the situation which exists in Indonesia. It is possible only because we have given to the Dutch the money and equipment to carry out a venture that the United Nations has protested against.

In the January 10 issue of Between the Lines a résumé of that situation is revealed and I am asking leave to insert it in the RECORD as part of my remarks. Are we to be a party to the death of liberty and freedom in Indonesia?

DUTCH SHOWCASE

Behind the shocking news of the Dutch attack against the Indonesian Republic are some revealing and significant facts which are being suppressed. It is a showcase—exhibiting how war is made. News reports have touched lightly on the fact that the Dutch are using American-made weapons, that their bombs and planes are American made and many Dutch fliers were trained by the American Army Air Corps. But few American citizens realize that this brutal attack is also the result of manipulations in this country that are as traitorous as they are shocking. In spite of the face-washing in public on the part of our officials in Washington and the UN, hundreds of millions of people in Asia are beginning to hate America for our part in this uneven war. The loss to America's prestige and good will is incalculable.

One of the most powerful financial forces in America and in the world is the Dutch-British Shell Oil combine—with its many interlacing ties with other British and American oil corporations. Dutch and British tin cartels and the Dutch and British rubber monopolies are all closely knit together with Shell. These groups have powerful associations in Wall Street and Washington, which leads to the real mystery and betrayal of the American people in the Dutch war against the infant Indonesian Republic.

As early as 1945 and 1946 American press reports revealed that the Dutch were receiving new large shipments of American war materials—materials created and paid for by the American taxpayer for the defense of America. How did the Holland imperialists, who did little to help the American military forces rescue the Dutch colonial empire from the Japanese, get these military supplies diverted to them? That is a mystery that has never been cleared up and has been given the hush-hush every time inquiries are made. Then, long before the Marshall plan, almost before any postwar loans were being passed out, the Dutch received huge loans from our Government—loans that have become the backbone of the whole despicable scheme to restore empire plundering at the expense of the American people.

The shame-faced plea that the new Dutch attacks were necessitated by "terrorist action" must be viewed alongside the fact that George Washington was also considered a "terrorist," the Boston Tea Party was "sabotage." Terrorism there has been in Indonesia, but when "terrorism" was carried on by the Dutch against the Nazis, the Dutch were heroes.

What throws even more shame on this situation is the fact that the tiny Indonesian Republic had just been fighting Communist factions who had tried to gain control of the new government—when the Dutch struck. Who arranged this early diversion and perversion of American arms to the Dutch imperialists without the knowledge or consent of the American people; who promoted this financing of war against freedom, this treasonable betrayal of American ideals and money?

Our Government knows who these men are and where their offices are in New York. Some of our Congressmen are fuming and indignant over certain papers being passed out to Russia 10 years ago which contained so-called "secrets"—information that was known to every diplomat in the world at the time. If these Congressmen are really sincere in protecting the interest and ideals of America, why don't they do some investigating of those forces which have carried out a betrayal of the American people greatly exceeding any of the small-time Communist gum-shoeing that has been hysterically waved before the American people? But these Congressmen will do little, for it's not "good politics" to start investigations that lead to the threshold of certain stately doorways in New York.

A destruction of liberty is going on in Indonesia approaching anything the evil tyrants of Russia have ever perpetrated. The enormous propaganda weapons we have handed over to Russia as a result of this debacle are also incalculable. And the skillful manipulators of Moscow will not fail to use them to the utmost against America and American interests in the world.

This information service is dedicated to the revelation and removal of the causes of war. In these facts which are being so shamefully camouflaged in current press reports, plus the multitudinous double deals of Standard, Gulf, and other oil companies in the Near East grab, you are looking World War III square in the face.

Grain Storage Facilities

REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. MARTIN of Iowa. Mr. Speaker, during the recent campaign I discussed a great deal the corn-storage and wheat-storage problems. I have prepared a bill, which I am introducing today, to extend the amortization provisions of our wartime legislation for the construction of storage facilities for our crops. I hope it will receive favorable consideration by the Congress, because I am very, very much interested in helping our farmers meet the crop-storage emergency that will most certainly arise if we have a large or even a normal crop in 1949. In any such tax legislation we should also be fair to all who have helped to meet this need for storage facilities during the past year.

My bill will allow a farmer who buys or builds a bin or crib to deduct one-fifth the cost of it on his income-tax return each year for 5 years. For example, if his bin or crib costs him $1,000, he can deduct $200 on his income-tax return each year for 5 years.

Provisions were made during the national emergency immediately preceding World War II for amortization deduction for income-tax purposes of the cost of emergency facilities. This law authorized writing off the entire cost of certain facilities over a period of 5 years and the emergency period was limited to the period beginning January 1, 1940, and ending as of September 30, 1945. The huge crops of 1948 have given rise to a situation calling for all-out effort to encourage the construction of adequate storage facilities at the very time that costs are so excessive and taxes are so high as to retard the construction so seriously needed. This storage problem prevails all over the agricultural area of America.

Because of the all-time high production of corn, wheat, and other grains in the upper Mississippi Valley area and in the far West and the heavy cotton and tobacco production in the southern part of the United States in 1948, even a normal production in 1949 will greatly overtax farm and terminal storage facilities. In fairness to those who constructed storage facilities for the 1948 crops and in order to encourage the construction of adequate storage facilities for the 1949 crops, my bill, if enacted, will amend the Internal Revenue Code to authorize amortization deduction for farm storage facilities. It defines a "farm storage facility" as any farm corncrib, farm grain bin, terminal point warehouse, or country point warehouse acquired or completed on or after January 1, 1948, and in the case of projects started prior to that time but not yet completed on January 1, 1948, my bill provides for such amortization of the cost of construction done or acquisition made subsequent to that date. My bill provides that it shall be applicable to taxable years beginning after December 31, 1947.

I believe the record will show that there was a tremendous expansion of construction of elevators under the provisions of the old act, which has now expired. The storage emergency which now prevails in the agricultural sections and the prospective greater emergency arising from the harvest of the 1949 crops

creates an immediate need for the encouragement of individuals and of private industries generally to build storage facilities to prevent profligate waste of food and fiber throughout our land at the very time spoilage and destruction of these supplies may bring tragedy to our own people and to those people of other lands who are looking to us for help.

The bill I am introducing is not intended to take the place of any legislation Congress may consider for increasing the authority and funds available for the Commodity Credit Corporation in the matter of grain-storage facilities, but rather to supplement any action taken with respect to the work of CCC by encouraging private construction and ownership of greater storage facilities.

I hope the Eighty-first Congress gives my bill prompt consideration and approval.

Communist Activities in Czechoslovakia

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by James Heston from the New York Times of January 16, 1949:

HIGH ESCAPED CZECH DEFICTS PRAGUE AS A SOVIET COLONY—FOREIGN OFFICE SECRETARY SAYS NATION'S RESOURCES ARE REBUILDING RUSSIA

(By James Reston)

WASHINGTON, January 15.—Arnost Heidrich, secretary general of the Czechoslovak Foreign Office and for 14 years legal and political adviser to the late Dr. Eduard Benes, has escaped from Prague and come to Washington with a detailed story of Communist activities and plans in eastern Europe.

M. Heidrich, a white-haired 59-year-old civil servant who is well known and trusted by the United States Government, was brought here by United States authorities and has made a full report of conditions in Czechoslovakia to the State Department.

That report has been repeated by M. Heidrich to this correspondent in a series of conversations during the past few days and his conclusions—or that part of them that can be published at this time—follow:

1. Czechoslovakia is now under the "complete domination" of Moscow. President Klement Gottwald is on the whole "a good Czech," but he is not the strongest man in the Government and he holds his post mainly because Premier Stalin likes him personally.

2. The real power in Prague is held not by the Communist cabinet that took over after the coup in February of 1948, but by the Communist Party itself, headed by Rudolf Slansky, party secretary general, and by a new personality who appeared after the coup—a German Communist sent to Prague by Moscow—"a man named Geminder." (The Czechoslovak Embassy here at first denied knowledge of such a man but later identified him as Bedrich Geminder.)

"Geminder is the real power," M. Heidrich said. "He was at one time a close collaborator of [Georgi] Dimitrov [Communist Premier of Bulgaria] and while his official job is Czechoslovak representative to the Cominform, he is actually Moscow's principal agent in Prague."

3. The activities of the Soviet-dominated Communists in Czechoslovakia and the day-to-day control exerted over Czechoslovak policy by Moscow do not suggest that the Soviet Union is at present preparing for an aggressive war on the West.

"I do not know what their preparations are inside the Soviet Union," M. Heidrich said, "but they seem to be developing Czechoslovakia primarily as a source of economic reconstruction in Russia, as a source of military supplies and as a strategic territory that must be denied to the Western powers rather than as a base for attack on the West."

4. Mr. Stalin is trying to build an eastern Ruhr in Czechoslovakia and Poland. As is known, he summoned the prime ministers of the eastern satellite states to Sochi in the Crimea last September 20. This meeting was attended by President Gottwald, his secretary, Mme. Koehler—described by M. Heidrich as a Communist of considerable power who was invited by Mr. Stalin to attend the formal proceedings of the Czechoslovak-Soviet discussions in Moscow over the Marshall plan—and Herr Geminder; Foreign Minister Ana Pauker for Rumania; Premier Dimitrov of Bulgaria; and Matyas Rakosi, Communist deputy premier of Hungary.

M. Heidrich said that the proceedings of this meeting had been carefully kept out of the Czechoslovak Foreign Office, but that orders had been given for the Communist Party organizations in the satellite countries—as distinguished from the governments—to prepare detailed plans for the economic integration of eastern Europe under the constant direction of Moscow.

For some reason not apparent to M. Heidrich, Poland evidently was not represented at the Sochi meeting, but plans were nevertheless laid to include not only Poland but eastern Germany in the Soviet economic sphere.

5. A plan of gradual economic sanctions against the Tito Government of Yugoslavia also was outlined at the Sochi meeting and has since been put into operation. The Czechoslovak Government, for example, was induced to stop all shipments of arms from the Skoda factories to Yugoslavia, and since October there has been a gradual strangulation of Marshal Tito's trade from Czechoslovakia, Bulgaria, Poland, Rumania, and Hungary.

Mr. Heidrich, who managed to get his wife and only child out of Czechoslovakia just before Christmas, was under constant surveillance in his home and at the Foreign Office by the Czechoslovak police, who in turn, M. Heidrich said, are now controlled at the top by agents of the Soviet secret police.

He got out, he explained, because he was convinced that service to the Prague Government was now "service to Moscow," and there was absolutely no hope, he said, in a policy of appeasement.

M. Heidrich has had some experience with foreign conquerors before. He entered the Czechoslovak foreign service in 1919. He was principal liaison officer between the Foreign Office and President Benes from 1935 to the outbreak of the war, and in that capacity served for a time as Dr. Benes' contact with the Runciman mission, which helped prepare the way for the Munich pact.

ONCE SENTENCED TO DEATH

He remained in Czechoslovakia during the war, was arrested by the Gestapo and sentenced to death, but avoided this fate through the intervention of the International Red Cross. His feeling now is that he can work for the best interests of his country by helping form a Czechoslovak liberation council in this country. A meeting to establish this council will be held here later this month.

M. Heidrich emphasized that the Soviet Government was determined to create a new form of mercantile colonialism in its relations with the states of eastern Europe. It is doing so, he felt, to bolster its own economic weakness at home and to counteract the influences of the Marshall plan.

At the present time, he reported, the Russians are getting some tanks and guns from Czechoslovakia, but are demanding shipments of these in a semifinished state so that they can finish them in secret and in accordance with their own specifications inside the Soviet Union.

It is obvious, he said, that they do not trust the Czechoslovak Army, and do not feel that they could fight a war against the west on Czechoslovak soil.

He added it was his opinion that if war did break out the Russians would not draw their lines at the western Czechoslovak frontier but build them inside the Soviet Union itself.

More than guns and tanks, however, he explained, what the Russians are seeking from Czechoslovakia is steel rails and rolling stock to help repair their battered transportation system. The same thing appears to be true elsewhere in Eastern Europe: The Russians are using every possible kind of pressure and police state tactics to gain control over the economic life of the whole Eastern European area with a view to rebuilding their own strength at the expense of others, Mr. Heidrich added.

Moreover, they are working, he emphasized, on long-range plans. The process of collectivizing the land is being pressed in an effort to create reforms that could not easily be changed. This was evidently discussed at the Sochi conference, he said, where instructions were given to press for the nationalization of retail trade and small farms.

M. Heidrich, who went to Moscow when the Czechoslovaks were summoned there for having agreed to participate in the Marshall plan, said that the Soviet thesis on this plan was extremely simple. The United States, Soviet officials explained, is getting into the most severe economic situation. The European recovery program is really nothing but a dramatic illustration of the desperate efforts capitalistic countries will adopt to avoid economic collapse. What former Secretary of State Marshall and President Truman are really doing, it was explained, is adopting a policy of imperialism to assure themselves of markets and no ally of the Soviet Union could be permitted to consider cooperation with such a plot.

SATELLITE POLITICS AVOIDED

Though every effort is being made by the Soviet Union to organize the "new mercantile colonialism" in Eastern Europe, few efforts are being made by the Moscow Government to help the satellites solve their political disputes, Mr. Heidrich said.

In both 1945 and 1946, he related, the Czechoslovak Foreign Office asked Moscow to try to arrange a settlement of the Czech-Polish dispute over Teschen, but got absolutely no cooperation.

The same, he added, was true of the Rumanian-Hungarian boundary questions and all other inter-satellite political relations: always Moscow preserved these disputes as bargaining points to obtain the economic assistance they wanted from Eastern Europe.

Turning to United States-Soviet relations, M. Heidrich said that the primary objective of Soviet policy was to get United States troops out of the Continent of Europe. He was told repeatedly by Communists, he said, that the United States was the one power that stood in the way of Communist plans

in Europe and that every effort must be made to induce the United States troops to withdraw.

For months, he asserted, the Soviet Union gradually has been preparing plans to reach a settlement in Austria under which the Western armies would pull out. If this were done, he observed (the State Department dissents on this point), the Soviet chances of communizing Austria would be good, and Russia not only would then be able to stir up agitation in Germany for withdrawal there but might be able to create a Communist Austria that could embarrass and surround Marshal Tito and open up a direct route through Communist held territory from the Soviet Union to the Italian frontier.

One of the remarkable things about Soviet officials, M. Heidrich said, is their confidence that in time they can achieve their aims not only in Europe but in the United States as well. They honestly and sincerely believe, he asserted, that they can win the minds not only of the Europeans but of the Americans as well.

"I stress it," M. Heidrich said. "They believe that if they can avoid inflaming American public opinion too much, if they can avoid a Pearl Harbor mentality from arising in the United States, they will gradually be able to prevent the American Government from winning public support here in this country."

There is resistance in Czechoslovakia the former Secretary General reported, by a plodding people who now know what they have lost—they are now working 6 days a week and getting a lower standard of living than before the coup—but that resistance is not likely, he added, to create another Tito situation in his country.

Only in Yugoslavia, he observed, was there sufficient strength at the end of the war to prevent the effective infiltration of the Moscow agents. Elsewhere—in Czechoslovakia, and even in Poland—the Communists were in control of the economic life of the country and of the means of terrorizing the population.

The resistance, however, was sullen and rested on the hope of steady opposition to Soviet policy by the United States. For Washington to abandon the firm policy, M. Heidrich said, would be a disaster.

"You would end the resistance to Soviet policy and in the end you would lose Europe," he added.

Other points made by M. Heidrich were these:

In 1946 President Benes might have been strong enough to oppose the Communist plans. He did oppose them when M. Gottwald attempted to make Zdenek Fierlinger, former Czechoslovakia Ambassador to Moscow, Foreign Minister. At that time, Dr. Benes told M. Gottwald that he would never approve the appointment.

But after two strokes, one in July and the other in September of 1947, Dr. Benes was in such poor physical condition that the least excitement unbalanced him and prevented him from making any decisions at all.

Jan Masaryk, son of Thomas G. Masaryk and former Czechoslovak Foreign Minister, committed suicide, without the slightest doubt. M. Heidrich saw him every day during the last few weeks of his life. M. Masaryk talked constantly, first of escaping to the west and then of suicide, and apparently chose the latter because there were times when he expressed the fear that he had gone too far in trying to placate both sides.

The Czechoslovak Government is arranging for the release of arms to Israel, partly because it is a good source of dollars and partly because Moscow is interested in creating an area of unrest in the Near East.

Compulsory Health Insurance

EXTENSION OF REMARKS
OF
HON. FREDERICK C. SMITH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article written by Dorothy Thompson:

[From the New York Mirror of December 26, 1948]

ON THE RECORD

(By Dorothy Thompson)

It seems certain we are going to take another step on the road to bureaucratic collectivism by the passage of a compulsory health insurance bill, to which President Truman is pledged.

The United States Public Health Service is for it, as every Government agency is always for extension. The labor unions and farmers' organizations are for it because it sounds good. Industry would like to saddle the Federal Government with the expense of workmen's compensation cases. Professional social workers foresee great opportunities for themselves. And a mere 150,000 physicians, 90 percent of whom are against it, cannot buck the trend. Besides, they are supposed to be prejudiced, on the current theory that those who know most about anything are not reliable witnesses.

Also, the opposition has not been intelligent. It has ranted against socialization as though the mere word had conjuring powers. Let this opponent, therefore, make herself clear. I am not against it because it is socialistic, but because it is the application of national socialism in the least appropriate field. Also, I have lived under such medical systems in England, Austria, and Germany. They were awful.

They cost the people far too much, provide inferior services at a high price, are incapable of dealing with really serious and complicated cases. They result in two sorts of medicine—good medicine for the well-to-do, and bad for the masses.

The great joker in all these schemes is that they are put forward as free—something for nothing. Let their proponents at least tell the truth. What is advocated is compulsory insurance.

Every worker in this country will have the cost subtracted from his pay envelope and added—by his employers—to the price of everything he buys. He will be paying for unused aspirins when he needs the money for oranges. He will be supporting innumerable filing clerks—a horrendous paper staff for 150,000,000 people. When and if he gets ill he will find himself as 1 of 50 patients—half of them hypochondriacs bent on getting service for their money—whom a physician must examine in an hour.

And if he really is ill—and finds that under the slap-happy methods of overworked doctors, whose fees are assured anyhow, he gets not better but worse—he finally will in desperation consult one of those private physicians who refuse to join the assembly line and, atop all he already has put up, week by week, pay a private fee.

How do I know this? Because I have experienced it.

Just why this most inventive country seems compelled blindly to copy social measures originating elsewhere is baffling. We need better health service. Granted. We need many, many more hospitals. The existing hospitals need public aid, since the sources of private support are increasingly drained off in taxes. And we need more genuinely free medicine for people in real jams.

But before Congress passes any bill for universal sickness insurance—falsely called health insurance—it owes it to the American people to tell them exactly what a person with, say, an income of from $2,000 to $3,000 a year is going to have to pay over a working life of 40 years to take care of his illnesses, and just what services the Government positively guarantees him in return for his money. Will it, for instance, sign on the dotted line that if his wife is in labor the Government guarantees a bed and a physician at the critical moment?

Don't make me laugh. I've lived under these schemes.

The St. Lawrence Waterway

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. WHITE of Idaho. Mr. Speaker, the construction of the St. Lawrence waterway and opening of the Great Lakes to ocean navigation is the next great step in our national development. There is inserted herewith a memorandum received from the chairman of the National St. Lawrence Project Conference and my comments thereon:

NATIONAL ST. LAWRENCE
PROJECT CONFERENCE,
Washington, D. C., January 11, 1949.

MEMORANDUM

In recent weeks, a clamor has been set up by a certain group in the iron and steel industry, calling for construction of the long-proposed deep canal in the St. Lawrence River. They want it for the importation of iron ore from the Labrador-Quebec region. Their argument is the same that was told in the Senate a year ago.

The leader in this campaign is a firm—the only United States firm—engaged in the development of the Labrador-Quebec iron-ore field. It is reported that their project is now reaching the stage when large-scale financing will be required, and popular interest in it might be very helpful.

A very different story of the ore situation comes from some others in the industry. They see in the proposed canal an invitation to the entry of cheaply mined ores from outside the North American continent, and discouragement of the development of our own inexhaustible resources of taconite and other low-grade-iron ores.

This view is well stated in a letter recently written by Mr. Alex C. Brown, president of the Cleveland Cliffs Iron Co., a copy of which is attached. I am sure you will find it an important addition to the discussion of the St. Lawrence River question.

Very truly yours,
CARROLL B. HUNTRESS,
Chairman.

JANUARY 17, 1949.

Mr. CARROLL B. HUNTRESS,
Chairman, National St. Lawrence Project Conference,
Washington, D. C.

DEAR MR. HUNTRESS: Making reference to your memoranda of January 11. There is in central North America surrounded by one of the richest agricultural zones and productive

areas on the globe, one of the extensive inland coast lines in the world—the shore line of the Great Lakes, a district in which is located many of the world's most progressive cities and productive industrial centers.

To any casual observer it is apparent that a relatively small investment in enlarging existing waterways to bring ocean navigation to the Great Lakes will extend the advantage of oceangoing transportation to central United States to stimulate the development of one of the most productive areas in the Nation.

As a citizen interested in the upbuilding of our country and advancement of our Nation, I am at a loss to understand the motive of any group or organization of people with the security of our industrial and armament production at heart that will oppose the simple plan to construct the St. Lawrence waterway and bring the multiple benefits of this development to the United States and central North America.

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

Regular Veterans Association Offers Strong Veterans Program Under New Leadership

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. HAGEN. Mr. Speaker, many Members of Congress have become acquainted with the Regular Veterans' Association. They have been in the forefront fighting for proper legislation for veterans of the American regular army for many years past.

Late last year at the National Convention held in Denver, Colorado, a new national commander was elected. He is a veteran from New York City who has been active in veterans' affairs and veterans' organizations for many years. I refer to the Honorable H. David Frackman.

National Commander Frackman delivered a brief address over the Mutual network at 2:45 p. m. eastern standard time on January 16. I believe his remarks will be of interest to Members of Congress and readers of the CONGRESSIONAL RECORD.

His talk follows:

The legislative program submitted to the President and the Eighty-first Congress by the Regular Veterans Association seeks to protect the interests of the veteran and the servicemen alike. We will actively help them and their families to obtain benefits now denied them. For example, the married enlisted personnel of the armed forces who are below the rank of the first three top grades do not receive family subsistence or quarters. We believe this unfair. The high cost of living, and housing off military or naval reservations creates a real hardship for these men and their families. We have recommended that all married enlisted personnel, regardless of grade, be furnished with quarters and subsistence for their families or granted an equivalent allowance for quarters, if housing is not available on the reservation.

We urge every possible benefit be extended to disabled veterans whose disability was received by reason of service to their country. These men are entitled to effective rehabilitation programs and we insist that every effort be made to help them receive the care and comfort they have justly earned.

We believe in a strong, national military program; one which will insure safety and security for the United States and its people, and discourage any attempt on the part of others to precipitate war.

We stand squarely behind the President in his effort for a permanent and lasting peace. We urge all Americans to give full support to the organization of the United Nations. We firmly believe it can and will in time solve the differences which now exist between nations.

We believe it to be the solemn duty of veteran organizations to safeguard in time of peace the freedoms so valiantly defended in time of war. Our heroic war dead, if they could speak, would ask us to unite in a common effort to preserve the priceless freedom handed down to us by our forefathers. We must guard against these groups who seek from within and from without our borders to impair our democratic structure of government.

We, in the Regular Veterans' Association, are dedicated to the task of maintaining, advocating, and extending freedom of speech, press, religion, and assembly; and to aid the abolition of ignorance, prejudice, and intolerance. These ideals are a mandate to us, specifically set forth in our certificate of incorporation. They form the integral part of our Americanism program.

We ask all veterans, veteran organizations, service men and women, and those who are or will shortly be members of our peacetime draft army, to join with us in perpetuating these ideals, to the end that we suffer no impairment of the fundamental freedoms guaranteed us by our American Bill of Rights.

As Americans we were united in war in the service of our country. Let us now in peace again unite to preserve our American way of life.

Mr. Speaker, also of interest to Members of Congress, the veterans of the country, and the general public as well, is a program for veterans including the legislative program for 1949.

It is given in a circular sent out from the national office of the Regular Veterans' Association, 1115 Fifteenth Street NW., Washington, D. C., under the title of "You Should Join the Regular Veterans' Association and Support Our Legislative Program." It follows:

The voice of the RVA is your voice. You are the RVA. Support the RVA morally and financially and it will work for you, your family, your home, your country, your rights, and privileges as American citizens. The following program invites your support. We're going places. Why don't you come along?

1. We are fighting for reinstatement of the wartime tax exemption of $1,500 for all members of the armed forces.

2. We are for parity in pensions and disability compensation for all veterans and for equal treatment of their dependents.

3. We advocate equal allowances for quarters for all married enlisted personnel of the armed forces regardless of grade.

4. We are giving active cooperation in child welfare work. Reduced juvenile delinquency means better citizens. Better citizens mean a stronger America.

5. We are opposed to communism or any ideology that would undermine our American way of life.

6. We urge practical and reasonable rehabilitation of all veterans who have served or are serving our country either in war or peace and that their dependents be provided for accordingly.

7. We want liberalization of requirements for total and permanent disability of veterans regardless of service connection.

8. We urge universal military training for strengthening national security.

9. We are for support of the United Nations Organization in its endeavor to bring about world peace and understanding, to the extent that it is supported by our own country.

10. We will exert every effort in the Eighty-first Congress, and otherwise, to safeguard the rights and privileges of all Americans for adequate, low-cost housing. We stand for the principles of the Taft-Ellender-Wagner bill for a long-range housing program and will give active support to its enactment.

11. We urge the use of surplus funds of the United States Soldiers' Home for additional and much needed housing on the reservation.

12. We urge a housing program for the personnel at Bethesda Naval Medical Center and other similar hospitals.

13. We will make every effort to exempt from taxation the retired pay of enlisted men of the armed forces.

14. We will work for increased medical attention, hospitalization, and compensation for tubercular veterans of both war and peace.

15. We will make every effort to protect employment preferences for veterans.

The Housing Shortage

EXTENSION OF REMARKS
OF
HON. RAYMOND W. KARST
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. KARST. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a resolution from the members of the First St. Louis County Chapter No. 39, American War Dads, which I heartily acknowledge and endorse:

Whereas there is at present an acute housing shortage in the United States, due primarily to the fact that during the recent war there was very little building on account of lack of material and diversion of labor to national requirements; and

Whereas due to the marriages of many thousands of young people, the majority of whom are veterans of the last war, the housing situation is daily becoming more aggravating since the cessation of hostilities; and

Whereas a great many people are thereby forced to live under undesirable, and certainly undeserved, conditions due to no fault of their own; and

Whereas a continuance of this will jeopardize the lives of a great many of our citizens because of unhealthy environments; and

Whereas the financial status of most of those affected by this situation does not permit the purchasing of homes for cash; and

Whereas in view of the above-mentioned prevailing conditions, there is apparently no early remedy or relief from this unpleasant situation: Be it

Resolved, That the members of the First St. Louis County Chapter No. 39, of the American War Dads, through their duly elected and authorized officers, solicit and implore their legislative representatives in State and national capacities to initiate, advocate, and support such legislation as will produce throughout this State and Nation low-priced housing, with small down pay-

ments upon terms which will not work a hardship on the purchasers; that because of the urgency of the situation they act promptly endeavoring to accomplish the enactment of the necessary legislation as quickly as possible.

WM. H. SANTEN,
President.

Attest: LEONARD P. ALBERS,
Acting Secretary.

Columbia Valley Authority Needed in Pacific Northwest

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. MITCHELL. Mr. Speaker, the severe shortage of electrical power in the Pacific Northwest, as well as in the entire Nation, demands a comprehensive and farsighted program for the maximum development of the power potential in our great rivers. In my section of the country, the power shortage is more than an emergency; it has become chronic. Since 1946 regional requirements have not been met. For the next 6 to 8 years, this power deficiency will continue under present schedules of dam construction. Emergency measures are being adopted to take care of the most pressing power needs, but the permanent economic welfare of the Pacific Northwest demands a permanent solution. The time has come to appraise and integrate the various plans for development of the great Columbia River and to translate them into a unified, effective operating program. This requires a Columbia Valley Authority.

Within the past year both the Reclamation Bureau in the Department of the Interior and the Corps of Engineers in the Department of the Army have prepared comprehensive surveys of Columbia River development. The Bonneville Power Administration, which is the regional marketing agency for the Federal Government, emphasizes in its 1949 advance program report:

These plans clearly show the need for viewing the river and its tributaries as a whole from the mountains to the sea. The maximum benefits can be obtained only by a development which locates the various structures and facilities so that they are designed for coordinated operation. In the field of power this requires a major transmission network interconnecting the various plants and load centers. As the water from the upstream storage reservoirs flows through the series of downstream plants and is used over and over again, the power generated can move between the various areas according to water conditions and load requirements. The operation of water storage and release can be integrated so as to provide for flood control, navigation, irrigation, and power production.

The President in his budget message to the Congress points out that the magnitude of our investment in natural resources and its economic importance make it necessary to exercise careful surveillance of the programs in order to prevent waste and insure sound development. In this connection, specifically, he urges the application of TVA principles wherever they can insure the above objectives. For the Pacific Northwest, economy and sound development of natural resources require a Columbia Valley Authority.

Mr. Speaker, I am today introducing a bill making the first Tuesday after the first Monday in November, in every even-numbered year, a legal holiday. A companion bill has been introduced in the Senate by Senator MAGNUSON of my State and Senator HUMPHREY of Minnesota.

Mr. Speaker, I wish to emphasize the importance of this measure for the continued strength and vitality of the democratic process. On November 2 of each election year, American citizens exercise the greatest privilege of a democracy—to decide by free and secret ballot who shall be their representatives to carry on the great affairs of government. In my opinion it is imperative that this day be set aside for the fullest exercise of the voting privilege.

The majority of the voting population is drawn from those who work for a living. The difficulties of getting to the polling booth before, after, or during work hours are well known to many of you. In my district, which includes the great cities of Seattle and Bremerton, the past election witnessed an excessive congestion of prospective voters at the polls. Many were unable to vote within the deadline, or they left because they simply could not afford to spend hours waiting at the polling booths. Thousands of workers were, in effect, denied the exercise of their franchise.

I recognize, of course, that the local authorities bear a responsibility to provide adequate voting facilities. Nevertheless, Mr. Speaker, we in the Congress can provide the framework for more orderly and efficient voting procedures and for maximum opportunities to cast the vote by passage of the bill which I have today introduced. I am sure that the voters who work for a living will be most grateful for the recognition by Congress of the practical problems which confront them on election day.

When Will We Awake?

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial entitled "When Will We Awake?" which appeared in the New Hampshire Morning Union on January 14, 1949:

WHEN WILL WE AWAKE?

If anyone has any doubt about the effects of a Communist conquest of China throughout the Far East, it should be removed by the report of Lindesay Parrott to the New York Times from Tokyo.

Japanese political experts, Mr. Parrott says, are reckoning that the Communist Party in Japan will more than double its vote of 2 years ago in the general election scheduled for January 23. In the last election, the Communist vote was 1,367,000, and if forecasts are correct, will be 2,700,000 this month. Whereas the Communists elected four members to the Diet 2 years ago, they are expected to elect between 12 and 20 this time.

How does Mr. Parrott explain this advance of communism under the American occupation? Better organization, and the switching of some Socialists to the Communist Party through disgust over the recent scandals in which the Socialist Party was implicated, are factors. But he finds the main reason in the Communist victory in the Chinese war, and the impotent policy of the United States toward China. The Communists in Japan have seized upon this incident as proof that communism will eventually triumph in Asia, and many Japanese voters are deciding that if this is so, they had better get on the bandwagon.

If this is happening in Japan under American occupation, what may we expect in Indochina, Malaya, and Indonesia, where there are large Chinese populations, and where discontent is fanned by political unrest. The Soviets are not blind to the advantages offered them in all these areas. They have already sowed the seeds of Communist agitation among the Chinese throughout southeast Asia and if they gain control of China, their plan of campaign will immediately be intensified in that area.

Do not have any doubt in this matter. That Communist control of China will lead to control of Asia is written out clearly for anyone who wants to read. In this connection, a recent statement by a Japanese publisher that publications on the American type of democracy are becoming less popular in Japan, while criticism of democracy with a few kind words for communism receive prompt public acceptance.

When will we awake to the disaster that we are sowing for ourselves in the Far East by a stupid policy that is handing China over to Soviet Russia? While we oppose communism in western Europe, we follow a sell-out policy in Asia that will make communism so strong that it will become invincible.

Brass Goods Plant Cuts Workweek

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a clipping from the Waterbury (Conn.) American, edition of Friday, January 14, 1949, wherein it states that the Waterbury branch of the American Brass Co. will curtail its present working schedule starting tomorrow. This curtailment of operations to either a 24- to 32-hour week is necessitated because of the growing shortage of copper.

There is presently in operation Public Law 42, which was an enactment of a bill I introduced in February of 1947, to grant a 2-year suspension of the $8-per-ton copper import-excise tax. Authority for such suspension lapses on

March 31 of this year, and if not renewed, as is contemplated in H. R. 260, introduced by me on January 3, 1949, not only this factory but a great portion of our industry will be forced to curtail operations.

The industrial Northeast is, at the present time, facing a leveling off of employment which has deprived many skilled laborers of their economic security, and it would be shameful neglect on the part of this Congress if we were, by virtue of our lethargy, to be responsible for further lay-offs.

I call this matter to the attention of the House, at this time, so that appropriate and immediate action may be taken on H. R. 260 to assure continued production and employment in our most vital industries.

The article follows:

BRASS GOODS PLANT CUTS WORKWEEK—ABC WORKERS START TUESDAY ON 24- TO 32-HOUR SCHEDULE

Waterbury brass goods branch of the American Brass Co. will go on a 24- to 32-hour-a-week schedule starting next Tuesday. Fewer orders from customers is responsible for the condition that will drop part of the plant to 3 days of operations and the balance to 4 days.

The branch went on 4 days last fall but gradually returned to 40 hours under the impetus of a year-end business spurt.

Departments operating on the 3-day schedule will work Wednesday, Thursday, and Friday. Those on 32 hours will run Tuesday through Friday.

Operations also have been curtailed to some extent in other branches of the company's Waterbury division. The casting shop and North rolling mill are said by CIO officials to have been affected by short time. Management spokesmen could not be reached for comment.

COPPER SHORTAGE AFFECTS OPERATIONS

Last month officials said operations have been touched by the growing shortage of copper. They expressed hope for speedy passage by Congress of the Patterson bill to extend the suspension of the 4-cents-a-pound excise tax on foreign-mined copper. The current act, which expires March 31, would be renewed for 2 years under the bill presented by Representative JAMES T. PATTERSON.

The slump in the brass goods division is due almost entirely to a decline in orders from other manufacturers served by this unit of the eyelet industry. About 75 laborers will be affected by the cut to 3 days and 325 skilled and semiskilled workers by the 4-day schedule.

The company resorted to curtailment of operations to spread the work and avert lay-offs, a spokesman said.

Bills Introduced

EXTENSION OF REMARKS
OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include copies of the following bills and resolutions introduced by me in the Eighty-first Congress to date:

H. R. 83, introduced January 3, 1949, a bill to outlaw the Communist Party:

Be it enacted, etc., That from and after the first day of the third calendar month following the month in which this act is enacted it shall be unlawful for any individual knowingly and willfully to become or remain a member of the Communist Party. As used in this section, the term "Communist Party" means the political party now known as the Communist Party of the United States of America, whether or not any change is hereafter made in such name.

SEC. 2. Whoever violates any provision of the first section of this act shall, upon conviction thereof, be punished by a fine of not more than $10,000 or by imprisonment for not more than 10 years, or by both such fine and imprisonment.

H. R. 84, introduced January 3, 1949, a bill making appropriations for and on behalf of the Department of the Air Force for the fiscal year ending June 30, 1950:

Be it enacted, etc., That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, for the fiscal year ending June 30, 1950, the sum of $7,000,000,000, to be expended, in order to carry out the functions and operations of the Department of the Air Force, of which sum of $7,000,000,000 the sum of $2,738,000,000 is hereby allocated for the procurement or purchase of aircraft; (a) by the Department of the Air Force and (b) by the Department of the Army for and on behalf of the Department of the Air Force.

H. R. 85, introduced January 3, 1949, a bill making appropriations for the Department of the Navy for the fiscal year ending June 30, 1950:

Be it enacted, etc., That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, for the fiscal year ending June 30, 1950, the sum of $7,000,000,000, to be expended by the Department of the Navy in carrying out its functions and operations, of which sum of $7,000,000,000 the sum of $2,346,000,000 is hereby allocated for the procurement or purchase of aircraft.

House Joint Resolution 36, introduced January 3, 1949, joint resolution proposing an amendment to the Constitution of the United States relative to treaty ratification:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as a part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"ARTICLE —

"SECTION 1. The President shall have power, by and with the advice and consent of the Congress, to make treaties, provided a majority of the Members present in each House concur.

"SEC. 2. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within 7 years from the date of its submission."

House Concurrent Resolution 6, introduced January 3, 1949, to express the sense of Congress that the national interest demands that immediate and effective aid should be given the Republic of China:

Resolved by the House of Representatives (the Senate concurring), That it is the sense of Congress that the continued existence of the Republic of China is threatened, and that the national interest demands that prompt and forceful measures be taken by the Government of the United States to provide assistance to the Republic of China. Therefore, the President is respectfully requested to formulate a program to furnish assistance to the Republic of China in meeting its present crisis. In order that the assistance given the Republic of China shall be both immediate and effective, it is requested that the program so formulated include (1) provisions for the initial expenditure of $1,000,000,000, (2) provisions for the immediate dispatch of increased military missions to China to advise the Government of the Republic of China as to the conduct of its military operations, (3) provisions for the immediate mustering of sufficient transportation facilities, both surface and air, to insure that assistance to the Republic of China shall not be delayed for lack of such facilities, and (4) provisions for the immediate expenditure, without regard to the restrictions imposed under existing law, of such unexpended funds as have been heretofore appropriated for the aid of China. The President is further respectfully requested to submit to Congress as soon as possible the program so formulated, together with proposals for the legislation necessary to effectuate such program.

House Resolution 33, introduced January 6, 1949, creating a select committee of the House of Representatives to conduct an investigation of the economic and political foreign policy of the United States:

Resolved, That there is hereby created a select committee to be composed of 19 Members of the House of Representatives to conduct a thorough study of international relations and to carry out a searching investigation of the Department of State and the Foreign Service. Recognizing the concern of other committees whose areas of legislative jurisdiction cover matters of vital importance in the question of foreign policy, such a select committee should be composed of 19 members as follows: 7 members who are members of the Committee on Foreign Affairs, 4 from the majority and 3 from the minority party, to be appointed by the chairman of the committee; 3 members from the Committees on Appropriations, Armed Services, Banking and Currency, and Interstate and Foreign Commerce, to be appointed by the chairmen of those committees.

SEC. 2. (a) It shall be the duty of the committee to conduct—

(1) a comprehensive study of all phases, both economic and political, of the foreign policy of the United States, including a complete review of our interests in all parts of the world; such study to be made with respect to each foreign country and each geographical region, such as the Balkan States, the Middle East, Central and South America; and so forth; and

(2) an investigation of the Department of State and the Foreign Service of the United States.

(b) Such study and investigation shall be made for the purpose of enabling the committee to make such recommendations as it deems advisable with respect to—

(1) the formulation and execution of a realistic over-all foreign policy for the United States which will serve the best interests of the United States;

(2) improvements in the operation and administration of the Department of State and the Foreign Service of the United States;

(3) methods for securing accurate and up-to-date information concerning world conditions; and

(4) the communication of such information to the people of the United States.

SEC. 3. Such recommendations shall be embodied in reports to the House (or to the Clerk of the House if the House is not in session) which shall be made by the committee during the present Congress at intervals of not more than 90 days; the first report to be made within 90 days after the date of the passage of this resolution and the final report to be made on January 2, 1951.

SEC. 4. For purposes of carrying out this resolution the committee, or any subcommittee thereof, is authorized to sit and act during the present Congress at such times and places within or outside the United States, whether or not the House is sitting, has recessed, or has adjourned, to hold such hearings, to require the attendance of such witnesses and the production of such books, papers, and documents, and to take such testimony as it deems necessary. Subpenas may be issued over the signature of the chairman of the committee or any member designated by him and may be served by any person designated by such chairman or member.

House Resolution 34, introduced January 6, 1949, providing for the expenses incurred by the special committee authorized by House Resolution 33:

Resolved, That the expenses of the study and investigation to be conducted by the select committee created by House Resolution 33, not to exceed $50,000, including expenditures for the employment of investigators, attorneys, and clerical and stenographic assistants, shall be paid out of the contingent fund of the House on vouchers authorized by such committee, signed by the chairman thereof, and approved by the Committee on Accounts.

House Concurrent Resolution 10, introduced January 6, 1949, expressing the sense of the Congress that there should be a bipartisan platform on foreign policy:

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress of the United States that there should be a bipartisan platform on foreign policy, including the following principles:

(1) Because this Republic was brought into being for the prime purpose of laying the foundations for a just and permanent peace, and because every true American is devoted to the achievement of this objective, the United States should firmly dedicate itself and all of its resources to the maintenance of its destiny-given position of leadership for world peace.

(2) Because it is desirable to give the Members of Congress a more potent voice in the development and in the implementation of foreign policy, there should be appointed immediately a select committee of the House to conduct a thorough study of international relations and to carry out a searching investigation of the Department of State and the Foreign Service. Recognizing the concern of other committees whose areas of legislative jurisdiction cover matters of vital importance in the question of foreign policy, such a select committee should be composed of 19 members as follows: Seven members who are members of the Committee on Foreign Affairs, four from the majority and three from the minority party, to be appointed by the chairman of the committee; three members from the Committee on Appropriations, Armed Services, Banking and Currency, and Interstate and Foreign Commerce, to be appointed by the chairmen of those committees.

(3) Because the United States must continue to exercise leadership in the establishment and functioning of a real, workable, and effective world organization, we must recognize that Russia's failure to cooperate has made it impossible for the United Nations to operate as intended. The United Nations remains an infant organization whose impeded growth keeps it from exercising the mature functions of a peace-preserving agency for the world. It still has a promising vitality, and we should continue our efforts to eliminate its defects, chief of which is the veto. While its development remains halted by Soviet intransigeance it is obviously incapable of exercising many of the powers given it by the peace-loving nations that signed the Charter. We have reason to hope that someday the United Nations will be permitted to attain full effectiveness and serve mankind as intended. Until then, common sense leads us to seek security in defense agreements between truly peace-loving countries, such as the Rio Pact and the Atlantic Pact which is now in preliminary drafting stages. Such pacts or agreements have the virtue of keeping the spark of vitality in the structure created at San Francisco and at the same time bypassing the crippling effects of the Soviet attempts to prevent achievement of real security through their habitual misuse of the veto power.

(4) Because diplomatic appeasement, which has failed in the past, leads only to conflict, such appeasement of the Union of Soviet Socialist Republics should cease.

(5) As long as aid to free nations is effective in checking the advance of the Union of Soviet Socialist Republics and preventing the spread of communism, economic assistance to rehabilitate the economies of nations resisting Russian aggression and the spread of communism should be continued by the United States.

(6) If a democratic nation, threatened by a Communist minority which is either directly or indirectly aided, abetted, and controlled by the Union of Soviet Socialist Republics, asks aid of the United States, assistance should be extended, be it economic or military.

(7) The United States should (a) inform the world, and particularly the Union of Soviet Socialist Republics, that it intends to use its force to stop aggression directed at strategic points such as the approaches to the Atlantic, Gibraltar, the nations of western Europe, the Dardanelles, Greece, Turkey, Iran, the Near East, the Persian Gulf area, China, and the islands of the Pacific; (b) state clearly that whenever there is an encroachment on these areas, or any other strategic positions, the integrity of which the United States deems essential to its security and survival, the nation making such encroachment will meet the immediate, sustained, and unrelenting resistance of the United States; and (c) for the self-interest of the United States and the peace of the world, establish a line beyond which an aggressor may not move without encountering the full force and power of the United States.

(8) Because the achievement and the maintenance of adequate preparedness on the sea, on the land, and more especially in the air, and because atomic supremacy and air supremacy by the United States must be realized at all costs, the funds required to keep it the strongest military nation should be appropriated, provision for full and adequate manpower for the armed services should be made, and the armed services should move efficiently and effectively to an early and full realization of this determined objective.

Committee on Un-American Activities Assignments

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. HÉBERT. Mr. Speaker, there is a political axiom that you can do anything you want to do when you have the votes.

That axiom has been obviously applied to me because I have exercised political independence in Washington and Louisiana, and as a result I have failed to be reassigned—or if you care to use the real term, I have been "purged"—to the Committee on Un-American Actitives for the Eighty-first Congress.

It would have been far more commendable and courageous of those responsible for this move if they had not resorted to subterfuge in the best Machiavellian technique to attain their end. Their position is directly in contrast to mine, which has always been straightforward, forthright, and to the point. My political integrity is not on the auction block. I am immune to political police thought, control, and action through fear of reprisal.

I know it displeased some individuals when I refused to play politics as a member of the Committee on Un-American Activities and instead always kept in mind the security of America as my first objective in preference to the machinations and wishes of partisan politicians. I was critical of the attitude of both Republicans and Democrats by refusing to participate in any plan or scheme which would either smear or whitewash individuals. I sought only the truth and attempted to bring some balance to a rather unsteady procedure. The reward for that contribution is the failure to reassign me to the Committee on Un-American Activities under the rather feeble and puny guise that only lawyers were to be selected on the committee. An artful device has been effectively employed.

In Louisiana, I supported and participated actively and openly in the States' rights movement, in which I believed and still believe. Apparently this was a mortal sin in the eyes of some individuals who would now have me seek forgiveness and absolution. I have no inclination nor desire to do either. I have nothing to apologize for. Election results do not change my principles.

It was and still is my intention to cooperate as far as consistently possible with President Truman's program, but I cannot and will not divorce myself from the principles with which I have lived for so many years. I was elected as a Democrat by the people of Louisiana and shall conduct myself according to their wishes and instructions. I am responsible to them and to them alone.

The denials of reprisal and punitive action are not convincing in view of the

facts. The inescapable truth of the matter is that a precedent was broken in failing to reassign me to the Committee on Un-American Activities solely because I openly espoused the principles of States' rights. They could not find a legitimate reason so they confected a flimsy excuse. They prefer to resort to indirect and subversive methods instead of direct and aboveboard admissions. Such methods do not command nor merit the respect of those who believe in fair play.

The practice of the political purge is not a new art. It has always been indulged as a means of liquidation by those who refuse to recognize the right of an individual to think and act for himself.

I shall continue to say what I think and do what I say.

Irregular Air Carriers

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I desire to include a letter written to the Civil Aeronautics Board on the subject of irregular carriers by Mr. Jack F. Scavenius, president of Mount McKinley Airways, Inc.:

JANUARY 10, 1949.

CIVIL AERONAUTICS BOARD,
Washington, D. C.

Re Economic Regulations Draft Release No. 33, dated December 10, 1948.

GENTLEMEN: The following are our thoughts and suggestions concerning proposed revision of section 292–1 of the Economic Regulations covering large irregular carriers.

With respect to this proposed regulation, it must be apparent to the Board that such contemplated action will result in complete elimination of all nonscheduled carriers in the United States and Alaska, with the exception of nonscheduled business conducted by so-called fixed-base operators in continental United States who might otherwise be prosperous enough to retain an airplane of the DC–3 type or larger for occasional charter or sightseeing trips and who could maybe at the same time utilize such an aircraft for instruction purposes.

I realize that the whole problem of the so-called nonscheduled operators is a serious one, and I also realize that a great many of the present nonscheduled operators are conducting their business in such a manner as to be detrimental to the public safety and also detrimental to the inspiration of the public of the desirability of air transportation. I do, however, believe that the nonscheduled business as it has developed after the war has a possibility of developing a new phase for the industry, and should, if possible, be fostered and encouraged by the Board.

In this respect, I would like to refer you to an editorial written by Charles Adams in the December 20, 1948, edition of Aviation Week. It pretty closely parallels my views on the subject.

It is obvious that had the Board inaugurated adequate safety regulations, and had the CAA followed through and enforced these regulations to the letter, we would not today be faced with this seemingly insurmountable problem. In the recent past there have been several serious or near-serious accidents on the part of the nonscheduled operators which could have been avoided had CAA, on the strength of past experience, clamped down on these operators who are manifestly nothing but outlaws and were known to the industry as completely disregarding not only the present safety regulations but even common sense. It has been very hard and extremely unfair for the few nonscheduled operators who are striving to comply with safety regulations, and operate in a decent and safe manner, to see CAA tolerate competition of the type just mentioned.

In numerous cases these outlaw practices by certain operators have for a long time been common knowledge to people in the industry and it has often been predicted that should these practices be allowed to continue disaster was bound to result. It is strange to understand why so little action has been taken by CAA to rectify conditions as prevalent and well known over a long period of time. In this combination I would like to point out that the local inspectors for CAA in the Alaska area have been conscientious and hard working, and it is my impression that they have been hampered by a lackadaisical attitude in Washington. At least, that is my own explanation, inasmuch as these people are known to me to be just as worried about the situation as I am myself.

Last fall the Board brought out a new proposed part 42 which was heartily endorsed by me in behalf of Mount McKinley Airways. Such a regulation would have solved the major part of the problem at hand, inasmuch as the majority of the operators would have had no intention to or would have been unable to operate under this rather strict regulation.

It is, however, obvious to my way of thinking that no operator, nonscheduled or otherwise, could possibly operate safely under requirements less exacting than those proposed by this regulation. Proof of which is that Mount McKinley Airways has, for all practical purposes, operated under self-imposed regulations very similar to those proposed in this new part 42.

In this respect, let me point out it is my considered opinion that it is economically impossible for any company to operate as infrequently as required by the Board and still operate with reasonable safety. We advocate a new part 42 with strictest possible safety regulations, including a requirement for extensive pilot training, etc., but on the other hand we realize that this is not economically possible unless the company is able to earn the necessary revenue to carry the cost. We would also respectfully point out that we in Alaska have all other avenues of revenue cut off inasmuch as we are not allowed to operate between points within the Territory.

We of Mount McKinley Airways believe that the solution to the whole problem would be a tremendous tightening both of the safety regulations themselves and of the enforcement of such regulations.

As an example of how leniency on the part of the CAA has caused a hardship on the more conscientious operators, I would like to mention the requirement pertaining to installation of fire-prevention equipment on DC–3's. CAA set the final deadline as of December 31, 1948, and Mount McKinley Airways at that time had this program completed at a cost of $7,000 per airplane. We find now that CAA has extended this deadline for practically everyone who has asked for it for an indefinite period of time. We naturally stop and wonder why we should have had to spend this considerable amount of money to comply with this regulation when we find that any number of operators who have had no intention of complying with this regulation are still allowed to operate, reaping the benefit of a considerable saving.

It is our contention that the frequency provisions in 292.1 should be flexible and each case should be considered separately and the Board's decision should be covered by the need for the service. We would like to see a new part 42, as previously proposed, in effect immediately. We would further suggest that the Board would allow any nonscheduled operator to operate irregularly but also as frequently as service may be needed under this regulation, but should further service be required of any carrier they should be required to operate under part 41. In other words, it should not be very difficult for the Board, in collaboration with the operators, to determine how many trips a week any one operator should be allowed to make between points before being required to operate under part 41 instead of part 42.

The present system of certificating carriers when and if needed has obviously not been satisfactory. In the Alaska case, for instance, additional service has been needed for well over 2 years or practically since the end of the war and still the decision in the United States-Alaska Service case cannot be expected to be forthcoming for several months. In other words, the Board in this respect has apparently been 3 years behind and by the time a decision is rendered this decision may very well be obsolete. In the meantime, the Territory of Alaska would have suffered untold hardships had it not been for the activities of the nonscheduled operators or large irregular carriers. In other words, the Territory of Alaska has had fairly adequate air transportation for the last 2½ years, not due to any action by the Board but in spite of the Board.

I am saying this with all due respect to the Board and realizing the tremendous difficulties under which the Board is operating but I do believe that, even under the present Aeronautics Act of 1938, as amended, as unsatisfactory as this act may be, the Board could find a solution to give temporary relief and still avoid the outlaw and cutthroat practices which have been so apparent on the part of the nonscheduled operators the last few years.

One particular point I would like to bring out is the restrictions on the use of ticket agencies by the irregular carriers. While I think that the proposed action is somewhat drastic I would like to refer you to a letter written by me to Chairman O'Connell, of the CAB, on July 21, 1948, in regard to travel agencies. As I pointed out in said letter there is no question in my mind that the so-called travel agencies, as seem to be flourishing today, to a large extent constitute a racket which is detrimental both to the public and to the decent operators. However, it seems to me that this could be eliminated by requiring travel agencies to be registered, provide bond, and by other means of regulation, but if this is not practical we of Mount McKinley Airways would rather see all travel agencies completely eliminated than have to tolerate present conditions.

Respectfully submitted this 10th day of January 1949.

MOUNT MCKINLEY AIRWAYS, INC.,
JACK F. SCAVENIUS, *President.*

The Right to Work

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, more and more people are be-

ginning to question the policy which excuses assault and battery, organized violence, the destruction of personal property, malicious injury to real property, and the practice of keeping hundreds of employees from their jobs.

An editorial of December 3 from the Knoxville (Tenn.) Journal comments upon the situation as follows:

DEPEND UPON IT, UNION WILL ESCAPE PUNISHMENT IN WRECKING OF PLANTS

It would be too much to say that the country was shocked by the story from Kalamazoo, Mich., of the raid by 300 union goons on a strike-bound plant in that city.

Since 1937, when under the protection of Roosevelt and the then Governor, now Supreme Court Justice, Frank Murphy, this same CIO initiated a new reign of terrorism into union organization, it has been difficult to shock the country by any item of violence of this kind.

In this latest incident, 300 men swooped down on the plants at dawn in a caravan of cars. Windows were broken, parked automobiles smashed, milk trucks were overturned and thousands of dollars' worth of valuable equipment in the plants ruined past repair.

Significant in this situation was the failure of the Kalamazoo law enforcement agencies to raise a hand in defense of the attacked plants or of the men who were working in them at the time. Four or five determined, courageous policemen could have held the mob at bay. On the other hand, any such officers would have acted in the face of a psychology which has taken possession of most people in the course of the Roosevelt regime. That is to say, there are two kinds of crime. One is that committed by the ordinary citizen and the other is that committed under the sponsorship of a union. Extortion, assault, or the willful destruction of property, or occasionally murder, are all reasonably safe if they occur in the course of a labor dispute. The failure of law enforcement agencies to take the initiative in the arrest of persons for such crimes and of the courts to deal with them severely enough has created an atmosphere of immunity that is appalling.

The State administration of Michigan has promised action in the Kalamazoo case, but Governor Sigler is going out of office the first of the year. His successor, elected with the support of the labor vote in Michigan, is not likely to be excited about this latest outrage. As usual, union violence will go unpunished.

Cardinal Mindszenty

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. KEARNEY. Mr. Speaker, the whole civilized world was shocked over the arrest of the primate of Hungary, Cardinal Mindszenty, upon trumped-up charges of plotting to overthrow the Communist regime. I have today addressed a letter to the chairman of the Committee on Foreign Affairs of the House of Representatives urging him to take the necessary course of action to protest this travesty on justice and all that is decent to the Hungarian Government, in the name of the people of the United States. In addition, I have received many telegrams, letters, and petitions from my constituents voicing their vehement protest to the unjust arrest and imprisonment of His Eminence Cardinal Mindszenty by the Communist Government of Hungary, condemning this as un-Christian and undemocratic, and a most shocking and disturbing desecration of the principles of freedom and justice. They call on the Government of the United States to exert all efforts to see that this terrible injustice is righted and to prevent a repetition of injustice similar to the Archbishop Stepinac incident. Our great country is the only hope of the oppressed peoples of the world and we must see that the authority of our country is thrown on the side of truth and justice. The imprisonment of Cardinal Mindszenty is not only a threat to religious freedom, but to all democratic freedoms throughout the world. In this respect, I wish to include in the RECORD the following letter written by the Most Reverend Edmund F. Gibbons, bishop of the Albany Catholic diocese, which includes a portion of the Thirty-first Congressional District. Said Bishop Gibbons:

The long-expected has come to pass. The Primate of Hungary, Cardinal Mindszenty has been arrested and imprisoned by the Communists. It is but the unfolding of the Marxist program for the destruction of all religion and the enslavement of all peoples. The pattern is always the same. The agents of Stalin throughout the world go along—venturing as much as they dare at the moment—emboldened by each new success which goes unpunished, though not unprotested—reaching even higher, assailing the exalted, smearing the sacred—until now his Hungarian minions have ventured unabashedly to profane a prince of the church.

Soon the old familiar farce will be reenacted. The theater and the cast will be new, but the play and the props are always the same—the trumped-up charges, the forged evidence, the distortions and the extortions—all so well rehearsed in past years on Cieplak, Stepinac, and lesser thousands. Rightly does Acting Secretary of State Lovett label it all a "sickening sham."

We shall not be deceived by these devices. We shall not fail to pierce the facade of righteousness and respectability behind which the Communists, with almost fanatic, scrupulosity, always seek to hide mummery, the mockery and chicanery of it all. The noble and majestic figure of the cardinal will shine forth—the true priest of God, whose only crime has been his championing of honesty against Communist deceit; the true shepherd, whose sole sin has been his insistence on feeding his flock truth, and not Communist lies.

"Why should I fear to return to Hungary," he said, a few years ago, when safe in this country. "That is where my flock is. Ultimately, all that my enemies can take from me is my life." What zeal for his people. What glorious Christian resignation. But while we admire his fortitude, let us not rest supine and inarticulate—members of the Mystical Body that we are. Let not the Christian masses be dumb in the face of his tormentors. If the cardinal is to be crucified, with the modern Communist brand of crucifixion, let us not fail to rally beneath his cross. Let not the crime be perpetrated, without stirring up a world-wide shout of protest, so tremendous and resounding that it will shake even the iron curtain, to disturb the smug security of those who there planned this and further crimes contemptuous of Christian sensibilities.

Numerous individuals of all faiths, pastors of churches, Catholic War Veterans posts, and the Slovak Catholic Federation of America have been among those who have protested the action of the Hungarian Government.

Shipments Under the Marshall Plan

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. MULTER. Mr. Speaker, I am in receipt of a letter from the Seafarers International Union of North America, Atlantic and Gulf district, signed by its secretary, Paul Hall, which contains much important factual data with reference to shipments under the Marshall plan.

I commend this information to the attention of every Member of this House.

The letter is as follows:

SEAFARERS INTERNATIONAL
UNION OF NORTH AMERICA,
ATLANTIC AND GULF DISTRICT,
New York, N. Y., January 14, 1949.

Congressman ABRAHAM J. MULTER,
House of Representatives,
Washington, D. C.

MY DEAR MR. MULTER: I know that you, having demonstrated your interest in merchant seamen on several occasions, are aware that the proposal made by ECA Administrator Paul G. Hoffman to ship all Marshall plan bulk cargoes in foreign-flag ships would throw 10,000 or more American seamen out of work and virtually scuttle the American merchant marine.

This letter is written to call it to your attention that Hoffman has tried to justify his proposal by statements which, according to my information, simply do not fit the facts.

The facts as published in this union's weekly newspaper, the Seafarers Log, of January 7, 1949, are these: The American rate for carrying coal from the east coast to France is $10.85 a ton. This rate is set by the Maritime Commission. On foreign ships, the rate ranges from $8.50 a ton to about $9. Recently three operators of foreign-flag ships were asked to quote coal rates. Two of the operators quoted $8.50. The third wouldn't talk about any rate below $9 and seemed to prefer a higher one.

Thus, the actual differential turns out to be no more than $2.35 a ton at the most and only $1.85 or less in some cases. And the story doesn't end there, because the differential is just about wiped out later so far as American taxpayers are concerned. Coal is not the only bulk cargo, but the coal rate continues to be the root of the controversy.

Another facet of the Marshall plan shipping situation has been overlooked completely by Hoffman and his executive assistants. At least they have not mentioned it in their public statements.

It is no secret that representatives of French shipping interests recently told a member of the Maritime Commission that they deliberately depressed their rates in a maneuver to get a bigger slice of the melon. Later on, the Frenchmen continued, up would go the rates. The Americans would be hoodwinked.

Shipping men of other nations participating in the Marshall plan are reported to have said substantially the same thing, although they said it less bluntly than the Frenchmen.

Foreign rates already are rising as the foreign operators smack their lips in anticipation.

Foreign operators haven't been worrying about making or losing money for the present period. If they lose money they expect to be reimbursed directly or indirectly through the Marshall plan. This would mean American subsidization of European merchant fleets with low labor standards. And if they get the extra cargoes and raise the rates, too, their chances of losing money are very slight. Yet Hoffman said that to pay the American rates was to subsidize the American merchant marine and copies of that letter were sent to many trade unionists, Senators, and Congressmen who have taken up the cudgels in the SIU's fight to have the Hoffman order rescinded.

What of the rate differential that remains? Is it as devastating as Hoffman would have it sound? The answer is a resounding "No," after some of the elements in steamship financing are examined.

If a minimum of half of the bulk cargoes are to be carried under the American flag as the law now provides, despite Hoffman's peculiar interpretation, they will go for the most part in Liberties under bare-boat charter from the Maritime Commission.

When a company charters a Liberty from the Commission, it pays $7,500 a month in rent. If 150 Liberties should fail to operate because of the Hoffman order, it would mean a dead loss in revenue to the Government of $1,125,000 a month. The charter hire for Victory ships is $10,000 a month, and if any Victory should fail to operate because of the order the loss of revenue would be correspondingly greater.

Maritime Commission spokesmen point out that the money from chartering a ship is almost entirely profit to the Government. The loss to the Government is even greater, however, for a ship in the boneyard costs the Commission about $10,000 a year to maintain.

Then there is the matter of taxes. If a company charters a Liberty, the first 10 percent in gross profit on the capital invested in the operation of that ship is subject to normal corporate income taxes. When the profits go higher, the taxes spiral. After the 10 percent has been taxed separately, the Government divides additional gross profits by the number of days the company actually operated the ship.

The company is then taxed 50 percent of the first $100 a day profit, 75 percent of profit between $100 and $300 a day, and 90 percent of any profit above $300 a day. The steamship companies still pay substantial dividends while the Government gets millions and millions in taxes.

In short, if the Maritime Commission ships are in the boneyard, the Government loses: (1) millions of dollars in charter hire, (2) millions of dollars in maintenance charges, (3) millions of dollars in corporate taxes, (4) millions of dollars in unemployment benefits paid to seamen and others in the maritime industry.

Hoffman maintains that if all the bulk cargoes go on foreign-flag ships, this country will be able to ship more goods to Europe. This is a dubious argument at best, since shipping costs are only one item in the Marshall plan.

However, he might better insist that 60 or 70, or even 100 percent, of the bulk cargoes go in American ships. And he might ask that the extra taxes collected by the Government from the shipping industry be appropriated to purchase the goods that the people of the war-ravaged nations of Europe must have, despite chiseling in shipping and other matters by some of their businessmen.

Speaking for the membership of this union, I strongly hope that you take whatever action is necessary to block the Hoffman scheme by insuring that an absolute minimum of 50 percent of all Marshall-plan cargoes go in American vessels. Such action will save the jobs of thousands of loyal American workers.

Sincerely yours,

PAUL HALL,
Secretary-Treasurer.

Mr. Speaker, it is my opinion that the foregoing represents a full and fair statement of the situation. The position of the Seafarers International Union is sound and should be supported by us.

South Carolina Leads

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. BRYSON. Mr. Speaker, the attached editorial from my home-town newspaper, the Greenville News, is very revealing and encouraging. It is generally known that the trend of industry has been toward the South for some years. I hope with the recognition that our section has been discriminated against in the matter of freight rates and that adjustments are in the process of being made, we may look forward to even greater progress:

SOUTH CAROLINA LEADS

The notable industrial growth of South Carolina in recent years has attracted much attention both in and outside of the State.

But perhaps it is not generally realized that the progress of this State in this respect has been greater than in any other southern State.

This striking fact is brought out in an article in the Manufacturers Record by Caldwell R. Walker, editor of the Blue Book of Southern Progress.

This article is a summary of southern economic progress and industrial development. It shows that in capturing an additional 5 percent of the national income the South has had to maintain a rate of growth 43 percent above that of the Nation as a whole. Incomes of 14 Southern States have grown at a swifter pace than that of the Nation and these States have also achieved a swifter rate of industrialization, showing the potency of industrialization as an income producing factor.

But South Carolina's showing is outstanding in this southern record. While the article says that Florida leads the 16 Southern States in rate of total income growth, a rate double that of the Nation, South Carolina has made the most outstanding gain in industrialization, and leads the South in percentage of income derived from manufacturers.

A statistical break-down of income gain from 1929 to 1947 shows that South Carolina's income from agriculture gained 158 percent, income from manufacture gained 390 percent; and its income gain from all sources was 248 percent.

Another table on manufacturing income shows that in 1929 South Carolina's income from that source was 24.7 percent, while in 1947 it was 24.8 percent; and the article says that South Carolina's tremendous growth of 10 percent in industrial percentage easily tops that of all the other 15 Southern States, and probably that of any other State."

This is a record that should be most gratifying to every South Carolina citizen. It can be fairly interpreted, we think, as evidence that the systematic and sustained efforts that have been made to promote the greater industrial development of the State have achieved very definite results. And the fact suggests that with continuation of these methods we can go much further in broadening the economic welfare of the State.

Indians in the United States

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. D'EWART. Mr. Speaker, several Members have asked me for information which will assist them in answering a growing number of inquiries about the condition of the Indians of the United States. For their convenience, I have prepared the following statement summarizing some of the information I have gathered as chairman, during the Eightieth Congress, of the Subcommittee on Indian Affairs, and as a resident of and Member of Congress for the State of Montana.

There are in the United States about 350,000 Indians, of varying degrees of Indian ancestry, and probably 32,000 Eskimos, Aleuts, and Indians in Alaska. The percentage of full-bloods is declining. Indians live in every State, although the largest concentration is in the West. The estimated Indian population of the ten leading States is: Oklahoma, 111,000; Arizona, 56,000; New Mexico, 43,000; South Dakota 31,000; California, 24,000; Montana, 19,000; Washington, 15,000; Minnesota, 14,000; Wisconsin, 13,000; and North Dakota, 13,000. About 260,000 Indians live on reservations under the jurisdiction of the Office of Indian Affairs, Department of the Interior. The relationships of the remainder with their tribal organizations vary widely. A large number of individuals of Indian ancestry have severed all connections with the Indian Service and are living and working as individuals in cities and towns throughout the country. Most of the remainder obtain some of their livelihood off the reservation.

The Office of Indian Affairs was established many years ago to administer the complex body of law and treaty which governs the relationship between the United States and the Indians. The Indian Bureau acts as trustee for tribal and individual funds and property, and operates reservations which have been set aside for the Indians. The Bureau's functions are many and varied. It operates approximately 400 day and boarding schools and supervises the education of Indians who attend public schools under contracts with State and local authorities. It operates a number of hospitals on reservations, provides a field health service, and arranges for the treatment of Indians in non-Indian facilities when necessary. Some 46,000,000 acres of forest and grazing lands on

Indian reservations are supervised by the Bureau. Its construction service builds and maintains roads, buildings, and other facilities required on reservations. Irrigation works also are constructed, and an extension service assists Indians in planning and management of their farms. A credit system is designed to help Indians increase and improve their farm and livestock operations. The Bureau is also responsible for maintaining law and order on reservations, enforcing the special laws which apply to Indians such as the statute which prohibits the sale or use of liquor. The Bureau has requested $59,001,520 to carry on these functions in fiscal year 1950.

Landownership within the reservations varies, and may be patent in fee, white ownership, allotments in trust, tribal owned property and lands set aside for special purposes. Land not actually patented is in varying degrees of trust status under the Secretary of the Interior. One of the problems needing immediate legislation has to do with Indian estates and what is called fractional heirship. That is trust land that has passed to succeeding generations until the fraction of ownership of any one heir is so small that it represents no real equity.

All Indians are citizens of the United States and have the right to vote. Any Indian is free to leave the reservation at any time and to sever all connections with his tribe and the Indian Bureau. In practice, only a few are able to do so since such a departure in most cases would mean the sacrifice of whatever advantages and special privileges accorded the Indian on the reservation. Many Indians leave the reservation for part of the year for work to supplement their incomes, returning during the winter.

A primary purpose of the Indian Bureau has been to raise the Indians to an economic and educational level which would permit them to be assimilated in the general society of this country without prejudice, on an even basis with all other citizens. Due in part to the peculiar ward status of the Indians, progress in the economic field and in individual initiative has been tragically slow. The resources of the lands included in reservations varies greatly, and the degree of the advancement of the Indian tribes follows to some extent the prosperity or lack of prosperity which the tribe has enjoyed.

The Osage Indians of Oklahoma have a high level of income because of the oil developments in their reservation. The Blackfeet in Montana have a similar development, although on a smaller scale. The Flathead tribe of Montana has a good income from the lease of a hydroelectric power site, and members of this tribe are generally quite as capable and as well educated as their white neighbors. The Klamath Indians of Oregon have a good income from their reservation, particularly from timber, and members of the tribe are well able to take an equal place in the world with other citizens. Other reservations, such as the Rocky Boy in Montana, were not as fortunate in the matter of national resources, and the result is shown in a lower level of income, a lower educational level, and a greater need for further assistance from the Federal Government. At the extreme are the Navajo and Hopi tribes of the Southwest. They have increased rapidly in numbers on reservations with very limited resources which are now able to support only about one-half the members of the tribes. Many of them do not speak English and have little conception of the American manner of living. Most of them are in dire poverty, and the problem of the Navajo needs immediate study and solution.

During the last session of Congress, it became apparent that a new start must be made toward ending Federal wardship of Indians and placing them, as individuals, upon an equal footing with other citizens. To keep them or to allow them to remain indefinitely in a wardship is a violation of our principles as a Nation of free and independent people.

It appeared that the Indian Bureau, in some instances, may have lost sight of this objective, and that its policies are tending to perpetuate the Indian in his wardship status rather than to prepare him for full participation in society. The Indian Affairs Committee determined to take a new look at the Indian problem, and to endeavor to hasten Indian rehabilitation. We realized, however, that the wide differences in the economic and educational advancement of the various tribes makes this a difficult and complicated problem. The committee recognized that the proposal that the Indian Bureau be abolished summarily does not take into account the many aged full-blood Indians who will need Federal protection as long as they live, nor the needs of the tribes whose economic situation is such that the States and local communities cannot assume the responsibility.

After a study of the problem, it appeared that at least four possible objectives could be set up, and legislation to implement them, in part, was introduced in the Eightieth Congress.

The first objective was to remove from Federal supervision the tribes which are well-advanced and able to manage their own affairs. The Klamath Tribe of Oregon and the Flathead of Montana are examples. They have reached a degree of economic welfare and a status of individual initiative where they could undertake to manage their own affairs as efficiently and successfully as they are now being managed by the Government.

The second objective was to give increased responsibility over Indian matters to the States. Legislation was introduced to give the States jurisdiction over criminal offenses committed by or against Indians on Indian reservations, an area where the States are now forbidden to enter. This would make for better and more equitable law enforcement, and would solve very serious problems in some areas where county and State officials are helpless to cope with the criminal activities of some individual Indians. Another field where increased participation by State and local governments would result in generally improved conditions is that of road construction and maintenance. A third is the field of education. The greatest possible advantages are realized where Indian and white children of the neighborhood may attend the same public schools, schools which are under State supervision. Progress is being made in educational cooperation with the States.

A third objective was to make it possible for an individual Indian, on his own initiative, who had attained an educational and economic status that made it feasible, to assume the responsibilities that would come with the end of wardship and the severing of his connections with the Indian Bureau. Present Bureau regulations concerning trust land and money make it very difficult for an Indian to end his wardship without a very real sacrifice. Legislation was introduced in the last Congress to implement this objective in a manner that would not injure the interests of the tribe.

The fourth possible objective was to turn over to the States, in certain instances, the responsibility for the Indians within their borders. It is realized that this cannot be done at present except in unusual cases, but it is believed that States such as New York and California could well assume responsibility for the Indians within their borders, permitting the Federal Government to relinquish wardship of such Indians. In general the States have not been interested as they should be nor willing to assume proper responsibility for the welfare of their Indians.

Maintaining the Indian in continued wardship is an extremely costly matter for the citizens of the United States, and an unsatisfactory mode of life for the Indians. The new generation of Indians, including thousands who served in the recent war, will not be content with life on the reservation under present circumstances, and they should be encouraged and assisted in their efforts to improve their way of life and to attain economic, political, and social equality.

Our Citadel of Freedom

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an editorial entitled "Our Citadel of Freedom," by Harry H. Schlacht.

This editorial appeared in all Hearst newspapers from coast to coast and was published September 17, 1948.

The editorial is as follows:

OUR CITADEL OF FREEDOM

(By Harry H. Schlacht)

Here we wrote the Bill of Rights—The path of human progress is lit with its lights. Here we wrote the Declaration with an eagle pinion quill—It circled round the world where force and hate stood still. Here we wrote the Constitution and codified the

page—That made our Republic the wonder of the age.

We salute today our Constitution. It is 161 years young. Its youthful veins are full of enterprise and courage. Its daily respiration is liberty and patriotism.

Our Constitution is the heart of our Nation. It is the citadel of our freedom. It is the bulwark of our security. It is the inspiration of our American way of life.

It is the charter of our fundamental laws. It is a vital human document with a soul and a spirit. America symbolizes "Vox populi; vox Dei." The voice of the people is the voice of God.

In our country the law is supreme. No man is so high as to be above the law. No officer of government may disregard it with impunity.

And when the highest law to which we pay homage is the Constitution of the United States, the history of the world has presented no such wonder of a prosperous and happy civil government.

We have been devoted to our Constitution. We know that wise men conceived it. We know that strong men administered it. We know that brave men fought for it. We know that heroic men died for it.

No greater contribution to civilization and world peace can be made than that we carry on unimpaired our traditional system of representative government.

We live and move in the light of a great tradition. We live under the law, and at the ballot box we wear the purple robes of power.

We are free to act, to go, and to think. We are subjects and yet sovereigns. We are citizens and yet princes. We are the freest people in all the world. We are Americans. This cavalcade of freedom did not come to us by idle chance.

It is the product of the vision and sacrifice of our forefathers.

They were pure patriots. They made every visible sacrifice for an invisible posterity.

And yet there are loose in this country today, demagogs and preachers of foreign ideologies who would scrap our Constitution and mobilize the unthinking and prejudiced to ride roughshod over our American institutions.

These traitors would convert our Nation into a laboratory for the practice of alien experiments that have no counterpart in our form of government, as prescribed by our Constitution.

There is not a government under the sun which gives to its people more opportunity, more humanity, and more freedom, than our system of constitutional government gives to us.

Shame on those who would retreat from the high state we have won for ourselves in this land. Shame on those who would destroy the freedom we enjoy. Shame on those who would supplant our democracy with the rule of a dictator. Shame on those who, being citizens of the United States, profess a love for a foreign land which seems to be greater than their love for America.

Shame on those parasites who enjoy the fruits of the struggles of our martyrs and patriots and worship at the godless shrine of communism.

Let us go forward to the fulfillment of our great destiny of justice and freedom. Let us reaffirm our faith in our Constitution. Let us vow to preserve and protect it. Let us guard it with eternal vigilance. Let us, in the words of William Randolph Hearst, set aside "A Constitution Day to give all American citizens an opportunity to make public declaration and demonstration of our reverence for the great document whose provisions protect our liberties and preserve our Republic."

Ours must be the American way. Ours must be the American tradition, with its love of liberty, with its ideals of equality, with its practice of human brotherhood.

Our fighters for freedom gave life to our Constitution and their lives for it on flaming battlefronts. Our Constitution will protect us if we protect our Constitution.

Tribute to Hon. Fred Marshall, of Minnesota

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. BLATNIK. Mr. Speaker, I take this opportunity to express my admiration and high regards for that farmer-statesman and my very good friend, the Honorable FRED MARSHALL, and to welcome him to our councils where he now sits as Representative from Minnesota's Sixth Congressional District. I know that I express the sentiments of the entire Minnesota Democratic delegation when I say that we are immensely proud of FRED MARSHALL, and that it is a great honor to have him as a colleague and fellow worker in the fight for a legislative program of prosperity, social justice, and world peace.

The voters of Minnesota's Sixth District are indeed to be congratulated for their wise choice when they selected Mr. MARSHALL as their Congressman. He is a man of great ability, integrity, experience, and one with a deep devotion to liberal principles and the welfare of his country.

The Sixth District of Minnesota is largely an agricultural area, and Mr. MARSHALL is especially qualified to represent his district, and speak with authority on the needs and interests of his constituents. For he is a genuine "dirt" farmer—a gentleman and a farmer but not a gentleman farmer—one who has worked and managed the 400-acre farm in Meeker County, Minn., which has belonged to the Marshall family for four generations. As a practicing farmer by profession, FRED MARSHALL knows the common, everyday problems of the small family-sized farm and is therefore able to speak from first-hand experience on the needs of the vast majority of his constituents.

In addition, FRED MARSHALL comes to Congress with a background of 12 years of distinguished service with Federal farm programs, which has given him a full understanding of most of the practical problems of agricultural policy. As a former State AAA committeeman, he knows the technical aspects of price support, parity, and farm marketing problems. As a former State director of the Farm Security Administration, FRED MARSHALL is acquainted with the needs of the underprivileged one-third of our rural population. As a former Director of the Farmers Home Administration, a position which he resigned after his election to the Eighty-first Congress, Mr. MARSHALL can speak with authority on the question of farm finance and farm tenancy.

As one who has his roots deep in Minnesota's history, FRED MARSHALL has experienced the hopes and aspirations of her people, and his voice will express these hopes and aspirations. I am confident that he has a great legislative career ahead of him, and I know that my colleagues and friends in the House will enjoy working with him, and when they come to know him personally they will share my admiration and high regard for him.

Under leave to extend my remarks in the RECORD, I include a section of Drew Pearson's column, Washington Merry-Go-Round, which appeared in the January 12, 1949, edition of the St. Paul Dispatch, which discusses Minnesota's FRED MARSHALL:

Of all the new faces in the Eighty-first Congress, none is more welcome than a friendly, square-jawed countenance atop a 6-foot frame belonging to Congressman FRED MARSHALL, freshman Democrat from Minnesota.

In fact, it might be said that MARSHALL is the most welcome addition—period—because he replaces that all-American isolationist and reactionary, Harold Knutson, generally considered the most disagreeable man in Congress.

MARSHALL'S first mission in Washington, he says, is to explode the belief that most of the folks in my country are rabid isolationists "like my predecessor." The Minnesotan, unlike Knutson, doesn't talk much. However, he has been a champion of the Truman foreign policy and will support most of the liberal domestic reforms the President advocated. He knows the problems of the farmer from A to Z, having been one all his 42 years.

One of these problems, which MARSHALL hopes to see remedied, is insufficient low-cost, rural housing. MARSHALL got some first-hand pointers on this as Minnesota director of the Farmers Home Administration (formerly Farm Security Administration) before coming to Washington.

His oddest campaign experience happened in a small town shortly before election when he met a voter who insisted that he (MARSHALL) could not be a candidate for Congress. "Harold Knutson was just through here and told us he had no opposition," said the voter.

In the end, the voters of Minnesota's Sixth District decided otherwise, giving MARSHALL a majority of 4,200 out of 130,000 ballots.

Radio Broadcast by Eugene Lyons

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast by Eugene Lyons:

KATYN CRIME

Ladies and gentlemen, I want to talk to you today about a very unpleasant subject. A hideous, an appalling, story of cold-blooded mass murder, one of the most frightful atrocities of the last war.

Frankly, I don't relish the job of reviving the ghastly memory. We've seen and heard so much horror in recent years that it seems unkind to exhibit some more at this late date. But it's a job that has to be done. It seems to me important—not only for Poles but for

Americans and for all mankind—that this particular atrocity be kept alive.

Why? Because the murderers are known. Only a deliberate conspiracy of silence has shielded them against exposure. The time is ripe to crack that conspiracy wide open, to pillory the guilty nation before world public opinion.

Some of you may recollect a grim piece of news nearly 6 years ago, back in April 1943. At that time it was a shocking sensation. The Germans announced that in a place called Katyn Forest, near Smolensk, in Soviet Russia, they had discovered a number of mass graves; in those graves—thousands of corpses fully clothed in cold-weather military uniforms.

Because of the chemical peculiarity of the soil, the bodies were still fairly well preserved. From personal objects in the pockets—such as letters, diaries, documents—the victims were easily identified as Polish officers, from generals down to noncommissioned grades.

The Germans charged flatly that the Poles had been massacred in April and May of 1940, when that territory was still in Soviet hands. As proof they cited impressive evidence. The dates on scraps of newspapers found on the bodies and in the graves, for instance. The fact that not one of the letters from relatives or unmailed outgoing letters carried a date later than April or May 1940. The fact that the diaries all ended abruptly on those dates, cut off by sudden death. These and a mass of other findings were established by a group of physicians and other scientific specialists from many of the countries then under German control.

Berlin accused the Russians of having slaughtered those officers. It was one of the most shocking atrocity charges of the whole war. But the world was too familiar with the cynical, lying German propaganda. Normally the whole story would have been dismissed as another piece of Dr. Goebbels' trickery.

But in this instance it could not be so easily brushed off. It happened that over 10,000 Polish officers, prisoners of war in Russia, had been mysteriously missing. There had been no trace of them. The Soviet authorities would not or could not explain their amazing disappearance. The German discovery was therefore the first clew to their grim fate, and it could not be treated lightly.

Let's go back a bit to the period when Nazi Germany and Soviet Russia were friends and allies, in the first 22 months of the war. When the Red armies marched into Poland, by prearrangement with the Germans, in September 1939, they took a lot of prisoners—over 180,000 by Moscow's own admission. Among them were some 11,000 officers.

Then, in June 1941, Hitler turned on his partner in the rape of Poland. He invaded Russia. Despite the Soviet stab in the back, the Polish exile government, headed by General Sikorski, made peace with Moscow for a common struggle against the Nazi beast.

Among other things, the Russian-Polish agreement provided for the immediate formation on Soviet territory of a Polish army, to be drawn from the Polish prisoners, who, of course, were all amnestied. General Anders, released from a Soviet torture cell to command the new force, counted on using those officer prisoners.

From concentration camps throughout Russia the amnestied Poles flocked to the colors. But a strange and alarming mystery developed. Of the 11,000 officers, only about 400 showed up. Weeks passed, months passed. But not a single one of the more than 10,000 missing officers appeared. Inquiries through the Polish underground among their families showed definitely that none of them had returned to Poland.

General Anders and the Polish Government pressed the Soviets for an explanation and got only an embarrassed shrugging of shoulders. General Sikorski took up the matter with Stalin in personal interviews. Stalin promised to inquire—but again nothing happened. This went on for nearly 2 years—until the sensational German announcement of the Katyn Forest discovery.

Though the Sikorski government distrusted the German enemy, the mass extermination of those officers—the flower of Polish manhood—could not be written off as an unsolved mystery. It suggested that a neutral investigation be undertaken by the International Red Cross.

To this suggestion Berlin agreed immediately. But Moscow said no. More than that, it denounced the Poles for making the proposal and used the episode as a pretext for breaking relations with their government. The rest is familiar history. The Kremlin proceeded to organize a Polish quisling committee, headed by Communists—the committee which in due time evolved into the present Red regime in Warsaw.

In the face of the German accusations, the Soviets, in April 1943, countered with a claim that the brutal massacres in Katyn Forest had been committed by the Germans themselves after they occupied the Smolensk area. All the Polish officers, the Moscow version declared, had been captured by the Germans when the Red Army retreated.

Now, stop to consider this version. For nearly 2 years the Russians, including Stalin himself, had been unable to give a plausible explanation for the missing 10,000. But, suddenly, after the bodies were found and identified, they trotted out a detailed story. If they were telling the truth, why hadn't they told those facts in the past? Instead of pretending to look for the missing men, they could have said, frankly, "Sorry, but your officers are unfortunately in the hands of the Germans."

After all, the loss of 10,000 prisoners—all of them officers and among them 14 generals—was not a trifle that would be overlooked by the Soviet military authorities. The normal Russian procedure was to evacuate prisoners to the rear as the invaders advanced. Ten thousand officers was too rich a prize to be simply "forgotten" and left to the enemy.

The whole Soviet version was a transparent lie—an attempt to pin their own frightful crime on the Germans. To bolster their belated claim they instituted an inquiry by their own Soviet scientists as soon as Smolensk was again in their control. Naturally it sustained the Soviet version.

The date of the massacre of Katyn Forest, according to the findings of this inquiry, was supposedly August of 1941. That was a sad blunder. Why would the victims have worn overcoats, woolen socks, fur gloves, and other winter clothes in August? Caught off guard, the Russians mumbled something about freak weather that year. A check-up of the facts, however, showed that it had been a normal hot summer month in that region.

And that brings us to the conspiracy of silence to which I alluded. Since Soviet Russia was an ally in the war against Germany, neither the United States nor Great Britain cared to look into the unsavory Katyn Forest facts. It was more convenient to accept the Moscow lies and forget the matter. The continuous demands by Polish representatives for a fair, objective study of the horrible affair went unheeded.

After the war, in preparing for the Nuremberg trial of German leaders, the conduct of the case insofar as atrocities in eastern Europe were concerned was left to the Soviet prosecutors. Not to mention the most publicized and most appalling of the war crimes would have been too obviously an evasion. The formal indictment therefore listed the Katyn Forest massacre among the charges against the Germans.

Some testimony was read into the Nuremberg record. But the witnesses were hand picked by the Russian prosecutors. Several of the scientists who had made the original investigation for the Germans were now living in liberated countries—one of them in Switzerland, another in Italy, a third in France. They were willing to testify. They have told the press that their study and report in 1943 had been made honestly and not under pressure. But the Soviet prosecutor was careful not to call them. Instead he called the one scientist who was living in Bulgaria, a Soviet satellite state—the one investigator, that is to say, who had to testify as the Russians wished, or else.

The proceedings, in short, were carefully manipulated to prevent the exposure of the real murderers. And yet, when the Nuremberg verdict was handed down by the Allied judges, lo and behold, not a word about the Katyn Forest accusation. Crimes that were trivial by comparison were adjudicated, but this one simply was not mentioned. The Soviet judges issued a minority report of their own, but even they avoided all mention of the Katyn massacre.

In effect therefore the Germans, though found guilty of endless other heinous crimes, were exonerated of this one. And if the Germans didn't do it, it means that the Soviet Russians did. Stalin's regime stands convicted of mass murder. But the conspiracy of silence continues. To appease the tyrant of the Kremlin, the democratic world tacitly agreed to close its eyes to the Polish blood on his hands. The policy of appeasement has been called off in other respects, yet it persists in relation to this foul massacre of innocents.

But the truth must be established. Pressure must be brought on our Government and on the United Nations to undertake a complete, impartial examination of the facts. It's up to you and me, to every man and woman who has a conscience, to expose the mass murderers. This we must do in justice to bleeding Poland whose best sons were killed in cold blood. This we must do in order that the whole world may see the true character of the despotism enthroned in the Kremlin.

TVA

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edward B. Smith, from the Knoxville News-Sentinel of January 5, 1949:

TENNESSEE NOTEBOOK—PAUL PETERS—REMEMBER HIM?—CROPS UP AGAIN IN NEWS AS ANTI-TVA CRUSADER

(By Edward B. Smith)

Plenty of signs appeared during the Presidential election campaign last fall that if the Republicans gained control of Congress, TVA and this region which it serves would be in for a very unhappy time.

Additional evidence, minor to some extent but still quite significant, has emerged since the election. It is in the form of a staff report to the House Committee on Small Business concerning TVA's fertilizer operations.

The report bears a publication date of December 1, but obviously had been written before the election under the impression that the GOP would be in control, that the House committee would remain intact, and that a full-scale attack on TVA would soon be launched.

But the committee is dead, and its chairman and another influential member, both Republicans, have been retired to private life.

The chairman was Representative Walter C. Ploeser, of Missouri, who took a leading part in killing the New Johnsonville steam plant; the other committeeman was Representative W. H. Stevenson, of Wisconsin.

Actually there is nothing new in that staff report; it is a rehash of most of the half-truths which TVA enemies, including some leaders in the commercial fertilizer industry, have been tossing around for years. But the press associations a few days ago discovered it, and reported on it briefly.

It is a dead report to a dead committee, and there is no reason to revive either. But just to show the nature of the report, it should be discussed briefly.

It declares that "by strict commercial standards TVA's chemical plant operations were operated at a loss of almost $4,000,000 in 1947." The report says that TVA's bookkeeping methods would not be countenanced in private industry.

It charges that the price of TVA fertilizer was, during the war, far out of line with that charged by the private fertilizer industry.

Finally, it accuses TVA of discrimination by distributing most of its fertilizer production through farm cooperatives.

The answers are rather simple.

TVA makes no pretense of operating its fertilizer program by commercial standards. The program is wholly experimental and is carried on for the purposes of developing better techniques and higher grade fertilizer, and in educating the farmers of this country to use more fertilizer and better fertilizer.

On two occasions, the last time being only last year, the General Accounting Office has given high praise to TVA bookkeeping procedures, and compared them to best procedures in well-managed private industry. Whenever GAO praises anything, it is rare and big news.

TVA fertilizer prices were high during the war because facilities were being used largely for production of nitrates for explosives. The unit price for fertilizer was, naturally, therefore, very high.

TVA cooperates with land-grant colleges and county agents in distributing fertilizer for supervised test purposes. It also ships large quantities to co-ops, which act as distribution agents and make sure that the farmer members who get this fertilizer use it properly and keep accurate reports. Last year TVA, in answer to that same complaint about "discrimination," asked the National Fertilizer Association to suggest a better distribution method. The association couldn't do it.

The most interesting thing about this staff report, however, is the identity of the man who did the research work and signed the report. He is Paul O. Peters.

The name should strike a responsive chord in local memories. The clock turns back to 1938. TVA was having hard going those days in the face of assaults from its own Chairman, Arthur E. Morgan; from Senator Kenneth McKellar, of Tennessee; from Senator Styles Bridges, of New Hampshire, and Representative Knutson, of Minnesota. The private Power Trust, encouraged by these attacks, was hammering away at TVA.

At that time Paul Peters was on the Republican National Committee pay roll in Washington. He was writing some of those anti-TVA speeches for BRIDGES and Knutson.

He also turned out a series of press releases against TVA; a few newspapers, including the Chicago Tribune and the Knoxville Journal, printed them with a great flourish.

The News-Sentinel properly identified Mr. Peters in a small front-page item and it apparently embarrassed him. He sued for $30,000, alleging libel.

Nothing happened for more than a year. The case was set for trial on November 16, 1939. When the judge called it up, neither Mr. Peters nor his attorneys were present. That was the end of that.

Textbooks Favoring Communism

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Forest Republican of Tionesta, Pa., for January 13, 1949:

Before the start of the current public school year we drew attention in these editorial columns to the problem of cleaning up leftist textbooks in Forest County schools.

We cited one instance which gave an untrue picture in favor of Communist Russia, its institutions and its economy.

It is hoped that action is being formulated to eliminate this and any other malignant school texts. In this connection we are privileged to quote an editorial from a recent issue of the Industrial News Review. This editorial reads as follows:

"Some time ago, in Chicago, an organization of educators, which claimed that it represented 2,000 colleges and schools, held a convention. One of the principal speakers was an author of textbooks—and his books have been thrown out of some 1,400 schools because civic and patriotic organizations found them excessively critical of American principles and traditions. Another personality on the program was the representative of a teacher's union which was expelled by the American Federation of Labor on charges of communism. A third prominent speaker had long been a writer for New Masses and the Daily Worker, and was named by a congressional committee 'as a professed card-holding member of the Communist Party and as a member of more than 80 so-called Communist-front groups.'

"These left-wingers in the ranks of American educators are the exceptions. Thousands upon thousands of teachers are doing a splendid job and are helping to fight the forces of darkness which wish to turn this country into a totalitarian police state. But the fact remain that a dangerous proportion of American teaching and textbooks is based on the theory that practically everything is wrong with the United States, that the economic system called free enterprise exists to exploit the people, that the founders of the country, from Washington down, were self-seeking and dubious characters, and that the hope of the world lies in communism or some kindred philosophy of life and government.

"What this kind of teaching does to unformed minds isn't hard to fathom. It dwarfs the achievements that created our greatest, and magnifies our defects. It avoids the fact that our kind of government and our kind of economic system has done far more, for far more people, than any other ever devised. It leaves the student with nothing to tie to, nothing constructive to believe.

"It is a healthy sign that there has been a remarkable upsurge of interest in the quality and content of American teaching and textbooks in the last year or two. Young men and women now in school will determine what sort of a country we will have in the future. Academic freedom must not be used to justify warped and subtle instruction which produces distrust of the American tradition, and praises, by direction or indirection, governments which exist only through the cruelest oppression and terrorism.

Health Care for Americans

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1949

Mr. PEPPER. Mr. President, on the 17th of the month I had the honor to appear in the Alexandria Gazette as guest columnist for the distinguished columnist, Charles Parmer. The subject of the article which I wrote was The Need To Provide Good Health Care for Every American. In this article I supported the general health program of the President.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PARMER FROM WASHINGTON

(By Charles Parmer)

(Senator CLAUDE PEPPER, Democrat of Florida, is Charles Parmer's guest-columnist today. Senator PEPPER writes on The Need To Provide Good Health Care for Every American. He is the leader of a Senate group sponsoring Federal health aid proposals which President Truman endorses. Senator A. WILLIS ROBERTSON, Democrat of Virginia, was Mr. Parmer's guest-columnist Saturday. He stated his objections to the President's proposed health program.)

(By CLAUDE PEPPER, U. S. Senate, Florida)

The quality of medical care in America is very high and our standards of medical education are probably unsurpassed. In spite of this, the health needs of the American people remain unmet to a great extent.

The Senate Subcommittee on Wartime Health and Education, of which I was chairman, in several of its reports revealed the gravity of the Nation's health problem. On the basis of selective-service experience at least 40 percent of our men of military age—between eight and nine million men—are unfit for military duty. On any one day, at least 7,000,000 people in the United States suffer some illness. As many as 23,000,000 persons have a chronic or disabling disease. Sickness and accidents cost the Nation at least $3,000,000 a year.

Our health services and facilities are wholly inadequate. Forty percent of our counties do not have even a full-time local public health officer. Hospitals are needed—areas of our country with an aggregate population of 15,000,000 people do not have a single recognized general hospital. Pure shortages of doctors, nurses, dentists, psychiatrists, and other trained health personnel are so great that many persons are forced to forego medical care. In 1944, 553 counties had less than one active physician per 3,000 population, the danger line. And numerous counties had no active doctor at all.

If we had adequate services available for mothers and children, we could prevent at least half of the deaths of mothers who die in childbirth, and one-third of the deaths of the young babies. Our State health agencies have, on their waiting lists, thousands of crippled children who require and cannot get proper attention because of the lack of facilities and personnel, and over half a million children with rheumatic fever fail to receive good medical care.

We should not fool ourselves into believing that the United States is the healthiest Nation in the world. Official charts and tables of international health organizations

show that many other countries have lower death rates at various ages, higher life expectancy rates, lower infant and maternal mortality rates, and smaller incidence rates for some of the major illnesses.

These deficiencies are understandable. Only a small part of our people are able to pay for comprehensive and adequate health care, because good medical care is expensive. Most American families cannot afford to pay for it out of current income or savings. In 1944, the average family reported an expenditure of $100 or 4.6 percent of its income for medical care. We also know that people with lower incomes have more sickness and need more medical care, yet they receive substantially less than those in the upper-income brackets.

When sickness does hit, it strikes hard. Wage losses and medical costs arising out of sickness have very often wiped out a family's savings and driven it into debt, irrespective of the level of income. Many Americans will not call a doctor until they are seriously ill, and many others are reluctant to accept medical attention on a charity basis.

We cannot continue to regard complete health care as a luxury, or as a dole to be exchanged for self-respect. The need for national health insurance, financed by required contributions to a health insurance fund has now become clear. Furthermore, a vast new public-health program is a must.

None of us is in favor of socialized medicine; all of us want to see our national health system continue to expand as an integral part of our system of free enterprise with the assistance and encouragement of our Federal, State, and local governments. We will see that this is done.

What we are trying to do now is to develop a comprehensive program so that all of our people may receive the full benefits from our fine medical profession. In response to the needs and wishes of the American people, President Truman and the Democratic Party will press for the enactment of legislation to provide for the building of additional hospitals; for the modernization of existing hospitals; for the establishment of new and the enlargement of existing medical and other schools of health for the training of additional doctors, dentists, psychiatrists; for a recruitment and training program for necessary nurses and other health workers; for a system of scholarships and loans to deserving and qualified young men and women to enter the health profession; for the expansion of our public health facilities, particularly in our small towns and rural areas; for the enlargement of research and training programs in cancer, heart, poliomyelitis, leprosy, dental, mental, and other serious illnesses; for the expansion of our maternal and child health and school health services; for vocational and other aid to our physically handicapped.

Above all, we will provide, step by step, for the formation of a national health insurance program to bring hospital, medical, dental, nursing, and clinical care within the reach of every American man, woman, and child upon the basis of the typical American principle of insurance, and not charity. We will provide and guarantee the free choice of doctors by patients. Doctors will be able to accept or reject patients who may apply to them.

In looking to the future of the United States we must not forget that we are a community of human beings. If the United States is to fulfill her great democratic role in the world of nations, the doctors, other members of the health profession, public officials, and all other citizens must work together to develop and maintain a national health program to take care of the physical and mental well-being of the American people. The most precious thing we cherish is good health.

Foolish Huddle in Omaha

EXTENSION OF REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1949

Mr. KEEFE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Tulsa Tribune of January 15, 1949:

FOOLISH HUDDLE IN OMAHA

(By Richard Lloyd Jones)

HUGH D. SCOTT, JR., of Philadelphia, who is the Republican national chairman, has summoned the national committee to meet in Omaha. He calls the committee into this Omaha huddle to labor for "numerous suggestions for outlining a Republican program and policy during 1949."

Why Omaha? It is central, but what can the national committee do? Resolutions, whatever they may be, are worthless. Only Republicans with legislative powers can put Republican principles into practice.

What does Mr. SCOTT think he can now accomplish in Omaha that was not accomplished last June in his own home town of Philadelphia? There something more than a national committee sat in conference. The Republican Party itself was there.

Tom Dewey, Governor of our greatest State, and Earl Warren, Governor of one of our greatest States, were chosen as the crusading leaders. But they didn't crusade. That's where the campaign went wrong.

Both Dewey and Warren rose to places of political power because they were great prosecutors. The Republican Party had every reason to believe that by selecting them they were elevating to leadership two great crusaders who would reveal to the American people the dangers of the dramatized hypocrisies that are leading us to ruin.

But what did Dewey and Warren do? They let the party down. That's the fact. They rolled over the country on their campaign trains delivering poetic platitudes that certainly did not prosecute corruptions.

Meanwhile, Mr. Truman dramatized fight. He announced that he was going out to "give them hell." The people apparently were in the mood for a little hell-raising. They got it, they asked for it and now they've got to pay for it.

Mr. Truman comes to the full term with the endorsement of less than a majority of the voters. But he accepts that minority vote as a mandate. Four times Franklin Roosevelt talked of a "mandate from the people." So Mr. Truman blows the mandate horn. And now he proposes to outdo Roosevelt in raids upon the people's treasury. He is going to tax and tax and tax.

The Republican Party can do nothing about this tax burden business at Omaha. To take some Republican politicians out on the west bank of the Missouri for a conference is just plain silly. And it's high time the Republican Party quit being silly.

The Truman program is totally illogical, costly, fraught with dangers to the survival of free government. If carried out, it is certain to destroy our free economy. There is but one place where the Republicans can effectively register protests and broadcast statements that will reveal the dangers that confront us. That place is Washington, not Omaha.

The Republican Party has great traditional principles. Those principles are voiced in our Constitution and Bill of Rights. There are 42 Republicans in the Senate of the United States. There are 174 Republicans in the House of Representatives. What those Republicans say and do will have some effect on the minds of the people, but Mr. SCOTT's huddle at Omaha will have none.

Where is the Republican in either House in Congress who is protesting this proposal of Truman's to increase our national debt to the incomprehensible altitude of more than $250,000,000,000? In the Senate of the United States there has been just one voice in vigorous protest to this infamy. And that comes not from a Republican, but from a Democrat, HARRY BYRD, of Virginia.

In last summer's campaign Harry Truman gave an exhibition of a fighter. He was not the champion of any exalted cause. He was fighting for an office in the true Pendergast fashion. He was wholly reckless with the truth. But Dewey did not rise to the stature of the statesman who assails untruths.

If ever again the Republican Party is to enlist the confidence and the support of the American people it must be its old self as a crusader for efficiency and for economy in the people's business.

The Republican Party must speak from the floors of Congress now or forever hold its tongue. Running out to Omaha is just political comedy. The Republican Party must again be the champion of the rational progress that once gave it place and power. The truth is the Republican Party has abdicated its own record and its own history. It was a great Republican, James G. Blaine, of Maine, once the Republican Party's banner bearer, who first put forward the theory of reciprocal trade agreements. And it was this same Blaine, of Maine, who assailed the predatory privileges of high tariff by declaring in the Senate: "Such movements as this, if endorsed by the Republican Party, will speedily put the party in retirement."

It was a Republican President, William McKinley, who, the day before he was assassinated at Buffalo, declared: "Isolation is no longer possible or desirable. No nation can longer be 'ndifferent to any other. Reciprocity treaties are in harmony with the spirit of the times; measures of retaliation are not."

It was a Republican President, Theodore Roosevelt, who first urged the reclamation of western arid land. It was he who 47 years ago put through the Newlands Act, which was the first of the great reservoir acts which has been copied at the Coolidge Dam, the Hoover Dam, and other great engineering enterprises. The New Dealers adopted that big Republican idea.

It was a Republican named Sherman who drafted the first antitrust laws. It was a Republican President named Harrison who signed those laws. It was the Republican Roosevelt who made trust-busting synonymous with his name. It was a Republican President named Taft who carried many of these far-reaching actions into office. It was the Republican Party that first firmly believed in the idea of cordial and helpful cooperation between management and labor. What has happened? The Republican Party has allowed its political opponent to brand it as opposed to all the largeness and the liberalism of Republican tradition.

Without a crusading leadership, the Republican Party last November received the endorsement of 22,000,000 American voters, while millions, confused and dissatisfied, did not even care to vote. These twenty-two millions and every one of the millions of confused and discontented can be captured by the Republican Party if and when the Republican Party again becomes the militant party that gave it a glorified place in the pages of American history. The Republican Party has been the liberal party. It has been the sustaining friend of the farmer without attempting to purchase the farmer's favor. It has been the friend of labor. Any review of labor legislation, including the rational

Taft-Hartley Act as opposed to the Wagner Act, is all political history that should again become the inspiration of a crusading, rational, aggressive, and progressive political party.

All the Republican Party needs now is a captain to call the signals. One rational, fearless, truth-telling, truth-seeking leader can liberate a people from bureaucratic boodle and bondage. It is the story of all great human triumphs. It can be story of the Republican Party now. But Omaha is no place to go to do it.

The Right To Work

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, there are still some people in the United States of America who realize that, if we are to eat, wear clothing, have shelter, and a few other things that are not actually necessities, but which we all want, someone, somewhere must work. Some of us still believe in the good old-fashioned doctrine that if a man can get a job for pay which he considers adequate, there is not any reason why he should not be permitted to take it and earn something for himself and family.

Nevertheless, there are certain groups who seem to feel that the right to strike, as they call it, carries with it the right to keep other people from working. Unfortunately, altogether too many people until they were personally affected by being driven from their jobs, have gone along with the idea that while a man ordinarily had no right to beat you up on your way to work, if he was a picket he and other pickets could not only keep you from your job, but had a right to give you a beating.

An editorial of the December 6 issue of the Allegan Gazette, written by Leo W. Hoffman, calls attention to that situation. That editorial reads as follows:

THE KALAMAZOO RAID

Last Wednesday 300 men invaded Kalamazoo by auto, blocked streets in the vicinity of the strike-bound Shakespeare plant, tipped over workers' autos, burned a truck, surrounded Sheriff Buder and prevented him from performing his duty, assaulted and injured a policeman and 6 other persons, prevented the fire department from performing its duty, destroyed company property, and then quickly departed. Mr. Shane, State director of the CIO United Steelworkers, admitted that its members conducted the raid.

In other words, the CIO has, by violence, by openly defying the laws of the State of Michigan and the United States, attempted to win their strike by intimidation.

The men who planned the raid, the men who took part in the raid are criminals. They are guilty of assault and battery, felonious assault, obstruction of justice, disorderly conduct, and other innumerable crimes.

Ever since the New Deal took over the reins of Government, ever since Murphy permitted the sit-down strikers to remain in control of private property, we have had incidents such as this repeated time after time.

The United States Government has done nothing to discourage the unions from their acts of violence with the exception of the passage of the Taft-Hartley Act. The State and local authorities have done very little to punish these offenders and nothing to prevent such incidents from occurring (with the exception of Prosecutor Killian and Sheriff Kubath from Berrien County).

With Truman and the New Deal again in power, and the repeal of the Taft-Hartley Act promised, labor again feels that it can commit its crimes against the public without fear of punishment. With WILLIAMS elected, we can expect little aid from the State police (not that we have had very much). Local sheriffs and police, not equipped to handle rioting on a large scale, are intimidated. So we are again at the mercy of the labor goons, some Communists, others as bad as Communists.

By this deliberate, planned raid, labor has served notice on the employer and the individual workingman that their demands must be met or else the employers' property will be destroyed, and the individual will be beaten up. We are again due for an era of violence and lawlessness unless we knuckle under.

Where is that freedom to work guaranteed by the Constitution? Where is the law that protects the individual from lawless acts committed by his neighbor? The Constitution of our country has been superseded by the New Deal, and we must appease the hoodlums. It is an open season for crime. A majority of our citizens decided at the last election that they would rather be the dependent upon the State for charity than maintain their independence. They trade their freedom for a piddling sum of money. We are no longer the United States of America, we are the United Socialistic States of America.

L. W. H.

Foreign Air Bases

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, January 18, 1949

Mr. WILEY. Mr. President, ever since the start of America's foreign aid program—long before the war—I have suggested that foreign bases for ships and planes should be secured, so to speak, as collateral for the billions of dollars which America was pouring abroad.

Unfortunately, for a long time previous to the war, during the war, and after the war, this suggestion was not heeded, with the result that we gave our taxpayers' resources without ever securing very much tangible return in terms of the needs of our own people.

Along this line, the Hearst newspapers throughout the Nation, including the able newspaper in the largest city of my own State, the Milwaukee Sentinel, carried an editorial entitled "Air Bases Vital to Peace."

I ask unanimous consent that this editorial be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AIR BASES VITAL TO PEACE

Senator WILEY, of Wisconsin, has offered the challenging suggestion that many European nations benefiting substantially from American assistance programs are in a position to reciprocate in a manner to increase the security of the United States, but have been neither required nor even requested to do so.

As an illustration he points out that some of the nations profiting most from the Marshall plan have island or territorial possessions in the Atlantic and Pacific strategic areas which will be of major aeronautical importance in the event of a future war involving the United States.

During the last war, as a matter of fact, the United States was permitted and actually urged to build air bases on many of these islands, and did so entirely at its own expense and at very great expense, and the ultimate victory was materially hastened by these operations.

But since the war, the United States has not retained military rights or even commercial privileges in the majority of these strategic areas, although the nations enjoying sovereignty over them do so only because the United States adequately strengthened them and successfully defended them.

With permanent military rights in these vital areas, the United States could be assured of victory in any future war, and in all probability prevent all future wars.

But in the hands of an enemy of the United States, the same areas could be utilized for the waging of aggressive warfare not only against the United States but against the whole civilized world, and might conceivably be the instruments for the enslavement of all mankind.

Why does not the Government of the United States, as Senator WILEY suggests, initiate negotiations with the various friendly powers thus concerned, with the object of preventing future war?

Particularly urgent in this respect, he emphasizes, is the subcontinent of Greenland, from which air defense could make America virtually impregnable in a future war, but from which an enemy air assault might also be of such proportions as to devastate and perhaps defeat the United States.

"Because of its overwhelming importance," Senator WILEY has written to Secretary of State Marshall, "may I suggest that our Government, if it has not already done so, enter into and follow up on negotiations with Denmark for some cooperative agreement whereby we can use Thule as a Greenland base for our air corps."

He reminds Secretary Marshall that the military aviation range from Greenland "would blanket some of the most important areas of production on the American Continent."

"It seems to me," his letter continued, "this Greenland air base is a sort of eastern anchor for our defense, just as Alaska is our western anchor, and every effort should be made to make it a bastion of United States defense instead of an air highway for invasion of the United States."

If the rehabilitation of European nations after a past war is so important to the United States, why is not the prevention of future war equally important?

Why, indeed, should not all possible contributions to American security be required of the rehabilitated nations as a condition of our assistance?

As Senator WILEY so earnestly observes:

"I feel that use of air facilities at Thule and negotiations for similar air rights on

many other ocean outposts belonging to foreign lands are certainly courtesies that America has a right to seek in return for the untold millions she has expended and will expend for European recovery."

Since permanent peace is the basic aspiration of most of the nations of the world, and American economic and military resources are the main support of peace, the relation between rehabilitation and the prevention of war is obvious and should be the keystone of American policy in the whole field of American assistance.

National Housing Legislation

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 18, 1949

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the RECORD a statement regarding the proposed national housing bill, which has been issued to the press by the Senator from Louisiana [Mr. ELLENDER], the Senator from New York [Mr. WAGNER], the Senator from Alabama [Mr. SPARKMAN], the Senator from Pennsylvania [Mr. MYERS], the Senator from Alabama [Mr. HILL], the Senator from Florida [Mr. PEPPER], the Senator from Louisiana [Mr. LONG], and myself.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The sponsors of the new comprehensive national housing bill in a joint statement today said that after careful consideration they had decided that the provision in the bill which would withdraw the tax exemption now accorded the obligations of States and their political subdivisions is within the jurisdiction of the Senate Finance and the House Ways and Means Commttees and should not be considered by the Senate Banking and Currency Committee in connection with the housing legislation.

Senator MAYBANK, chairman of the Senate Banking and Currency Committee, will move that the provision be struck from the bill when the committee takes the legislation up.

The Senators also stated that before hearings on the housing bill begin within the next couple of weeks they intend to introduce other legislation primarily in the form of amendments to existing legislation with respect to such matters as insurance of home mortgages by the FHA, secondary markets for FHA-insured or veteran-guaranteed loans, and provision for the middle-income families.

Manchuria, the Tinderbox of Asia

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, January 18, 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an article which was written by a great American commentator of the air, Mr. George Moorad, entitled "Manchuria, Still the Tinderbox of Asia."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Portland (Oreg.) Oregonian of January 8, 1949]

MANCHURIA, STILL THE TINDERBOX OF ASIA—ONCE AGAIN RUSSIA'S AGGRESSIVENESS, AS IT HAS FOR CENTURIES IN THE ORIENT, CREATES RESISTANCE BY WORLD POWERS

(By George Moorad)

Again the fuse is sputtering in the historic tinderbox of Asia. Time and again since the first Cossack freebooters swept down from Siberia in the sixteenth century Manchuria has proved the spark that lighted war between the various influences and powers scrambling over China's sprawling body. Time and again over the last half century Japan, America, Britain, China, France, and Germany have combined to stop the Russian drive for the commanding ice-free ports of Manchuria, and four times it has come eventually to war. From Peter the Great to Stalin there has been no fundamental change in Russian tactics, except that today the United States alone must challenge Russia's mastery of the Pacific.

This is not a matter where America's distaste for war or even a popular willingness to ignore the Russian challenge will in the end have any telling consequence. The same geopolitical influences which through the centuries have dictated Russian aggressiveness simultaneously create resistance on the other side, which, in this case, means America standing on her somewhat tenuous bulwark in Japan. A whole series of historic errors have been perpetrated which again has unloosed the Russian glacier and now makes this struggle quite inevitable. From Secretary of State John Hay down to Gen. Douglas MacArthur the principle of resistance remains unchanged by academic argument.

A dominating characteristic of this age-old struggle for Manchuria is the use of treachery to gain one's ends. Whether this is due to the oriental background of the participants is open to some question in view of the latter-day developments, yet it is true that the secret treaty, the bribe, the broken promise figure prominently in every chapter from the Treaty of Nerchinsk in 1689 to the Yalta agreement in February 1945.

In early times relations between China and Russia were casual and friendly until the seventeenth century, when land hunger or greed, furs, and gold drove the Cossacks from the Urals into rich Manchuria. A war of 30 years' duration ended in 1689, when the Russians were driven to the north bank of the Amur River, and not until 1728 were commercial relations between the two countries fully restored.

In 1858 China's swift decline before the onslaughts of the West set the Russian bear in motion. After first gaining the south bank of the Amur and the territory of Ussuri to the sea, which includes the port of Vladivostok, the Russians then portrayed themselves as friends of China and offered to mediate for the removal of French troops in Peking—for a price. Their mediation was unsuccessful, but China paid the broker's fee.

HOPES OF CZAR SET BACK BY JAPAN IN 1894

In 1894 Japan gave czarist hopes a rude set-back by defeating China and seizing, besides Formosa and the Loochoos, the Liaotung Peninsula which dominates Manchuria. Japan was forced to disgorge Liaotung chiefly because of pressure from America and Great Britain, but while signing the peace treaty of Shimoneseki with the Japanese, the Chinese Foreign Minister, the famous Viceroy Li Hung-chang, immediately proceeded to St. Petersburg where he signed a secret treaty of alliance with the Russians. Perhaps bribery played a part in Viceroy Li's decision, for he was much too clever for the naive explanation which he gave his government. In a telegram to Peking he said:

"Russia possesses enormous stretches of land, which are settled very sparsely. She will not, therefore, encroach upon one foot of soil owned by others, and as for China bonds of intimacy link her with that country. She has no motive for wishing to connect the railway in Manchuria except the prompt conveyance of troops, and that again is wanted in order to effectually come to China's aid if at any time we should be in straits."

Russia had promised China help in the event she was attacked, but at the same time the czar secretly promised to help Kaiser Wilhelm gain the port of Kiaochow (now Tsingtao) on the Shantung promontory. Only a year after her promise to the Chinese was signed, Russia combined with Germany to strike a staggering blow, the Germans taking Kiaochow and the Russians seizing the Liaotung Peninsula. Even the Russian Foreign Minister, M. deWitte, had been double-crossed by his Emperor. When the Chinese frantically appealed to M. deWitte for assistance against the Germans, deWitte promised to intervene only to be informed by Czar Nicholas that "our ships are proceeding with instructions to occupy Manchuria."

Japan was enraged by Russia's seizure of the strategic ports which Japan had been forced to surrender. Great Britain moved quickly to take the port of Weihaiwei, lying directly between the Russians in Manchuria and the Germans at Kiaochow. The dismemberment of China seemed imminent when the United States intervened with Secretary of State John Hay's famous notes upon the open door in 1899.

NOTES SENT BY JOHN HAY INSISTED ON RIGHTS

Although the principles of free trade and equal opportunities in China had been enunciated as early as 1843 by Daniel Webster, through the first American envoy to China, Caleb Cushing, Secretary Hay now sent a series of circular notes to London, Berlin, St. Petersburg, Tokyo, Rome, and Paris. His first note in September 1899, bluntly insisted that America would insist upon equality of opportunity in every part of Korea, Manchuria and China, and this was followed by a steady strengthening of our position until on January 13, 1905, John Hay informed the world that: "The United States is irrevocably committed to perpetuate the broad policy of maintaining the integrity of China and the 'open door' in the Orient."

The open-door notes served to clarify American interests in the Orient, to which the Czar reluctantly agreed, but already the Russians had gone too far. Through Mongolia and Manchuria, Russian policy was attempting to set up a Russo-Chinese alliance, while at the contiguous ports of Dalny (Dairen) and Port Arthur they had established the greatest naval base in the Pacific. This was a dagger at Japan's heart, and was scarcely less palatable to the United States and Great Britain, who carefully prepared the Japs for their swift and crushing attack upon Port Arthur. Britain assisted in building Japan's warships and training her crews, while the American bankers, Kuhn, Loeb & Co., actually financed the war.

Nearly all the circumstances of the Russo-Japanese war of 1904–5 have a familiar ring. American newspaper cartoons of that time picture Uncle Sam somewhat divided between

the pleasure of selling war supplies to either side, and the anxiety that war would spread.

Port Arthur to the Russians was what Pearl Harbor became to the United States 37 years later. The dispute about Korean ports and the Russian occupation of Manchuria had reached the stage where the Japanese consul at Chefoo was given permission to visit Port Arthur to evacuate Japanese nationals. A high Japanese naval officer traveled as a servant with the party, noted the positions of the mighty Russian Navy, and reported within a few hours to Fleet Admiral Togo in Japan.

As at Pearl Harbor, there was no declaration of war. Port Arthur on the night of February 8, 1904, says a contemporary observer:

"* * * thought uneasily of a war that might come, perhaps. Port Arthur's military and social leaders took the occasion to make merry. Bright lights flashed throughout the Russian port. Carriages rattled over its thoroughfares. The dreamy strains of the waltz and the martial note of the patriotic anthem echoed through the streets. Beautiful women in the height of fashion and brave men in the habiliments of social intercourse lent life to the gay scene. Wine and laughter, the unbounded hospitality of rich homes, the glitter, glamor, and noisy joyousness of the circus tent were the order of the hour. Naught suggested the war cloud hovering overhead save the fleet of warships lying at anchor in the harbor, bristling with guns.

"It was 11 o'clock," the story continues, "and the merriment was at its height. Then came the awful transition. Torpedoes that seemed to shake the very globe burst forth in uproar and flame. The hideous crash of warfare, the cries of the wounded and the groans of dying men smote the ear. As on the eve of Waterloo when the booming of cannon blasted the dance, so now a sudden sweep of violence terminated the festivities."

The Japanese on that February night in 1904 carried their swift attack exactly as they did their dash upon Pearl Harbor in 1941. Japanese torpedo ships, familiar with the Russian flashlight signals, penetrated the screening vessels until they were among the giant warships in the inner harbor. The Russian battleship *Pallada* was on the outside of the fleet on lookout duty when the Jap torpedo boats approached with full lights running. An artillery officer noticed them and informed the *Pallada's* captain that they were Japanese. The captain denied it and said they were built in Port Arthur, and when the artillery man persisted the captain informed him icily: "I am in command of this ship, sir." A moment later the first torpedo struck.

AMERICA THOUGHT JAP ATTACK ON RUSSIA WAS FAIR

Although Czar Nicholas protested to the world about this act of treachery, the American viewpoint at that time was that all's fair in war, and our cartoonists gleefully pictured the bearded Ivan protesting because the Japs had been smart enough to strike the first blow. It was still considered that eventually the superior Russian strength would win, but transport difficulties over the single-track trans-Siberian railway and the final shattering defeat of Admiral Rojestvensky's fleet by Togo made Russia willing enough to negotiate.

Peace upon extremely generous terms to the loser were arranged through President Theodore Roosevelt's strong-arm diplomacy. At the Portsmouth Naval Yard it was agreed that the territory of Manchuria should be evacuated by both armies, Russian treaty rights to Port Arthur and Dalny should pass to the Japanese, while both sides promised to maintain the open door. As peace treaties go, this document was unique, for Russia lost only the fruits of her illegal conquest and Japan made few imperial gains. The real victory was to President Theodore Roosevelt and the principle of the open door.

This period probably marked the most effective period in American diplomacy, which maintained neutrality without isolation, yet confined hostilities without the risk of intervention. The world response to the open-door notes, including the replies from Russia and Japan, so severely limited the potential fruits of victory that both sides were amenable to President Roosevelt's demand for truce.

It is interesting to note T. R.'s shrewd comment on the negotiations which culminated in the peace of Portsmouth. He wrote:

"I am bound to say that the Japanese have impressed me most favorably. * * * They have always told me the truth. They are a very secretive people and I speedily learned that I must never read into anything they said one word more than was actually down in black and white * * * but the Russians lied so to others that they finally got into the dangerous position of even lying to themselves."

President Theodore Roosevelt is so often pictured as a rather sophomoric devotee of the big stick that his accomplishments inside the range of traditional American neutrality tend to be overlooked. The wise and realistic judgments of this period also appear to scotch the argument that today's costly blunders are admissible because of American youth and inexperience with international affairs.

In subsequent years Manchuria has remained the bone of conflict in the Far East, and the United States has intervened repeatedly, though without wide public appreciation of the fact. In 1917-18 American, British, and other alllied troops were assigned to Siberia ostensibly to prevent the Russian revolution from slopping over into China, but also to prevent the Japanese from taking what they had hoped to get in 1905. In 1922 the liberal government of Japan was again persuaded by American pressure to quit Kiaochow, which they had taken from the Germans, and the balance was maintained until Japan struck again in the Mukden incident of September 1931.

Manchuria was obviously the beginning of World War II, the first step in a policy of appeasement and retreat which led inevitably to Pearl Harbor. It is argued that the fatal misstep was made by Britain's Foreign Secretary John Simon, who refused to join Secretary of State Henry Stimson in a demarche upon Japan. But Stimson was Secretary in the Hoover Cabinet, and the problems of the depression and a strong isolationist sentiment make it improbable that the United States would have acted with any courage adequate to the situation.

The puppet state of Manchukuo became a fait accompli which thoroughly destroyed the application of the open door. Only Russia remained to challenge Japanese expansion, which she did with several large-scale battles between 1937 and 1939. Then a 20-year friendship pact was concluded with the Japanese, which the Soviets destroyed in 1945 at the secret urging of the United States.

It is extremely difficult to explain the Yalta policy of February 1945, but at least it is consistent with the unhappy pattern of Manchuria. At the Cairo Conference in 1943 the foreign treaty ports of China were abolished and Manchuria was promised to the Chinese National Government. At Yalta, about 14 months later, Manchuria was secretly delivered to the Soviet Union and the principle of the treaty ports was reinstated exclusively for Russian benefit.

YALTA RESTORED SITUATION BEFORE RUSS-JAP WAR

Yalta restored the precise conditions which brought about the Russo-Japanese War, but this time without the stated safeguards of the open door. Equal opportunities are implied in the treaty which describes Dairen (or Dalny) as "a free port open to the trade and shipping of all nations," but actually no trade or shipping except Russian has entered the Manchurian ports since VJ-day. In 3 years of diplomatic secrecy and silence since Manchuria was occupied, Russia's exclusive possession has become a fait accompli.

The only public explanation ever offered for the secret Yalta promises is that of expedience caused by military miscalculation of Japan's remaining strength. This is plainly inadmissible. No amount of military ignorance can change the fact that Marshal Stalin voiced his positive interest in Manchuria to Secretary Cordell Hull 2 years before the Yalta conference and by mid-1944 Soviet troops were being ostentatiously routed through Moscow for Siberia.

Six months before Yalta the Soviets officially began their anti-Japanese propaganda campaign by issuing special stamps recalling the treachery of the Japanese attack in 1904, and a book called Port Arthur, which stated: "Every stone and piece of soil of Port Arthur is as dear to Russian hearts as are the stones and soil of Sebastopol." Ignorance of Soviet intentions in Manchuria was impossible no matter what the plight of United States military intelligence.

GAMBLE ON STALIN'S WORD SEEN IN AGREEMENT

It is rather possible that Yalta was entirely political, based upon the knowledge that Japanese and British influence had been destroyed and that, for better or worse, the United States and Russia stood face-to-face in Asia. The elements of the status quo had been destroyed by war and distributed as largesse at Cairo, so rather than take responsibility alone the United States chose this breath-taking gamble upon the word of Stalin.

The decisions of Yalta, one of the conferees explained to us in Moscow a few days later, were to become the foundation of Mr. Roosevelt's 50-year plan to win the trust and understanding of the Soviet Union.

Whether Stalin would have kept his word had Mr. Roosevelt lived, or whether the late President might have closed the floodgates at the last moment is a subject for fascinating but futile speculation. What has happened is that Russian imperialism is on the march again, has seized Manchuria and is cascading into China with an energy never equaled by the Cossacks or the Czars. Reluctantly facing her is the United States, our diplomatic weapon of the open door dissolved, yet pledged to the struggle by even deeper commitments than those which swayed our policy in 1943. The fuse is sputtering loudly in Manchuria, breeding ground of wars.

Increased Salary and Expense Allowance of the President

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1949

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by

David Lawrence, dealing with the action of the Congress in connection with the increase in salary and expense allowances for the President, the Vice President, and the Speaker of the House. This very able article points out to us the effect of what we have done by our recent action. It should be read by all Members of Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Evening Star of January 17, 1949]

TAX-FREE ALLOWANCE VOTED BY SENATE SEEN PROBLEM FOR TRUMAN—PRESIDENT CANNOT KNOW WHETHER HE'S ENTITLED TO MONEY AS PAY UNDER BILL

(By David Lawrence)

President Truman can save future Presidents much embarrassment and set an example of forbearance and dignity by requesting the House of Representatives to amend the bill just passed by the Senate that gives him a $50,000 tax-free expense allowance. No President hereafter will ever be sure whether he can pocket that sum as a part of his income or whether he is under moral obligation to spend it only for a public purpose.

It isn't as if a President doesn't have his expenses paid by the Government. For out of the so-called budget for the White House of more than $1,000,000 a year, he gets the following things:

1. A house with plenty of bedrooms and baths, rent free, plus servants—not a dime of which expense he has to pay. All upkeep and repair expenses are paid by Uncle Sam. The maintenance amounts to about $260,000 a year.

2. All expenses for official entertainment.

3. A fleet of automobiles and chauffeurs for the personal use of himself and family. The Government pays for the upkeep and gasoline used.

GETS PRIVATE YACHT

4. A private yacht and crew that cost the Government a large sum annually to maintain.

5. A private airplane with luxury accommodations and maintenance crew that costs the Government quite a sum annually to maintain.

6. A $40,000 allowance for travel which can be used for political campaigning by the simple trick of calling the trips nonpolitical.

Now it is proposed to increase the President's salary from $75,000 to $100,000. This item would be taxable and thus the President would be just like anybody else insofar as that sum is concerned. Last year he netted approximately $48,000 after taxes because of the split-income rates of husband and wife and under the proposed salary he would net $60,000 after taxes.

But when it comes to the $50,000 expense allowance, tax free, which the Senate has just voted to the President, no businessman has any such privilege. The Government scrutinizes closely expense accounts in business and disallows them if not spent for business purposes. Even so, when the item is ruled to be deductible, the Government bears only 38 percent, while the employer bears 62 percent of the cost of the expense item. There are no tax-free expense allowances in private business.

NO ACCOUNTING NECESSARY

The precedent in this case is also bad because the Senate voted that a President didn't have to make an accounting if he didn't want to do so. Does this mean he can add the $50,000 to personal income? Why put a President of the United States in the embarrassing position of having to decide whether a given expenditure is one that he would or would not have made if he had not been the Chief Executive?

If the House of Representatives wishes to put the matter of a President's salary on a realistic basis, it can increase the present amount to a total of $240,000 a year and make all of this taxable just as is any executive's salary, subject to the usual deductions. This means that at present rates his net sum after taxes would be about $110,000, or the equivalent of a $100,000 taxable salary and $50,000 tax-free allowance as the Senate has proposed.

No element of tax avoidance would then be involved and the precedent would be an honorable one, though to be sure many of the so-called "little people" who are supposed to have won the election for Mr. Truman will wonder since when does "a man of the people" need so much money for personal use the moment he wins an election?

A President who cannot save money on a $75,000 taxable salary when all his rent and servants and transportation are paid for by the Government is not setting a good example of economy or thrift. Likewise a President who accepts a tax-free allowance of any kind and asks the other citizens to pay taxes is not interpreting correctly the basic principles of Thomas Jefferson on which the Democratic Party was founded. Only kings and princes are treated on any other basis. It's a bad way to start off the Fair Deal.

Rights of Alaskan Indians

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 18, 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Saving the Indians," from the Alaska Weekly of January 7, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SAVING THE INDIANS

Mr. James E. Curry, who saves Alaskan Indians at a profit, has broken into print again with the dire prediction that 7,000 Indians surviving in southeastern Alaska are due to die miserable deaths within a few years unless their land rights are defined before various schemes to populate the Territory with whites take effect. "The more whites there are in Alaska," said Mr. Curry, "the greater will be the encroachment on the Indian's right to live unless that right is legally defined."

We were blissfully unaware that an act of Congress was required in order to legally define the Indian's right to live. In our ignorance we had assumed that the Indian of Alaska, being an American citizen in full right, had certain constitutional guarantees concerning his right to live and his right to the pursuit of happiness.

This is not to say that the entire system of aboriginal rights and the Indian land claims in general should not be clarified by proper legislative action for the sake of all Alaska, whites and natives alike, but it is to express a certain measure of disgust with the professional native agitator.

As for example, in the same interview Mr. Curry passed out the following misinformation:

"Some time back Interior Secretary Krug was about to sign an order giving some Eskimos a reservation near Nome.

"A hill of jade was found in the center of the area, an Indian was thrown into jail for attempting to mine it, white mining interests began to show a great interest in developing the jade deposit, and the order has not been signed."

The easily ascertained fact is that this so-called mountain of jade had long been located and a certain amount of work toward its development had been accomplished long before Secretary Krug attempted to turn over this highly mineralized area to the Eskimos.

In common with all others interested in Alaska, the Alaska Weekly is interested in the welfare of all Alaskans, and that includes the natives of the Territory. It has been our observation that the Indian Service, the Territorial health department, and many other agencies have evidenced a paternalistic interest and a generosity toward the natives never accorded by any governmental agency to the whites pioneering the country nor capital seeking its development.

We feel that even without the paid services of Mr. Curry the natives are in small danger of mass starvation or dying a miserable death in the foreseeable future.

Trades Unionist and Hemispheric Air Defense

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. HINSHAW. Mr. Speaker, few, if any, understand better than do the workers in the aircraft industry why continuity of production loads in aircraft factories constitutes a major factor in the defense strength of the United States. Production workers and skilled technicians in aircraft factories must be currently familiar with production models. If they are furloughed or become separated for extended periods that familiarity is largely lost. Furthermore, discontinuity of work discourages them with the industry and causes the skilled personnel to seek employment elsewhere—employment in industries where continuity of work, and, hence, income, is reasonably well assured. Such persons, because of their skill, command good wages, and at the same time are sought after by other industries. I speak not only of production workers in their many classifications, but, particularly, of the tool and die makers and the erectors and maintenance men on jigs and fixtures.

You cannot turn the aircraft industry off and on like a spigot. It takes time to organize and train a production team and it takes time to train workers in the specialized aspects of the skills needed in the industry.

In the past 5 years, by virtue of the demands of new designs for high-speed aircraft, the degree of skill required among the various trades employed in

the aircraft industry has mounted very high, indeed. For example, the construction of a wing designed for speeds approaching the sonic range requires a perfection of skill in construction so far beyond that required for the earlier World War II aircraft that it is not possible to employ workers in modern wing construction who are as relatively unskilled as were those who built the wings for the earliest type of aircraft. Continuity of employment and, hence, continuity in training to the new degrees of skill required is becoming a tremendously important factor, therefore, to the defense of our country.

On last December 11, in the Washington Trades Unionist, appears an article written by Mr. John Baer, formerly a Member of Congress and in recent years a familiar figure representing the A. F. of L. on Capitol Hill, entitled "Hemispheric Air Defense—The United States 70-Group Program." This article went out to over 1,000 A. F. of L. and farm papers and has been widely published. The article referred to is as follows:

HEMISPHERIC AIR DEFENSE—THE UNITED STATES 70-GROUP PROGRAM

With the termination of the war in Europe began a period of transition for the Army Air Force. This resulted in Air Force redeployment from the European to the Pacific theater of war for the final action against Japan. Within 90 days the Japanese capitulated to our Air Force bombings—and immediately came Nation-wide demand in this country to "get the boys back home."

From the effective combat force of VE- and VJ-days and within 12 months the enormous fighting force of 243 groups was reduced to but two effective groups. We have now begun the long trek back to the necessary 70 groups, which had long been determined was the minimum force necessary to the security of our national defense.

By virtue of the failure of the United States Senate to act on H. R. 6247, the 70-group bill, a vast part of that 70-group-force program, with its complementary groups in the National Guard and Air Reserves, now exists only on paper. It constitutes but a part of a ponderous governmental record, kept in the headquarters of the newly established United States Department of the Air Force.

With the dismemberment of the Air Force combat forces in 1945 and 1946 came the renegotiation and cancellation of 18,090 separate contracts, totaling more than $22,000,000,000. The cancellation of these contracts was reflected not alone by unemployment in airplane factories, but unemployment in practically every manufacturing center in the United States.

This almost complete liquidation, if not annihilation, of the American aircraft industry was described in the report of September 13, 1948, made by the Grand Lodge of International Machinists.

That report read, in part, as follows:

"The aircraft retrenchment program affected not only production of current types of planes, but involved lay-offs of hundreds of highly skilled technicians working on research and experimental projects. The airframe industry had a peak employment during the war of 1,250,000 workers, exclusive of companies manufacturing aircraft engines, propellers, and aircraft parts. Employment declined so that in March the Department of Commerce reported a total of only 148,000 employees in the air-frame manufacturing plants.

"The case of one company is typical of the industry's experience. Douglas Aircraft reached peak employment in August 1943 of 157,000 workers. * * * In January 1948 the company had only 16,000 employees, and * * * less than 5,000 were on the active recall list on that date. * * *

"Recently, at Lockheed, 80 tool and die makers were laid off for a period of approximately 3 months and at the end of the lay-off only 1 of the 80 returned to work. During that period the 79 had found employment at other jobs—in some cases at a lower rate of pay—and they chose to remain in their new jobs rather than to face the uncertain economic conditions in the aircraft industry.

"* * * Certain significant passages, typical of the stress placed on our national defense requirements, are quoted from the reports of President Truman's committee:

"'* * * The United States must have a double-barreled policy abroad. It must work to achieve world peace through support and development of the United Nations. At the same time it must prepare to defend itself for the possibility that war may come. * * * Reluctantly, this commission has come to the conclusion that relative security is to be found only in arming the United States so strongly that—

"'1. That other nations will hesitate to attack us, or our vital national interests, because of the violence of our counterattack they would have to face; and

"'2. That if we were attacked we will be able to smash the assault at the earliest possible moment.

"'This country, therefore, if it is to have even relative security, must be ready for war. Moreover, it must be ready for modern war.'

"The recommendations of the President's commission and the congressional committee strongly affirm the country's need for the prompt adoption of a program designed to give us air supremacy by 1953. That length of time is the time required to complete the over-all program based on an Air Force composed of 70 groups. Emphasis is placed on the need for a new approach to aircraft production. Rather than Congress providing funds on a year-to-year basis, a long-range program is urged which will give adequate consideration to all phases of the problem.

"* * * Supremacy in the air is the first requirement for maintaining peace, and of meeting an attack upon the United States, Canada, and Newfoundland by another country. The interests of our country require building and maintaining not only a strong but a stabilized aviation industry—working on a long-term production program that will afford and maintain for us supremacy in the air at the earliest possible date."

Address Before Alexander Hamilton Club of Tulsa, Okla.

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1949

Mr. KEEFE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the Alexander Hamilton Club, Tulsa, Okla., January 15, 1949:

Mr. Toastmaster, ladies and gentlemen, it is indeed refreshing that in the midst of a tangled and snarled mess of social, economic, and international problems we can assemble as Americans in this remarkable city of Tulsa and freely discuss our common interests. Stimulated and inspired by the collossal record of Alexander Hamilton, we gather tonight without fear, secure in the knowledge that despite the events of November 2, the spirit of republicanism still lives as a vital, virile force throughout the Nation. To those of faint heart, may I call your attention to the fact that nearly 22,000,000 people in these United States voted Republican, as against slightly in excess of 24,000,000 who voted Democratic. Can anyone say that 22,000,000 Americans are not a virile, vital force in the Nation? No, my friends, the Republican Party, which has survived victory and defeat down through the years, still lives, and under proper leadership and guidance will again command the intelligent support of those who believe in a fundamental concept of liberty and freedom for the individual and in a government of law under the Constitution.

The events of the recent past should serve as a warning to the 40,000,000 who failed to exercise their right of suffrage and should inspire them to active participation in the political affairs of the State and Nation, if we are to preserve our freedom and liberty and prevent an ultimate devastating collapse that may take us down the path to state socialism or communism.

I shall not attempt to explain the events that may have precipitated the defeat of our party on November 2. Those events are now history and reference to them is valuable only as a guide in attempting to interpret what is to come in the future. We are a Nation dedicated to the principle of two-party government. I pray the time may never come when we will have such a variety of splinter parties that none can successfully carry on the Government. The situation in France should be sufficient warning to cause all thinking Americans to pause. Our Nation has risen to its great eminence because we have always had a strong majority and minority party. I was in attendance at the last Republican Convention at Philadelphia, and out of the welter of confusion and heat a voice was heard that sounded a call that in my judgment will go down in history as one of the great historic statements of all time. Our only living ex-President spoke in part these words:

"Great as your problems are, they are no greater than Americans have met before your time. You are no less able or courageous than they were. Therefore I repeat, what you say and do here is of transcendent importance. If you produce nothing but improvised platitudes, you will give no hope. If you produce no leadership here—no virile fighter for the right—you will have done nothing of historic significance. If you follow the counsel of those who believe that politics is only a game to be played for personal advantage, you are wasting your time and effort. If, on the other hand, as a mature and inspired political party, you face the truth that we are in a critical battle to safeguard our Nation and civilization which under God have brought to us a life of liberty, then you will be guided in every step to restore the foundations of faith, of morals and of right thinking. If you choose your leadership with full recognition that only those can lead who believe in your ideals, who seek not only victory but the opportunity to serve in the fight, then you will issue from this hall a clarion call in as pure a note—in as full a tone—as that call to arms which your political ancestors issued at Ripon, Wis., when this party was born to make all men free."

Never in the history of the Republic was a more inspiring statement ever made. In my humble opinion, the Presidential campaign of 1948 fell far short of those ideas and ideals. The Democrats were specific in their

promises. They left no room for doubt. They said they would repeal the Taft-Hartley law. Many Republicans were either "hush-hush" or divided on the issue. Some thought it might be amended; others said it would stand. The Democrats made specific promises to the farmer, to labor, to the aged, to the unfortunate, and to the housewife. The Republican leadership wrote most of the same promises in their platform but refrained at the highest level from slugging it out with the opposition. Many Americans grew sympathetic for the under dog. Many apparently were not impressed by appeals for unity and reaffirmation of the Golden Rule. The people apparently wanted some concrete definite expression from the Republican leadership; they received nothing from the top but generalizations. This ought to teach each and every one of us that the American people are hungry for truth and facts and it is the responsibility of every good Republican in America tonight to actively and militantly fight for those positive principles in which we believe. It will not do for us as Republicans to simply say: "We can do it better," since that is a mere presumptive conclusion. To say that Republicans are competent and the opposition are a lot of bunglers is a mere repetition of the same presumptive conclusion. We must be able to furnish concrete evidence to show how we could do it better and show in specific terms how we can improve the welfare of our Nation.

There is no use talking about reorganizing the Republican Party with this or that set of leaders, when our first procedure should be to organize the thought and purpose of the party in keeping with its record and history. It is my opinion that such a course will develop leaders who will stand staunchly on principles and policies for the ultimate welfare of and service to our people. Our people and the future of our country are not safe in the hands of men who think and speak of fear and who listen alone to the coercive threats of the so-called pressure groups. We must have leadership that will think first in terms of public service and of the wants and needs of the people. It should be clear by now that in all times and in all lands, leaders have earned their places by courageous stands and not by maneuvering or scheming to foreclose the lawful ambitions of others or by disregarding the wants of the people. Our determination to see our country forge ahead is just as great and our faith in our people is just as strong as ever, and I am certain that the Republican Party still has men who are courageous, dauntless fighters for the right, and that out of this conflict there will arise such leadership that will save our country from drifting and sinking into sheer, pure socialism.

On January 5 the President delivered his message on the state of the Union. You will recall that during the recent campaign the President repeatedly declared that the Eightieth Congress was the worst or the second worst Congress in the history of the Nation. He repeatedly gave the impression that the Nation was all but destroyed as a result of the action or inaction of the Eightieth Congress. How different was his initial approach in delivering his address on the state of the Nation:

"I am happy to report to this Eighty-first Congress that the state of the Nation is good. Our Nation is better able than ever before to meet the needs of the American people and to give them their fair chance in the pursuit of happiness."

He further said: "Our private enterprise system has reached new heights of production. Since the boom year of 1929, while our population has increased by only 20 percent, our agricultural production has increased by 45 percent and our industrial production has increased by 75 percent. We are turning out far more goods and more wealth per worker than we have ever done before."

This, in the year 1948 while operating under the legislative leadership of the Republican-controlled Eightieth Congress—the greatest number of people employed, the highest national income, and the greatest production ever achieved in the history of the country in peacetime; and still it was contended that the Republican Eightieth Congress failed to meet its responsibilities to the people. I call attention to these facts merely to demonstrate how necessary it is for our people to think and to reason if we are to find the truth that must guide our actions as citizens.

The President has just submitted his proposed budget for the fiscal year beginning July 1, 1949, and ending June 30, 1950. It is the most collossal, intricate, and complicated budget ever submitted to a Congress of the United States. It consists of 1,429 pages of small print. It actually weighs 6½ pounds. It would take a lifetime of effort and study to comprehend all of its multitude of figures and details. I think it might be helpful to state the budget situation in terms of receipts and disbursements per fiscal year. In the fiscal year 1948, the Government actually collected as total receipts from the public from all sources $45,372,000,000. It spent $36,524,000,000, leaving a balance of $8,848,000,000 in the Treasury. This was the first year of Republican control of the Congress.

The fiscal year 1949 will not end until June 30. It is estimated that despite the tax reduction provided for by the Eightieth Congress, the Government receipts from all sources will amount to $42,923,000,000. Total expenditures were estimated at $40,133,000,000. It is anticipated that there will be a surplus above expenditures of $2,790,000,000. These are the President's own estimates as contained in his recent budget message. Thus for the fiscal years of Republican control of the Congress we will have operated for the first time in many years in the black with actual surpluses in each year in the Treasury.

We now turn to the estimates of the President for the fiscal year 1950. He estimates that total receipts from all sources of Government revenue will be $47,185,000,000. He estimates that disbursements from the Treasury will total $45,710,000,000, leaving a surplus at the end of fiscal year 1950 of $1,475,000,000. I must call your attention, however, to the fact that the President has recommended tax increases including increased pay-roll taxes that are estimated to bring into the Treasury an additional $5,950,000,000. We must understand that these are mere estimates and already proposals are being recommended in the form of a new lend-lease program for the purpose of arming certain unnamed free nations that will cost an additional $2,000,000,000. Thus it should be apparent to anyone that even in the face of the most optimistic estimates of income, we will have to embark upon a program of deficit finance before the end of the fiscal year 1950. This can mean one of two things—either increasing the national debt or further devaluation of the gold content of the dollar in order to create an artificial treasury balance. The situation is critical and frightens even the most casual student of government finance.

Many people clamoring for more and bigger public expenditures, for more and bigger Federal grant-in-aid programs of all kinds, have apparently been lulled into a false sense of security and utterly fail to realize that unless the Government provides for an orderly and constant amortization of our public debt as a definite part of our fiscal policy, we may in the future face a situation of the gravest consequences. In my humble opinion, orderly debt management and retirement is a positive necessity if we are to maintain the fiscal solvency of your Government and mine. How, then, can this be done? All indications point to a continuation of the Marshall plan and a continuous increase in the amount needed for our armies of occupation in foreign lands and for various and sundry programs of aid to the nations that are fighting Communist aggression. All indications point to increased rather than diminished appropriations for national defense. As things now stand in the present Congress, little or no reduction of appropriations requested for these proposals will be made. The chances are that they will be increased rather than cut. It is possible, however, to materially reduce our spending for internal peacetime functions and activities. I am one who believes that it is also possible to install practices of economy in our national-defense program and our foreign-aid program that will very materially reduce the sums alleged to be needed. It is high time that the people of America begin to realize that one of the greatest threats to our freedom and liberty in this country and the American way of life is to be found in the extravagant spending of the United States Government for internal peacetime functions and activities, oppressive taxation, and a dangerously high public debt. We all complain of the inflation that has cut away the purchasing power of our dollar, and yet many fail to realize that one of the largest items of expenditure made by the average individual is the taxes that he is forced to pay to Federal, State, and local governments. Federal spending in 1940 approximated $9,000,000,000. In the fiscal year ending June 30, 1948, $36,524,000,000. Current annual Federal expenditures exceed the total national income in 1933.

It should be apparent to every thinking person, therefore, that one of the first obligations of the Eighty-first Congress is to keep the budget in balance and provide a surplus that will maintain a program for orderly debt retirement. The greatest care must be exercised that taxation does not reach the point of confiscation and dry up the sources upon which taxes are levied. The best way to acquire surplus funds for debt retirement is to reduce every Government expenditure not absolutely necessary for the maintenance and extension of necessary Government services. I trust that the Hoover Commission report will point the way to streamlining our giant Federal Government by consolidation of Federal agencies and elimination of duplicating and overlapping services and activities among the various departments of Government. There must be drastic curtailment in the Federal pay roll, and it would seem a matter of common sense that needed increases in compensation to Federal employees could best be accomplished by a reduction in personnel. There are literally hundreds of places in the Federal budget where considerable cuts can be made and in no way interfere with the orderly and necessary Government services. This has been demonstrated time and again. Citizens all over America must be aroused in some way to the delicate and critical fiscal situation facing your country and mine. We must no longer look to the Federal Government to support us. We should support, and eventually will be forced to support, the Government if we are to avoid complete disintegration of our American system of business as well as Government. Members of Congress should be encouraged by you people to resist selfish, special interest, pressure groups of any kind. The public are entitled to have the Congress place the national welfare above local needs and local pressures. Does this mean that we Republicans have no

interest in the welfare of the common man? I bitterly resent that charge. We want the real benefits of social security to be achieved for all of our people. We want the standard of living of our people raised. We want full employment. We want good wages. We want necessary internal improvements. We want the benefits of rural electrification extended. We want our waterways harnessed to prevent flood and disaster. We want our resources developed to provide much-needed electrical energy. We want erosion control and reclamation and good soil practices continued. But, my fellow Americans, unlike many of our Democratic friends, we must take account of the cost. We must know where the money is coming from. We must know how these vast sums that must be provided by taxation can be raised without breaking the back of the taxpayer. The President in his message expressed the hope that we could legislate all of his objectives into law and provide the money for their implementation into action without ruin to the capitalistic society that has brought us the best standard of living of any people on the face of the earth. I assure you, my fellow Americans, that the accomplishment of this objective is no simple assignment. I am one, however, who refuses to accept the philosophy that we are headed for ultimate collapse and ruin. I refuse to surrender my faith in the intelligence, the courage, the integrity, and the vision of our people. I am convinced if it can be marshalled and applied to the situation at hand, we will be able to ultimately solve our problems in the great public interest.

There are many of the proposals submitted by the President in his state of the Union message that any good American who believes in justice and human liberty can support. There are other suggestions so intimately associated with the Communist and Socialist attitude toward government that we who believe in the capitalistic system will be compelled to oppose.

As a Republican, I do not conceive it to be my responsibility to merely become a heckling, defeatist, and unintelligent opposition. I believe that we as a party have a golden opportunity to go to the people of America with a definite program of constructive legislation that will permit the accomplishment of many of the social objectives that the people of America demand and yet do so within the framework of our constitutional guaranties and within the framework of our established capitalistic system of government.

Isn't it queer that after 16 years of Democratic control, during all of which time the administration in power had complete control of the executive, the administrative, the legislative, and I may say the judicial branch of the Government, with the exception of two—is it not queer that with all this opportunity for the passage of legislation in the interests of the people that we should now hear it said that cartels and monopoly and Wall Street are in the saddle—that the people are still ill-housed, improperly clothed, and suffering from the pangs of hunger and malnutrition? What has this great party been doing all these years with the untold billions that it has had at its command, if it has permitted the development of the giant monopolistic influences of which it now complains? What has this Government been doing to protect the interests of the common man during the past 16 years, if one-third of our population is still ill-housed, poorly clothed, and ill-fed? It comes with poor grace, it seems to me, at this late hour, to attempt to assess Republican responsibility for the ills that beset mankind when you and I know, and every thinking person knows, that the party in power, while appealing constantly to the underprivileged, has utterly failed legislatively to provide the relief which they contend is so badly needed today.

I again say to you, my fellow Americans, that it is high time for us to think, and to think not in terms of our own peculiar selfish interests, but to think in terms of what is for the best interest of the whole people. Human avarice, selfishness, and greed are still found in the hearts of men. There must be developed in this country a great crusade for truth and for justice among all our people. We should determine here and now as Republicans to carry on the fight for freedom and for liberty. We must determine here and now to rededicate ourselves to the interests and welfare of our great country and by precept and example demonstrate to the people of the world that here in America, with liberty and freedom, tolerance and justice and the principles of democratic government still live.

Our Public Recreation Lands

EXTENSION OF REMARKS
OF
HON. J. HARDIN PETERSON
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1949

Mr. PETERSON. Mr. Speaker, during the Eightieth Congress we have had as Chairman of the Public Lands Committee of the House of Representatives the distinguished gentleman from California, the Honorable RICHARD WELCH. I had the privilege of serving on the Merchant Marine and Fisheries Committee with the gentleman from California, and on the same subcommittee with him, and have a warm personal friendship for him.

When he came, by reason of the Reorganization Act and the change in parties, to the Public Lands Committee and became its chairman, it was my pleasure to serve with him 2 years, during which time I had the opportunity to observe his kindness, his fairness, and the ability with which he handled this great committee.

I am glad to pay tribute to the fine service which the distinguished gentleman from California rendered thereon. It was a real pleasure to again have the opportunity to serve with him.

In December of last year, the gentleman from California [Mr. WELCH] chairman of the Public Lands Committee, delivered before the California State Chamber of Commerce a very fine address entitled "Our Public Recreation Lands." In view of the important matter contained therein and the fine presentation of the problem, I wish to include it in my remarks at this time. It follows:

OUR PUBLIC RECREATION LANDS

(By Hon. RICHARD WELCH, United States Representative from California)

1. INTRODUCTORY

I wish that I could come before you today with the statement that, here in California and in the other Western States where we have such bounteous recreation resources on the public lands, there is no recreation problem.

If recreation were there for the taking without any need for organized special services to the public, or any need for construction work, or maintenance, or other incidental jobs, I, as chairman of the Public Lands Committee, would be spared a great deal of trouble and expense.

But that is not the case. We have to make our great recreation resources accessible to people by building and maintaining facilities for public convenience, and by imposing reasonable measures of discipline in the various public use programs. We have to think ahead where our public lands are concerned because we have to guarantee those lands freedom from plundering and deterioration of the national park, national forest, and other public uses we have organized so carefully upon them.

Every time I go into a national park or national forest and see how the public, despite our earnest efforts at friendly discipline, is always on the verge of debasing the magnificence of our scenery, I realize how important the job has become.

The automobile load of perfectly fine Americans will gaze spellbound at the scenery from Washington Point in Yosemite National Park, and at the same time throw out lunch wrappers, beer cans, and all manner of trash to the four winds. You can go up there right now and see this condition; and it is repeated at a thousand places in California alone.

My point is that such an attitude is indicative of the public indifference we encounter all the time in trying to perpetuate in every way the high values of parks and forests and other recreation lands—to keep them free from simple spoliation and also from major invasion of nonconforming uses, such as overgrazing, overcutting of timber, and other enterprises that have little or no place in recreation land use.

We of the Government have tremendous watchdog responsibilities. That is why I cannot come before you saying that everything is all right. In the constant process of economic and social evolution nothing ever is ideal, apparently.

But I did not come here today to complain about the public. Far from it. For the most part the public is wonderfully responsive to what is right. I am more interested at the moment in telling you how facilities for the convenience of that public, at our recreation areas on the public lands, are rapidly going to pieces because of the lack of sufficient reconstruction and maintenance funds to keep them in good condition. We can't blame the public for this difficulty, although it is a public responsibility to see that the situation is corrected.

Taking only one situation among the several serious recreation problems—that of the western national park areas—I am very much disturbed by the general run-down condition of buildings, roads, trails, camp grounds, water and sewer systems, communications systems, and other structures.

I find that in a good many cases routine upkeep has not been possible for some years on anything like an adequate basis.

I am particularly concerned with this situation because, as chairman of the Committee on Public Lands, and as a citizen of the West, I deplore the way many costly park structures have depreciated to the point that they are beyond ordinary maintenance, and will require a great deal of reconstruction. The situation right now is an open invitation for even more serious conditions before betterment can be achieved, because it takes time to make corrections.

I take it that in such company as this there is no need for me to argue that recreation is one of life's essentials. All of you here today, I believe, are aware that the need to safeguard our natural recreation resources, and to make them available to people, is clearly a matter of duty in the business and social life of our phenomenally expansive West, along with the many other civic responsibilities.

However, I do feel that we have been taking the park maintenance problems for granted,

and letting it drift along without proper attention. The pleas of the National Park Service for aid apparently are not being heard clearly enough by the public, and by the public's Representatives in Congress where Federal funds are appropriated.

One writer on this subject has said that, until money can be provided for park maintenance, the Park Service would like to hang out a sign such as used to be seen in some western establishments, reading: "Don't shoot the piano player, he's doing the best he can." I know that we all have a great deal of sympathy for the Park Service, the Forest Service and our State Park people in this problem. They do not complain very loudly, and need assistance in getting their story told where it will do the most good.

The only way by which we are going to save ourselves from a great deal of additional trouble and expense is to take stock of the situation as individuals, and by organized civic means, in order to save our splendid natural recreation plant from further deterioration.

2. THE PROBLEM

During the war years the National Park Service, in common with some of the other non-war agencies, was asked to defer as much as possible of the national park program. The park service was trimmed down to a skeleton organization, and such matters as construction and maintenance of facilities were suspended almost entirely for the duration.

Buildings were not painted, roads missed their usual routine maintenance, clean-up was not done, trails were ignored almost entirely. In short, the entire park plant—and this goes also for forest service and State parks—began immediately to go to pieces. Because of war we had to stand by and watch that happen.

After the war everyone looked forward to readjustment and resumption of normal maintenance in the parks. But national and international complications have not been overcome to the point that we can settle down even yet to the arts of peace. The parks still are being operated on practically a starvation financial diet. We have not yet begun to refurbish the most neglected roads, some of our trails have disappeared almost entirely, campgrounds and picnic areas are neglected sadly, many of our buildings have not been painted or repaired for many years. Without adequate clean-up crews the park roadsides in numerous places have become so littered that they are a public disgrace. As I suggested at the outset, the general public might help a good deal in this particular problem—which is the most obviously discouraging of all. Paradoxically, during these past lean years in the parks, the problem has been aggravated by an amazing increase in use of the parks by the public.

You will be unusually interested at this point, I think, in a few figures which I requested of the Park Service. During the decade of the twenties there were 20,000,000 visits made by the public to the national park system throughout the country.

During the 1930's over 87,000,000 visits were made.

Thus far in the 1940's over 146,000,000 visits have been recorded. This is about equal to a visit from every person in the country.

During the four war years alone over 57,000,000 visits were made—almost two and one-half times the total number of visits during the entire decade of the 1920's.

Today our national population is 37,000,000 more than it was in 1920. Over 25,000,000 visits per year are being recorded at the national parks. I have visited the parks, observed the visitors, and studied their problems. I can say to you that people consider parks and recreation as necessities as much as they consider them luxuries.

The public will never give up the parks so long as our standard of living permits the individual to maintain that intense love of country which is so characteristic of every American; and which is inspired in no small measure in this age of wheels through the enlightenment of travel to the recreation places of our country.

We are thinking ahead these days in terms of thirty to fifty million visits per year, and this is a rather fearsome prospect for the Park Service in view of the present state of decay into which their facilities have fallen.

The task, of course, is to take care of park visitors adequately, in all respects. We must face squarely the fact that people need the parks, and that we are thinking today in wholesale terms by comparison with park needs of a few years ago when we still were in the retail epoch with only a few million visitors annually.

3. THE MEANS

Taking care of park visitors requires a complete plant at each area. We have to have administrative and protection forces and facilities, and construction and maintenance crews and facilities.

I have been a champion of the national parks, and recreation generally, throughout my life as a public servant which covers a period of 40 years, 23 of them in Congress. If in this championship I have emphasized any one particular thing it has been the principle of taking care of the conveniences which Congress has been able to provide in the parks.

Road work alone always looms high in the annual maintenance programs of the parks. In the 28 areas of the western national park region we have 437 miles of high standard primary roads, 1,306 miles of secondary roads, and 2,632 miles of trails.

During the present fiscal year the Park Service has only $248,400 for routine maintenance of those primary roads. That averages out at about $600 per mile per year for primary road maintenance, exclusive of snow removal or other unusually expensive operations which cost a great deal more than $600 per mile.

The fact is that with present-day costs we are trying to make road-maintenance money go three and four times as far as it is possible to stretch it. The fact that the Park Service had practically no road-maintenance money whatever during the war years, and has had very little thus far during the postwar period, means that in a good many instances road work has become a reconstruction job rather than a maintenance job. This is something which must be taken care of very soon if we are to escape costs of many thousands of dollars per mile for rebuilding before the roads again will be in good shape for maintenance at low costs. The same thing is true of minor roads and trails.

In the other departments where such developments as camp grounds, water and sewer systems, communications, and quarters are taken care of, the Park Service this year has only $437,000 for the western areas. This is about one-third of the amount needed.

I was astounded on my last trip into the Yosemite to learn that telephone-maintenance money this year was so meager that it barely sufficed to put the most important lines in service. The telephone line between Hetch Hetchy and the park headquarters had to be ignored. Yet when the 11,000-acre forest-fire catastrophe occurred at Hetch Hetchy last September, 24 hours were lost in getting adequate crews on the fire line because that telephone line was out of service. I have investigated this incident and know that a few hundreds of additional dollars would have made the difference. The fire is costing the taxpayers about $100,000.

There are many other examples of penny-wise pound foolishness. The question is: What are we going to do? I am doing all that I can to bring to the people at home, and to the authorities in Washington, an understanding that we cannot have people using our park and recreation areas of the West at the staggering rate of dozens of millions of visits per year without incurring a big bill. I can get many of the facts and tell the story. It is up to you people here at home to see to it that remedial measures are pressed vigorously until the situation is permanently corrected.

The Shenandoah Valley

EXTENSION OF REMARKS
OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1949

Mr. HARRISON. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the following article appearing in the Daily News-Record of Harrisonburg, Va., on Wednesday, January 5, 1949:

SHENANDOAH HISTORIC, TOO

Orval Hopkins, travel editor of the Washington Post, makes some amends for not giving at least a nod to the Shenandoah Valley's treasured history, and was so reminded by Kinsley McWhorter, Jr., office secretary of the Shenandoah Valley, Inc., and Mr. Hopkins then prominently displayed the following in his newspaper:

This quarter of the page led off last week with a headline reading "Williamsburg drips history" and went on in not too well chosen (it seems) words to talk about the Williamsburg-Jamestown-Yorktown triangle which had been laying claim to most of the history lying around loose. This temerity aroused verbs and adjectives in the breast of Kinsley McWhorter, Jr., office manager of Shenandoah Valley, Inc., Staunton, Va. McWhorter unlimbers and delivers as follows:

M'WHORTER'S LETTER

"DEAR MR. HOPKINS: Don't let those people down in Tidewater fool you. The historicitude of the Tidewater triangle is undeniable, but never let yourself be talked into believing that they are on the apex. Your column in Sunday's Post indicated you had been led to believe that Yorktown, Williamsburg, and Jamestown were it.

" 'Tain't so. Up here in the valley we originated the word history. We fathered the ancestors of Sam Houston, caught Daniel Boone on his way through, showed Woodrow Wilson the world and later let him visit the beauties at Mary Baldwin College (then Augusta Female Seminary), had T. J. Jackson teaching the youth, proved so beautiful to Matthew Fontaine Maury that he requested his casket be carried through Goshen Pass when the rhododendron were in bloom, we fathered the ancestors of half a continent, served as county seat for the West (Staunton itself did that), have the original deed to the Northwest Territory, fathered the Stovers who married the Eisenhowers who gave birth to General Ike, provided the battlefield for the most-studied campaign in military history, fed the Confederacy, invented the reaper, the sewing machine, and own the Seventh Wonder of the World."

VALLEY OF HISTORY

"If the triangle can top that, then we have the finest hotel in the East in the Hotel Roanoke; have eight major caverns whose history goes back some many millions of years; present the apple blossom festival: gave to the world Johnny Appleseed.

"This place reeks of so much history that it's becoming widely and popularly known as the valley of history. The Washington family came from and lived in the eastern panhandle of West Virginia; Gen. Muhlenberg, the preacher who got up in the pulpit and started enlisting men in the Eighth Virginia Regiment in 1776, lived in the valley; we've got Scotch, Irish, German, English, and Selim the Mohammedan in our history.

"Next time a triangler tyro tries to tell you he's tops, tip him off."

SOME MORE HISTORY

But Mr. McWhorter, even in his zeal in standing up for the Shenandoah Valley history didn't get near all of it. He might have mentioned that:

Governor Alexander Spotswood and his knights of the golden horseshoe first viewed the great valley of Virginia from Swift Run Gap in the Blue Ridge, and a monument now marks the spot. Governor Spotswood was so thrilled over what he saw in the valley that he recounted to no end the discoveries to the Williamsburg settlement.

Gen. John Sevier, noted Indian fighter, founder and first Governor of the State of Franklin and then 6 times Governor of the State of Tennessee to whose founding he contributed much, was born in the New Market Tenth Legion region.

President Abraham Lincoln's family lived in Rockingham County and the old Lincoln Homestead is still preserved on Linville Creek. The President's father, Thomas Lincoln, was born in Rockingham County and went to Kentucky with his parents.

The Lincoln and Sevier families, direct descendants of two of America's great men, still reside in Rockingham and northern Shenandoah County.

He could have mentioned that in the earliest days of the Nation, the pioneers in the Shenandoah Valley had fought and worked so hard in their battle to develop the region and protect their hard-gained liberties that the area was referred to by Thomas Jefferson as the tenth legion of democracy. It is from this expression that the village on the valley pike derived its name.

These are just a few contributions to history by the Shenandoah Valley.

The Voice of America

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1949

Mr. MUNDT. Mr. President, from time to time the question has arisen, in connection with our overseas broadcast programs, whether or not the programs are reaching the ears of those for whom they are intended. I ask unanimous consent to have printed in the Appendix of the RECORD an article from This Week Magazine of December 12, 1948, written by the capable director of the Voice of America broadcasts, Mr. George V. Allen, Assistant Secretary of State, which indicates the effectiveness of these broadcasts.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE RUSSIANS ARE LISTENING

(By George V. Allen)

The State Department's Office of International Information has stopped dueling and started slugging, not with name calling or vilification, but with hard, cold facts. With vigorous new American techniques, we are establishing the Voice of America as the voice of truth to a world-wide radio audience that has been confused, disturbed, and betrayed by destructive propaganda from other sources.

To win people for our side, the United States must be known for what it is. People everywhere must be armed swiftly and continuously with facts that will sustain the confidence they feel in us and resist the error and the completely inaccurate picture of the United States they are subjected to every day.

In this battle for men's minds, the Soviet Union itself is more important to us than any other country. No people are more jealously guarded or harder to reach, no other state has such absolute control over the information its citizens are permitted to receive.

Nevertheless, the Voice of America penetrates Soviet Russia every day on 13 radio beams and reaches a potential audience of 4,000,000 people. We calculate this figure on the conservative basis of 2 listeners to each of the 1,500,000 or 2,000,000 short-wave receivers we know to exist there.

We know that we are heard. The Russian press often discusses our broadcasts, and occasional interviews indicate that peasants and workers know what we are saying. Moscow radio itself is devoting precious transmitters to jamming us, which would be a waste of time if we were not invading the Marxian purity of the Russian mind.

Of course, it is one thing to be heard and another to be believed. What can we say to the Russian people that will earn their respect, their good will, even their friendship?

This is perhaps our most vital problem whether we are at peace or—God forbid—at war. For if, in these present tense times, the Russian people could obtain a true picture of Americans as peace-loving but determined devotees of liberty, their leaders would find it more difficult to continue their provocative acts in Berlin and elsewhere.

With this in mind, the Voice of America approaches its task as a fight for democracy and against aggression. The prime, paramount foreign-policy aim of the United States is the preservation of the democratic way of life wherever it exists in the world today—and the hope that eventually it will be extended to those areas which do not now enjoy it.

Our broadcasts appeal to the universal desire for freedom. It was this desire, we believe, that prompted the two Soviet airmen to desert to the American zone.

AFRAID TO SPEAK

The Voice of America broadcasts do not urge anyone to leave Russia or any other country in the Soviet bloc. Nevertheless, the action of the airmen suggests that there are many people like them behind the iron curtain—people who much prefer to think for themselves, who share the universal hopes for peace, cooperation, independence. Lieutenant Pirogov said 70 percent of his countrymen feel as he does, but are "afraid to speak."

Our programs are designed to tell the Russian people about our own form of government and the liberties which our people enjoy under it, in comparison with the regimentation, repression, and police control under which the Soviet citizen lives.

Our great emphasis, of course, is placed on information about how democracy operates in the United States and how our people live.

Our information techniques have been varied in order to provide the best framework for every idea or argument we wish to use.

Our newest—a device already familiar to American domestic radio audiences—is the personal interview.

This is generally the case history of a Russian who has fled from his homeland and whose welcome here is a testimonial to life in America. Whenever possible we encourage the individual to write and to read his own radio script.

In each case we have used plain, everyday people whose plain everyday experiences seem to us to have more impact than the views of a foreign dignitary. We can seldom use the big-name émigré, since it might lead our listeners to the wholly erroneous impression that the United States is supporting his particular political clique.

LIFE IN AMERICA

Our first personalized report was made by a talented young musician. He told how he had reached the United States from a DP camp in Germany and how he earned opportunities, first to teach, then to play in concert, and finally to join one of our symphony orchestras. No frills, no moralizing. Simply an account of how a man's basic skills enabled him to find his place in American society.

Vladimir Petrov, whose experiences in the slave-labor gold mines of Siberia are already known to This Week readers "[Stalin's Mountain of Gold"—July 11] prepared the second script. In it, he told how he got a factory job in America, reported on his wages, hours, and working conditions, explained train and subway transportation, installment buying, and eating in cafeterias. It would not have impressed American listeners; we are inclined to take these things for granted. But Russian listeners, who must always carry identity cards and whose freedom of movement and decision is extremely limited, undoubtedly got the point.

THE KASENKINA STORY

The third was a bedside interview with Mrs. Anna Kasenkina, the Russian schoolteacher who leaped from the window of the Soviet consulate in New York. The Moscow Radio went to extreme lengths to distort this event and we felt that Mrs. Kasenkina's own account of it was the best possible rebuttal.

Programs like these are hard to refute. These are not Trotzkyites, deviationists, or wreckers whom the Soviet regime can lambast on political grounds. These are plain Russian people speaking to their homeland of how they have fared in America.

We intend to expand this phase of our broadcasting. Right now we are discussing, with the University of North Carolina communications center and experimental radio station, plans for regional broadcasts which will add the voices of everyday Americans to out output. If translation proves feasible, we shall expand this idea to include sending to Russia the voices of Texas cattlemen, Northwest lumbermen, Minnesota farmers, San Francisco shippers, and New England manufacturers. Let the Russians decide for themselves who is unemployed, who is plundered, who is terrorized.

Another service we render to the Soviet citizen, whose news is so sharply censored, is to give him facts which his own government seeks to keep away from him. It was the Voice of America, for instance, which first told the Russian people of the widespread reports that the ruble was to be devalued—not the Soviet press or radio.

It was not presented as a scare story, but simply as an example of how poorly informed the Russian people were on the operations of their own government. Within a month some of the most nortorious Soviet poison penmen were screaming their heads off about the perfidity of the American radio and its "hysterical imperialist mouthpieces", etc.

THREATS WON'T WORK

While rumors of forcible Russian occupation of Berlin and even of all western Europe were popping, the Voice of America emphasized, day after day, our determination not to be driven out of anywhere by threats, bluster, or provocative incidents.

In September, the broadcasts of the American Government's white paper on the breakdown of negotiations between Russia and the western powers to end the Berlin blockade

were the only complete reports of the event available to Soviet citizens.

The depression line—the old Moscow favorite that America is on the brink of economic collapse—is met with employment and production statistics.

HERE'S THE ANSWER

When Hungary accused us of monopolizing penicillin, the Voice of America explained the rise in penicillin production, the drop in price and our success in setting up production, through UNRRA, in countries of eastern Europe.

When Austrians hear that America is planning immediate withdrawal from the country, when Germans hear that we are politicking in food supplies, there are answers to be given. When we heard that the rural faction of Hungary's small landowners party was meeting to protest a coalition with the Communists, the facts were broadcast. And when the dissidents met, the party president, a Communist collaborator, howled: "This meeting was called by the Voice of America."

We know we are heard. We know that in many places we are welcomed and believed. Inside Russia itself, we know we are making some headway. The Soviet press and the radio both devote considerable efforts to answering us—in very violent terms—particularly in matters relating to standards of living. Every one of our broadcasts which reports the possessions, working conditions, purchasing power, and personal liberties of the American citizen brings a swift and furious reply from the Soviets. For these are the facts which seem to hit closest to home. Totalitarianism does not produce for them what democracy produces for us, economically or socially.

The one sure way to keep sharp and clear these differences between democracy and the police state is to make the Voice of America the voice of the people. I am often asked if the "Voice" is not simply the voice of the United States Government. It is true that since the Government information program was placed in the State Department in 1945, our tie-in with the day-to-day policy requirements of the Department has grown steadily much closer, much more in the know.

GULF OF IGNORANCE

But I consider the "Voice" to be a good deal more than a subdivision of a Government agency. Foreign relations today have gone far beyond the narrow and restricted dealings of government with government, of diplomat with diplomat. Free peoples must now speak honestly to each other across national boundaries. The true Voice of America, speaking across a gulf of black ignorance to the people of Russia and the world, can be an atom bomb of moral force in guaranteeing our survival and bringing the world into an era of universal peace.

Resolution of General Assembly of South Carolina

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1949

Mr. MCMILLAN of South Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of the resolution adopted by the South Carolina Legislature.

The State of South Carolina, under present rules and regulations established by the Stabilization Bureau of the Department of Agriculture requires farmers to tie their tobacco before presenting same to the warehouses for sale. The warehousemen will not accept tobacco in loose-leaf form on the grounds that the tobacco buyers for the different tobacco companies state that their redrying plant machinery is set up to handle tied tobacco. However, in certain other States they do purchase loose-leaf tobacco at almost the same price they give the farmers in the States where tobacco is sold in tied form.

Tobacco farmers in my State feel that the Stabilization Bureau should grant at least a 10-percent differential if it is necessary to continue to have their tobacco tied before they can market same. The high cost of labor and the loss in poundage by tying tobacco should require at least a 10-percent differential. The records show that the differential between tied and untied tobacco during the past season was only approximately 2 cents.

I expect to introduce a resolution calling on the Tobacco Stabilization Bureau to either grant the tobacco markets in all States permission to sell tobacco in loose-leaf form, if they so desire, or grant a 10-percent differential between the sale of loose-leaf and tied tobacco.

Concurrent resolution memorializing the Congress of the United States to enact legislation equalizing the differential for the marketing of tobacco under the grading and tieing system

Whereas the tobacco markets in the State of South Carolina are losing approximately 10,000,000 to 12,000,000 pounds of tobacco each year by reason of the fact that the system of grading and tieing is required in this State, while in the adjoining State of Georgia tobacco is sold ungraded and untied; and

Whereas the differential of 4 cents per pound provided in this State is not sufficient to equalize the cost of labor and the loss of 5 to 10 percent in weight incurred in marketing tobacco under the grading and tieing system: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That the Congress of the United States of America is memorialized to enact legislation which will either increase the differential provided for the marketing of tobacco under the grading and tieing system from 4 cents to 10 cents per pound, or require the acceptance of ungraded and untied tobacco by the flue-cured tobacco stabilization corporation in this State during the times in which the tobacco markets in the State of Georgia are open, to the end that the inequities accruing by the system of marketing tobacco in South Carolina under the grading and tieing system will be met; and be it further

Resolved, That a copy of this resolution be forwarded to each of the Senators and Members of the House of Representatives from South Carolina in the Congress of the United States of America.

Palestine

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in Worldgram concerning the situation in Palestine:

Mess in Palestine continues to irritate and embarrass United States and British diplomats, military experts, strategists. Things haven't gone according to plan.

Embarrassment is that all the inside predictions, the confident forecasts as to how things would go in the Middle East have not panned out.

Irritation grows out of necessity to come up with new plans, new solutions, in a situation changing every day. Nobody is quite sure what to do next.

Prophecies of the military experts, in particular, have had to be revised.

Year ago, United States military men were saying—not for publication—that Jews might hold out for awhile, but that sooner or later Arabs would wipe them out. British military experts went further, prophesying privately that the Jews had almost no chance, that the Arabs would win quick control of Palestine.

Now, these official but private forecasters are in a state of confusion. The Jews keep making new gains, while the Arabs keep falling apart. Apparently, forecasting a war is almost as hazardous as forecasting an election.

What went wrong, it seems, was that the military experts guessed wrong on some of the intangibles. Tendency was to underestimate Israel's will to fight and her skill in military action. As for the Arabs, tendency was to overestimate their effective manpower, their will to fight, their ability to stick together.

At any rate, the notion that only intervention by the armed forces of the United Nations could save Israel turns out to have been a miscalculation.

Now, two or three things are clear that weren't before.

Israel, next to Turkey, dominates Middle East, shows most strength, unity.

Arab states, with the single exception of Transjordan, seethe with unrest, economic trouble, political turmoil. They are anything but stable, reliable.

United States and Britain, as a result, have to adjust their diplomacy, their military strategy to this fact of a strong Israel in the midst of Arab weakness.

For the British, especially, this is difficult to get used to.

There's not much secret about what the United States and Britain want in the Middle East.

Oil has top priority, especially for Europe, for European recovery.

Bases come a close second, especially for the air forces.

True, neither United States nor British strategists have much confidence that they could hold the Middle East against a full-scale invasion by the Russians, but the attempt would have to be made. In any case, air bases can serve as outposts, advance strong points for Britain's defense in depth farther south in Africa.

Problem for British and United States diplomats is to walk the tightrope between Arab-Jewish hostility, somehow mediate a peace, then wrap up the bases and the oil.

Prospects are a little brighter than they were a while ago. Israel, though winning battles, is feeling the economic pinch, needs help, needs United States dollars. That fact gives the United States and Britain their leverage, improves the chances for peace.

But diplomats in this area still have to work on a catch-as-catch-can basis, can't see far ahead. Forecasting, such as that a year ago, is out of style.

Much Willful Misinformation About Basing Point for Purpose of Deceiving People Into Believing That Customers a Distance Away From Basing Point Get Part of Their Freight Absorbed by Seller When in Fact the Buyer Always Pays Full Freight Under Any Basing Point System

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1949

Mr. PATMAN. Mr. Speaker, every day we see in the daily press and hear over the radio that small manufacturers and fabricators at a distance from steel mills and other suppliers of their basic materials will be greatly handicapped under the Supreme Court decision outlawing the basing point when wrongfully used.

The fact is—and let us get this straight—it cannot be denied the consumer or buyer under the basing point system must pay full freight to destination and the buyer does not absorb a part of the freight as alleged in heavy industries. There are some exceptions in a buyer's market when there is cross hauling but none in a seller's market where there is no cross hauling.

The executive secretary of the Texas Butane Dealers Association, is reported to have said last week in Texas that 300,000 tons of plate steel a year are needed annually in making butane tanks in the five Southwestern States. It is reported that he pointed out that a recent Supreme Court decision may pinch off the industry's source of supply. He need not have any such apprehension under this ruling.

Under the cement and steel basing point systems, small fabricators have been complaining in this seller's market that they could not get these basic materials where they were located a distance from the source of supply because customers nearer by where the freight rate was less had the advantage and there was not enough to go around. This is based on the theory that the seller pays the freight, which is not true. If it were true that the seller paid the freight, the outlawing of the basing point would help distant buyers because the seller would get the same free-on-board price from customers whether near or far.

DALLAS MANUFACTURER AT NO DISADVANTAGE

A butane-gas manufacturer at Dallas, Tex., is at no disadvantage under the Supreme Court decision. Even if it is necessary for him to buy his steel and pay freight on it from the mill at Pittsburgh, Pa., he is in a better position to serve his customers at Dallas, Tex., than a manufacturer of such tanks would be located at the steel mill at Pittsburgh. The reason is obvious. It costs less to ship raw materials by freight than finished products. The Dallas manufacturer would be compelled to pay freight on the raw steel to Dallas. He would manufacture it into butane-gas tanks and sell them in the Dallas area. The manufacturer of a similar product near the mill at Pittsburgh where the raw materials could be obtained without the payment of freight will be compelled to pay the price of the freight on the finished product to Dallas, Tex. Then the Pittsburgh manufacturer will be in competition with the Dallas manufacturer, who has the advantage because he has paid less freight on the raw material.

ALLOCATION OF STEEL PROPOSED

The following letter has been received by me from a prominent steel fabricator in Texas:

All of my problems originate with steel, that is, the complete lack of steel plate at any price other than the most exorbitant gray or black market price, which I cannot afford to pay and even anticipate any semblance of profit.

I have been supplying hundreds of dealers in the southwestern area with butane and propane tanks, as well as other steel pressure vessels since 1937. The allocation of steel for war purposes forced me to cease operations in 1942, which was more than agreeable with me, as all materials were so vitally needed for war products. For the next 2½ years my efforts were devoted to the sale of war bonds and installing the pay-roll-deduction plan in large manufacturing plants at my own expense.

Then in 1945 I got back into production and have had difficulty obtaining steel plate from the mills ever since. I have visited most of the steel mills, but have received no encouragement with reference to future shipments.

I have talked with many small steel fabricators like myself and I know of seven who have already been forced out of business due to the mills being on a voluntary allocation and seemingly are shipping most of their steel to the big concerns. Many of the small fabricators did a beautiful job in defense work and I think it would be disastrous to force the small-business man out of business with voluntary allocation, and in my opinion in fairness to the small-business man we should by all means go back to Government allocation, which would be fair for all.

The fact is that big steel companies are buying fabricating plants with their retained earnings. There is one case in Houston, Tex., where a fabricator has been in business a half century, I am told, and just recently his supply of steel was cut off. The reason was the big steel company furnishing him had purchased his competitor, and very soon thereafter customers of this old Houston fabricator began to receive circulars offering for sale by the subsidiary of the steel company the same type of tanks heretofore manufactured and sold by the old Houston concern.

There are other instances in the United States just as cruel as this one.

COSTLESS CAPITAL FOR BIG CONCERNS

Last year the large corporations had earnings amounting to over $35,000,000,000, or almost as much as our national budget. After the payment of taxes these earnings were over $20,000,000,000. Instead of distributing two-thirds of this money to stockholders, as was the practice before World War II, only one-third of it was distributed, or $7,000,000,000, in the form of dividends, and the other $13,000,000,000 plus were retained by the officers of these corporations, and much of it will be used to buy up nonrelated concerns and competitors.

One big food manufacturer admitted using $50,000,000 of earnings the past 4 years to buy up other manufacturers, including competitors.

How long can our private-enterprise system last when big concerns have such a monopoly in a seller's market that they can get their venture or risk capital from their customers? This is costless capital. It is paid by customers and not borrowed; therefore, no interest will have to be paid on it.

What chance has a small-business man in a business world where he must go into the market and borrow the money and pay interest on it and go into business in competition with a large concern that secures its capital from its customers in the form of high prices?

Does Joe Stalin Know This?—How Many Members of Congress Understand It?—The Chairman of the Board of the Chase National Bank Gives a Look at the Mechanics of Government Financing

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. WHITE of Idaho. Mr. Speaker, the following extract is taken from a reprint of an address of Winthrop W. Aldrich, of the Chase National Bank, rerecently distributed to the Members of Congress:

Our monetary and fiscal authorities, too, have many means at their disposal to combat deflationary trends, if a recession should occur, before a situation develops which might lead to depression. We should take care not to have our psychological attitudes so conditioned by the events of the great depression that we are inhibited from making those constructive modifications in the interest rate structure which may be called for by future developments.

Concerning the idea that some sort of a commitment has been made by our monetary authorities, it is sufficient to point out that the authorities have no statutory power to make a contractual commitment to maintain the prices of marketable bonds at par. Those who declare that such a commitment has been given base their belief on current policy declarations of the Federal Open Market Committee and on qualified and often ambiguous statements of various Government officials. These declarations and statements obviously cannot constitute a commitment.

THE PROBLEM OF CREDIT CONTROL

The public debt underlies such a large part of the monetary and credit structure of the country that its management cannot be separated from the general problem of monetary and credit control. This circumstance makes essential a coordination of Treasury and Fed-

eral Reserve policy. The coordination should not be brought about, however, by the dominance of the one party or the other, but by a joint development of fiscal and monetary policy directed toward the long-run advantage of the economy.

Purchases of Government securities by the Reserve banks have peculiar and important monetary effects. These purchases are made with the Reserve banks' own credit—they are not conditional upon the antecedent receipt of funds from any outside source. The seller of securities is paid in effect with a check drawn by the Reserve bank on itself. Member bank reserves, therefore, rise whenever the Federal Reserve banks purchase securities, no matter whether the securities are purchased from commercial banks, insurance companies, savings banks, or individuals.

In order to maintain the level and structure of rates chosen for support, the Reserve banks have had to absorb large amounts of Government obligations from commercial banks, insurance companies, and others needing funds with which to accommodate private borrowers or seeking to hedge against the possibility of changes in the level of support prices. In an effort to prevent these purchases from inflating member bank reserves, the Reserve banks and the Treasury have undertaken three principal types of action.

First, they have applied a varying portion of the Treasury's cash operating surplus to the redemption of maturing securities held by the Reserve banks, particularly Treasury bills, thereby offsetting to a very large extent the increase in member bank reserves resulting from market support purchases. This use of the cash surplus is a necessary instrument of control as long as the Reserve banks are absorbing securities from the market. As an instrument of control, however, it depends not only upon the existence of such a cash surplus, but also upon the availability of that surplus when needed. To some extent, the availability of these funds can be controlled by means of the war loan depositary system. However, only a portion of the funds used for debt retirement are now channeled through these accounts.

In practice, neither tax revenues nor expenditures can always be controlled with sufficient precision to assure that a Treasury cash surplus will synchronize with the varying need to retire securities held by the Reserve banks.[1]

Second, the monetary authorities have endeavored to offset the effect of support purchases by the Reserve banks by upward adjustments in rates on short-term Government obligations. Increases in short-term rates were initiated in the middle of 1947 in order to discourage investors from selling Treasury bills to the Federal Reserve banks, which at that time had absorbed over 90 percent of the total outstanding. Later, increases in short-term rates were made to achieve a more viable rate level and, in consequence, to enable the Federal Reserve banks to shift some of their holdings of short-term Government securities to the private market. This became more and more necessary as the impending reduction of the Treasury surplus threatened to preclude further cash redemption of securities held by the Federal Reserve banks.

Raising the reserve requirements of member banks has been the third device for offsetting the inflationary results of support purchases. Within the past year required reserves have been increased by roughly $3,000,000,000. Increases in required reserves may actually complicate the problem of maintaining stable and orderly conditions in the Government securities market since they are imposed horizontally and without regard to the reserve positions of individual banks. In the case of the individual bank, if the increase in required reserves is greater than the amount necessary to sterilize the additional reserves created by support purchases, the bank in question will be forced to sell Government obligations to its Reserve bank. If the increase in required reserves is not large enough to bring about this result, the additional requirement will have little restraining effect. To the extent that individual banks are forced to sell Government obligations, the market in Government securities churns about, and, after it has settled down, the impact and burden of the increased reserve requirement come to rest on the shoulders of the commercial banks to the exclusion of all other classes of lenders.

A certain degree of success in controlling credit has been claimed for the combined use of these devices. Whatever success has been achieved so far by the program is to be attributed primarily to the use of the Treasury surplus in the retirement of securities held by the banking system. This surplus, a fortunate accident of circumstances, has been diminishing in amount and will probably disappear before long. Obviously, policies of monetary and credit control should not be left to the vicissitudes of our Federal budget.

[1] This is a roundabout method of debt retirement which is not without certain disadvantages and limitations. The choice of securities to be retired is in the discretion of the market. Consequently, the authorities are unable to give proper consideration of the longer range aspects of debt retirement such as the appropriate maturity structure of the debt and its ownership distribution.

Election of President and Vice President by the House of Representatives

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1949

Mr. LODGE. Mr. President, one of the principal features of Senate Joint Resolution 2 is that which prevents an election from being decided in the House of Representatives.

A penetrating analysis of this aspect of Senate Joint Resolution 2 by Mr. Arthur Krock appeared in the New York Times on January 14, 1949. It merits thoughtful reading. I ask unanimous consent to have it printed in the Appendix of the RECORD, as well as some facts which I have accumulated regarding the joint resolution.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

Those citizens who were closely following the returns of the 1948 Presidential election in the early hours of November 3, and especially those whose business it was to inform the public of the outcome, will not soon forget the wobbling count in Ohio and California through the night. For until it became certain that these two States were to give their electoral votes to President Truman he lacked the majority necessary for election. They could not have brought victory to Governor Dewey by going Republican. He would have needed Illinois, too. But by doing so they would have thrown the election into the House of Representatives.

Had that happened the House at this moment would probably still be balloting, with noon on January 20, 1949, drawing ever nearer, at which hour Mr. Truman's term as President expires by fiat of the twentieth amendment. The House would probably still be balloting because of the partisan compositions of the delegations from the 48 States that also were chosen on November 2. And if the deadlock had continued until noon on January 20, as well it might have, the country might have had a President whose title was not entirely clarified by the Constitution or the statute of Presidential succession.

The reasons are these:

1. When a national election is thrown into the House because no candidate has received an electoral majority—now 266—each State delegation is given 1 vote by the Constitution, and this vote is determined by the majority of its delegation. In the present House there are 21 delegations with a Democratic majority, 20 with a Republican majority, 3 that are evenly divided, and 4 which represent States carried by the Democratic States' Rights ticket.

2. The Constitution limits the House in such circumstances to make its choice from the three candidates who led in the national poll, and on November 2 these were President Truman, Governor Dewey, and Governor Thurmond. If each of the 45 delegations unevenly divided had obeyed the mandate of the voters in its State, none of the candidates would have had the required constitutional majority of 25 even if the 3 evenly divided delegations had contrived to vote.

3. Mr. Truman would have been obliged to swing 4 of the 7 delegations from the evenly divided States and those Democratic States in which he was defeated by Mr. Thurmond. Mr. Dewey would have required a shift of 5. Mr. Thurmond would have required a shift of 21. So a deadlock on the Presidency might now be afflicting the Nation.

4. As noon on January 20 drew nearer the pressures on these seven delegations would have produced violent emotions which can only be imagined by reading the history of similar situations in 1801, 1825, and 1877. Of the delegations from these seven States (Alabama, Louisiana, Mississippi, and South Carolina—carried by Mr. Thurmond, and Connecticut, Idaho, and Montana—evenly divided), Louisiana, Idaho, and Montana—conceivably might have yielded to the pressure for President Truman. But it is difficult to envisage the same shift in Alabama, Mississippi, South Carolina, and Connecticut. So Mr. Truman, with 24, would still be one short of the required majority.

5. Until or unless a member shifted in the Connecticut, Idaho, and Montana delegations these would have been unable to vote. This would have left 45 State delegations to produce a requisite majority of 23. But that would have been the same problem expressed in lower figures. Mr. Truman, Mr. Dewey, and Mr. Thurmond would then have needed shifts in 2, 3, and 19 delegations, respectively.

Suppose the deadlock had continued until close to noon on January 20. How could the United States have acquired a President. On this point the twelfth amendment, the twentieth amendment, and the statute of succession of 1947 are not wholly clear, but the destructive condition might have been resolved without successful legal challenge in one of the following ways:

1. The Senate is composed of 96 Members, of whom a majority of 49 can elect a Vice President; if no candidate for that office has an electoral majority, from the two who polled the highest number of votes—in this

case Senator BARKLEY and Governor Warren. There are 42 Republicans in this Senate, to whom for speculative purposes might be added the 8 from the 4 States carried by the Thurmond-Wright ticket, reducing the regular Democratic membership of 54 to 46, or 3 less than enough to choose Mr. BARKLEY. A shift of only three Senators from the Dixiecrat States would have made him Vice President, and in such circumstances this is more than conceivable. On the failure of the House to choose a President by noon on January 20 this Vice President would have become President for the full term, but once again there would have been no Vice President.

2. If both House and Senate had been deadlocked at noon on January 20, Public Law 199, the statute of succession, seems to provide that the Speaker (now SAM RAYBURN) would have become acting President.

This nightmare vision of a might-have-been furnishes another reason for such electoral reform as the Lodge-Gossett-Kefauver bill proposes.

EXAMPLES

Some ask what would have happened in past campaigns had this proposed amendment been in effect.

It cannot be too strongly emphasized that while it is, of course, easy to apply the amendment retroactively—by adjusting the new rules to the old figures—it is useful to do so only as a means of illustrating how it would have worked mechanically. One cannot assume—as some have—that citizens would have voted identically or in the same volume under the terms of this proposed change as they actually did vote under the existing system. Indeed, had this amendment been in effect in the past, the whole composition of the popular vote would have been different. Candidates and issues might have been—and in some instances would certainly have been—different. Campaigning would have been carried all over the 48 States instead of being concentrated in a few key sections. Interest in the elections in the so-called one-party areas would have been greater.

Always remembering that the following figures are merely a mechanical application of the formula embodied in Senate Joint Resolution 2, the table below illustrates how the vote would have been divided and counted in the 1948 Presidential elections if the terms of Senate Joint Resolution 2 had been in effect and if the people had voted as they actually did vote in that year.

States	Popular vote		Electoral vote (under present system)		Electoral vote (under S. J. Res. 2)	
	Truman (Democrat)	Dewey (Republican)	Truman (Democrat)	Dewey (Republican)	Truman (Democrat)	Dewey (Republican)
Alabama	(1)	40,930	(1)		(1)	2.0
Arizona	95,251	77,579	4		2.1	1.8
Arkansas	149,659	50,959	9		5.6	1.9
California	1,913,134	1,895,269	25		11.9	11.8
Colorado	267,288	239,714	6		3.1	2.8
Connecticut	423,297	437,754		8	3.9	4.0
Delaware	67,829	69,595		3	1.5	1.5
Florida	281,988	194,280	8		3.9	2.7
Georgia	254,646	76,691	12		7.3	2.2
Idaho	107,370	101,514	4		2.0	1.9
Illinois	1,994,715	1,961,103	28		14.0	13.8
Indiana	807,833	821,079		13	6.3	6.4
Iowa	522,380	494,018	10		5.0	4.8
Kansas	351,902	423,039		8	3.6	4.3
Kentucky	466,756	341,210	11		6.2	4.6
Louisiana	136,344	72,657			3.3	1.7
Maine	111,916	150,234		5	2.1	2.8
Maryland	286,521	294,814		8	3.8	4.0
Massachusetts	1,151,788	909,370	16		8.8	6.9
Michigan	1,003,448	1,038,595		19	9.0	9.3
Minnesota	692,966	483,617	11		6.3	4.4
Mississippi	18,848	5,466			.9	.3
Missouri	917,315	655,039	15		8.7	6.2
Montana	119,071	96,700	4		2.1	1.7
Nebraska	224,165	264,774		6	2.7	3.3
Nevada	31,291	29,357	3		1.5	1.4
New Hampshire	107,995	121,299		4	1.9	2.1
New Jersey	895,455	981,124		16	7.3	8.0
New Mexico	105,464	80,303	4		2.3	1.7
New York	2,780,204	2,841,163		47	21.2	21.6
North Carolina	459,070	258,572	14		8.1	4.6
North Dakota	95,812	115,139		4	1.7	2.1
Ohio	1,452,791	1,445,684	25		12.4	12.3
Oklahoma	452,782	268,817	10		6.3	3.7
Oregon	243,147	260,904		6	2.8	3.0
Pennsylvania	1,752,426	1,902,197		35	16.4	17.8
Rhode Island	188,476	134,880	4		2.3	1.7
South Carolina	34,423	5,386			1.9	.3
South Dakota	117,567	129,651		4	1.9	2.1
Tennessee	270,402	202,914	11		5.9	4.4
Texas	750,700	282,240	23		15.0	5.6
Utah	149,151	124,402	4		2.2	1.8
Vermont	45,447	75,926		3	1.1	1.8
Virginia	200,786	172,070	11		5.3	4.5
Washington	476,165	386,315	8		4.2	3.4
West Virginia	429,188	316,251	8		4.6	3.4
Wisconsin	647,310	590,959	12		6.1	5.6
Wyoming	52,354	47,947	3		1.5	1.4
Total	24,104,836	21,969,500	303	189	258.0	221.4

[1] Not on ballot.

NOTES

1. Governor Thurmond, States' Rights candidate, polled 1,169,312 popular votes and received 39 electoral votes. Under S. J. Res. 2, he would have received 38.6 electoral votes.

2. Henry Wallace, Progressive candidate, polled 1,157,100 popular votes and received no electoral votes. Under S. J. Res. 2, he would have received 9.4 electoral votes.

3. Other candidates (Socialist, etc.) polled 279,668 popular votes and received no electoral votes. Under S. J. Res. 2, they would have received 1.8 electoral votes.

4. Division of a State's electoral vote would be carried to 3 decimal points, or further, if necessary, for absolute accuracy.

Max Abelman

EXTENSION OF REMARKS
OF
HON. JAMES J. HEFFERNAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1949

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a tribute to Max Abelman, secretary to the board of directors of the Jewish Hospital, of Brooklyn:

[From the Brooklyn (N. Y.) Eagle of August 8, 1948]

SPENDS FOUR DECADES AIDING WORTH-WHILE NEEDY CAUSES

(By Clarence Greenbaum)

Max Abelman's 40 years of activity in the service of Brooklyn have convinced him that this borough's many cultural and financial facets entitle it to be an independent city.

The secretary to the board of Jewish Hospital of Brooklyn, who is regarded in many quarters as Brooklyn's unofficial ambassador of good will, feels that our community suffers by reason of close proximity to Manhattan.

He points out that some of the greatest men in this country were born in Brooklyn, and adds that if we were to have a separate city status our cultural facilities, the hallmark of a great city, would increase tremendously.

"It is a disgrace," Mr. Abelman says, "that Brooklyn should not have its own opera house, symphonic orchestra, and repertoire theater, as well as its own art school."

AN AUTHORITY ON CHARITY

Mr. Abelman should know, for he counts among his friends the great and near-great, as well as the countless common folk whom he has aided by philanthropic endeavors down through the years. He has written books on the organization and finance of philanthropy which are considered authorities. Likewise, he has composed music and written plays, educational films, and other articles.

For four decades—he is 60—he has served as the unofficial public relations man for any worthy cause—even any worthy individual—that needs a hand. Through dinners, mass meetings, and drives, he has helped Brooklyn meet its quotas for war chests and war relief work in both world conflicts, as well as aiding philanthropic activities of many varieties. He helped expand the Big Sister and Big Brother movement, and raised $1,000,000 for the Brooklyn Federation of Jewish Philanthropies at a single dinner in 1920.

A year earlier, under the auspices of 44 banks, he arranged a meeting at the academy of music and added $43,960,000 to Brooklyn's Fifth Liberty Loan quota.

F. D. R. AMONG HIS FRIENDS

His personal friendship with the important persons of two generations is attested to by the many autographed photographs on the wall of his office, as well as by the letters which jam his files, bearing the tributes of such personages as the late President Franklin D. Roosevelt and Chief of Staff Omar N. Bradley.

His favorite dinner of them all was one in 1942 at the Waldorf-Astoria in celebration of the twentieth anniversary of the Most Reverend Thomas E. Molloy as Roman Catholic bishop of the Diocese of Brooklyn. The high

point was the presentation of a portrait of Pope Pius XII, painted by Albert Cugat when the Pope, then Cardinal Pacelli, visited the United States. The dinner was attended by Catholics, Jews, and Protestants.

Mr. Abelman scorns denominational lines, stating that he is "particularly interested in living tolerance, not talking or attending mass meetings about it."

He is concerned primarily with trying to live up to the maxim that sums up his philosophy of life—"never living a day without doing a kind act for someone else."

CAME TO NEW YORK AS CHILD

Incidentally, Albert Cugat is the muralist whose talent Mr. Abelman enlisted for the decorating of 16 children's rooms with murals at the Jewish Hospital. The murals, something new in hospital technique, entertain young patients with scenes from Alice in Wonderland to Snow White.

Then, in typical Abelman fashion, he brought down many noted personages to autograph the murals—including Lord Halifax, the former British Ambassador to the United States, and the late Wendell L. Willkie.

Born in Romania, Mr. Abelman came to New York with his parents when he was 5. He arrived in Brooklyn in 1909 and immediately asked the late Abraham Abraham, the founder of Abraham & Straus, for a position with that organization. There was no suitable opening with A. & S. at the time, but Mr. Abraham sent him to see the late Nathan S. Jonas, president of what was then the Citizens Trust Co., since incorporated with the Manufacturers Trust Co.

Mr. Jonas explained that there was being organized the Brooklyn Federation of Jewish Charities, one of the first federated charity units in the country, and would not Mr. Abelman consider a temporary job with it? Max took a clerkship, was with the federation for 14 years, and he had begun a lasting friendship with Mr. Jonas. So much so, that Mr. Abelman's son and only child, Alan Nathan, a mechanical engineer, is named after Mr. Jonas.

BECAME EXECUTIVE DIRECTOR

He rose to become executive director of the federation, and many of his most successful campaigns were waged in its behalf. Then, from 1922 to 1932, he served as assistant secretary and trust officer at the Manufacturers Trust Co.

In 1932, following repeated pleas by Mr. Jonas, he went to the Jewish Hospital as assistant to the president and secretary to the board. He is responsible in a large degree for the appellation Hospital With a Heart, which has been gained by the institution.

Max is married to the former Bessie Schwartz, whom he courted when she was 15 and whom he married when she was 18.

The Abelmans live at 35 Tennis Court, and have a summer place at 311 Beach One Hundred and Forty-eighth Street, Neponsit. They have been married since 1907.

Max's reading hobby is centered mainly on the Bible, Shakespeare, and autobiographies. In the latter field, he has compiled one of the finest collections extant, the volumes being spread over bookshelves in his home and in his office.

Max likes to make history, though, and is pretty well interested in everything that goes on. Witness his great work on a four-man committee responsible for the dedication of the S. Parkes Cadman Plaza, hard by the Brooklyn downtown area, as well as in drives in behalf of the Middlesex Medical School, Waltham, Mass., so that capable medical students would not be deprived of a chance of becoming great doctors. And—he has even written songs and acted in plays, and some day hopes to write a book, but no one article can sum up his varied accomplishments.

Society of Virginia Honors Woodrow Wilson

EXTENSION OF REMARKS

OF

HON. PORTER HARDY, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1949

Mr. HARDY. Mr. Speaker, Virginia has produced many illustrious sons who have deeply touched the hearts of mankind. Among these was President Woodrow Wilson, who voiced the instinctive yearning of all peoples for peace. His ideas and achievements are recorded in the libraries of the world. His tomb at the National Cathedral at Mount St. Alban in Washington is a national shrine.

In view of the present crisis facing civilization, it is especially fitting that his memory be honored by his native State. On December 28, 1948, the Society of Virginia of the District of Columbia sponsored a birthday memorial service at his tomb. The service was attended by his widow, Mrs. Woodrow Wilson.

President J. W. Rixey Smith, of the society, placed a floral wreath on the tomb, and Mrs. Richard A. Allen read the following inspiring tribute by E. Y. Davidson, which I am submitting for publication in the CONGRESSIONAL RECORD:

WOODROW WILSON

(By E. Y. Davidson)

The greatest American has fallen. In life's battles he was as grand as Achilles; in death he was sublime. He met every foe unflinchingly, panoplied with the sword of truth and the armor of righteousness. And when he entered into life's gloaming he was still unafraid. He was ready, and he lay down to peaceful sleep. He was not only the outstanding American of his generation. He was the greatest American. He rose to such heights of greatness that his influence was the most potent and the most dominant in the world. Through him, more than through any other man, empires crumbled, republics were established, and the yoke of oppression fell from the necks of millions of peoples, to whom was given a new birth of liberty. He was the first to suggest a practical formula for universal peace—a peace hoped for and sought for since the dawn of civilization.

His peace message, delivered before the Senate of the United States, is the most remarkable pronunciamento of human justice and human liberty of which history affords any record. It is a world-embracing message of righteousness.

To preserve our liberties and to save democracy for the world, he, Titan-like, led America into the World War, and tendered to the god of war all of America's dynamic and potential energy. After victory, he, Christ-like, devoted his great talents to the establishment of world peace and world brotherhood; and in the exercise of those talents he never wavered. With unflagging zeal and unremitting consecration he gave his all in pursuance of his high ideals and his high purpose. Rejected by his own, he never lost faith; reviled, he reviled not again. He was matchless; and his fame is imperishable.

WASHINGTON, D. C., *February 6, 1924.*

Displaced Persons Earn Our Help

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1949

Mr. JAVITS. Mr. Speaker, there are appended four articles from the New York Times by Robert L. Schiffer of that paper constituting a survey of the displaced persons situation since the passage of the Displaced Persons Act of 1948 as it relates to the resettlement in the United States. Four conclusions emerge from these factual reports:

First. DP's are useful citizens needed in the United States based upon both their skill and character, and they integrate well into our country.

Second. The problem of displaced persons in the United States, British, and French occupied areas of Germany and Austria still remains a critical one.

Third. The present Displaced Persons Act is administratively impractical and substantially unjust and inadequate.

Fourth. To carry our fair share of a great moral responsibility, and to relieve ourselves of the heavy expense involved in maintaining DP camps and in contributions to the International Refugee Organization, the enactment of a better displaced-persons law as early as possible in this session is imperative:

[From the New York Times of January 5, 1949]

1949 IS YEAR OF HOPE FOR EUROPE'S DP'S—IRO OFFICIALS EXPECT 330,000 OF THE REMAINING 750,000 TO LEAVE CAMPS BEFORE 1950—SPEEDIER FLOW IS SOUGHT—FATE OF 184,000 NOT ELIGIBLE UNDER PRESENT PROGRAMS STILL A BIG PROBLEM

(By Robert L. Schiffer)

The new year 1949 is expected to bring to nearly 750,000 refugees in Europe their first real glimmer of hope for an end to the wandering and homelessness that have marked their lives since the upheaval of the war and its aftermath made them displaced persons—men, women, and children without a country.

Comprising one of the most complex of the many acute problems that must be dealt with on an international level in 1949, Europe's refugees, nevertheless, still have a long way to go before they begin a new year in new homes. An analysis of the situation as it exists at present, particularly in relationship to the new United States Displaced Persons Act that will admit 205,000 refugees to this country in the next 2 years, has been the subject of a survey for the New York Times.

The survey has shown that, if resettlement programs continue at their present rate, a minimum of 250,000 refugees will be in lands of permanent settlement at this time next year. Indications, however, point to an increase in this rate, which averaged more than 20,000 a month in the last quarter of 1948. Officials of the International Refugee Organization, the United Nations agency charged with the care and welfare of Europe's homeless, hope that the end of 1949 will have seen 380,000 DP's leave the vacuum of the camps.

THREE HUNDRED AND FIFTEEN THOUSAND RESETTLED SO FAR

While agreeing that liquidation of the DP problem has been proceeding slowly—with only 315,000 resettled since VE-day—William Hallam Tuck, director general of the IRO, has

expressed confidence that this year would mark the turning point in the situation and that IRO would be able to complete the major part of its task by June 1950. According to Mr. Tuck, however, the success of these efforts depends in large part upon how quickly the United States, Canada, and Australia, which have announced plans to absorb up to 400,000 of the current DP's, get their programs functioning at top speed.

Once this is accomplished, Mr. Tuck says, a fleet of 30 ships and hundreds of trains and planes will keep a steady stream of refuge s flowing out of the more than 600 DP camps and assembly centers in Germany, Austria, and Italy where the bulk of Europe's homeless are now marking time.

Despite his optimism in regard to the solution of the problem, Mr. Tuck stresses the fact that there still is no answer in sight as to what will happen to the "hard core" of DP's estimated at 184,000, most of whom are not eligible under announced programs. This "hard core" consists of the aged, sick, and infirm. It also include 30,000 professionals—doctors, lawyers, professors. Without agreement on the part of receiving countries to make some provision for this group, Mr. Tuck holds that the DP problem cannot be liquidated in its entirety.

As 1949 begins, however, the picture in the camps is considerably different from what it was even a year ago. The feeling of despair that was so prevalent at that time has given way to a feeling of hope, in large part owing to the United States program. As camps close and the people slowly move out to the waiting trains, those who remain are beginning to see that the end of their homelessness is approaching.

The DP picture in Europe, as surveyed by the IRO, is as follows:

Out of a technically eligible group of more than 1,200,000 persons, IRO has nearly 750,000 men, women, and children on its assistance rolls for whom it is seeking immigration opportunities. Slightly fewer than 600,000 of these are living in the DP camps of Germany, Austria, and Italy and it is this group that forms IRO's major problems.

These 600,000 are mainly Poles, Ukrainians, Balts, Yugoslavs, with smaller numbers of Russian, Rumanian, Hungarian, and other origins. About 55 percent of the total are Catholics, 27 percent of Protestant denominations, and 18 percent Jewish.

The DP camps, for the most part, are former Army barracks or assembly centers. Here and there an apartment building has been requisitioned. But wooden huts are the most common homes; privacy is at a minimum, with cases of 10 or 20 people being forced to share a room not uncommon.

Wherever possible, the IRO, following in the footsteps of its predecessor organization, the United Nations Relief and Rehabilitation Administration, is trying to make life bearable for the people. But a limited budget of $155,000,000, the bulk of which must be devoted to resettling the homeless, makes extensive work of this nature impossible.

The burden of easing the hardships of the people in the camps, therefore, has fallen on the shoulders of American voluntary agencies, working in cooperation with the IRO. These agencies, such as the National Catholic Welfare Conference, the American Joint Distribution Committee, the Church World Service, and the American Friends Service Committee, are doing what they can to supplement IRO care by adding to the basic food and clothing rations and by providing special care for children and aged people.

Some 2,500 refugee doctors and dentists, as well as 2,000 refugee nurses, look after the health of the DP's, under the direction of a small IRO medical staff, assisted by the private agencies. The health of the people is generally regarded as good today, with the physical condition of the 100,000 youngsters in the camps, where the birth rate is steadily increasing, said to be excellent. This is attributed to the special care devoted to the children since the end of the war.

SPECIAL SCHOOLS IN CAMPS

Special schools have been opened for the youngsters in the camps so that they will not fall behind in their studies and will be able to enter their proper grades when they finally settle in the communities that will take them. The older boys and girls get vocational training so that they will have no difficulty in finding jobs.

These vocational-training courses are also open to men and women who wish to prepare themselves for the new lives they hope to start. The private agencies have assumed the major burden of this training program and a survey of courses they are offering by the DP's shows that they run the gamut from opera singing to atomic physics.

In addition to participating in these vocational-training projects, 150,000 DP's are filling full- or part-time jobs, either in the camps or in various projects sponsored by the occupation powers. In general, though, according to the IRO, the refugees are not being absorbed into national economies for two major reasons: Many of the DP's, having suffered at the hands of the Germans and Austrians, now refuse to contribute anything to the economy of these countries; while in Italy, where they would like to work, poor economic conditions do not permit them to obtain jobs.

The camps are administered by the displaced persons themselves through democratically elected camp committees, which distribute the food, police the camps, run the schools, and organize work opportunities.

Basically, however, everything that the camps have to offer is makeshift—predicated on the hope that each tomorrow will mean the end of its need.

Adding to this hope is the increasing number of selection teams from various countries that today are passing upon the qualifications of those eligible to emigrate. Since the end of the war, DP's have made their way to 73 countries all over the world, either in mass emigration schemes or through individual effort.

In a 16-month analysis of the major receiving countries, IRO statistics show that through October 1948, the last month for which such a break-down was available, the United Kingdom took in 78,000 DP's; Australia, 12,000; Canada, 43,000; Belgium, 20,000; the United States nearly 20,000; Palestine nearly 30,000 (incomplete figures); France, 21,000; Argentina, 18,000; Venezuela, 10,000; and Brazil, 5,000.

GOALS FOR COUNTRIES SET

The total goals for these major receiving countries, in addition to the United States plan to admit 205,000, are: United Kingdom, 2,000 a week; Australia, 100,000; Canada, 100,000; Belgium, 58,000; Palestine, the majority of the remaining 125,000 Jewish DP's; France, 30,000 agricultural workers; Argentina, 35,000; Venezuela, 10,000 (virtually completed); and Brazil, 15,000.

The goals of some of the other countries are: New Zealand, unknown thousands; Netherlands, 7,000; Chile, 8,000; Colombia, 2,000; Guatemala, 50,000; and Peru, 5,000 to 8,000.

Doubt is expressed in IRO circles, however, as to whether some of the countries will meet their goals. It is not believed, for example, that Belgium or Great Britain will be able to take many more than they already have admitted, throwing an increased burden on other nations.

All the countries involved, with the exception of Palestine, which is taking in only Jewish refugees, are seeking the best skills the camps have to offer. IRO surveys have disclosed that the DP's possess a wide variety of these skills, a fact that has intensified interest in the refugees because it is felt that they constitute the last large group of skilled workers that Europe will be able to offer the world for generations to come. The last IRO survey showed in part that the camps contained the following skills: 75,964 agricultural workers, 25,000 clothing workers, 12,567 construction workers, 14,437 domestic workers, 30,437 professional workers.

These are the major classifications, but with exception of the professional group, they cover many key fields in which labor shortages exist in various countries.

In addition to finding new homes for the DP's, IRO is also trying to encourage as many of the people as possible to return to their old ones. This program has not been meeting with too much success. Nearly 60,000 have been repatriated thus far, but it is believed that the repatriation program will have run its limit after another 57,000 go home. The remaining DP's are said to be unwilling to return to eastern European countries for political or religious reasons.

"With very few exceptions," Mr. Tuck insists, "I feel that any nation that takes these DP's will be getting people of the highest caliber who will make wonderful contributions to the communities which offer them homes."

[From the New York Times of January 7, 1949]

DP SKILLS EXPECTED TO AID UNITED STATES INCOME—SURVEY SHOWS REFUGEES WILL HELP EASE LABOR SHORTAGE AND INCREASE PRODUCTION—MANY JOBS ARE AVAILABLE—30 STATE COMMITTEES TO HELP RESETTLEMENT LIKELY TO BE FUNCTIONING NEXT MONTH

(By Robert L. Schiffer)

The 205,000 refugees who will get a chance to leave the vacuum of Europe's displaced persons camps and enter the United States in the next 2 years will help ease a shortage of skilled labor in this country and at the same time add several hundred million dollars to the national income, according to a survey for the New York Times.

Indicating that the incoming DP's will have no difficulty in starting new lives for themselves and in being absorbed into the Nation's economy, the survey shows that throughout the country hundreds of thousands of jobs are open for Europe's refugees. Added to this is the estimate that tens of thousands of Americans will be able to obtain better positions as a result of DP's providing certain specialized skills, thereby making possible increased production and creating a demand for more workers in the industries involved.

These factors, it has been learned, will add to the national income at a rate estimated by Government officials at a minimum of $200,000,000 a year.

ONLY ABOUT 70,000 TO GET JOBS

Focusing attention on how the Displaced Persons Act of 1948 will affect the employment situation, members of the Displaced Persons Commission, immigration officials, the Bureau of Labor Statistics, and the United States Employment Service say that of the 205,000 persons to be admitted only about 60,000 to 70,000 will be able to get jobs, the rest being dependents, such as wives and minor children. Therefore, they assert, with hundreds of thousands of jobs now going begging, "an added labor force of 70,000 will hardly scratch the surface of work opportunities which Europe's displaced persons can fill."

As an illustration of the Nation's ability to absorb the refugees in large numbers, the Displaced Persons Commission, established under the act to supervise displaced-person immigration, presents the following picture:

The tailoring industry is suffering a serious shortage of skilled tailors, supplied previously from among eastern European immigrants. It is estimated that New York State alone could absorb 20,000, with 10,000 taking jobs in this city. The garment unions, as well as big tailoring concerns, have urged the Displaced Persons Commission to obtain the necessary workers. The Bond Clothing Co., for example, has told the Commission that it could absorb 3,000 skilled tailors, while the Hickey-Freeman Co. has said that, if it could obtain 300 to 400 good tailors from among the displaced persons, it would be in a position to hire 10 to 15 Americans to fill less skilled positions dependent upon each of the master tailors.

FARM WORKERS NEEDED

Agricultural vacancies throughout the country run above the hundred thousand figure. New York State alone has estimated that it could put 50,000 DP farmers to work immediately. The same situation has been noted in reports from the West. The Displaced Persons Commission says that communities with depreciating farm values because of inability to obtain necessary help are urgently petitioning it to send agricultural workers.

Thousands of cattlemen and sheepherders are needed for the West. States such as Colorado require miners for the nonferrous mines. California is said to be badly in need of citrus-fruit pickers. The construction trades throughout the country say they are handicapped because they lack sufficient specialists, such as stonecutters, while the hotel and restaurant industries report a shortage of chefs and waiters.

This is just a brief cross section of the jobs that can be filled by the DP's when they arrive in this country, according to the Bureau of Labor Statistics. Native Americans, it is said, are not applying for these openings either because they are not interested or because they do not possess the skills, which, as in the cases of tailoring and stonecutting, require long years of apprenticeship.

Officials of the Employment Service and Bureau of Labor Statistics, as well as the Immigration and Naturalization Service, say, therefore, that in no cases would DP's be taking jobs away from American labor.

FOR PROFESSIONAL GROUPS

While skilled and unskilled workers, in general, probably will not have any difficulty after they arrive, the DP Commission anticipates some trouble with those in professional groups. Doctors and lawyers, for the most part, will have to conform with the existing laws of the States in which they settle, obtaining the required schooling and taking examinations before they are admitted to practice.

The Commission says that it is trying to solve this problem by encouraging professionals to take jobs in allied fields—a doctor as a laboratory assistant and a lawyer as a law clerk—until they meet the necessary qualifications. It has been learned that the Commission is trying to work out some arrangements on this problem with various professional organizations and societies.

Meanwhile the survey has shown that the DP program is gradually commanding growing interest throughout the Nation.

[From the New York Times of January 8, 1949]

THREE-YEAR DP THRONG FOUND DOING WELL—FEW IN 43,500 IMMIGRANTS HAVE NEEDED AID, NATIONAL SURVEY NOW DISCLOSES—20 PERCENT GO WEST—SALARIES SHOW $40 AVERAGE AND CHILDREN MAKE GOOD SCHOOL, COLLEGE RECORDS

(By Robert L. Schiffer)

Virtually all European refugees admitted to the United States under special immigration programs since the end of the war are self-sufficient today and independent of outside aid, the survey for the New York Times on displaced persons has disclosed.

Most of the refugees included in this phase of the survey entered the United States under a special directive issued by President Truman in December 1945, and which was in effect until June 1948. In this period, 41,000 DP's received a haven here. Only 2,500 have come in thus far under the provisions of the Displaced Persons Act of 1948 and preliminary reports indicate that they also are successful in establishing themselves in this country.

The facts regarding all the DP's who have entered the United States since the end of the war are being studied by the Displaced Persons Commission, set up under the act to resettle the 205,000 men, women, and children who will be arriving from European DP camps in the next 2 years. The study also will be used as a guide in assisting the new immigrants.

So little difficulty has been encountered in the assimilation of the refugees that less than 100 of those able to work are in any need of assistance today. Reports of the Immigration and Naturalization Service and from private welfare agencies show that the refugees are now accepted members of their communities. It has been estimated that an average of 6 months was needed to get individuals or family groups settled and completely self-supporting.

NEED ONLY OPPORTUNITY

Agencies such as the Catholic Committee on Refugees, the United Service for New Americans, and Church World Service, which were among a score of private organizations bringing in large numbers of refugees under the Truman directive, say that in very few cases has anyone come back to request assistance. Most of the people, the agencies find, "are so grateful for the chance to make their own way after years of suffering and privation that they now ask only for the opportunity to stand on their own feet."

The survey shows that more than 50 percent of the immigrants have settled on the eastern seaboard. The rest went to virtually every State. At one point, nearly 70 percent had remained in the East, but later 20 percent shifted to the West and Midwest, reports say. These also point out that only a handful of those who first settled in the West moved back East. This is expected to offer encouragement to newly arriving immigrants to settle in western areas.

A majority of the 41,000 was found to have settled in cities of more than 100,000 because relatives and friends, along with greater job and educational opportunities, were there. The job categories covered by these former DP's touch nearly every classification.

Average salaries, according to one report of the Immigration and Naturalization Service, have been in the neighborhood of $40, with many going much higher and a few lower.

Children, other reports say, have on the whole had the most success in becoming assimilated, making excellent school records. College-age boys and girls also are said to be doing well.

More than 1,300 unaccompanied boys and girls up to 18 years of age were brought into the country under the Truman program by the United States Committee for the Care of European Children. The committee reports that these youngsters have been placed in foster homes, nurseries, and children's homes in 30 States and 246 cities and towns. Some of the older boys and girls, the committee says, are working and many of the boys are already serving in the Army.

Of the 2,500 who have entered thus far under the terms of the Displaced Persons Act, the great majority is still in the East, with a concentration in New York City, main port of arrival. However, the three members of the Displaced Persons Commission—Ugo Carusi, Chairman, Edward O'Connor, and Harold N. Rosenfield—say there are indications that efforts to spread the newly arriving refugees over the country are having initial success.

Reports are now being received by the Commission from the first group who had entered by means of the act at the end of last October. There were only 800 men, women, and children in this group, but reports on them have come from 20 States and the District of Columbia. One, a Polish girl, was also reported to be en route to Alaska.

MORE LATVIANS WANTED

In the same vein, the Commission points to the resettlement of 84 Latvians, who now have homes and jobs in Senatobia, Miss. The groups, which will work on farms in the area, received what has been described as an encouraging reception. The Commission adds that these people have created such a good impression during the short space of time that they have been there that farmers for miles around are beginning to question Washington as to the possibility of obtaining additional DP's to settle in that area.

The agencies that assist refugees in coming to the United States and then make sure that they have homes and jobs and are not in need include the following, according to the American Council of Voluntary Agencies for Foreign Service:

War Relief Services of the National Catholic Welfare Conference, United Service for New Americans, Church World Service, Hebrew Immigrant Aid Society, Unitarian Service Committee, International Rescue and Relief Committee, Society of Friends (Quakers), United Ukrainian Relief Society, American Association of International Institutes, National Lutheran Council, United Lithuanian Relief Committee, Tolstoy Foundation, United States Committee for the Care of European Children, Travelers Aid Society, and the National Social Welfare Assembly.

Resettlement committees are being set up meanwhile in every Catholic diocese throughout the country, while each Protestant church is being asked to "adopt" at least one DP family. Jewish groups also are helping through their synagogues and clubs. Civic groups as well as labor unions and industry are joining in the program, working with the welfare agencies and religious denominations.

The success of this combined operation is illustrated through many cases cited by the private welfare agencies. The United Service for New Americans, for example, tells of the experience of Ovsej Abelow and his family.

Until October 1948, Mr. Abelow had no future. His life had been shattered when the Germans deported him from his native Poland to the Dachau concentration camp. American soldiers saved him from execution near the end of the war. Then after that he lived in the Heidenheim Displaced Persons Camp in the American Zone of Occupation, Germany, where he met his wife and where his child was born.

The activation of the United States DP program finally gave him his first chance to leave the camp, and with the aid of the USNA he and his family were admitted to the United States 2 months ago. Two months, however, were all the Abelows needed to start life anew, because today they have their own home in Youngstown, Ohio, and Mr. Abelow is employed as a tailor, earning a weekly salary of $40.

The Abelows and all the other DP's, according to the Commission, are rapidly on their way to becoming good Americans.

[From the New York Times of January 10, 1949]

BETTER DP LAW HELD IMPERATIVE—COMMISSION TO TELL CONGRESS 1949 QUOTA OF 75,000 IS IMPOSSIBLE UNDER RULES—40,000 JOBS ARE WAITING—BUT RED TAPE WILL ALLOW ONLY 6,000 TO ENTER IN 3 MONTHS—DELAY IRKS EMPLOYERS

(By Robert L. Schiffer)

Far-reaching changes in the basic structure of the law admitting 205,000 refugees here during a 2-year period will be recommended to Congress by the Displaced Persons Commission in a special report that is expected to point out that the program has bogged down seriously because of current restrictions.

The Commission is making its first report to the President and Congress since it was set up 6 months ago by the Displaced Persons Act of 1948. The report, it was learned yesterday, will say that without a radical change in the situation it will be virtually impossible to meet this year's goal of bringing in 75,000 refugees. This will be borne out by the fact that although the Commission has approved assurances for jobs and homes covering more than 40,000 persons, it is not believed that more than 6,000 DP's will arrive in the next 3 months, according to the displaced-persons survey for the New York Times.

As only 2,500 have already been admitted, this will make a total of 8,500 who will have gained admission by the end of March, 9 months after the passage of the act.

It is also expected that Congress will be told that compared to the $2,000,000 given the Commission to start the job of bringing in the 205,000 refugees, private welfare agencies are advancing funds at a rate that will cost them more than $25,000,000 to support the Federal program.

1945 YARDSTICK ASSAILED

Reviewing all phases of operation under the act in its first 6 months of life, the report will contain additional recommendations for altering what are considered to be its most troublesome features. These are said to include the provisions limiting the law to refugees admitted to the DP camps as of December 22, 1945—the section that has been attacked by President Truman as being discriminatory against Catholics and Jews because large numbers of them arrived after that date; the proposals relating to the necessity of having a job and home assured for the DP in advance of his arrival; and various priorities assigned to ethnic origins and certain skills such as agriculture.

The three members of the Commission, Ugo Carusi, Chairman; Harry N. Rosenfield; and Edward O'Connor, will, it is expected, emphasize the advisability of revising the act by pointing out that despite its limitations the DP program has many worth-while achievements to its credit, which could be added to through a more liberal law.

As the act stands now, one of the biggest stumbling blocks in the way of speeding up the flow of DP's to this country is that it takes a minimum of 6 weeks for one DP to be processed in Europe and to receive a visa. In the face of this and with a staff of only 64 persons on hand to supervise the vast amount of paper work and complex procedure involved, it is felt that it is noteworthy that as many as 2,000 DP's will arrive here during January.

It has been estimated, however, that it is necessary for 10,000 DP's to enter this country every month if the program is to meet its 2-year deadline.

RED TAPE OUTLINED

The difficulty in stepping-up the rate is attributed to the following set of circumstances:

After the Commission approves an assurance in Washington, it is sent to headquarters in Frankfort, Germany. There special care must be given to select the type of worker requested in the assurance. Once this is accomplished, the International Refugee Organization must examine the records of the individual involved and certify that he is eligible. Then, the prospective immigrant must be screened by the Army's Counterintelligence Corps to determine that he is not a former Nazi or Fascist or Communist.

After passing this test, the DP is called forward from the camp where he is living to one of the centrally located immigration assembly centers. There, he is interviewed again by a special board consisting of the Army, a United States consular official, a DP Commission analyst, and a public-health officer. Following a report by this board, the DP Commission analyst either certifies or rejects the candidate.

If approved, he must then be questioned separately by the United States consular official and must also undergo a medical test, and passing this, he returns to the consular official, who then checks to see whether the DP qualifies under regular United States immigration law. Following this approval, he can proceed either to Bremerhaven or Hamburg, the embarkation centers. But before he boards ship, he must undergo still another routine check by a representative of the Immigration and Naturalization Service. After that he can sail, but he still faces the possibility that he may be turned back at Ellis Island for a number of technical reasons.

SPEED-UP HELD IMPOSSIBLE

The Commission, it is expected, will simply point out in its report the impossibility of attaining any real speed under this procedure.

It has been learned, meanwhile, that because of this lag in getting refugees to the United States, prospective employers who had pledged themselves to hire DP's are now notifying the Commission that it may not be possible for them to wait any longer. They are demanding that the Commission give them some promise as to when they can expect the DP's so that they can make proper plans. With the Commission unable to give any estimate as to how soon the people will arrive, many of those who have issued job assurances may cancel them, thereby also canceling a DP's right to enter the country.

This situation, it is said, is rapidly becoming one of the Commission's most serious problems.

The Commission hopes to solve this difficulty by eliminating the job assurance as well as the housing-assurance provisions entirely. As the act now stands, these assurances must be provided by relatives, employers, or private agencies before the DP's can even be selected.

Mr. Carusi contends that it is unnecessary to make such provisions in advance because experience has shown that the jobs and housing can be arranged after the DP's arrive in this country. He points out that none of these provisions was made for the DP's admitted under the terms of the Truman directive, but that all of the people are self-supporting today.

The Commission, it is also believed, will cite the fact that hundreds of thousands of jobs are available for DP's throughout the country and, therefore, there is no danger of any of the incoming refugees remaining unemployed.

On the aspect of what the private agencies are doing to promote the program, the Commission says that the Government owes them a huge debt for their cooperation and assistance in getting the DP program under way.

The agencies, listed in the third article of this survey, have been chiefly responsible for obtaining the great bulk of job and home assurances that have come in from all over the country.

In addition to obtaining assurances, these private organizations have established a pier service to meet every incoming ship. Whereas the DP Commission has only one representative on hand for each ship, the agencies have several hundred. They provide temporary shelter for the new arrivals and see to it that the people are fed and receive clothing wherever necessary.

In many cases the agencies provide rail fare and are also present at the final destination, checking to make sure that everything goes smoothly.

It is estimated that each DP thus cared for costs the private agency involved $200 for food, clothing, and train fare. While in some instances relatives repay this amount, in at least 60 percent of the cases, the cost is footed by such agencies as the National Catholic Welfare Conference, the United Service for New Americans, and the Church World Service.

This estimate does not include the funds expended by the private agencies while the DP's are still overseas or the funds that they advance to assist the people in meeting resettlement difficulties after they reach their new homes.

What has happened, therefore, according to representatives of the agencies, is that the Federal Government has instituted a program for which it is not paying, except for minor administrative costs. The International Refugee Organization pays for the trans-Atlantic voyage and the agencies assume the cost from the pier.

Despite the above-mentioned facts, the commissions, the private agencies, and Government officials connected with the program are confident that its potentialities will be realized as soon as current difficulties are ironed out. It is felt that the good record made by the DP's who have already entered this country point up the results that can be obtained and that these will be noted in various amendments and revisions to the Displaced Persons Act now being proposed in Congress that may extend the law to admit 400,000 refugees.

As an indication of the confidence it feels in the ultimate success of the program, the Displaced Persons Commission will soon announce that it is launching a comprehensive orientation program in the DP camps of Europe to prepare future Americans among the DP's for the life they will lead in this country.

This program will include lessons in English, general information about America, and specific information about the customs and habits of the particular communities to which the individual DP's will be going.

"We plan to give America's future citizens," the Commission says, "an advance foothold on their future."

Socialized Medicine

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1949

Mr. HARRISON. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the following article appearing in the Waynesboro News-Virginian of Wednesday, January 12, 1949:

IN THE OLD ARMCHAIR WITH LOUIS SPILMAN

There's much excitement in the United States today over proposals to "socialize"

medicine. We are inherently and instinctively opposed to the socialization of any profession or any business, but we likewise believe with all our mind, body, and soul that if a profession or business fails to meet the needs of society at large, then society must step in to regulate. This applies to professions as well as businesses.

Physicians, by virtue of the basic precepts of their calling, are pledged to aid suffering humanity. This does not mean physicians should be unpaid, poverty-stricken, neglected, and disregarded. It does mean, however, that every individual citizen, regardless of race, creed, financial status, or social level, should be insured adequate medical attention just as we would insure every individual citizen against starvation, freezing to death, or lack of burial in case of death.

In this day of specialization and scarcity of qualified physicians it has become difficult, in many rural communities, to secure medical aid. The tendency in the medical profession to concentrate in urban centers around huge medical centers has made the plight of many people in less populated areas, quite difficult. We offer no criticism; we simply recite a situation that merits solution primarily by the medical profession itself. If the medical profession is unable to solve the problem, then society must.

The physician's problem is keen. He is expected to answer the summons to an accident or a sick-bed at any time of day or night. Being human, it is physically impossible for any one physician to do so 24 hours a day, 7 days every week of the year. The physician, too, is entitled to compensation for his efforts. Yet a call for help must be answered else he is subjected to considerable criticism. Just how to meet this situation, it would seem, requires combined effort of the profession and of society.

Complete socialization of medicine is incompatible with democratic principles; is abhorrent to all who believe in individual freedom. But it is equally incompatible with democratic principles and abhorrent to individual freedom to have people suffer and die through lack of medical attention. So we must meet the problem courageously and intelligently and in harmony. No profession or business is above society; neither should society be permitted to enslave or intimidate any individual or group within it.

Address of Hon. Benjamin Franklin James, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. LOUIS E. GRAHAM
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1949

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. BENJAMIN FRANKLIN JAMES, of Pennsylvania, at the Franklin Monument, Washington, D. C., January 17, 1949:

I feel very highly privileged to be here today and to participate in these ceremonies commemorating the two hundred and forty-third anniversary of the birth of Benjamin Franklin, sometimes called the first American.

I value this privilege especially because many of my activities in life have, in a very small way, rather curiously followed those of Franklin's.

Being a printer, as was Franklin, I can greet with genuine affection the cosponsors of these ceremonies, my brothers in the Graphic Arts, and with equal affection I can greet the cosponsors who are representative of the International Firemen's Association. I have been the head of the printing company in Philadelphia which was founded by Franklin in 1728, and for the past 22 years I have been a fireman, a member of the volunteer fire company of my community.

Printing and fire fighting were very important activities in the life of the great man.

Like Franklin, I have served in the governing body of my community, and in the legislature of my State, and now finally I serve in the Congress of our Nation.

I want to interpolate here in connection with something that the Honorable Public Printer, Mr. Deviny, has said in connection with Franklin's success as a printer. I can assure all of you of the Graphic Arts that it is not possible to retire from the printing business at 40 years of age, in these days, with enough money to go the rest of life's distance, as did he.

Benjamin Franklin wrought diligently in many fields of human endeavor—in whatsoever field he labored he left the germinating seeds of his discoveries and his wisdom.

These seeds have been cultivated by succeeding generations and many rich harvests have been gathered that have benefited mankind enormously everywhere in this world.

Perhaps his finest achievement was in the field of philosophy—and in the management of the minds of the people of his time. For with his pen and his printing press he did far more than any other to mold the American character and awaken in our forefathers a national consciousness. Gathered here today in his honor, we can offer no better tribute to the memory of Franklin on this occasion than to resolve that we will, as individuals and Americans, sustain the American character he designed and to preserve an American national conscience, to the end that our country shall be and always remain a Republic, and that it shall stand as the noblest example of democratic government on the face of the earth.

There Is a Reason

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, all too often so-called conservative newspapers join some of the smear artists who over the last few years have taken delight in vilifying every individual who vigorously and with some small degree of success opposed the New Deal or its political allies. Then the editors of those same so-called conservative newspapers, which are in themselves illustrations of what is termed "free enterprise," sometimes complain why Members of Congress are not more courageous, more vigorous in opposing policies which are certain to minimize the profits which will accrue if we, as a nation, follow the principles laid down in our Constitution.

A recent illustration of what I am trying to show is the news story on the front page of the Grand Rapids Herald, Grand Rapids, Mich., which charges that a congressional committee's acts in holding a certain hearing to ascertain the facts in connection with a commando raid were illegal.

An editorial from the Allegan Gazette of December 23, written by Leo W. Hoffman, explains the fallacy of the Grand Rapids Herald's reasoning.

The editorial is as follows:

CIO PRESSURE SHOWS UP IN DAILY PAPER

In a news story on the front page of Wednesday's Grand Rapids Herald concerning the CIO's Phillip Murray and his refusal to testify in the investigation of CIO's raid on the Shakespeare plant at Kalamazoo, a headline reads "Hoffman's Acts Held Illegal."

Now the ordinary citizen, hurriedly scanning the morning paper over a cup of coffee, would immediately assume that some court or other properly constituted body or official had held that Congressman HOFFMAN had no authority to conduct the investigation. Careful reading of the news story's smaller print fails to show that any court or Government official had ever held illegal the investigation and the issuing of subpenas in the investigation. What the news story does tell is that Murray wrote HOFFMAN and advised him that his lawyers were of the opinion that the investigation was without authority.

We are willing to admit that Murray and the CIO are a powerful force in the United States, but we are not yet ready to admit that union lawyers can, without any hearing, "Hold a member of the labor committee's acts illegal."

The present-day tendency on the part of a great many daily papers is to play down any acts of violence and outrage committed by the unions and their flying goon squads, and play up any story that would put the labor bosses in a better light.

Perhaps some of these papers, being unionized themselves, are afraid of the unons, or perhaps just as a matter of political expediency, or commercial policy they are inclined in reporting the news to favor the unions.

Give the Grand Rapids Herald a story about Flying Discs, the Gray Ghosts, or the Galoshes Gang, and they will really go to town on it, but let a few hundred labor goons and bums from the other side of the State invade southwestern Michigan, destroy property, defy our local police, and the Grand Rapids Herald will devote most of its space to the union's claim that it is being improperly investigated.

Perhaps the attitude of the Herald is explained by the fact that politically the Herald is Senator ARTHUR VANDENBERG's paper and doesn't wish to antagonize the labor vote.

Our conclusion is that the Herald, intentionally by its use of headlines and a choice of words, misrepresented the facts.

Perhaps union pressure will in time destroy the freedom of the press.

World Bill of Rights

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following address of Dr. Alexander Brin,

which appeared in the Lynn Telegram-News, Lynn, Mass., on December 16, 1948:

DR. BRIN CITES "BILL OF DUTIES"—EDUCATOR IN INSPIRING TALK AT SYNAGOGUE IN SWAMPSCOTT

A "bill of duties" defining a sturdy and intelligent American patriotism, to be put side by side with our hallowed Bill of Rights to make our citizens more conscious of their daily responsibilities as members of an evolving and ever-expanding pattern of peaceful living in a dynamic democracy, was advocated last evening by Dr. Alexander Brin at a community-wide meeting in Swampscott commemorating the 157th anniversary of the ratification of the Bill of Rights.

Dr. Brin, vice-chairman of the Massachusetts Board of Education and editor and publisher of the Jewish Advocate, spoke at a meeting sponsored by the brotherhood of Temple Israel of Swampscott and held at the synagogue. It was attended by representative citizens from all parts of the North Shore.

Appealing for the rededication and reconsecration to the safeguarding and to the translating into action of national characteristics which have made the United States the last great fortress of freedom and the world's leading laboratory for democratic living, Dr. Brin alluded to the adoption by the United Nations of an International Bill of Rights patterned after our own.

He said that it is an indication that the world has rediscovered America's living creed, which recognizes human dignity and the safety of the individual. This action, he said, is a glowing tribute to the magnitude and magnificence of America's heritage and the massive American advantages of free speech, free institutions, and freedom from the corroding fears and secrecies of any totalitarian society. These have challenged the admiration, gratitude, and imitation of the world, he added, and should give every American a new sense of dignity and greater pride in his citizenship, because the world bill of rights harbors the same seed which germinated into our own democracy when it was adopted 157 years ago.

Prefacing his address by remarks concerning the privilege of living in the United States with a résumé of conditions in European nations as he found them through personal observation and experience of a recent 2-month tour, which covered 25,000 miles of the European continent, Dr. Brin said he is convinced that the American spirit and the classic essentials of American democracy are gradually conquering many parts of the world.

Deploring the fact that too many Americans take their priceless privileges of American citizenship for granted, Dr. Brin said:

"It is depressing to note that only 48,000,000 out of a potential voting population of 93,000,000 exercised the privilege of franchise in the last national election. It is a sad commentary when we realize that 45,000,000 eligible voters failed to cast their ballots, a privilege for which millions of human beings have given their lives."

Advocating a greater need for knowledge and appreciation of our own form of government and the moral and spiritual values which make up the bulwarks indispensable to the preservation of the fundamental structure of American civilization, the speaker called for an educational crusade to indoctrinate our people with the ideals and principles of our form of government.

He called attention to surveys in recent years in American secondary schools and colleges that revealed the shocking fact that only one person in five knew that the American Bill of Rights consists of the first 10 amendments to the Federal Constitution; that these amendments protect the basic liberties of the individual citizen from encroachment, and that our Bill of Rights is the very heart and center and the wellspring of American democracy. He said:

"We were also appalled at the revelations of student ignorance of American history. Actually 25 percent of 7,000 undergraduates in 36 universities did not know that Lincoln was President of the United States during the Civil War; 30 percent did not know that Woodrow Wilson was President during the first World War. Eighty-four percent could not cite two of the contributions made by the architect of America's character, Thomas Jefferson. Many college men could not define the meaning of American democracy and haven't the haziest notion about the difference between democracy and other systems of life and government. The conclusion is inescapable that the teaching of American history has been neglected and ignored in our educational institutions. Our children and elders too, should be taught the ideals of America and the fundamental principles of American civilization. The best of American thought and American literature should feed the minds of young and old."

Dr. Brin said that the Marshall plan, aside from its probable far-reaching economic changes upon a sick and discouraged world, is destined to hasten the establishment of a United States of Europe, dedicated to high ideals and based upon the principles on which the American Republic was founded.

He pointed out that the salvation of all mankind depends on the ideal of a world family of nations, patterned after the 48 States of our country, living together under the rule of law and reason.

"Such a federation," he said, "would eventually pool their economic resources and release vast sums of money for human welfare and would strengthen the tendencies for international good will and universal peace.

"The United States of America, in this crisis of the hour," Dr. Brin continued, "should not renounce fundamental principles but must cultivate a greater faith in her own destiny as the last great fortress of freedom and the world's leading laboratory for democratic living, having confidence in her racial composition, her geographic position and destiny, and a mission guaranteeing world stability and enduring peace."

Dr. Brin maintained that there is a close anology between the problems of the Thirteen Colonies after the Revolution and before the adoption of the Constitution and the present nations of the world. He said that in the formative days of our Nation we faced every problem the world faces today and were on the point of being destroyed when great constructive statesmen adopted our Constitution and later our Bill of Rights.

The speaker asserted that the adoption of the international bill of rights is another bulwark against the impending danger of war. It is a challenge to the democratic-minded nations to prepare themselves for a new period of advance and is an incentive of new vision and new vitality to rekindle the lights of hope and brotherhood and justice and peace for all the downtrodden denizens of the earth.

"Time and tide of world movements have proven the strength and soundness of the structure of American democracy, which has bestowed upon this Nation the inestimable gifts of religious and civic freedom, free speech, and a free press, high standards of education and living, a tradition of fair play, fellowship, trial by jury, the right of habeas corpus, protection from unreasonable search and seizure, the right of assembly, the right to disagree, freedom to choose one's occupation and residence, and free elections. These are the characteristics of a society of free men and women as distinguished from conditions of mental slavery which prevail over large areas of the earth today.

"America is magnificent because for all our 4,000,000 square miles, for all the 147,000,000 people, and there is a unity of language and speech as well as opportunities for self-expression, initiative, and enterprise of the individual which nowhere finds its match.

"Now that the world has taken the greatest forward step in the emancipation of the common man in the new weapon against tyranny in the form of a World Bill of Rights, it should go a long way to capture our imagination and harness our enthusiasm for the American way of life. The welfare of the Nation demands that we unite all Americans, comprising all sorts of conditions and men, to understand our country, to love our institutions, to promote its safety and perpetuity. We can best help keep aloft the flame of liberalism and democracy by checking inflation, thus protecting our currency, building up our national defense, greater participation and interest by our citizens in governmental affairs, strengthening our schools and restoring the prestige of the teaching profession, making our youth conscious of its great heritage as Americans, uproot injustices and weaknesses in our system of life, produce trained minds and creative imagination, check bigotry and intolerance among the various groups of our population, freshen and reform our public life to attract able men to public service, improve our municipal, State, and National Government, and help bring about better human relations and international understanding.

"In our jubilation over the significant event we must be on guard against exaggeration of its meaning. Universal peace, international brotherhood, and world comity are not yet assured and safeguarded. But the first step has been taken for the consummation of the matchless dream of international peace. Upon this foundation the United Nations will erect the mechanics that will bless and benefit the whole of the human family, which is striving for real equality, economic justice, universal education, and peace."

Additional Federal Judge, District of Kansas

EXTENSION OF REMARKS

OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1949

Mr. SCRIVNER. Mr. Speaker, early in this session I introduced a bill, H. R. 970, to authorize an additional Federal judge of the District Court of the United States for the District of Kansas.

The following news item in the Kansas City Kansan of January 13, 1949, graphically depicts the existing conditions and emphatically demonstrates the urgent need for an additional judge in the Kansas district in order to handle efficiently and expeditiously the growing court load.

FACTS SHOW THAT KANSAS NEEDS SECOND JUDGE

Kansas attorneys and laymen with knowledge of the great volume of business in the United States district court in this State were gratified by the recent recommendation of the judicial conference for an additional judgeship and introduction of a bill in Congress to create additional judgeships—in-

cluding one for Kansas. They now are looking confidently to Congress to take early action approving the bill.

Kansas is the only State having a population of more than 1,800,000 in the 1940 census—the last taken—which has but one district judge.

And all States with a 1940 population of 850,000 or more have two or more judges except Colorado, with 1,123,296 that year, and Kansas, which had 1,801,028.

Litigation in this State's Federal court, already heavily out of proportion in comparison with the case load for other district judges, is increasing. Thus there is a concerted effort to obtain at least one other judgeship for this State and relieve Judge Arthur J. Mellott of a part of the volume of work he is carrying.

SEES LESS DELAY

Judge Mellett will not admit he is overworked, even though his workday begins not later than 8:30 and continues to 5 and often 6 and 7 o'clock at night, with his workweek including Saturdays—customarily not included in the working days of judges.

But he is outspoken on the point that, through services of another judge, court hearings can be conducted so that the docket will be kept current and at the same time, submitted matters can be gone into thoroughly and ruled upon within a reasonable length of time without the undue delays which cannot be avoided when there is but one judge to handle all matters.

A Federal judge has before him from time to time grand juries which return indictments, or charges, against defendants alleged to have violated Federal laws; petit juries which act with the court in the trial of both criminal and civil cases; hears cases tried to the court, with jury waived; rules on motions involving various points; supervises trusteeships and receiverships; has general administrative duties, signs various orders, and appoints the various United States commissioners in the State.

OPERATING BUSINESSES

In one phase of work the court now is operating indirectly, through trustees and receiverships, a dozen or so big businesses. This duty requires numerous conferences at which the judge is called upon to make decisions affecting the future of those businesses, the investments of stockholders, and the claims of creditors.

A judge must have knowledge of business and finance and acquaint himself with the peculiar problems of such cases before him.

The human element demands his concern—the stake the individuals have in the outcome of civil matters, the greater one the defendant, and his family, have in a criminal action. In the latter the court also must delve deeply into the matter of rehabilitation possibilities for the accused.

He must keep abreast of all decisions of the courts. New questions constantly are arising in today's complex civilization. Congress passes new legislation, and some judge will face the responsibility of making a first decision on interpreting some phase of the law.

INTO EVERY QUESTION

Since the close of World War II many military prisoners have joined the ranks of others coming before the court seeking release on writs of habeas corpus. All such cases are in a category by themselves and claim special attention. In the case of the military prisoners, the judge is faced by a man who, in many instances, was fighting overseas for his country when he became involved in some difficulty which resulted in a sentence by a court martial.

In all cases of various types coming before him, the court must go into every question; every law point must be checked, each citation considered.

It thus is imperative that a judge have time for contemplation. There must be due consideration given every matter, however seemingly trivial, if justice is to be served.

MANY COURT SESSIONS

Indicative of the number of court days necessary to handle the case load of this State-wide district is the fact that of a possible total of 220 court days the past year—summer vacation, Saturdays, and Sundays being eliminated—formal court hearings were held in Kansas on 192 days. This includes formal court days of visiting judges, as well as those of Judge Mellott. This leaves but 28 days of the year to the judge for study of cases under submission, the writing of opinions, the disposition of uncontested litigation, and for handling the truly vast amount of administrative work necessary to the functioning of the court.

In an effort to keep the work as nearly current as possible, Judge Mellott has been almost constantly on the bench since the beginning of court sessions September 7. He was on the bench 65 out of a possible 75 days of court work in the last 4 months of 1948.

Judge Mellott spent 1 week in Kansas City, Kans., on habeas corpus matters, criminal and civil cases. Then he was 3 weeks at Wichita with both a grand jury and a petit jury in attendance. Some 100 persons were indicted by the grand jury.

Returning to Kansas City, Kans., he held a 5-week term, being on the bench virtually every day for trial of cases of all types—many to juries.

Next came 3 weeks at Fort Scott with a jury in attendance. Twenty-five criminal cases were disposed of and the court also handled 27 appeals by property owners whose land had been taken in connection with the Fall River project—a Government flood-protection development.

December 1, Judge Mellott had a special grand-jury session in Kansas City, Kans.; 46 persons were indicted. He also handled various court matters during that time. Then he was at Leavenworth for 5 days, disposing of some 30 criminal cases.

WORK ON INCREASE

He was 2 days at Topeka for naturalization work and habeas corpus hearings; then returned to Kansas City, Kans., to conduct court for 4 days.

Judge Mellott just has conducted a naturalization hearing in Kansas City, Kans., and 50 cases now are set for a Wichita term opening Monday.

As easily can be realized, submitted cases cannot be handled expeditiously and yet with proper deliberation when the judge is on the bench almost continuously.

Either the docket increases in size or there is delay in rulings on submitted matter.

And work of the court is on the increase. In Kansas during July, August, September, and October, 335 new cases were instituted.

For the 178 judges in the 84 districts in the United States, an average of 379 cases were filed per judge in the year ending June 30, 1948.

URGE JOINT RESPONSIBILITY

But for the one judge in Kansas, there were new cases filed 74 percent in excess of the average case load of all other Federal judges.

The pressure of work in the Kansas district as shown by those various comparisons is looked upon by the court as not being fair to litigants.

Persons close to the problem are of the opinion it would be better to have two—or more—judges in Kansas with joint responsibility than to create separate districts in the State. The latter would necessitate another court organization—with a district attorney, clerk, and marshal and their respective staffs. The desire in Kansas is for addition of judges rather than districts.

Judge Orie L. Phillips, Denver, presiding judge of the tenth circuit, recommended the creation of the second judgeship to the judicial conference at the recent meeting in Washington. The conference is composed of the presiding judges of all circuit courts of appeal with Chief Justice Fred M. Vinson, of the United States Supreme Court, as head.

Mr. Speaker, it is the fervent hope of the people of Kansas that the Committee on the Judiciary and the Congress will take early and favorable action.

Regulation W by Federal Reserve Board Retarding Business and Making Character Loans Almost Impossible

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1949

Mr. PATMAN. Mr. Speaker, there is more to regulation W as promulgated by the Federal Reserve Board than appears on the surface.

First, it places at a disadvantage the person who has real character and needs durable goods and whose credit is good but cannot obtain them because of an arbitrary regulation of the Federal Reserve Board. Something else is coming out about this regulation W that indicates it is a powerful weapon for monopolistic interests. For instance, the sale of an automobile, refrigerator, washing machine, or other durable goods, all private brands and provided by a manufacturer that has a finance company, has a great advantage over other durable goods that are not private brands and are not supported by a manufacturer's finance company.

It is reported in the news less than 2 days ago that installment rules promulgated by the Federal Reserve Board are being widely evaded; that goods sold on charge account are later switched to installment, which results in the installment period being lengthened. This is made possible by a manufacturer with a finance company. This same news item refers to the fact that installment credit rules, which require a high down payment of cash, are stirring up a lot of trouble among dealers in automobiles and home appliances because they claim a large percentage of their sales are being killed.

I have just received a telegram from Pueblo, Colo., as follows:

Please continue efforts to force amendment to Federal Reserve Board credit regulation W. Unless regulation is amended to permit new cars to be sold on 24 monthly payment terms, I believe Ford, General Motors, Chrysler, and entire industry will be working half time or less by July 1, 1949. This will force unemployment of millions in auto industry and all allied lines. Autocratic Federal Reserve Board either doesn't have brains enough to realize this or refuses to retreat

from their czaristic position. Thanks for your continued efforts to solve this vital problem.

In addition, I have also received a telegram from Lewis M. Evans, president, Elliott & Evans, Inc., and treasurer, National Small Businessmen's Association, Cleveland, Ohio, as follows:

The books of my firm are open for inspection. We are distributors of appliances in northern Ohio and since regulation W, September 20, 1948, our business has decreased 51 percent. The reasons are obvious. Eighty-five percent of our business is done through small merchants whose paper is handled by finance company because these merchants haven't the money to carry their own paper or give 30, 60, and 90 days open charge and then arrange for extended credit with their customers, consequently they are frozen out of the market and their customers are driven into stores that can carry accounts and that handle private brand merchandise and are both in the finance and merchandising business. It is time for Congress to awaken to the fact that restricted laws directed to just a part of the economy of our country will not work. Such laws will be broken or evaded because the people know what is fair and will not obey half slave and half free legislation.

Most sincerely yours.

This latter telegram discloses a trend calculated to be helpful to private brand merchandise and big concerns and discriminatory against others.

No Marshall Plan Money Should Be Granted to Nations Who Violate UN Charter

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1949

Mr. MULTER. Mr. Speaker, I take this opportunity to urge the enactment of the amendment proposed to section 118 of Public Law 472 of the Eightieth Congress, so that it will provide that no Marshall plan money shall be granted, lent, or used to or for any country which violates any provision of the Charter of the United Nations or directly or indirectly engages in acts of aggression, so long as such acts continue, as determined by proclamation of the President of the United States of America or by the United Nations.

I supported a similar amendment when it was offered last year at the time the law was enacted. At that time the only aggressor nation that would have been affected was Great Britain because of her misconduct in fomenting hostilities in the Middle East. Since then the Netherlands, despite all the United Nations could do and all that we could do, has engaged in open warfare in an attempt to destroy the Republic of Indonesia. It does not require any stretch of the imagination to believe that the Netherlands would never have dared to open hostilities if she knew that as a result thereof she would lose the financial assistance of the United States.

That it is brutally wrong to give any assistance directly or indirectly to a violator of the United Nations Charter was recognized by our Government when it directed the suspension of further allocations to the Netherlands on behalf of Indonesia by the Economic Cooperation Administration. That does not go far enough. As long as the Netherlands has a single dollar of its own money to spend for armaments or troops to carry on hostilities it should not get a single dollar of ours no matter where the money is to go. The same holds true for Britain and for every other nation that looks to us for help.

I spent 3 weeks in the Middle East in September of last year. Despite the denials that were emanating from the British Foreign Office at that time, I saw on every side indications of the activities of the British in urging the Arabs to carry on open warfare against the new State of Israel. Evidence was replete that it was British armaments and British money that made it possible for the Arab States to carry on these hostilities. Egypt, Lebanon, and Transjordan, almost from the beginning, have showed an indication and a desire to live at peace with the new state. It is only the misconduct of Britain in following the devilish and iniquitous thinking of Bevin that has prevented it.

The sending of five British war planes across Egypt and over Israel was a deliberate violation of the provisions of the Charter of the United Nations, as well as an antagonistic violation of the sovereignty of both Egypt and Israel. It was intended as a threat to Egypt in the event she carried on her promised negotiations for peace. For months she has been shipping armaments and troops into the Middle East. She fools nobody when she says that this is to protect her own military bases. The movement of these armaments and troops is intended as a threat against the Arab states as well as Israel. She has been attempting to make Israel believe that she is ready to enter the war against her. The threat against the Arab states is made in an attempt to make them believe that if they enter into peace treaties with Israel she will attempt to take over the Arab states. The Arab states desire to live at peace with their new neighbor, and will do so if Britain can be told to mind her own business and let them alone.

President Truman has been quoted as having told the British in no uncertain manner that American policy demands a peaceful Middle East, with the sovereign state of Israel prospering side by side with its neighbors.

The way for us to uphold the hand of the President is to withhold all aid from Britain, the Netherlands, and anyone else that dares to participate directly or indirectly in acts of aggression. I am sure that the British people feel as we do, and if they know that they can get money from us only for peaceful pursuits they will turn out of office the imperialistic war mongers, the leader of whom is the infamous Mr. Bevin.

Business Conditions in the United States

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, January 24, 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address regarding business conditions in the United States, delivered by me in Philadelphia on January 11 last, at the annual dinner meeting of Tacony Manufacturers' Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I will not make any of the obvious comments about a Democratic Senator being invited to address a group of businessmen in Philadelphia's Union League Club. I am happy to have this opportunity to meet with you, and I'll let it go at that.

If we are to believe all of the things we read in the syndicated columns of the newspapers, then the audience I face here tonight—manufacturers and businessmen—must be very nervous and worried about their future. Are you?

Frankly, I don't think so. I think you gentlemen have all learned in the last 16 years of Democratic administrations that the Government, although in your hair often, has had no intention whatsoever of harming the essential features of the free-enterprise system. Oh, I know that every time any new administration proposal has been put forward in those 16 years, the cry went up that we were out to ruin business and destroy private enterprise and capitalism in America.

I have no intention of making a political speech here tonight. First of all, the election campaign is over. We are quite satisfied in my party with the result. Those who hoped for a different result do not seem to be too distressed over what happened, and the prophets of doom are rather quiet. The stock market doesn't act as if it thought the American economic system were through or that the Democrats were going to throw it out the window. It's a high tribute to the essential soundness of American democracy that all of our citizens are able to take what has been regarded as a political miracle in their easy stride—to have rolled with the punch, you might say—and everyone is now intent on new plans for industrial expansion and new plans for the better America which all of us, Republicans and Democrats alike, seem to be convinced is in the offing.

I am not here tonight as a Democrat speaking to a group of manufacturers who are presumed to be largely Republicans. I accepted your kind invitation because I know that, regardless of any party considerations, you and I are interested in exactly the same thing and that is a prosperous country, and fully employed country, a prosperous Philadelphia, a Philadelphia whose industries, whose very important industries, are assured an even break and a fair opportunity to compete with other industrial cities. Sometimes there are Republican formulas or Democratic formulas for accomplishing these goals, but there is no disagreement as to the desirability of achieving those goals.

I understand that I have achieved something of a label in the United States Senate as being provincial; of insisting on looking at legislation from the standpoint of what it does to my State and to the cities in my State and to industries in those cities. I

have tried to break down all major matters of legislation in those terms because I think they are the best standards to use. In Pennsylvania we have just about every kind of industry; we have a vast range of interests; we are typical, on the whole, as to population. I feel that because of this diversified industrial pattern and diversified human pattern in Pennsylvania, those things which are good for our State are, on the whole, likely to be in the best interests of the Nation. Similarly, I feel that any proposal which would seriously damage a segment of Pennsylvania must of necessity have similar repercussions on great areas of the country.

You people who are businessmen and manufacturers can be of great help to me in my task in the Senate in passing on these issues. If there is anything we in the legislative part of the Government need and need badly and need all the time, it is information from informed constituents who can tell us how a particular program of Government affects their industries or their jobs or their communities. We need specific information of this kind. If we don't get it, we have to play our hunches. There are very few of us in the Congress who prefer to be uninformed on an important issue. Yet, there are many times when we must act in what we know is an uninformed manner.

I want to emphasize strongly that, just as we don't like to play our own hunches to the exclusion of the facts, we don't get much assistance from the hunch playing of others, even businessmen.

I said earlier that the impression is widespread that every time business looks at Government, it shivers. Whether business actually does so or not, at least business seems to give the impressions that it does. It has encouraged that impression over a period of 16 years when business, as such, has been inclined to view with alarm and shock almost every progressive proposal made by the Federal Government. I am not scolding, I am merely recalling some history.

I remember the great trepidation with which business viewed the first social security law. All of us looking backward know the fears so violently expressed on behalf of business at that time were groundless. Businessmen who are active in community work such as hospital boards are among the most active supporters today of proposals to extend social security coverage to hospital workers and other employees of nonprofit community organizations who are now excluded. The recent recommendations for tremendous expansion for social security coverage generally and substantial increases in social security benefits came from an advisory committee headed by a former board chairman of the United States Steel Corp., a committee which included many prominent businessmen in its membership. So time has dulled what was once supposed to have been an aching fear of socialism in America, as represented by the 1936 reaction of business, as such, to social security.

Almost every program of the old New Deal, programs now so familiar and universally accepted in America, was greeted by spokesmen for business with similar fearful protest.

Now, obviously, those fears were unfounded. Obviously, the America of today, with our 60,000,000 jobs and our awe-inspiring volume of production, is on a sounder economic footing than it ever was, largely because we have made it our business to guarantee certain minimum standards of opportunity and of protection for those in the lowest level of our economic structure. We have learned that business benefits from guarantees against cut-throat competition of the most unsocial type, competition based not on initiative and enterprise and inventiveness and good management, but on the basis of which firm can pay the lowest wages and work its employees the longest hours, competition in human misery. I know that most businesses and businessmen want to be fair and decent in the operations of their businesses, but sometimes they have to struggle for survival with those who have no scruples and who would cut every corner.

All I am trying to say in this somewhat roundabout fashion is that when evaluating proposed future courses for Government, you look before you leap to conclusions, you analyze it in terms of what it does to your business, rather than in terms of generalities.

We are going to revise our labor legislation, that is sure. At the time the Taft-Hartley Act was before the Congress in 1947, I received three types of mail on it: First, the hundreds and thousands of form letters and form telegrams from labor union members denouncing any labor legislation as slave-labor proposals; second, the many hundreds of letters from management and from business spokesmen demanding passage of the Hartley bill, which had just passed the House, and which was a complete monstrosity, a vengeful, unconstitutional, irresponsible conglomeration of every antilabor prejudice written into law; third, the thoughtful letters from both sides and from the public which addressed themselves to specific points of the proposed bills in the House and Senate and which either approved or disapproved of those provisions, not on the basis of slogans or hunches or prejudices, but on the basis of facts and on the basis of the probable operation of those features in a specific shop or industry.

They were the only letters that were of any value whatsoever. Whether for good or for bad, and I am convinced it was for good, it was letters like that which kept out of the Taft-Hartley Act by the margin of one single Senate vote a provision which arbitrarily would have banned all industry-wide bargaining. Some of you gentlemen may be adversely affected from time to time by the industry-wide bargaining process; some of you may find it advantageous. By the narrow margin of one vote in the United States Senate, it was made possible for those industries which have adopted the industry-wide bargaining method to continue to do so. I was convinced, as was a very, very narrow majority of Senators, that this right of industry-wide bargaining should not be prohibited by Federal law.

I am on record for the repeal of the Taft-Hartley Act and its replacement by legislation more in the spirit of the old Wagner Act. I am certainly convinced, however, that we should make some changes from the old Wagner Act.

But, on the whole, I think the new legislation will put the Federal Government once again in the position of affirmatively encouraging labor to organize on the theory that strong labor unions, imbued with a sense of responsibility, which was not entirely present in the earliest days of the Wagner Act, but which has certainly been developing over the years, are among the best assets and the best guaranties of strong democracy and of decency in national and international affairs.

It's usually presumed that all employers favor the Taft-Hartley Act and don't want it changed in any important respects. If I were more politic, perhaps I might engage in some double talk here tonight to give the impression that I secretly might be in accord with your idea, if that is your idea. I think, however, you prefer to have me be honest with you.

I say to you very sincerely that even though I am committed to the repeal of the Taft-Hartley Act, I am anxious to have you and all businessmen in Pennsylvania who are affected by labor legislation write to me in detail on the specific operation of any feature of the act which you think is good and should be retained. I am anxious to have you write if you will do it on one condition, and that is that you will tell me how it worked out in your plant.

Certainly I am regarded as a New Dealer. In the 10 years I have served in the Congress, I have fought vigorously and often for various phases of the so-called New Deal. I fight for it because I believe in it. My father was a career employee in the post office here, and I know what it is to live on a modest, fixed income while living costs are soaring in inflation. It happened to our family right after the First World War. I had to work my way through school and through law school, and I am acutely conscious of what the so-called little fellow is up against. After 40 years in the postal service, my father retired on a pension of about $25 per week. That still is a lot more than anyone on social security receives today, but it wasn't much reward. These things are close and personal to me. There are many men in this room who can tell similar stories; as a matter of fact, it is a somewhat typical American story.

But New Dealer or no, consumer-conscious or no, I am doing my best in the Senate to try to look at these things which come before us from the standpoint of whether they will mean a more stable economy or a nervous, unstable economy, whether they are going to put industries in Philadelphia or anywhere else out of business, whether they are going to mean jobs or take away jobs, whether they are going to strengthen America or weaken America.

For instance, I am for rent control and I am introducing a bill to strengthen substantially the present rent-control law, but the last thing I would like to see in America is a permanent rent-control statute which strangles building construction and solidifies American housing at present levels. Rent control will never end the need for housing in America. Adequate housing on the other hand, can and will end the need for rent control.

The National Association of Real Estate Boards' spokesmen don't seem to want any tremendous upsurge in housing construction for the lower-income levels—at least they have done their very best to defeat it in the last 2 years—and they don't want any rent control, either. They tell us that if we end rent control, we will end our housing shortage; that we will have a tremendous upsurge of new construction and that people who are renting space that they don't need will be forced to get out and make room for those who do need the space.

As a matter of fact, we have not had controls on new construction for 2 years, and, although there is a lot of it, it is, in nearly all cases, at rental prices that most people can't afford. Many homes being built for purchase are standing idle and vacant because there aren't enough purchasers with $15,000 or $20,000 to purchase them. All we would do by ending rent control now would be to subject millions of Americans to sudden sharp increases in rents and force them either to cut down on their other purchases just at a time when industrial production in many consumer lines is starting to catch up with demand, or it would force them out in the street and back to mother-in-law, if they were fortunate enough to have a mother-in-law with whom they could live.

The attitude of the National Association of Real Estate Boards in the face of this tremendous housing shortage in America has been distressingly unrealistic and antisocial and, on the whole, harmful to the real-estate industry itself because it has taught the average American to look with suspicion and distrust and fear on an entire industry, many

of whose members privately oppose the official position of their organization.

Other business groups have similarly brought down public condemnation upon themselves and all their members by attitudes altogether out of date for the time and the need.

Regardless of politics, there are many problems that come before Congress on which New Dealers and anti-New Dealers can cooperate effectively if they know what they are talking about. Let's take, as one example, the Bulwinkle bill. This bill, as most of you no doubt know, guarantees to the railroads virtual immunity from the antitrust laws in the establishment of lawful uniform rates through rate-making bureaus which have been in operation for perhaps 50 years.

The Department of Justice several years ago took the position that the traditional method of rate making on the part of the railroads, subject at all times to Interstate Commerce Commission approval, constituted a violation of the antitrust laws.

New Deal Democrats are, on the whole, great friends of the Antitrust Section of the Department of Justice and of the anti-trust-law theory. Yet those of us who are regarded as New Dealers who are members of the Senate Interstate and Foreign Commerce Committee, which has jurisdiction over this legislation, made it our business to study this bill carefully, and we supported it.

When the President vetoed it, we voted to override the veto.

I was closely associated with Senator REED of Kansas in the preparation of this legislation. CLYDE REED and I do not see eye to eye on many things, but on transportation we have cooperated very closely and there is a feeling there, I think I can say, of mutual respect. We have tried diligently to get at the facts and we have frequently found, on technical legislation of this sort, that there is no Republican or Democratic viewpoint. We have tried to find the facts and then let the facts dictate what we should do. Together we were able to work effectively to bring together the railroad, box-car builders, and steel interests in an informal meeting many months ago to work out a program for assuring adequate steel for the construction of sufficient box cars to end one of the greatest transportation crises we ever had in this country.

One of the biggest problems that will face the Eighty-first Congress from the standpoint of business, has to do with this very involved and complicated and technical issue of basing-point pricing. I have asked to be placed on the subcommittee of the Senate Interstate and Foreign Commerce Commitee which has been conducting an investigation into the effects on the economy generally of the Supreme Court decision against basing-point pricing in the cement industry.

I feel that whatever we do in this matter of legalizing basing-point pricing, we are going to be in bad with somebody. Business is divided on the issue. I would probably have been smarter to have stayed as far away from this issue as I could, but as the only Pennsylvania member of the committee, and with this issue having such a profound importance to the State of Pennsylvania, I believe the best politics is to try to find out what the facts are, rather than to duck a highly controversial hot potato.

Shortly after the Supreme Court decision was announced last year, the steel industry immediately converted to f. o. b. pricing—perhaps because it felt insecure in any other type of pricing and perhaps because this was a good time for them to pass freight costs on to the consumer in a seller's market, I don't know—businessmen from all over the State began to write me in great anguish over the issue. Reading that mail, I found a great deal of it was based on complete ignorance to the actual facts. Some of it was based on outright misinformation. Only a few businessmen in the whole State of Pennsylvania who took the trouble to write me on the issue had first taken the trouble to find out what they were talking about and then to phrase their letters in terms of what this meant to them and to their industry in some specific detail. Those letters were useful; the others were just a waste of everyone's time.

In your Senators and your Congressmen you have men whom you expect to decide issues involving billions of dollars, issues involving the very future and safety and security of our Nation, issues involving your very lives and health. You people know many things that we don't. A simple order from you dictated to your stenographer saying vote for this or that measure or vote against it—merely because you say I should—doesn't help us, however. Tell us why. Tell us how you happen to know something about the issues. Give us something that we can use in committee or on the floor in the way of evidence, evidence that will stand up to criticism and to analysis and to evaluation.

There is not any issue which can come before this Congress which I am not willing to decide on its merits and I think that is true for most Members of Congress. We have our own economic views. We have our economic prejudices. So do you. But any American who won't listen to facts—if they are facts—and to the evidence—if it is good evidence—doesn't belong in the Congress of the United States.

I heard the other day about a recent appearance of Congressman HALLECK in Philadelphia at which he said he was going to give a nonpolitical Republican speech. Perhaps what I have given you here is a nonpolitical Democratic speech. I hope you will realize, however, that when it comes to Philadelphia, to the betterment of Philadelphia, to the continuing progress of Philadelphia, to the protection of Philadelphia and her industries, I am a Philadelphian who loves this city, who treasures the friendships I have in this city, and who wants this city to regain all of the prestige it used to have as the birthplace of American freedom, as the leading cultural city in America, as a fine and decent place in which to live.

Count of Electoral Votes

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, January 24, 1949

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of Senate Joint Resolution 2, together with a letter from the Brookings Institution and newspaper comment.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

TEXT OF SENATE JOINT RESOLUTION 2

Resolved, etc., That an amendment is hereby proposed to the Constitution of the United States which shall be valid to all intents and purposes as part of the Constitution when ratified by three-fourths of the legislatures of the several States. Said amendment shall be as follows:

"Article —

"SECTION 1. The executive power shall be vested in a President of the United States of America. He shall hold his office during the term of 4 years, and together with the Vice President, chosen for the same term, be elected as provided in this Constitution.

"The electoral college system of electing the President and Vice President of the United States is hereby abolished. The President and Vice President shall be elected by the people of the several States. The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature. Congress shall determine the time of such election, which shall be the same throughout the United States. Until otherwise determined by the Congress, such election shall be held on the Tuesday next after the first Monday in November of the year preceding the year in which the regular term of the President is to begin. Each State shall be entitled to a number of electoral votes equal to the whole number of Senators and Representatives to which such State may be entitled in the Congress.

"Within 45 days after such election, or at such time as the Congress shall direct, the official custodian of the election returns of each State shall make distinct lists of all persons for whom votes were cast for President and the number of votes for each, and the total vote of the electors of the State for all persons for President, which lists he shall sign and certify and transmit sealed to the seat of the Government of the United States, directed to the President of the Senate. The President of the Senate shall in the presence of the Senate and House of Representatives open all certificates and the votes shall then be counted. Each person for whom votes were cast for President in each State shall be credited with such proportion of the electoral votes thereof as he received of the total vote of the electors therein for President. In making the computations, fractional numbers less than one one-thousandth shall be disregarded unless a more detailed calculation would change the result of the election. The person having the greatest number of electoral votes for President shall be President. If two or more persons shall have an equal and the highest number of such votes, then the one for whom the greatest number of popular votes were cast shall be President.

"The Vice President shall be likewise elected, at the same time and in the same manner and subject to the same provisions, as the President, but no person constitutionally ineligible for the office of President shall be eligible to that of Vice President of the United States.

"SEC. 2. Paragraphs 1, 2, and 3 of section 1, article II, of the Constitution and the twelfth article of amendment to the Constitution are hereby repealed.

"SEC. 3. This article shall take effect on the 10th day of February following its ratification.

"SEC. 4. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the States within 7 years from the date of its submission to the States by the Congress."

LETTER FROM THE BROOKINGS INSTITUTION

WASHINGTON, D. C., *May 27, 1948.*

The Honorable HENRY CABOT LODGE, JR.,
United States Senate,
Washington, D. C.

MY DEAR SENATOR: Several members of our staff have examined carefully Senate Joint Resolution 200, proposing an amendment to

the Constitution of the United States for the election of the President and Vice President, together with the hearings, the committee report, and the other material you submitted.

We are in agreement that the Congress should give the States the opportunity to vote on this amendment and that its adoption by them would result in a material improvement in our political system.

We note with approval that the proposed amendment does not abolish the electoral vote for President and Vice President, but leaves each State with a number of electoral votes equaling the number of its Senators and Representatives in the Congress. It thus preserves the compromise between the large States and the small States that permitted of the adoption of the Constitution and the formation of a more perfect Union and leaves the States free to determine the qualifications for voters, which shall be the qualifications requisite for electors of the most numerous branch of the State legislature.

It provides, however, that the electoral votes of each State shall be apportioned among the several parties on the ballot of that State in accordance with the votes polled by those parties in the Presidential election. Thus, if one party polls 51 percent of the votes in a State and the other party polls 49, the electoral vote will go 51 percent to the leading party and 49 percent to the other party, instead of 100 percent to the leading party as at present.

The proposed system has great advantages over the existing system in that—

1. It will practically eliminate the chance that a President will receive a majority of electoral votes despite the fact that his opponent polled a majority of the popular vote.

2. It will eliminate the chance of the election of a President being thrown into the House of Representatives.

3. It will practically remove the chance that small minority groups can attain and exercise great power over Presidents, Presidential candidates, and political parties because they hold the balance of power in pivotal States. These minority groups will have no power beyond that justified by their number of voters in a Presidential election.

4. In the selection of candidates for the Presidency and Vice Presidency the parties will be concerned with the capacity of the persons chosen to command the support of voters throughout the Nation and not upon their capacity to carry certain pivotal States or even big cities. Able men from small States will not be handicapped as they are at present.

5. Sure States will no longer be neglected as they are at present both in nominations and in campaigns because a substantial minority vote in those States will result in electoral votes for the candidate of their party. Voters opposed to the dominant party in their respective States will be encouraged to work and vote for their candidates, because their work and votes may actually affect the results. Their votes will be cast and counted for the candidates of their choice and not thrown away as under the present system.

Another reason for favoring the amendment is that it would eliminate an archaic provision from the Constitution. Article II, section 1, provides that "Each State shall appoint, in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress."

It has, of course, been years since any legislature has itself chosen the Presidential electors and has not submitted the choice to the voters, but the power to do so is still in the Constitution. This amendment would remove all possibility of a revival of appointment of electors by the legislature. It would also do away with the cumbersome device of the electoral college and the nomination of electors.

For these reasons we believe the proposed amendment should be submitted to the people.

Very sincerely yours,

LEWIS MERIAM,
Vice President.

NEWSPAPER COMMENT

Literally hundreds of newspapers all over the country have printed editorials during the past year commenting favorably on this proposed constitutional amendment.

Space permits including here only a few representative editorials and articles.

"IS THE COLLEGE NECESSARY?"

"(New York Times, January 7, 1949)

"There were no surprises yesterday when the House and Senate met jointly to watch the tellers count the vote of the electoral college. Or if there was a surprise it was that President Truman, who happened to be at the Capitol for lunch, broke precedent by being present during part of the counting. Mr. Truman and Senator BARKLEY got 303 votes and were elected. But this was a historic ceremony—and a nice day for it.

"Possibly this will be the last time it will be performed. The country may be growing a little tired of its meaninglessness and of the constant danger that the electoral-college system will throw an election into the House. What sense is there in giving all the votes of New York to Governor Dewey, who carried the State by 55,000 votes out of 5,000,000; or all the votes of Illinois to Mr. Truman, who won by the narrow squeak of 33,612 votes out of about 4,000,000 cast? One solution would be to take a Nation-wide vote, regardless of State lines. But this proposal would violate the principle by which the smaller States are at present a little overweighted in the college. They entered the Union with the understanding that they would have a minimum of one vote each for each Senator and each Representative. They would have good historical grounds for objecting if they were weighted purely by population.

"A more practicable plan is that of Senator LODGE, of Massachusetts, who would assign the electoral votes according to the actual count in each State. Under this arrangement the 1948 electoral votes of New York and Illinois would have been split, but Mr. Truman would still have been elected. We hope the Lodge amendment will have consideration, even though the dear old college may thus be doomed."

"THE MACHINERY CREAKED

"(Christian Science Monitor, December 15, 1948)

"On December 13 Harry S. Truman was elected President. Legally, that is more correct than to say that he was elected on November 2. For under the Constitution and the controlling Federal statute it was only when 303 votes were cast in the electoral college on the first Monday after the second Wednesday in December that the actual election took place.

"The ancient machinery creaked more audibly than usual. And more Americans were listening. For on the night of November 2 millions had been concerned lest their voting produce a stalemate in the electoral college and force an election by the House of Representatives. Happily, that invitation to political deals was bypassed.

"But there was still the prospect of a three-way split and much uncertainty about how many States' rights Democrats would keep their pledge to vote against Mr. Truman. In the end, all but one did so, and he came from a State whose popular vote went to the President. Another elector from the same State chose to keep his pledge rather than follow the vote.

"Citizens had fresh opportunity to see that the electoral college is anything but accurate and efficient. Governor Dewey got only 189 of the 531 votes, although receiving nearly half the popular total. And President Truman got none of New York's 47 electoral ballots although he ran only 60,000 behind Mr. Dewey in a vote of 6,000,000. Citizens learned again that under this unsystematic system they might choose a President at the polls and have him beaten in the electoral college.

"This time the antique college performed its function, but also pointed up faults which should put fresh steam behind proposals for reform. It is not necessary to throw out the apportionment of electoral votes which gives small States a bit of extra weight. But it would be helpful to give each candidate his fair proportion of electoral votes according to his popular vote in each State. The new Congress should adopt the plan to do this proposed as a constitutional amendment in the Lodge-Gossett resolution."

"ALL VOTES FOR PRESIDENT WOULD COUNT

"(Los Angeles Times, October 23, 1948)

"In the Presidential election of 1824 Andrew Jackson led John Quincy Adams by 50,000 votes but he did not have a clear majority over his three opponents. That threw the election into the House of Representatives, where the manipulations of Henry Clay won the Presidency for the No. 2 candidate, Adams.

"In 1876 the Democrat Samuel J. Tilden polled 4,300,590 votes; the Republican Rutherford B. Hayes, 4,036,298. The electoral votes were so distributed among the States as to give Hayes a majority of one—and he became President.

"In 1888 the Democrat Grover Cleveland got 5,556,543 popular votes; the Republican Benjamin Harrison, 5,175,582. But again the distribution of electoral votes gave the Presidency to the loser, Harrison.

"These were the only three instances in which the electoral college tricked the popular winner out of the Presidency, but there were several cases in which the vote in the electoral college grossly distorted the popular vote.

"The electoral system is a device of the founding fathers who did not conceive of the election of a national President as a popular affair. Universal suffrage was not an idea generally accepted. Moreover, the major problem of the Constitution writers was the welding of the States 'in order to form a more perfect Union.' It was natural that they would think of the election of a President as a function of the States. So they wrote:

" 'Each State shall appoint, in such manner as the legislature thereof shall direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress.'

"And, according to amendment XII, ratified in 1804,

" 'The electors shall meet in their respective States, and vote by ballot for President and Vice President * * * and transmit (the ballots) sealed to the seat of government of the United States, directed to the President of the Senate.'

"Under State laws and traditions it has become practically impossible for electors of a State to be split among parties. The last split occurred in West Virginia in 1916.

Since then it has been law—or custom—for all the electors of a State to cast their ballots for the candidate with the largest popular vote in that State.

"Some of the pernicious possibilities of this system were exampled above. We can invent a simple example for ourselves. Take three States, A, B, and C. Let us say that A and B have a million voters each and C has 500,000. A and B have 10 electors each, C has 5. In State A 525,000 votes are cast for the Black Party, 475,000 for the White. In State B 400,000 are cast for Black, 600,000 for White; in State C 300,000 for Black, 200,000 for White. Totals, 1,225,000 Black; 1,275,000 White. But A's and C's electoral votes—totaling 15—go Black. Only B's electoral votes—totaling 10—go White. So White, with a popular majority of 50,000, gets only 40 percent of the electoral votes.

"A system that allows such things to happen ought to be changed, and there is some hope of its being changed before the next Presidential election in 1952. The Republican platform pledges a 'revision of the procedure for the election of the President and Vice President which will more exactly reflect the popular vote.' Senate Joint Resolution 200, introduced in the last regular session of Congress and sponsored by Senator LODGE, of Massachusetts, among others, provides for an amendment to the Constitution abolishing the electoral college but preserving the electoral votes of the States.

"The obvious question is, Why not abolish the electoral votes, too, and simply count the popular votes? The answer is that a constitutional amendment has to be approved by two-thirds of the States and the smaller States might not ratify a proposal that would deprive them of their slight bonus in the vote count. They have this bonus because they are entitled to an electoral vote for each of their Senators, and these, of course, have no relation to population."

"The proposed amendment makes this concession to State jealousy; otherwise it seems fair and desirable. Keeping its accustomed number of electoral votes, each State would divide them among the candidates according to the number of popular votes, with fractions less than .001 disregarded unless they would change the election result. In the example above, Black would get 5¼ electoral votes in State A to White's 4¾. In State B, Black would get 4 to White's 6; in C, Black 3, White 2. Total, Black 12¼, White 12¾. White's small majority would win under the new system where it loses under the old.

"There would be no more block voting by States. Thus such political adventures as that of the Dixiecrats would become impossible. And the new system would tend to break the Solid South, for a minority of Republican voters would be entitled to a fraction of the electoral votes. It would overthrow the tactic of concentrating campaigns in large key States where a simple majority now delivers a large number of electoral votes in a block.

"The amendment would democratize Presidential elections. It would be almost direct, as nearly so as we can hope for. The next Congress ought to get it to the States as soon as possible."

"NO PRESIDENT IN 1949?

"(This Week magazine, October 17, 1948)

"(By Kermit Roosevelt)

"It is entirely possible that our next President will be a man few Americans outside of South Carolina knew much about. It is also within the realm of possibility that we might be for weeks without any President, with the House of Representatives unable to choose among the three candidates before it.

"The first possibility would mean an administration with only insignificant congressional and national support. The second would threaten a complete break-down of administration. Either would be disastrous to the country, particularly in so critical a year as 1949 promises to be. Both are made possible by the present antiquated election system.

"There are signs that we're finally getting around to doing something about these anomalies—Congress is pondering a constitutional amendment. Until it's enacted, however, a number of time-honored peculiarities will characterize United States elections.

"Unless you live in the District of Columbia, for example, you probably think that the Constitution guarantees you the right of voting for the candidate of your choice.

"You are wrong.

"Unless you are a Republican in a State which always goes Democratic, or vice versa, you probably think that your vote will surely be counted in your candidate's favor.

"Wrong again

"You are wrong on that, too. Actually, it may even be counted against him.

"Perhaps you think the man receiving the greatest popular vote is always elected. Almost certainly you think that whoever receives the most electoral votes is bound to win.

"Both of these assumptions are wrong, too.

"The reason so many of us have such incorrect views is due to that institution known as the electoral college and to the provision that the slate receiving most votes in a given State is elected in toto.

"The Constitution does not guarantee you the right to vote for President. The fact is that our founding fathers took a dim view of the average citizen's voting qualifications. They provided instead that the Chief Executive should be chosen by electors, themselves to be selected by whatever method the State legislatures should decide. For years some legislatures decided to select the electors themselves without consulting the public.

"One third lost

"Moreover the electors were not (and still are not legally) bound to vote for any specific candidate. In fact, on one occasion three electors, chosen to vote for one man, cast their votes for another and thus swung the election (in 1796) from Jefferson to Adams.

"But as a practical matter, electors do vote for the candidate to which they are pledged. And, under the unit-vote system, all the electoral votes of a State go to the candidate receiving a plurality of the popular votes. This means that at least one-third of the votes cast in the Nation are not counted for the candidate for whom they were cast. If there are three candidates, and one gets 34 percent of the votes in a given State, while the others get 33 percent each, that one receives two electoral votes from those who opposed him for every one that he actually won himself. The number of electoral votes in each State, remember, corresponds to the number of Congressmen.

"That's not all. By another constitutional provision, if one candidate does not have an absolute majority of electoral votes, the House of Representatives is required to elect the President from among the three leaders.

"Opponents of the present system are hopeful that reform is at last in sight after generations of agitation. It is certain, however, that this election at least will be conducted under the old rules. And all sorts of things could happen.

"On election day it might develop that Dewey had won 265 electoral votes, which would be one less than a majority. Truman might have 211 votes and the Dixiecrat candidate, Governor Thurmond, of South Carolina, having carried Alabama, Louisiana, Mississippi, South Carolina, and Virginia, would have 55.

"The election would have to be referred to the House of Representatives. The House would make its choice from the three leading candidates, each State having one vote regardless of size. Now, let us go one step further and assume, as is perfectly possible, that while the Republicans have won a majority in the House, they have done so by carrying the biggest States, and that the Democrats actually represent more States.

"Then, as Dixiecrat spokesmen have already pointed out, they will hold the balance of power. They could say to the Truman supporters, 'You vote for our man or we'll vote for Dewey. Your man can't win. You have to choose between a Democrat and a Republican.'

"Thurmond could win

"It is then perfectly possible that Governor Thurmond would find himself President, although he would have received only a fraction of the electoral votes and even smaller fraction of the popular vote.

"Eleven times in our history, Presidents have been elected with a minority of popular votes (their opponents having together a total more than they). Three times the man gaining office has had fewer votes than did his leading opponent. It has happened before and it could happen again.

"If it doesn't happen soon, however, the chances are it never will. For Republicans and Democrats are united now in urging reform. Senator HENRY CABOT LODGE has introduced a resolution which provides that the candidates will receive from each State electoral votes in proportion to the popular votes they received in that State.

"A bare plurality needed

"It would no longer be possible then for a party to win the election by carrying a bare plurality in 12 States. As things stand, any party which wins California, Illinois, Michigan, Iowa, Massachusetts, Missouri, New Jersey, New York, Ohio, Pennsylvania, Texas, and Wisconsin is in. Strategically placed, less than 24,000,000 votes could win against 60,000,000. The idea of electoral reform is to make that impossible.

"Representative ED GOSSETT has introduced the counterpart of LODGE's measure in the House. The Republican convention adopted a plank favoring revision of electoral procedure. A Democratic Congressman told me that 90 percent of his colleagues will vote for Gossett's resolution.

"The solid South, which might have been expected to oppose on the grounds that it will lose its solidarity, has given strong support. This is because many southerners are convinced that under present conditions, Republicans pay no attention to the South because they cannot hope to win electoral votes there, and Democrats pay no attention to it because they are sure to win there anyway.

"Northern politicians, on the other hand, from the pivotal States which have had disproportionate influence under the present system, are so eager to break up the solid South that they will sacrifice some advantages to do so.

"Thus, as sometimes happens when politicians are pursuing their own ends, they agree on something for contradictory reasons—and the people win. Meanwhile we have to take the cracked pitcher to the well once more. And we can only keep our fingers crossed and hope that it will not be once too often.

Senator Hill: Man of the Year in Service to Southern Agriculture

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, January 24, 1949

Mr. SPARKMAN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the announcement in the Progressive Farmer magazine of January 1949 of its selection of Senator Lister Hill as man of the year in service to southern agriculture.

Lister Hill was the unanimous choice of the editorial board of the Progressive Farmer, which has given this award each year since 1936 to those who have made enduring contributions to the welfare and progress of our farm people.

Dr. Clarence Poe, editor of the Progressive Farmer, declared that Senator HILL has done more than any other southerner to help farm people get hospitals.

The Birmingham News commented that the selection of Senator Hill as man of the year comes as no surprise to the farmers. The farmers know that he is a long-time champion of their interest—a coauthor of the TVA Act, a sponsor of the national soil fertility bill for soil conservation and high-grade, cheaper fertilizers, a pioneer supporter of REA, and author of the rural telephone bill to bring telephones to the farm people. He is one of the sponsors of the general housing bill with its provisions for farm and rural housing. The Public House Service bill introduced by him would help local health departments improve and expand their services, and one of the objectives of his library service demonstration bill is to bring books and educational materials to rural people.

Lister Hill has fought for the Thomas-Hill bill for Federal aid to education, for the school-lunch program, for good roads, and for the development of the country's water resources to provide electricity, water transportation, cheaper freight rates, and protection from floods. He has worked for aid to the aged, the blind, and for crippled and dependent children.

The farmers of America have no greater friend than Lister Hill—no man more active to give them and their families the opportunity for good health and a good education, for a fairer share of the benefits and blessings of American prosperity.

I also request the several brief newspaper comments on the same subject be printed in the RECORD.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

FOR HELPING RURAL AMERICA GET HOSPITALS SENATOR HILL IS OUR 1948 "MAN OF THE YEAR"

(By Clarence Poe, president and editor, the Progressive Farmer)

(Every year since 1936 the Progressive Farmer has recognized some great southern leader as the "Man of the Year in Service to Southern Agriculture." A truly great roll of honor of achievement and service, the complete list of awards is as follows: 1937, Dr. C. H. Herty, for successful research in making paper from pine; 1938, Dr. A. J. Pieters, "apostle of lespedeza"; 1939, Edward A. O'Neal, for farm organization leadership; 1940, Dr. H. A. Morgan, for agricultural education and research; 1941, Oscar Johnston, president, National Cotton Council; 1942, Dr. George W. Carver, foremost Negro agricultural scientist; 1943, D. M. Clements, southern leader of vo-ag teaching; 1944, Hugh H. Bennett, No. 1 American in soil conservation; 1945, David Lilienthal, Chairman, Tennessee Valley Authority; 1946, Dr. Julian C. Miller, for developing new sweet potato varieties; 1947, Dean Paul W. Chapman, for Southwide promotion of new rural industries. This year we are delighted to add to this distinguished list Senator Lister Hill, coauthor of the Hill-Burton bill for Federal aid to hospital building all over rural America.)

The South's great need for more doctors, more hospitals, more insurance to serve our southern farm people was stressed on this page last month.

This month we honor as our "1948 Man of the Year in Service to Southern Agriculture" the man who has done more than any other southerner has yet done to help farm people get hospitals, Hon. Lister Hill, United States Senator from Alabama since 1938.

Was Senator Hill predestined to present and promote Federal aid for helping people get better medical care? One might easily think so. For almost the first paragraph we find in his biographical sketch reads as follows:

Lister Hill's father was Dr. Luther L. Hill, of Montgomery, Ala., one of the South's most noted surgeons. Before the birth of his son he had studied in England under the great Lord Joseph Lister, and was shortly to become famous for performing the first successful suture of the heart in the United States' medical history. Lister's father named him for Joseph Lister.

EARLY EXPERIENCES INFLUENCED HIM

Thus Lister Hill is the son of a famous southern doctor, and named for a famous English doctor. And when we asked Senator Hill to tell us something about his life, he said: "My earliest observations and experiences had to do with this matter of better medical care for rural people. For example, one of the first things I remember was a trip I made with my father. It was an emergency call. A farmer had been severely kicked in the chest by a mule. There was surgery, as well as bonesetting, to be done. Word of the accident came in the afternoon. It was night when we reached the man, after traveling over miles of muddy, rutted roads.

"On an old split-bottom chair I sat and watched my father operate. A kerosene lamp lighted the kitchen table where the patient lay. Steam rose from the kettle heated on a wood range as the farmer's wife poured hot water into a basin. The man moaned softly as my father's strong hands moved swiftly, skillfully—setting the bones, sewing and binding the wound.

"'Now, Jeff,' he said, 'just take it easy until I can come back Thursday.'

"'Yes, sir, Doctor, just like you say. Durn th .t mule anyhow.'"

BILLION-DOLLAR HOSPITAL-BUILDING PROGRAM

Such experiences early convinced Lister Hill of the hospital needs of our farmers. Fortunately, when he got into the United States Senate, he set out to do something about this situation, and, fortunately, too, he proceeded with the necessary tact and wisdom to insure success. Help was needed from both northern and southern Senators; also, from both Democratic and Republican Senators; and Hill found an able Ohio Republican Senator all ready to work with him—Senator H. H. Burton, now a member of the United States Supreme Court. The result of their action was the Hill-Burton bill, which, in its final form, provides $75,000,000 a year from the United States Treasury to cover one-third of the cost of building hospitals where need is greatest—which means, primarily, rural areas. The American Farm Bureau, the National Grange, and National Farmers Union all supported the measure. Incidentally, among farm publications, the Progressive Farmer may claim to have done more than any other publication. The writer appeared before the Senate committee and later did some of the hardest lobbying of his life to help get the bill through the House. It finally became law in August 1946.

"Just what progress has been made up to date—in the Nation as a whole?" we asked Senator Hill the other day.

"If the States carry through their plans, a billion-dollar construction program will be under way by 1951," he answered. "Under the act the first year was devoted to fact finding and planning. Actual construction has been going on a little over a year, yet a Nation-wide hospital program costing nearly a third of a billion dollars is already under way. Of 540 projects under way, 418 are general hospitals, 70 are health centers. The remainder are nurses' homes or hospitals treating special diseases."

RURAL SOUTH WILL BENEFIT MOST

"And our southern rural people who have lagged furthest behind in hospital care are now fast taking advantage of the Federal Government's offer to provide one-third of the cost of hospital building," we suggested.

"Fifty-five percent of all projects now approved will be located in the Southern States, and almost 45 percent of Federal funds allocated are coming to the South," he answered. "The act is of special benefit to the South for two reasons: First, it gives preference to rural areas. Second, because Federal aid for the first time in any Federal legislation is allocated on the basis of need and per capita income. The South, largely rural, has a lower per capita income, fewer hospitals, more children, and a higher birth rate than any other section of the country.

"Recognizing these facts, the act gives the lion's share of the Federal funds to the low-income States. Two out of every three general hospitals and health centers already approved under the program will serve farmers and rural people in towns of less than 5,000 population. The act is making possible during 1948-49 construction of southern hospitals and health centers costing $195,000,000. By 1951 the program will have helped the South build more than 800 hospitals and health centers. The South will more than double the 20,000 hospital beds now serving farm and rural people. Furthermore, these new beds will be in modern hospitals with blood plasma, penicillin, and other new drugs, and with the most modern surgical instruments and medical equipment for protecting and healing the human body."

We honor Senator Hill—and all southern Senators and Representatives who worked with him—for what they have done. Through Federal appropriations, the rich States now help the poor States build hospitals. Now, every State should make State appropriations whereby rich counties will likewise help poor counties. Hospitals in rural counties will attract doctors to rural counties. The next great need is to have everybody carry hospital and medical insurance, so that hospital bills and doctor's bills may be most easily paid. So we move toward the time when farm people may have an equal chance with urban people in their inevitable battles with disease and death.

After describing the accomplishments of the Hill-Burton Act and its benefits to the farm people of the South, the Progressive Farmer had this to say about Senator Hill:

"LISTER HILL

"Alabamians who have previously received our 'Man of the Year' award include: M. J. Funchess, John H. Bankhead, P. O. Davis, L. N. Duncan, R. Y. Bailey, K. G. Baker, R. E. Cammack, Dr. Tom D. Spies, M. Hosmer Pearson, Ernest S. Morgan, Fred Stewart.

"When our editorial board early last fall unanimously voted to name Senator Hill 'Man of the Year for the South,' he automatically became also Alabama's man of the year.

"In according to Senator Hill its highest award for his contribution to better rural health, the Progressive Farmer was not overlooking his distinguished services to agriculture over a period of many years. For more than 20 years he has worked and fought in the United States Congress to advance the cause of human welfare, to develop and conserve the Nation's natural resources, and to bring justice to the American farmer.

"As coauthor of the TVA Act, Senator Hill was one of the first to foresee the blessings that development of the Tennessee Valley could bring to Alabama and the South. He was a pioneer supporter of REA.

"The Hill amendment to the Transportation Act of 1940 was a significant step in the South's fight to remove freight-rate discriminations.

"As coauthor of the GI Bill of Rights and a number of strengthening amendments, Senator Hill helped enact the original amendment which recognized on-the-farm training as full-time institutional training. He is coauthor of the bill providing $300,000,000 a year in Federal aid to education. The bill is likely to become law during the sessions of this Congress.

"He has always been in the thick of every fight for legislation to promote farm ownership and reduce tenancy; for credit adapted to farm needs; and for the many and varied types of legislation developed since 1933 to assure American farmers fair prices for their products and equality with all other groups in the American economy."

EDITORIAL COMMENT ON THE SELECTION OF UNITED STATES SENATOR LISTER HILL, OF ALABAMA, AS "MAN OF THE YEAR IN SERVICE TO SOUTHERN AGRICULTURE," BY THE PROGRESSIVE FARMER MAGAZINE:

Raleigh News and Observer: "The award is significant for two reasons. It emphasizes that real service is performed by actions rather than words and that the road to constructive service for the South usually lies along the route of intelligent cooperation with the Federal Government rather than in constant harping upon States' rights. * * * The South would not, and probably could not, have doubled its woefully meager hospital facilities for rural people without assistance from the Federal Government. The same situation exists in regard to public schools. Senator Hill is also coauthor of a bill providing for Federal assistance in that vital field."

San Antonio Express: "Senator Hill's interest in hospitals for farm residents dates back to boyhood. When he watched his father, Dr. Luther L. Hill, of Montgomery, lay a farmer, who had been kicked in the chest by a mule, on a kitchen table and operate on him by the light of a kerosene lamp, young Hill resolved to see that farmers had hospitals—some day. Senator Hill, with help from various sources, made good on that youthful resolve. One suspects that the Senator's interest in country-wide library extension—evidenced by his long-pending bill in Congress—likewise began with boyish book hunger."

Birmingham Post: "Senator Hill's record of service to southern agriculture extends back over almost his entire career in the Congress, but the work which brings this newest honor is that performed as coauthor of the Hill-Burton Act which provides Federal aid for the building of sorely needed hospitals all over rural America."

The Montgomery Examiner: "This herculean contribution to the welfare of the South by Senator Hill, which is only one of many, is the proper answer to those critics of his who, occasionally in the back room, attempt to smear him by insinuations that his liberal philosophy is somehow unsouthern. Senator Lister Hill has established himself as Alabama's—and probably the South's—outstanding statesman in the great liberal tradition. * * * The list of his direct legislative contributions and of his battles in just causes is a monument to him."

The Montgomery Advertiser: "When Senator Hill goes to the people in an election, he can remind them that he helped create the wondrous TVA, that he provided hospital bills, that he sponsored cheap fertilizer, that he helped put lights and telephones in their homes and terrace their farms and send books in rural bookmobiles for them to read."

The Chattanooga Times: "Give the South better health conditions and you will materially further its advancement economically, politically, and socially. This is the service Senator Hill has rendered the South in the Hill-Burton Act; this is the service the Progressive Farmer recognizes, along with his efforts on behalf of the TVA, the REA, and other programs of intense benefit to the southern farmer."

A Blueprint for 1949–52

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, January 24, 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Blueprint for 1949–52," from the Washington Post.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A BLUEPRINT FOR 1949–52—PROSAIC TRUMAN TALK HAS PECULIAR POWER

Now that a second term for Harry S. Truman is assured, it behooves Americans of all political parties to read critically his speeches and pronunciamentos.

Taken together, they make an almost completely rounded program for political action, particularly on the domestic level.

Truman's style is what might be called passionately prosaic. It lacks entirely the warmth and humor and brilliance of F. D. R. It has none of the Shakespearian grandeur of Churchill at his best, none of the philosophical insight of a Jefferson or the humble majesty of a Lincoln.

Instead it has a quality which probably helped Truman win his surprising victory in November. It is composed from the vulgate of grass roots America. It is full of monosyllabic horse sense—hard-hitting, graceless, forthright prose. Completely lacking in classical allusions, whimsy, or forensic magic, it is, nevertheless, not without a certain power. Its very artlessness carries conviction.

From these unlettered pages emerges a man who is more truly dedicated to gradual social reform than one might imagine. Here is a citizen stubborn, persistent, and too often bitter against his enemies, who can be counted upon consistently to back his own convictions against hell, high water, Communists, Republicans, and Dixiecrats.

THE ROAD AHEAD

What can we expect from the future after reading this book?

That Truman will continue to sponsor his civil-rights program with the same disregard for political expediency that he showed during the campaign.

That he will continue to fight for price curbs, an excess-profits tax, and other measures which he believes may alleviate inflation.

That he will seek to raise the minimum wage level, extend social security, and fight for additional funds for education, public housing, and other social benefits.

That, like Wilson and F. D. R., he will continue to try to keep us out of war while giving all-out aid to our allies.

That he will back his loyalty probe and FBI check-ups on the Communists but will continue to heckle publicity-seeking congressional committees of the Thomas stripe.

That he will continue to try to balance the budget and whittle down the debt, if necessary, at the expense of the taxpayer.

That he will give at least lip service to trust-busting.

That he will satisfy his labor backers by continuing to attack the Taft-Hartley Act while awaiting new labor legislation.

That he will satisfy his agricultural backers by continuing to support farm prices, the commodity credit program, rural electrification, rural housing, and the cooperatives, while keeping a weather eye on soil conservation and the endangered national parks and forests.

That he will seek to soothe business by proclaiming his friendly interest in full production if not his wholehearted joy in zooming profits.

That, in short, he will seek to revive partially the spirit of the New Deal within the framework of the modified capitalism we now enjoy.

NOTHING DANGEROUS

While it is not certain that the new Congress, even with its additional Democrats, will rubber-stamp all of Truman's legislative proposals, we can probably expect some new curbs and new taxes. Not to be expected are brilliant improvisations, "dangerous" innovations, or excessive socialization.

Whether you voted for Harry S. Truman or not, you owe it to your own future to examine coolly and carefully this blueprint he has drawn for our future. It is the only road map you have for that dim highway 1949–52.—S. N.

Language Is Ordnance

EXTENSION OF REMARKS
OF
HON. ELMER THOMAS
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Monday, January 24, 1949

Mr. THOMAS of Oklahoma. On December 25, 1948, there was published in the magazine called Armed Forces an article entitled "Language Is Ordnance." The article was prepared by Max Sherover, and I ask permission to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LANGUAGE IS ORDNANCE

(By Max Sherover)

In World War I, America—for the first time in its history—fought a major war in

association with allies of varying linguistic background, and fought enemies whose languages were equally foreign.

In World War II, the language pattern was even more diffused. It was truly a global war. In its wake came the realization that command of the ally's, as well as the enemy's, language was no less important than the modernity and superiority of our ordnance.

Even in postwar years, American statesmen and military government authorities are finding the dearth of language skills, natural among a people never called upon to develop such proficiency, a handicap in searching out the pathway to reconstruction, recovery, and peace.

Language poverty is a fact. Daily during the war this fact was impressed, particularly, upon military and naval intelligence officers who found themselves forced to rely upon only an inadequate handful of liaison interpreters as an unsteady crutch. We were veritable "language cripples" in the midst of a life-and-death struggle, trying to find safety, and restore order, in a world of panic. Where the script called for us to pursue, run, leap, and fly, we could barely creep for lack of linguistic communication with our allies; for inability to worm out the enemy's secrets even when we could listen in on his coded communications. The priceless understanding which could have been ours by mere understanding of captured prisoners was largely dissipated, except in the rare instances where this storehouse of intelligence finally filtered back to the language specialists.

Awareness of the risks and dangers inherent in the Nation's language deficiency quickly led officers in Army and Navy Intelligence, in the FBI, and in other key Government agencies to urge the widest diffusion of foreign-language training to personnel at all levels. The solution was less apparent. How could language training be given on a mass basis to Americans who had had neither the need nor the opportunity for such training in civilian life? How could it be done in haste, in the midst of a war with other priority demands upon available time for training?

Our enemies had never underestimated the importance of language preparedness. The Japanese Foreign Office would not appoint a man to a consular or diplomatic post unless he was thoroughly at home in the language of the country to which he was being sent. The qualification card for Japanese Army and Navy officers listed prominently the languages each knew, and each had to know at least one foreign language.

Many had a command of the various dialects of Chinese. Others knew Burmese, Tagalog, Visayan, Malayan, Korean, Spanish, Dutch, all the myriad languages of Asia and even the aboriginal speech of obscure islands in the Pacific. Some could converse as fluently in pidgin English as in the important conversational languages of Europe.

Those prewar tourists who marveled at the command shown by Japanese schoolboys of difficult English might have marveled even more had they realized that this linguistic proficiency in an Asiatic island empire was merely following the original and better pattern laid out by the Germans in generations of language training. For our chief European enemy had planned astutely through the years for the employment of languages as a weapon. Of our allies, only the British even approached, and they could not match, the linguistic skills of our enemies.

With the realization of our shortcoming in this aspect of warfare driven home emphatically, the problem of overcoming it was vast. It was determined that 40 languages were basic not that every man need know all forty, but that every man filling a position demanding linguistic competence must know at least one, or more if possible, of these 40 foreign tongues.

Time was precious. Carefully screened officers and men were assigned to special language schools, set up with the haste and compressed efficiency of a war crisis. Every language teacher and every language method was drafted into this mass education task.

Our own experience at linguaphone had convinced us that to learn a language by the traditional academic, grammatical approach is an outdated concept.

It makes language a mechanical task, not a medium of communication, and it destroys much of the psychological content.

Illustrative of the semantic difficulties of just translating an idiom into a foreign language are several phrases picked out at random. If a foreigner were to translate literally such an American idiom as "The play laid an egg," not only could the American connotation be completely lost on the translator, but, if he translated it literally into his own language, it would convey the very opposite meaning of what was intended. After all, a fowl laying an egg is an asset. It is only when the egg becomes antiquated that it is a liability—except in China.

Pages could be filled with illustrations of the semantic conflicts which plague the simplest translation. To know another language it is not sufficient to know just the grammar, nor the dictionary definition of a word. Rather, it is the feeling for the soul of the language, the subtleties, the play upon words, the literary illusions, usage, and context. To do otherwise is to emulate the parrot, which pronounces words without any concept of what the sounds he utters conveys to the listener.

It was this concept of grasping the feel and soul of a language which our organization carried into the mass language training which we were called upon to give, and we are especially proud of the fact that we were fully prepared, by virtue of our years of civilian training, to respond instantly, not only for the armed forces of the United States but for the Governments of Great Britain, Canada, Australia, the Philippines, Holland, Belgium, France, Russia, Greece, and others.

In preparation for the invasion of North Africa, we supplied courses in Arabic and French. In preparation for the launching of the American cross-channel landing in Europe, we carried out the greatest language-teaching project in the history of the world.

Individually and in study groups, tens of thousands of Americans were taught and drilled in speech fluency in French and German. Special language-teaching facilities were established at the leading universities and colleges throughout the country, at which thousands of GI's were coached in Japanese, Chinese, Burmese, Malay, as well as in the more widely used European tongues. Hundreds of thousands of American servicemen who before the war had considered the speaking of a foreign tongue as fantastic returned home with either a smattering or, in some cases, a thorough knowledge of a foreign language. Some even carried a determination to retain and improve upon what they had learned. The value and importance of language skills impressed upon the Veterans' Administration the utility of language courses in the educational facilities available to veterans under the GI bill of rights.

The ideal of a vast number of Americans becoming a master of at least one foreign language so that the Nation need no longer face a world with which it can communicate only through interpreters and translators is capable of realization. It is no longer a curiosity to find an American who can speak, read, or write a few foreign languages.

These persons are national assets, in that they can serve our Government in its world-wide activities, either in civilian or military fields. They are of value to American business as foreign representatives, travelers, teachers, diplomats, missionaries, engineers, or technicians. They can converse with, and act as host to, the foreign-language-speaking people who come to us, and look to us, in even greater numbers. They are no longer living behind the illusory security of a linguistic Maginot line. They are the advance guard in a new world, the better world that can be ours if each does his bit toward educational self-improvement.

World War II forced on us the lesson that language isolation is as great a liability as geographic or psychological isolation. Be it for good or ill, the two oceans now, and in the future, no longer offer a protective barrier against aggression. The vastness of the oceans has been shrunk to the few hours needed by a supersonic weapon to navigate their widths. The jet plane, the radio- and radar-guided missiles, and the atomic energy weapons now in being or under development force upon the United States the initiative:

1. In defense;
2. In counterattack, if attacked;
3. In taking the lead to insure an enduring world peace, if for no other reason than that to fail means the mass suicide of mankind.

In any of these three objectives the importance of linguistic fluency and communication is obvious.

(1) For the defense, and to anticipate and forestall aggression, we must know the language of the potential attacker or invader.

(2) For the counterattack we must know the language of any we may fight.

(3) For world peace and amity, we must know the language of our neighbors. In this cramped world, every nation is our neighbor.

Our educators are now aware of this urgent language need, and of our deficiency in it. Our military men have learned how dangerous is linguistic unpreparedness.

Reliance on interpreters, translators, and professional intelligence agents is outmoded by the modern demand for instantaneous understanding, and the urgency of on-the-spot decisions. The fate—not only of isolated individuals—but of a platoon, company, regiment, or even of a whole army, could hinge on linguistic adequacy or the proper understanding of a communication. The greater the average level of intelligence of an army, the wider the availability of language skills among its personnel, the better the assurance of the successful fulfillment of its mission. This is as true of nations as it is of armed forces.

The Situation in China—Retirement of Chiang Kai-shek

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, January 24, 1949

Mr. BRIDGES. Mr. President, on Saturday last, January 22, the Washington News published an editorial relating to conditions in China and the withdrawal of President Chiang Kai-shek from the Chinese scene. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE LET DOWN A FRIEND

President Chiang Kai-shek's withdrawal from the Chinese scene is not likely to bring realization of his desperate hope that it will open the way for an amicable settlement of the civil war. The Communists want absolute control. Chiang's retirement has removed the chief obstacle to their goal.

Disintegration of the national forces probably will go on until the Reds dominate most of China. Meanwhile the rest of Asia will be open to attack.

For this tragic situation Washington is more to blame than Moscow.

With no outside assistance, the Generalissimo had defeated the Communist forces and driven them far back into the north by the time the Japanese invaded his country in 1937. When the Japanese forced him out of his capital at Nanking, Chiang and his government retreated to Hangkow, then to Chungking, "city of mud and courage." But he did not quit. He could have made an advantageous deal with the Japanese, but he chose the course of honor. Of his effort, Lt. Gen. A. C. Wedemeyer, wartime commander of the American theater in China, said:

"The actual contribution that our Chinese allies made in the recent war has not, in my opinion, been properly evaluated or appreciated. * * * The steadfast determination of the Generalissimo as well as the Chinese people to fight on against overwhelming odds, saved countless American lives and accelerated final victory."

In appreciation of that contribution to the Allied cause, Chiang in 1943 was invited to Cairo, where China was formally recognized as a member of the Big Four, with Britain, Russia, and the United States. There President Roosevelt and Winston Churchill agreed that all the territories Japan had stolen from China, including Manchuria, should be restored to China.

After that high-water mark in Chiang's career, duplicity entered.

At Yalta, in February 1945, with China not represented, Mr. Roosevelt and Mr. Churchill agreed with Stalin that Russia should be allowed to establish a naval base at Port Arthur, and to control the commercial facilities at Darian, Manchuria's greatest port.

We pressured Chiang into agreeing to these concessions and Darian was closed to Chinese shipping. When the Japanese in Manchuria surrendered to the Russians, Chiang was forced to use inadequate subsidiary ports or difficult overland detours in moving troops to the liberated areas. So the Communist forces got there first.

In March 1946, our Government embargoed munitions shipments to China until Chiang made peace with the Communists—which involved taking them into his government. Since the Reds could veto any peace proposal, our policy destroyed Chiang's bargaining power. Meanwhile, the Communists got war materials the Russians had captured from the Japanese.

Before the embargo was lifted in May 1947, initiative in the Chinese civil war had passed to the Communists.

Not until April 8, 1948, did our Congress approve an appropriation for military aid to Nationalist China. The first shipment of supplies bought under this act did not reach China until last month. Two more ships docked at Formosa, far from the fighting front, early this month, when the war was all but over. Most of the supplies contracted for probably will never reach China.

When we finally made up our minds that we did not want a Communist coalition in China, we got there with too little, much too late.

It is a record of which no American can be proud.

Arbitration and Mediation

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an address by Secretary of Labor Maurice J. Tobin to the National Academy of Arbitrators at the Hotel Statler, Washington, D. C., on Friday, January 14, 1949, entitled "Arbitration and Mediation":

I am very happy to have the privilege of addressing the National Academy of Arbitrators. This is a new organization concerned with implementing and raising the standards as well as the principles of labor arbitration.

Arbitration is not only a highly skilled craft, but is an important public service which is becoming an integral part of the collective bargaining process. You as arbitrators and we of the Department of Labor have a common interest. That end is labor peace based on good wages, good working conditions, and high productivity obtained through free collective bargaining.

The Department of Labor throughout its long history of 36 years has taken the position, and I believe you share this position, that Government assistance is in order only when collective bargaining has broken down. During this period the Department has acquired extensive experience in the methods of conciliation and mediation to assist the parties in the settlement of their disputes by peaceful means. Out of this experience has grown a conviction that the interested parties are best able to handle their own problems. However, it must be recognized that even men of good will may on occasion be unable to reach agreement. When that occurs, the Government must provide the facilities to assist them in resolving their differences.

There is a growing recognition by responsible labor and management representatives that their own self-interest as well as the public interest demands an orderly procedure for the settlement of their differences.

This does not mean compulsory arbitration, a procedure which has been rejected by both organized labor and organized management. On the contrary up to the time of the enactment of the Taft-Hartley Act with its provisions for suit for damages there was an ever increasing number of agreements containing voluntary arbitration provisions covering unsettled differences.

Although arbitration as a voluntary means of settling disputes is acquiring growing acceptance by labor and management, President Truman in his state of the Union message recommended to the Congress that arbitration be extended even further and said that "The use of economic force to decide issues arising out of the interpretation of existing contracts should be prevented."

Labor, management, and the Government must turn to men of your caliber to assist in the execution of such a program. Your organization, which has been established to maintain high professional standards in the field of arbitration, can do much toward the promotion of the arbitration process. I am confident that your organization will make a real contribution toward a greater recognition of arbitration processes as a part of our free industrial society.

It is not enough to pay lip service to the arbitration process. Labor and management when they use arbitration, whether by ad hoc or the permanent umpire system, must be willing to accept the decisions of arbitrators as a final method of settlement. The public has long recognized that decisions issued by our courts must be accepted without rancor and we do not call for a removal of the judge when we don't like his decision. Labor and management must accept this principle. The era of kill the umpire should come to an end.

In addition to appointing arbitrators another most important service that can be performed by the Federal Government is through the conciliation process. I feel very strongly that that process can best be carried out within the Department of Labor, where it functioned so successfully from 1913 to 1947. As Secretary of Labor I was proud to inherit that great record of effective conciliation. I look forward to carrying on that tradition when the Conciliation Service is returned to the Department of Labor.

During the years before the passage of the Taft-Hartley Act hundreds of thousands of cases were handled by the Conciliation Service. In 9 out of every 10 cases in which the Service participated before a strike occurred, the dispute was settled without a stoppage of work.

Why then did Congress take the Conciliation Service out of the Department of Labor? Frankly it had no good reason. The very best that can be said for it is the old bogey man that a Conciliation Service cannot be impartial so long as it is within the Department of Labor. Such a notion is, of course, ridiculous on its face. It is contrary to the unanimous recommendation of the Labor-Management Conference of 1945, which, although it failed to agree on many things, did agree unanimously on the fairness and impartiality of the Conciliation Service, and unanimously recommended that it be retained and strengthened within the Department of Labor. As many of you know, I have taken issue with the NAM on frequent occasions during the recent campaign or what they might call the late unpleasantness. However, I am very happy to agree with the position of Mr. Ira Mosher, chairman of the executive committee of the NAM, when he testified during the hearings on the proposed Taft-Hartley Act. During those hearings Mr. Mosher, on behalf of the NAM, recommended that no new agency be created for handling conciliation and in referring to the role of the Conciliation Service in assisting the parties to achieve satisfactory agreements through collective bargaining said:

"During the past year, the Conciliation Service has made important strides in the direction of providing that kind of conciliation. The members of the Labor-Management Advisory Committee to the Conciliation Service have performed a useful and valuable function in achieving a better understanding between the Conciliation Service and labor and management. I would like to see that kind of service and cooperative relations extended and strengthened."

Mr. Raymond Smethurst, general counsel of the NAM, testified to the same effect before the Senate committee and said: "We seriously question the advisability of establishing any new Federal agency having responsibility for the settlement of labor disputes."

The Eightieth Congress apparently wanted to show that it could not be led around by the nose by the NAM and did not follow their recommendation. This was one bit of sound advice given by the NAM. The Eightieth Congress should have listened. I am sure that the Eighty-first Congress will listen.

I don't like to belabor this point of impartiality, but since it has been raised I think it should be answered. Many of you men

sitting here tonight have acted as arbitrators pursuant to appointments made by the Department of Labor. Has your ability to act impartially been affected in any way by the fact of your appointment by the Labor Department, the independent Conciliation Service, or the American Arbitration Association? Obviously not. The question of who appoints men of integrity and impartiality cannot affect their integrity or impartiality, and I believe similarly that conciliators carefully chosen for integrity and impartiality will be impartial no matter what department of Government they are in.

The question, then, is not one of impartiality, but rather of effective governmental administration. Under the Cabinet form of government, effective Government administration requires that the President be in a position to look to a single Cabinet head as the responsible officer in charge of the labor policy of the Government.

I think it might be helpful to cite an illustration of the kind of thing that can happen when labor agencies are allowed to continue independent and unattached with no direct responsibility to the President through a Cabinet officer.

You all recall, I am sure, that when our distinguished Secretary of State, General Marshall, returned from Europe, approximately 2 months ago, he made a report to the President and the full Cabinet on our foreign relations in Europe. The fact that such a report was made was reported in the press, but what happened at that meeting was, of course, confidential.

In the course of his report, Secretary Marshall could very well have commented that the Economic Cooperation Administration plan, which is popularly named after General Marshall as the Marshall plan, was working very well and that democratic forces in Europe had been strengthened materially against the Communist groups attempting to secure a foothold in the democratic countries of Europe.

General Marshall might very well have said that the success of the Marshall plan was being seriously jeopardized in the flow of goods to these democratic nations as a result of the longshore dispute. At this juncture, the President would most likely turn to me as Secretary of Labor and ask the status of the longshore dispute. I would, unfortunately, say: "Mr. President, I don't know. That's not in my hands. That matter is being handled by the independent Conciliation Service." As you know, the heads of independent agencies do not sit in the Cabinet.

I believe that when problems such as this occur, and this type of problem occurs very frequently, the President has the right to look to a Cabinet officer to determine the labor situation as it relates to the problem under discussion in the Cabinet meeting.

In brief summary I wish to tell you the program of the administration in the field of labor relations. The administration intends:

1. To do everything in its power to encourage the free collective-bargaining process which is the bulwark of a free democracy;

2. We will do everything in our power to encourage the use of voluntary arbitration for the settlement of disputes and we will do everything in our power to provide the best kind of conciliation service to assist labor and management in negotiating their differences;

3. We will seek to find methods for handling jurisdictional disputes and unjustifiable secondary boycotts; and

4. As President Truman stated in his State of the Union message, means should be provided for settling or preventing strikes in vital industries which affect the public interest without endangering our democratic freedom.

This is a program which the majority of the American people has endorsed. It is a program that I know that the great majority of you as arbitrators endorse. The Department of Labor is prepared to implement this program through its established facilities and through the United States Conciliation Service when it is returned to the Department of Labor in the near future.

The Ghost Is Laid by Truman

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans States:

THE GHOST IS LAID BY TRUMAN

Two weeks ago, the Nation hummed with uncertainty concerning Mr. Truman's foreign policy for the next 4 years. The people thought there was going to be a change, because General Marshall resigned in ill health. Even the Acheson appointment was spyglassed in the Senate Foreign Relations Committee. Mr. Truman was going to sweet-talk with the Russians and everybody knew the Soviet couldn't be trusted, so what else could happen but for Uncle Sam to lose his shirt?

That was the general feeling, and President Truman must have been aware of it, for yesterday in his inaugural address, he laid the ghost of appeasement.

He called his names and he named America's enemy.

He said:

"In the pursuit of these aims (a just and lasting peace), the United States and other like-minded nations find themselves directly opposed by a regime with contrary aims and a totally different concept of life.

"The regime adheres to a false philosophy which purports to offer freedom, security, and greater opportunity to mankind. Misled by this philosophy, many peoples have sacrificed their liberties only to learn to their sorrow that deceit and mockery, poverty and tyranny, are their reward.

"That false philosophy is communism."

Tracing then the differences in method of government, morality, laws, outlook, and philosophy, Mr. Truman gave in short and simple language a stirring indictment of communism and built up a strong case for the democratic way. He just placed them side by side for all to see.

It was a good address. There was not a phrase which sounded insincere. All the world can read that message and gain a quick review of America's position in the world today and why we are doing what we are doing.

Help to the world to recover is our aim. A lasting peace and a just peace for everyone is our aim. Our aim also is stability for the family of nations, limitation of armaments, and expanded world trade.

To the accusations of Communists that we are imperialistic, Mr. Truman answered plainly and logically:

"We have sought no territory and we have imposed our will on none. We have asked no privileges we have not extended to others."

No one can truthfully deny that. That is a statement which should be broadcast to all peoples of the world, for it is so. It is the position of a nation with integrity and purpose. It is what our country stands for, and every one of us ought to be proud of it.

America's position is unassailable, and President Truman deserves our thanks for putting in so few words a truth no nation can deny, and faint-hearted and suspicious lands as well as our courageous friends needed the telling of it again.

Address of Hon. Cleveland M. Bailey, of West Virginia

EXTENSION OF REMARKS
OF
HON. HARLEY O. STAGGERS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. STAGGERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a speech made at the State Labor Conference in Trenton, N. J., on January 15, 1949, by my colleague from West Virginia, the Honorable CLEVELAND M. BAILEY:

Mr. Chairman, fellow Americans, fellow workers, on this all-important occasion in the history of the Congress of Industrial Organizations in New Jersey, I bring greetings from the new liberal Democratic administration in Washington, which I predict will usher in a new era in service to the great mass of American people.

Let me, at this time, extend my congratulations not only to the CIO and PAC groups, but to the united effort of all labor groups for the magnificent contribution in time, money, and votes made to our great victory on November 2. It was a victory for the common people.

Despite opposition by 90 percent of the newspapers, most radio broadcasters, and all of the pollsters, the American voter stood firm. This is the best thing that has happened in American public life in a generation. It is a notice to those who would mislead and exploit you that the time is past when our American birthright is for sale. If it had been for sale the Republican Grundy-Pugh machine of Pennsylvania would have bought it. Your heroic stand at the ballot box on election day restores one's faith in the traditions and ideals that have made America great—my hat is off to you.

As we gather to discuss problems facing both our Nation and the cause of organized labor, we are appalled by the growing lack of international harmony abroad and the loss of individual security here at home.

Not since we, in America, rejected Woodrow Wilson's League of Nations has the cause of world peace been so uncertain, and not since the gloomy days following the First World War has organized labor found itself in a life-and-death struggle for its very existence.

It is a matter of history the world over that the rights of the laboring class can be secure only in a government of free men and free institutions. The fate of organized labor, our democratic ideals, and civilization hang in the balance. Our own America—may God bless and preserve her—is the only bulwark strong enough to demand, and secure, a world at peace and safeguard the aspirations and hopes of all those who love liberty and justice.

Since the days of Thomas Jefferson, author of our Bill of Rights, we Americans have cherished liberty. We have taken for granted the hard-earned blessings of free speech, free press, free assembly, freedom of religion, and the right of a trial by jury of our peers. Ours may well be a false sense of security.

The need to make safe these liberties and to protect our sacred institutions and our American way of life is as urgent today as it was in 1941, when we were forced to make an all-out effort to roll back the forces of nazism, fascism, and communism that engulfed us.

In the hectic war years we vied with each other with deeds of patriotism and sacrifices. We pledged eternal loyalty to those who made our own way of life possible for future generations, but in three short years after the cease-fire order ended the world's greatest war, America has forgotten her sacred pledge to those who served so gallantly on the field of battle and those who labored so patriotically in our mills and mines to make possible and certain our victory.

When Hitler, Mussolini, and Stalin launched their campaigns for world domination, their first overt act was to wipe out every vestige of trade unionism and organized labor. This was followed by suppression of the press, of free speech and assembly, and of religious freedom. Firing squads were substituted for trial by jury.

To those who love liberty, exalt justice, and cherish freedom, the thought is abhorrent that such tragedy could ever blight America, yet only a casual glance at the record of the Eightieth Congress caused the American voter on election day to stop, look, and listen.

No address, on an occasion such as this, would be complete unless the speaker dwelled at length on the sorry record of the Eightieth Congress and particularly the Taft-Hartley Labor Relations Act. Here we had a horse and buggy Congress functioning in an atomic age. The horse evidently wore blinders. They could see the fat profits but not high prices; rich landlords but not poor tenants; big business but not the little people.

Like the rules drawn up to govern the early Carolina Colonists this Taft-Hartley bill provides for everything from the cut of a man's coat to the trimming of a woman's bonnet. It not only cut labor's coat and trimmed its bonnet, but it has left labor naked and defenseless before its enemies.

What, may I ask, has happened to the idea, so prevalent a few short years ago, that the right of labor to bargain collectively is necessary to the continuance of free enterprise? Why should a sane and sensible America want to destroy and degrade the very segment of her population on which she must depend for her very existence in the third great war, which seems inevitable?

A present-day definition of free enterprise would appear to mean the right of a privileged few to do as they d—— well please and to h—— with individual liberties and the American way of life as we understood them from the lips and life of our great war-time President—the late Franklin D. Roosevelt.

Time will not permit me to present a detailed picture of what this Taft-Hartley Act is doing to you. Briefly, it:

(a) Presents a dangerous encroachment on the individual rights of our citizens.

(b) It destroys the principle of free collective bargaining.

(c) It brings us once again face to face with that un-American idea of government by injunction.

(d) It strikes from the Federal statutes the Norris-LaGuardia Act which prevented the issuance of injunctions in strike cases.

(e) It drastically modified the Wagner National Labor Relations Act by imposing added restraints on labor groups.

When Congress, by legislation, says that a labor-owned and labor-controlled press cannot print the names of political candidates for public office either favorable or unfavorable to the cause of labor, it abridges the right of free persons.

When a labor group is forbidden to make contributions to political campaigns and candidates, and this same privilege is extended to industry and organized business groups, we have the rankest kind of discrimination.

When a union official is required to make oath as to the political affiliation of members of his group, we are reminded of the Force Act in the years following the Civil War. You can no more legislate loyalty and patriotism into the average citizen than you can legislate honesty into him. Both of these admirable qualities come from the heart, not the mouth, and from love of country, not legal documents.

When courts of law, by ex parte proceedings, are permitted to send men and women to prison for violating injunctions in labor cases, you see a great injustice facing the workingman who is denied the right to a trial by jury.

I see before me gray-haired men who will remember the period of the First World War and the infamous Eagle Glass Co. and the Hinchman Coal Co. cases, in which otherwise innocent men, by the score, went to prison because of alleged violations of an injunction of a United States district court. God forbid that we in America be forced to again exist half free and half slave. It is my thought that this Taft-Hartley Act not only enslaves labor but it returns to economic bondage more men and women than were freed by the Great Emancipator in Civil War days. In justice to the millions of organized workers it must be repealed. I shall work and vote for its repeal. I have already introduced legislation demanding it be wiped completely off our statute books.

The forthright liberal program outlined some days ago by President Truman in the Eighty-first Congress was well received all over the Nation and particularly by the people who were either forgotten or ignored by the reactionaries and economic royalists in the Eightieth Congress.

It is pleasing to note that labor and labor leaders have gotten away from their one-track policy of labor alone and are now thinking in terms of the general welfare. They see that if labor is to be happy and contented other segments of our population must also enjoy the benefits that come from steady jobs at good pay and working conditions and with the added assurance of a reasonable security in their declining years.

Your great and beloved leader, Philip Murray, has taken the lead in backing most of President Truman's liberal program, which means that labor is now interested in such national problems as better health and educational facilities, more liberal social-security coverage, better trade relations, price controls on basic articles of food and clothing, better housing, civil rights—all of which will go to make up a happier and more prosperous America.

The first step in carrying out these great liberal reforms came a few days ago when the House of Representatives, of which I have the honor of being a Member, took away from its Rules Committee the power to block legislation by pigeonholing liberal bills and refusing to allow them to come before the House for a vote.

The same fight for more liberal procedures is on now in the United States Senate, where filibuster tactics on the part of a few Senators block bringing to a vote legislation that they oppose. If Senate liberals win this fight, it will be possible to carry out most of the Democratic promises of the recent campaign.

Our magnificent victory in the last election demonstrates clearly what labor can do to shape the policies of our Government when it stands united. We have only made a beginning. The fight is still on. We must look to 1950 and 1952 and be prepared to further reduce in the Halls of Congress the number of those who take orders from the forces of reaction and greed.

If time would permit, this afternoon I would like to go ahead and preach you a sermon. I would take as my text a passage from the Scriptures that reads something like this, "Hold fast to the things that are good. Forsake and cast aside the things that are evil."

President Truman reported, "The state of the Nation is good." Sixteen years of liberal democracy has brought America the greatest prosperity ever enjoyed by any nation. That is good. We must hold on to these good times.

In conclusion, may I appeal to your common sense, not your prejudices. You will all agree that the halcyon days of the labor movement began with the election of Franklin D. Roosevelt in 1932. It was an emancipation day equal to Abe Lincoln's freeing the slaves. All the things you had hoped, prayed, and fought for were magically handed you overnight. You did not have to fight hard enough for some of these things. If so, you would not be so prone to forget.

As a candidate for reelection to Congress in the 1948 campaign, I made the statement that the American workingman, who was then enjoying the greatest period of prosperity in the Nation's history, would not change major political parties in the midst of all this prosperity. I said he would not rock the boat because he was satisfied with a good job, at good pay, and could educate his children and even save a little for a rainy day.

When will you learn that vigilance at the ballot box is still the price of economic freedom? When will you learn that your ballot is your greatest protection against those who would oppress you?

Never before has there been a time when labor needs to be more on guard. Mighty forces, both in and out of Congress, are anxious to throttle the labor movement. It is a time when labor should know its friends. A time when it should stand united, not only at a bargaining table, but at a ballot box.

Philippine Scouts—An Article by Mr. Hanson W. Baldwin Favoring Retention and Comment Thereon by Vicente Villamin

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert therein a timely article on the Philippine Scouts by Mr. Hanson W. Baldwin, the military expert of the New York Times, and the comment therein, published in that newspaper, by Mr. Vicente Villamin. They both propose the retention of the Philippine Scout organization, which is now a part of the American armed forces.

[From the New York Times]

FATE OF PHILIPPINE SCOUTS—FAMOUS UNIT, IN ARMY SINCE 1901, WILL BE DISBANDED BY JULY UNLESS CONGRESS ACTS

(By Hanson W. Baldwin)

The Philippine Scouts, famous in the old Army, will pass into the limbo of history by July 1, 1949, unless the next session of Congress takes preventive action.

At the very time when Communist victories in China are imperiling the United States strategic position in the Far East, and Gen. Douglas MacArthur is asking for more men in Japan, a force with proud traditions and a long history of usefulness is to be disbanded.

The disbandment, already started, is a by-product of Philippine independence. A United States Army spokesman has explained it as carrying out United States Government policy of not recruiting and using organized foreign troops as a part of the American Military Establishment.

"Since the Philippines became independent in 1946," the spokesman continued, "this policy applies to that nation in the same way as it does to any other foreign power."

A DISTINCTIVE PART

The Philippine Scouts have been a distinctive part of the United States Army (but with specialized and separate status) since 1901, and prior to the war formed a major part of the Philippine division. The Twenty-sixth Cavalry, Forty-fifth and Fifty-seventh Regiments and other units made history on Bataan, and most Army officers with Philippine experience agreed that these troops, when working with United States units and led by United States and Filipino officers—most of the latter graduates of West Point—made excellent soldiers. Most of the Scouts were professionals; they enlisted and reenlisted, and developed into competent, hard-working privates and noncoms and provided the sound cadre for a Philippine defense force.

After the war Congress passed Public Law 190—the Armed Forces Voluntary Recruitment Act of 1945—which authorized the Army to enlist 50,000 men in the Philippine Scouts for service in the Philippines and the Far East. Under this law, a maximum of some 39,000 men were recruited in 1945 and 1946 until Philippine independence halted recruiting.

These newly recruited men were called New Scouts, whereas veterans of the war—many of them prisoners of the Japanese—were called Old Scouts. The strength of the combined Old and New Scouts as of last August 31 was 27,100, and was declining steadily as enlistments expired. The Scouts, since the war, have served in the Philippines and in the Marianas.

Between 1,400 and 1,500 of them have acquired United States citizenship, and hence are eligible for enlistment—if they desire—in the United States Army. About 700 other Old Scouts, who had served for a number of years, are to receive an opportunity to enlist in the United States Army so that their long years of service might not be wasted and so that they might have the opportunity due to them to round out their military careers and take advantage of their eligibility for retirement pay. But these men will enlist as individuals—if they so desire; as an organization, the Philippine Scouts is dying.

The disbandment, now well started, is in strict accordance with the Government policy against enlistment of organized foreign troops in the United States Army.

This policy itself, however, should be challenged sharply by Congress, and the narrow interpretation of it that views the Philippines as a foreign power should be rejected completely.

A bill was sponsored by Senator HENRY CABOT LODGE, Jr., Republican, of Massachusetts, at the last session of Congress, which authorized the enlistment of aliens in the Army, but it was not passed. This bill, in modified form, supplemented by legislation that would perpetuate the Philippine Scouts and put the Philippines—in a military sense—in a most favorable nation position, should get immediate favorable attention by Congress.

There has been a strange reluctance by the Army to accept the service of aliens—at least in organized bodies. Yet that reluctance is now leading to the disbandment of what admittedly has been a most useful body of troops. This reluctance is, indeed, a reflection on the Army's own capabilities. For throughout history nearly every great power has utilized foreign and/or colonial troops to supplement its own manpower—where the leadership provided was good and understood the peculiar problems of these special troops, these contingents made good military material.

BRITONS IN INDIA CITED

The British situation in India is roughly comparable to our own in the Philippines. India is free, yet the British Army still utilizes Gurkha units—volunteers all—and these units have served and are serving with distinction in Malaya and elsewhere. Native troops like these are particularly useful in the environment, terrain, and climate to which they are accustomed, and the Filipinos, like the Gurkhas, could provide a major source of manpower for service under the United States flag in the Far East. Agreement with the Philippines to permit such voluntary enlistments probably could be achieved easily, as the perpetuation of the Philippine Scouts would be mutually advantageous to both countries.

Since the war, United States forces in the Philippines have been small—really token in nature. The importance of our bases there has diminished with Philippine independence and as the strategic focus shifted northward to Okinawa. But with eastern Asia threatened with communism, the Philippines again are assuming an increased strategic significance, and more military units under the United States flag clearly are needed in the Orient. Nor can we ever forget that we owe a moral commitment to the Philippines; their defense—in the last analysis—depends upon us. The Philippine Scouts must not be disbanded.

PHILIPPINE SCOUTS

WARM SPRINGS, VA., *December 26, 1948.*

To the EDITOR OF THE NEW YORK TIMES:

A Filipino citizen, I endorse the suggestion of Mr. Hanson W. Baldwin in his article in the Times of December 24 that the Filipino Scouts be not disbanded, thereby rescinding the American Government's decision to wind it up by July 1, 1949. This is a matter that cuts deep in the present relationship between the United States and the Philippines and their security in the western Pacific and beyond its perimeter.

As Mr. Baldwin says, the Scouts are some 29,000 Filipinos who have enlisted in the American Army since the war under the Recruitment Act of 1945 for service in the Philippines and other parts of the Far East. They are mostly those who were in the Filipino Scouts before the war, a body which was a part of the American armed forces in the Philippines, and other Filipinos who saw active service in the last war under Gen. Douglas MacArthur.

In anticipation of Philippine independence on July 4, 1946, the pertinent provision of the Recruitment Act authorized the enlistment of 50,000 Filipino Scouts in the American Army. Their rights and privileges were defined in the Second Rescission Act of 1946. This law is not to be confused with the First Rescission Act of the same year which took away many of the benefits in the GI bill of rights which would have accrued to those Filipino veterans who were in the American armed forces in the last war and who are legalistically described as then being "in but not of" the American Army.

By common understanding, the Filipino Scouts would have at least four functions: (1) To be ready for any eventuality in post-war Japan or in former enemy islands; (2) to help garrison the military bases which the United States under a treaty plans to build in the Philippines; (3) to carry out America's moral commitment as given by the President and acquiesced in by the Congress that Philippine independence shall be helped and protected; and (4) to be an indirect adjunct in the scheme of American military aid that is being actually extended to the Philippines under the Military Assistance Act of 1946.

The presence of a part of the American armed forces in the Philippines is with the consent of the Philippine Government, and the recruitment of Filipinos in those forces is proof conclusive of the trust that the American Government places in their proven fidelity and efficiency.

The American expenditures for the Scouts constitute a substantial help to the economy of the Philippines and their stoppage would militate against its postwar rehabilitation and reconstruction which the American Government, conscious of its responsibility in the premises, is trying to advance.

There are three principal links that bind the United States to the Philippines today—links that the former does not have to an equal degree with any other foreign country. They are: (1) The sentimental, arising from the fact that the Philippines has been under benevolent American tutelage for half a century, culminating in the creation of the Filipino independent nation; (2) the Philippine-American Treaty under which the former agrees to the maintenance of American military bases on Philippine territory for 99 years for their mutual protection; and (3) a modified free trade for 28 years, plus a required provision in the Philippine Constitution granting Americans the same rights as Filipinos in the development of natural resources and the operation of public utilities.

These three elements, strengthened by the Filipinos' loyalty and cooperation during the last war, make the two countries interlinked economically and interlocked militarily. With American military establishments in the Philippines (21 strategic sites have been selected), the Philippine Republic would irresistibly be involved in any war which America might wage in the future in that part of the world. That is a tremendous concession on the part of the Philippines—a concession required of it by the Philippine Independence Act of March 24, 1934, rendered more comprehensive by the Joint Resolution 94 of the American Congress in 1943.

Mr. Baldwin states: "The importance of our bases there has diminished with Philippine independence and as the strategic focus shifted northward to Okinawa. But with eastern Asia threatened with communism, the Philippines again are assuming an increased strategic significance, and more military units under the United States flag clearly are needed in the Orient."

Philippine independence did not diminish the importance of the bases, for they were decided upon long before that event and in anticipation of it. With Formosa and the Pescadores Islands liable to fall under Communist control as an incident to China's expected debacle, the American strategic positions will be materially weakened in Japan proper, in Guam, in the Micronesian Islands, in Okinawa itself and other islands in the Ryukyus Archipelago, and eventually yonder in Hawaii, the Panama Canal Zone, in Alaska, and at last in the Pacific coast of the United States.

The Philippines, a country rich in natural resources, with its 18,000,000 people who are fundamentally and intelligently friendly to the United States, and maintaining the only real democratic government in the Orient, is obviously and decisively the most valuable base that America could have under any method of warfare in that section of the earth. Instead of disbanding the 29,000

Filipino scouts, plain logic demands that America should have at least 100,000 of them there. Each of them, at less expense but not with less effectiveness, will take the place of every American soldier that will be needed in the event of any international emergency. Mr. Baldwin is tremendously right when he says: "The Philippine scouts must not be disbanded."

Respectfully submitted.

VICENTE VILLAMIN.

British Socialism

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news letter of Hon. Samuel B. Pettengill, former Representative from Indiana:

BRITISH SOCIALISM

Britain's Minister of Health, Mr. Bevan, is amazed at the bad sight which his countrymen are developing. "The rush for spectacles is so great that it has overtaken production capacity."

Free false teeth are also in great demand. It is reported that dentists pull each other's teeth, which they formerly did as a pleasant, neighborly, mutual service, and then send bills to the Government for payment.

Such is the result of the politicians taking over medical care. Even Mr. Bevan protests at the stampede for free service. "Because things are free," he says, "is no reason why people should abuse their opportunities. This is a great test of the maturity of the British people, insofar as they have all the resources of the medical profession at their disposal without charge."

One may sympathize with the plight of the Minister of Health, but to describe the system as free or without charge is the mark of a dishonest mind. Of course, it is all paid for. Doctors, dentists, and nurses don't do their work for nothing, even in unmerrie England.

"Something for nothing" is vote grease de luxe. But when millions get something for nothing, other millions get nothing for something. The same sort of relief rackets are growing in this country and the cost goes up also. The American Municipal Association reports that the relief load has gone up 136 percent during the past 3 years. And this during the biggest boom and largest employment in history.

As the Gadarene swine rushed down a steep place to the sea to be drowned, voters and taxpayers also blindly join the stampede for "free." The voters in Oregon woke up the day after the election with a headache. They found that they had approved an old-age pension plan of $50 a month regardless of need. Treat 'em alike—pauper and millionaire. It's a free country, isn't it?

The Oregon joker was the disclosure that the cost of free pensions for all was three times as much as the present cost of the State government in all its branches. Bond companies about to buy an Oregon State bond issue immediately withdrew their bids.

Just another case of the maturity of the people which Mr. Bevan is wondering about. Today in England, whether they work or not, or pay for private medical insurance or not, or are British subjects or not, everybody can ask for a glass eye, wig, truss, operation, or ambulance, and no charge. Just pay your taxes, that's all.

The British air lines, Government owned and politically operated, lost $45,000,000 this past year. That is 5 percent more loss than the previous year, and it is expected that the losses will continue, if not increase still more next year. The European recovery plan, however, enables the British Socialists to recover their losses out of American pocketbooks—including Oregon's.

There is one ebb in the tide of this oncoming Socialist sea. The Australians went left long before England did. They have had a longer look at it than the Britishers. In an election last spring, the disillusioned down-unders overwhelmingly defeated a proposal to give their federal government permanent control over prices, rents, etc. Our own Federal Government wants what the Australians reject. What was it that Poor Richard said about "Experience is a dear school"?

SAMUEL B. PETTENGILL.

"Encourage us to live above the common level. Make us to choose the harder right instead of the easier wrong, and never to be content with a half truth. Endow us with courage that is born of loyalty to all that is noble and worthy, that scorns to compromise with vice and injustice. Guard us against flippancy and irreverence in the sacred things. Help us to keep morally straight." (West Point cadet prayer.)

China's Fall Due to Yalta Agreement

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan:

CHINA'S FALL DUE TO YALTA AGREEMENT
(By Mark Sullivan)

Everywhere in America—St. Louis, Philadelphia, Grand Rapids, Dallas, any city or town or farm community anywhere—people must ask anxiously about the imminent fall of China to the Communists; what it means to us and to the world.

What is now coming to climax in China had its roots in agreements made by President Roosevelt with Premier Stalin of Russia at Yalta in February 1945. These agreements, with other steps by us and a policy followed by us, are the main cause of what is now taking place. We are responsible.

The Yalta agreements were secret at the time. They have since become public, and the accompanying circumstances have in large part come to light, partly through two books, both authoritative, both by intimates of Roosevelt. One is by James F. Byrnes, an official aide to Roosevelt at Yalta and later Secretary of State under Truman. The other book is based on diaries and notes of Harry Hopkins, likewise with Roosevelt at Yalta and at all times an intimate associate. The Hopkins material is edited and supplemented by Robert Sherwood, also a devoted asscciate of Roosevelt. (A third book, by a scholar, Dr. David J. Dellin, Soviet Russia and the East, containing authoritative and valuable information, has been consulted in the preparation of this article.)

Roosevelt went to Yalta to arrange for Stalin to take part in the war against Japan. Up to that time Russia had participated only in the war against Germany. Stalin brought to Yalta a set of demands, to be the price of helping to fight Japan. The price was an immense extension of Russian territory and power in eastern Asia, to be taken at the expense of China—some of it territory belonging to China, some of it territory which had been taken from China by Japan and which China expected to get back.

To Stalin's demands Roosevelt agreed. Stalin, cagy and firm, "insisted"—this word is used by Sherwood—that the agreements be put in writing: "The heads of the three great powers have agreed that these claims of the Soviet Union shall be unequivocally fulfilled after Japan has been defeated."

This, Sherwood wrote later, "was the most assailable point in the entire Yalta record * * *. For, if China had refused to agree to any of the Soviet claims, presumably the United States and Britain would have been compelled to join in enforcing them."

That was an appalling demand. But there was another more profoundly offensive to China; more shocking by what it put upon Roosevelt personally: "It is understood that the agreement * * * referred to above will require concurrence of Generalissimo Chiang Kai-shek. The President will take measures * * * to establish this concurrence on advice from Marshal Stalin."

What Roosevelt had done at Yalta included this: He had made secret agreements with Stalin, some remaining secret until Secretary of State Byrnes inquired into them, saying, as he wrote later: "I wanted to know how many IOU's were outstanding." The agreements were at the expense of China; China was already fighting alongside us in the war against Japan, but China, by the agreements, had to yield territory and make other concessions as a price to get Russia to join in the fight against Japan. If China refused, then, under the agreement, Roosevelt would, on advice from Marshal Stalin, take measures to establish concurrences.

The territory and other acquisitions, including control of railroads, which Russia got through the demands Roosevelt agreed to, together with further advantages Russia got in the winding up of the war against Japan, including arms taken from Japan—these composed leverage and impetus by which the Communists were able to make the drive against China that has now reached the stage of imminent success.

Later we did more that furthered the drive. In 1946 General Marshall, sent to China by President Truman, publicly called on Chiang Kai-shek to take Chinese Communist leaders into a coalition government. Such a proposal coming officially from a country that was historically China's friend undermined Chiang Kai-shek's prestige, strengthened the Communists. About the same time we suspended for 18 months the shipment of arms to the Chiang Kai-shek government, which we had been carrying on during the war against Japan. This crippled Chiang Kai-shek's military strength and increased the momentum of the Communist drive.

It Is Unfair To Use American Taxpayers' Money To Buy Argentina Meat To Feed Our Troops

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. REES. Mr. Speaker, my attention has been directed to a new Army

policy in the purchase of foreign meat requirements from Argentina. I am informed the program provides for the purchase of 100 percent of its boneless beef requirements from Argentina, for feeding the United States troops overseas. Of course, this new policy will play havoc in the livestock and meat packing industries.

It is well known that Argentina beef is not produced under strict inspection regulations that apply to American plants. Argentina is well known as one of the countries where foot-and-mouth disease is prevalent. In any event, if the Army insists on buying a cheaper quality of meat in South America it is bound to have a disastrous effect on the cattle and dressed beef markets in this country. It will also discourage the production and feeding of cattle.

It should be noted, too, that the price of beef cattle, as well as the price of wholesale beef, has dropped substantially the past few months. It is manifestly unfair that American taxpayers' money should be used to buy second-grade meat for the armed forces of our country.

As a part of my statement I am including a copy of a letter from Mr. E. F. Forbes, president of the Western States Meat Packers Association, Inc., that further describes the situation. The letter is as follows:

WESTERN STATES MEAT PACKERS ASSOCIATION, INC.,
San Francisco, Calif., January 18, 1949.

Hon. EDWARD H. REES,
House Office Building,
Washington, D. C.

MY DEAR MR. REES: A new Army policy is raising havoc in the livestock and meat packing industries.

Six months ago the Army started for the first time to buy part of its foreign meat requirements from Argentina. This program has expanded and the Army now plans to buy in Argentina up to 100 percent of its boneless beef requirements for feeding United States troops overseas.

This is lawful, and the Army can buy meat for less money in that country, about one-half less, but Argentine beef is not produced under the same strict meat inspection regulations that apply to federally inspected plants in the United States. In addition, Argentina is one of the countries where foot-and-mouth disease in cattle is prevalent at all times.

Furthermore, American cattle growers and packers cannot compete on a price basis with Argentina as wages paid in packing plants and cattle ranches in that country are only a fraction paid for similar work here.

Heavy steers produced in western feed lots were used in filling Army contracts until the Army recently stopped further purchases. Meanwhile, civilian demand for meat in the West has diminished and the demand for heavy beef carcasses by meat retailers has largely disappeared because of the size of the meat cuts. Beef of the proper type to produce the Army's three-way boneless beef is therefore a drug on the market. The resulting chaos in the cattle and dressed beef markets is causing both feeders and packers to suffer severe losses. This situation, if permitted to continue, will serve to discourage the production and feeding of cattle, which above all, is the one thing needed to produce a plentiful supply of beef at reasonable prices.

Cattlemen, farmers, and feeders who produce heavy cattle, and the packers who slaughter and process them, need the Army business to prevent disastrous market conditions from prevailing for the balance of this fiscal year.

We are not objecting to lower prices but we want to see them go down in an orderly manner and not drop so precipitously as to cause a bust and the ruination of many cattle feeders and packers. Wholesale beef prices have dropped very substantially during the past 2 months.

The Army intends to purchase from 15 to 18 million pounds of boneless beef from Argentina for far eastern troops during the balance of this fiscal year. We do not know the amount it intends to purchase for European needs. We understand that the Army also plans to buy lamb and mutton in Argentina, as well as beef, thereby affecting the sheep growers and lamb feeders.

Let me repeat that we cannot compete with Argentina on price, but after all, it is the taxpayers' money that is buying this meat, and if the cattle feeders and packers are ruined, our Government will not receive any taxes from them.

We respectfully ask that you protest to the Secretary of the Army, and to the President, the purchase of Argentina beef, lamb, and mutton for United States troops overseas.

Very cordially yours,

E. F. FORBES,
President, Western States Meat Packers Association, Inc.

Saga of Notzo Smart

EXTENSION OF REMARKS
OF
HON. FRANK FELLOWS
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. FELLOWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting the following editorial from the Bangor (Maine) Daily News of January 12, 1949:

SAGA OF NOTZO SMART

He ought to have known better—he'd been warned often enough—but somehow it happened so gradually he wasn't aware it was actually happening until it was too late to do anything about it.

That's why Notzo Smart is dead.

Notzo—he got the name from baby mispronunciation—wasn't born with a silver spoon in his mouth. His best clothes consisted of a jumper and overalls, a shade cleaner and bluer than the ones he wore every day.

His grandfather had been a clam digger. So had his father. So was he. In fact, that was the only thing any of them knew how to do through as many generations as there had been Smarts.

It provided a pretty good living too. A bit backbreaking, but after a while you got used to it and didn't mind it so much.

Legend has it that one of the Smarts, possibly his great-grandfather, back long before Notzo was born, staked off a place on the flats and put a sign on one of the poles. In crude but legible letters he painted, "Danger—Quicksands." While the sign was on the pole everybody was frightened and avoided the area. But time obliterates lots of things. By and by the sign got weather-beaten and you couldn't read it any more. Then it disappeared.

The flats outside the stakes always yielded a good day's pay, but Notzo thought one day he'd like to try digging just over the edge of forbidden territory. Just why, he didn't know, because he'd always done well in the safety zone.

So he crossed over. He sank in up to his ankles. But he didn't mind that so much. In fact, the rubber boots and wool socks made his feet hot and he found the cool flats a bit soothing. Actually the yield was smaller. But forbidden territory made him imagine the clams were bigger and that he was filling his creel faster.

He had quite a time getting his feet out. The mud clung like glue. But safety was just a couple of feet away, and after getting one leg on the firm ground he dragged the other one out. Then he looked back at his tracks, which soon filled in, and wondered what he'd been scared about.

Next day he went a bit farther into the staked-off area. He'd covered the flats pretty well just a foot inside and would have to give the seedlings time to grow before digging there again.

This time he sank up to his knees. He tried to move. He wanted to dig in those squirt holes about 6 feet from where he was mired, but couldn't budge. He grunted a protest.

"Look sucker," a voice said, coming from nowhere. "It's your clam hoe and your clam creel. They're made to dig clams with. Now you do the digging—but I'll tell you where you can dig."

"Sez you!" shouted Notzo who'd always dug where he pleased.

"Sez me," repeated the voice in a tone of finality. So Notzo dug there, not knowing quite what to make of it.

He got out somehow, but still didn't know when he'd had enough.

Back the next day, he went out toward the center. He expected to sink to his knees—and did. In fact, the ooze came up beyond his hips. He struggled. The more he twisted about the deeper he sank.

There isn't even a stone to mark where he was swallowed up. They put one there, but that was sucked under, too.

The worst of it was, Notzo had seen a neighbor of his sucked under not so long before, but he hadn't been impressed. It couldn't happen to him because he was going to play just around the edge. The other guy had walked right into the center the first thing.

That's how Notzo Smart got pulled in over his head. In his simple reasoning—for he was not so smart—it didn't occur to him the vortex was just as deadly whether you plunged in all at once or got there by gradual stages. Besides, hadn't he won every battle against it?—that is, except the last one.

Back when the century was younger Eugene V. Debs advocated a system of government said to be of advantage to the many rather than to the few and providing for the control of the means of livelihood by the state or by groups of workers. Under this utopian plan, a graduate of medicine, who had planned to set up practice in Bangor, could be told he'd have to go to Ellsworth, where the proportion wasn't so great, or vice versa. The same with a teacher and other professionals and trades people.

It was called socialism, and when it was offered as a full course the American voters soundly repudiated all such nonsense. They didn't know much about Debs. He may have been, and very probably was, a fine gentleman. But they couldn't stomach what he had to offer.

In the 1930's the first course of the same menu—social security—was offered on a different plate, was tried out, and became an accepted dish.

Now go on with the story.

Chiang Kai-shek's Record of Help to the United States

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a letter to the editor of the Providence (R. I.) Evening Bulletin, written by Adm. Harry E. Yarnell, retired, who is the former commander in chief of the United States Asiatic Fleet, and one of our greatest naval strategists, the man who demonstrated in war games how Pearl Harbor could be successfully attacked. We did not learn but the Japanese did, to our disaster.

A still greater disaster is befalling us in China, because the administration failed to follow the advice of men like Admiral Yarnell, who have been so eminently right on the forces at work in the Pacific area.

DON'T ABANDON CHIANG

EDITOR:

An Associated Press dispatch of January 17 states that Representative SOL BLOOM, who becomes chairman of the House Foreign Affairs Committee, has said that "Chiang Kai-shek and the gang with him will have to be kicked out before China can be defended against the Communists."

* * * * *

What Mr. BLOOM has forgotten is that the Nationalist Government of China under Chiang Kai-shek carried on a major war against Japan for 4½ years before Pearl Harbor. During that period the United States was supplying Japan with oil, scrap iron, and munitions of war.

The losses of China in manpower due to battle and devastation were exceedingly great. But so were the losses of the Japanese. It has been estimated that 1,000,000 Japanese troops were lost in the Chinese war as well as huge quantities of war munitions expended. Had all those troops and munitions been available to Japan, and no Chinese war on their hands, on December 7, 1941, we would probably be fighting in the Far East today, and untold thousands of American lives would have been sacrificed.

For this we have to thank Chiang Kai-shek, who never wavered in his determination to carry on the war until the last Japanese was out of China. There were a number of times when he could have arrived at a settlement with Japan but he refused all such opportunities.

Mr. BLOOM, by referring to the nationalist government as a "gang," evidently ignores, or is ignorant of the fact, that many of the ablest men in China are in government service and are laboring to rescue their country from the difficulties surrounding it.

There are, of course, grafters in the public service also. But that is not a situation peculiar to China. We have had them also, even in the House of Representatives.

Mr. BLOOM infers that when Chiang Kai-shek and his "gang" are out, some settlement of the Chinese Communist situation can be reached. It would be interesting to know what plan he has in mind to attain that end. It certainly should not be the appeasement policy recommended by Mr. Marshall as a result of his visit to China.

Mr. BLOOM is evidently unaware that Chiank Kai-shek has been fighting communism in China for 21 years. In view of the recent vast expenditures to that end in Europe, he should have our commendation rather than our censure.

The nationalist government has many faults. So has every government. However, it represents more closely what we consider a democracy than any other that may succeed it. Had we supported this government consistently from the beginning of the Japanese invasion of Manchuria it would be firmly in the saddle today. To use Mr. Wilkie's expression we have had in the Chinese people a "vast reservoir of good will." That is in danger of being lost, through ignorance of the Far East and inept diplomacy. Some of it can be saved if we continue our recognition of the nationalist government, even if it is driven to Formosa or Canton, and refuse our recognition to any Chinese element which follows the dictates of Moscow.

As for Chiang Kai-shek, it is the custom of some to take a kick at the lion when down, but future impartial historians will properly evaluate his great services to the United States during the years of the Pacific war.

H. E. YARNELL,
Admiral, United States Navy, Retired.
NEWPORT.

President Truman Calls for Proposals on Columbia Valley Authority Legislation

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. MITCHELL. Mr. Speaker, the White House today announced that President Truman had directed the various executive departments of Government to prepare recommendations on a unified administration of resource development in the Pacific Northwest through a Columbia Valley Authority. On January 12 and again today I have discussed proposed CVA legislation with the President and I am pleased to report his prompt recognition of the need for a CVA by instructing the executive departments to submit specific legislative proposals to be incorporated in CVA legislation.

At this time, Mr. Speaker, I wish to include a resolution from the Columbia Basin Commission, of Washington, relative to a proposed dam for storage of water above Grand Coulee Dam in Arrow Lakes, British Columbia.

Mr. Clarence C. Dill, a member of the Columbia Basin Commission and formerly an honored member of the House and Senate, in transmitting a copy of this resolution to me, wrote in part as follows:

The whole Pacific Northwest is caught in this power shortage. It will grow worse and worse during the next 3 or 4 years. The people need your help now. Storage of water above Grand Coulee Dam is the first necessity to assure more power for use in all parts of this area during the period between now and 1954.

Mr. Speaker, cities in my State and throughout the Pacific Northwest are now experiencing a partial brown-out because of the electrical power shortage. The Department of Public Utilities in the State of Washington has ordered electrical utilities in the State to work out a program for conserving power, which requires curtailment of power use wherever possible. We are losing new industrial opportunities and restricting established industries in the use of power. Aluminum production, despite its strategic importance to the national economy, has been virtually frozen to present levels, with no assurance of capacity operation, much less expansion.

Grand Coulee represents the only major source of additional Federal generating capacity in the next few years. It is contemplated that between April 1949, and October 1951 the remaining nine generators will be installed at Grand Coulee. In order to guarantee sufficient water flow to operate these generators, the Columbia Basin Commission has proposed the building of a water storage dam above Grand Coulee in Arrow Lakes, British Columbia. To approve and facilitate this action is the responsibility of the International Joint Commission.

Mr. Speaker, the Columbia River is a great international stream which has its source in Canada, and drains, with its tributaries, an area of 259,000 square miles, mainly in the Northwestern section of the United States. The immediate necessity of studies by an international body to determine a feasible storage dam in the Canadian portion and so provide an assured water supply for Grand Coulee points up the still greater need of a comprehensive and long-range program of Columbia River development. The several existing plans for the Columbia anticipate that by 1957 there will be 20 Federal dams instead of 2 on the Columbia system, with peak generating capability of almost 6,000,000 kilowatts, but even then four-fifths of the potential hydro capacity in that system will await development. To insure that the great river basin of the Columbia, with its abundant natural resources, is developed for the maximum benefit of the Pacific Northwest and the Nation, we must provide administrative tools adequate to the task. Logic and experience both point to a Columbia Valley Authority as the means of achieving orderly, unified, and comprehensive development of the Columbia River Basin.

The resolution referred to follows:

STORAGE IN ARROW LAKES

Whereas the serious power shortage in the Pacific Northwest has created an electrical crisis which, despite the reduction of more than 80,000 kilowatts of power to the large aluminum plants, has caused overloaded generators to blow out on the Missouri and the Spokane Rivers and in British Columbia, and overloaded power lines to fail to function from time to time, resulting in complete black-outs for half an hour to an hour in many towns and communities, and the Northwest power pool to operate without any reserve power to meet such emergencies, and the Columbia Basin Commission recognizing these break-downs to be not signals of ordinary trouble in the operation of electric utilities, but rather red lights of danger flashing warnings of complete collapse of electrical power supply which too great demands will bring during the coming winters between now and 1954, the date when Hungry

Horse and McNary Dams will first provide large blocks of power, unless something is done to meet the imperative need for an additional 500,000 to 1,000,000 kilowatts at the earliest possible date; and

Whereas the quickest, most effective and lowest cost relief can be provided by storage of water above Grand Coulee Dam in Arrow Lakes in British Columbia to operate the nine additional generators now being installed in Grand Coulee Dam, all of which will otherwise stand idle until 1954, but the control of building a storage dam there is first under the jurisdiction of the International Joint Commission, and since the Government of British Columbia has no objection to having the Commission expedite its report on the amount of storage it will approve in Arrow Lakes, and because the desperate need of power in the Pacific Northwest threatens a kilowatt catastrophe to industry and employment and our way of life here: Now, therefore, be it

Resolved by the Columbia Basin Commission, That it hereby requests the International Joint Commission to direct its international board of engineers to give priority to studies and report on the storage of water in Arrow Lakes, British Columbia, so that the Commission may decide the amount of storage it will approve there, and if such report be favorable, that the Bonneville Power Administration and the United States, and the proper governmental agency of British Columbia and Canada, then proceed to negotiate for an agreement or agreements for building a storage dam at the outlet of Arrow Lakes to impound 5,000,000 to 7,000,000 acre-feet of water, whereby British Columbia will receive an estimated annual revenue of $2,500,000 to $3,500,000 and the power plants at Grand Coulee Dam and Bonneville will be enabled to produce an additional 500,000 to 700,000 kilowatts of prime power during the winter months, so that said dam may be built at as early a date as feasible, possibly by the winter of 1951–1952; and be it further

Resolved, That the Commission urge the State legislature, the Members of Congress from Washington, Oregon, Idaho, and Montana, the Governors of said States, and the President of the United States, to join in the above request to the American member of the International Joint Commission, and the Premier of British Columbia and the Prime Minister of Canada to join in the above request to the Canadian members of the International Joint Commission in the hope that the threatened electrical catastrophe to the Pacific Northwest during the next 5 years may be averted, and that, instead, both the United States and Canada may have increased development and prosperity and a stronger national defense.

FRANK A. STEWART,
Chairman.

Oleomargarine Tax Repeal Legislation Should Be Speedily Passed

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. GATHINGS. Mr. Speaker, the Committee on Agriculture in the Eightieth Congress held lengthy hearings on bills which had for their purpose repealing the taxes on oleomargarine.

Witnesses representing farm organizations, jobbers, distributors, merchants, and the consumers came before the committee and practically all agreed that the taxes that had been imposed on margarine for many decades should be removed. The housewife is entitled to purchase colored margarine for her table without the imposition of restrictions and taxes which are most arbitrary and discriminatory.

Early action by the Congress is demanded by the American people to relieve the manufacturer, jobber, merchant, and the ultimate consumer of the taxes on this wholesome food commodity.

I trust that early and favorable action will be taken by the Committees on Agriculture as well as both Houses of Congress so that yellow margarine may be put on an equal footing with the competitive product which has enjoyed the benefits of legislation enacted many years ago.

I set forth below pertinent facts, which were forwarded to me by Mr. W. O. Reeves, of Blytheville, Ark., entitled "Margarine Fact Sheet":

MARGARINE FACT SHEET

Margarine is a pure-food spread and table fat. It is the nutritional equivalent of butter; 3,300 calories and 15,000 units of vitamin A per pound.

Margarine is vegetable fat; butter, animal fat. Otherwise, scientific tests have shown no difference.

Margarine is 80 percent fat, the rest mostly pasteurized skim milk. Margarine uses about 59 percent cottonseed oil, 37 percent soybean oil, and also peanut and corn oils. Margarine is the second largest market for soybean oil, exceeded only by shortenings.

Margarine is the only pure food arbitrarily restricted by Federal and State law in the interest of a competitor. The real purpose of antimargarine laws is to get a monopoly for butter. (Restrictions on renovated butter are not comparable to antimargarine laws.)

These laws tax or prohibit yellow margarine, although the United State Pure Food and Drug Administration authorizes use of color in margarine (and many other foods), although hundreds of foods use artificial color, and despite the fact that it is consumer demand which causes foods to be colored.

Butter is artificially colored most months of the year, and enjoys special exemption from labeling the fact. Butter is colored to suit consumer preferences; darker yellow in some areas, lighter in others.

The Federal antimargarine law: Taxes yellow margarine 10 cents a pound; white ¼ cent. Retailers' license fee, yellow margarine, $48 a year; white, $6. Wholesalers' license fee, yellow margarine, $480 a year; white $200. Manufacturers' license fee, $600.

There are also antimargarine laws in 26 States. Of these, 19 still prohibit yellow margarine. Since 1939 a trend toward repeal has abolished 10 State laws and modified 20 others. Federal repeal, almost accomplished in 1948, should be realized in 1949. Five States abolished their laws in 1948.

Only the butter interest seeks to restrict margarine. On the other hand, at congressional hearings in 1948, 37 consumer, farm labor, and business groups asked for repeal.

Margarine restrictions fall hardest on consumers and distributors alike. Because of the license fees, only 60 percent of food stores handle margarine. Millions of hours of work unnecessarily go into coloring margarine at home. The cost of living is increased, because the housewife is restricted from buying an economical pure food and is taxed to buy it in the yellow color she prefers it.

Butter cannot supply demand, yet seeks to restrict margarine. Butter production has slumped nearly a third since 1940. Today, there is a sixth less margarine-butter combined than before the war.

Farmers have found a great new milk market for whole-milk products. These give more profit than butterfat, conserve the nutrients thrown away when milk is used for butter and are expected to continue to take the greater part of the milk supply for the foreseeable future. No sharp production upturn in butter is in prospect.

Deliver the Mail

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of Hon. Samuel B. Pettengill, former Representative from Indiana:

DELIVER THE MAIL

The stevedores' strike, tying up the commerce of two sea coasts, may be settled by the time this appears in print. But the problem of industry-wide strikes will remain. The area of industrial conflict must be limited.

As I write, 150,000 bags of United States mail to go abroad are piled up in the New York post office because of the stevedores' strike. This mail is in the custody of the United States Government. The postage has been paid. The ships are ready to carry it. The senders have the right to demand that the Government forward it; the addressees have the right to receive it.

Countless other thousands of bags of incoming mail are on ships in the harbor waiting to be unloaded. The Italian liner, *Saturnia,* returned to Italy with 1,621 bags of incoming mail that could not be unloaded because of the strike.

The United States Government does nothing about it except to press the shipowners to grant the strikers' demands. President Truman is quoted as saying "the Government he heads has exhausted its remedies and is practically helpless."

In other American harbors, more mail, cargoes under the Marshall plan, and supplies for United States soldiers overseas are also piling up. What does this do to the prestige of the United States Government in Europe and Asia?

It has been a proud tradition of the Post Office Department that neither sleet nor snow nor fire nor flood could stop the messenger of the post on his appointed rounds. But the stevedores, by an industry-wide strike, have stopped the mail from going through.

When Grover Cleveland was President, a railroad strike stopped the mails. Cleveland said, in effect, "If it takes the Army to deliver a postcard in Chicago, the postcard will be delivered." It was delivered. Cleveland did not sit on his thumbs, or ask somebody to pass a law. It was plain to his straight-thinking mind that it was his duty to execute the existing laws and functions of the Government. One of those functions was to deliver the mail. It was that simple.

When Coolidge was Governor of Massachusetts, there was a strike of the policemen

of Boston. Coolidge said: "There is no such thing as the right to strike against the public by anybody, for any reason, at any time." That statement made him Vice President, and later, President.

Employers and unions are both responsible. Instead of one union bargaining with one employer, a combination of unions bargain with a combination of employers. Employers go along because they know that each of their competitors will be subject to the same rise in costs. This makes it easier to shift the burden of union demands onto the shoulders of consumers. The result is to limit competition and promote monopoly. The joint combine becomes a private and invisible government in which the general public has no vote. Differentials of living costs, or small-town advantages are eliminated. Local self-government of unions by their members disappears. The development leads inevitably to the police state, which labor leaders denounce as fascism.

There need be no fascism. Remove the road blocks to freedom. End the special privilege immunity to the antitrust laws which unions now enjoy. When unions combine to substantially restrain commerce, they should be as subject to the Sherman Act as employers. Equal justice under law.

As the great liberal, Justice Louis D. Brandeis, said: "We gain nothing by exchanging the tyranny of capital for the tyranny of labor * * * Lawlessness must be put down at once and at any cost."

SAMUEL B. PETTENGILL.

"No government ought to be without censors; and where the press is free, no one ever will. If virtuous, it need not fear the fair operation of attack and defense. Nature has given to man no other means of sifting out the truth, either in religion, law, or politics." (Thomas Jefferson.)

Federal School Aid

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I have received from the Connecticut Chamber of Commerce:

THE CONNECTICUT CHAMBER
OF COMMERCE, INC.,
Hartford, Conn., January 18, 1949.

The Honorable JOHN DAVIS LODGE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN LODGE: We are reliably informed that Federal school aid bill S. 246 (THOMAS, et al.) will be reported out today or soon thereafter by the Senate Labor and Welfare Committee without hearings. Also the same Senate committee, as we understand, intends today to report out without hearings S. 247 (THOMAS, et al.), a national science foundation bill; and S. 248 (THOMAS, et al.), the minimum wage bill.

I realize that most of the members of the above committee have arrived at a decision on these issues, also that committee hearings on such legislation were probably held during the Eightieth Congress. However, if the present action of the committee is to set a precedent to be followed by other committees, it would appear that we are departing from our democratic way of handling legislation affecting all of our citizens. It might even be called high-handed and rubber stamping.

The Connecticut Chamber of Commerce is sponsoring a meeting today to review and discuss problems involved in the financing of public schools, at which interested Statewide organizations have been invited to attend and state their views. The meeting is strictly educational and we had hoped it would be possible for many of these State groups to inform the Connecticut delegation of their position in the matter before the bill was reported out of committee.

While we know that our Connecticut congressional delegation is not responsible for this committee procedure, we urge that they impress on their colleagues that citizens of Connecticut and other States be heard on vital issues.

With kind personal regards, I am,
Respectfully yours,
WAYNE R. DICKERSON,
Executive Vice President.

Free Enterprise

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Malcolm W. Bingay from the Detroit Free Press of January 10, 1949:

MONDAY WASH LINE

(By Malcolm W. Bingay)

The other day I commented on an essay by De Witt Emery, president of the National Small Business Men's Association, in which he told about the troubles of his small son and himself to find a definition of the expression free enterprise. I said that there was no such thing, that Mr. Emery was naive in thinking there was.

At the insistence of Harvey Campbell, executive secretary of the Detroit Board of Commerce, Mr. Emery has answered me. Mr. Campbell takes upon himself the task of proving that I am an enemy of business and that while I have a tremendous following, I am disliked among businessmen.

I will accept even a Gallup survey, on any popularity contest between myself and Harvey. We might both rate zero.

Mr. Emery's letter follows in part:

"DEAR MR. BINGAY: You take apart a piece of mine in which I told about trying to find a definition of free enterprise. Among other things, you say there isn't and never has been such a thing. You are wrong on this—dead wrong.

"Free enterprise is both the lifeblood and backbone of our economy, has been for more than 150 years and it will be a sorry day for this country and for the whole world if free enterprise ever disappears from the American scene.

"You are quite right in saying that free enterprise is not mentioned in the Constitution. It isn't mentioned in the body of the Constitution or in the Bill of Rights, but nevertheless, free enterprise is the very essence of both the Constitution and the Bill of Rights, neither of which would last 30 days without it."

(All I said was that it wasn't mentioned when you said it was.)

"Free enterprise, or freedom of enterprise, if you prefer, is a way of life, the American way of life; it's our way of living and working together. Free enterprise has produced more of everything for everyone than any other way of life known to mankind any place on the face of the earth since the beginning of recorded history.

"Detroit is what it is today because Henry Ford was free to try again and again to make a go of his enterprise. Under any other way of life he might not have had a chance to make another attempt after he had failed, and the development of the automobile industry might therefore have been set back nobody knows how many years.

"I may, as you say, be 'naive' because I believe in freedom of enterprise, but I wouldn't trade this belief for anything in the world.

DE WITT EMERY."

Answer:

"DEAR MR. EMERY: As your chum—and my dear friend, always, Harvey Campbell, says—we are seeking the same objectives. Harvey rather childishly intimates that we are quarreling about words and their meanings. I am not interested in semantics, as he seems to think, if he understands the meaning of the word.

"My protest against your article is that it is unadulterated flapdoodle, missing the vital needs of a proper approach to our national problems. You are trying to quarrel with me about words. For 40 years I have been fighting against the gobbledygook of demagogic politicians and soapbox Communists.

"And now in my old age, I will be darned if I am going to stand for the same line of bunk from those who say they represent American business.

"You knew when you wrote that article—or had your ghost write it for you—that the specious expression 'free enterprise' meant nothing.

"I am not going to defend American business if all it has to offer is a lot of fleabitten clichés and moth-eaten platitudes which conceal the facts of economic life like the old-fashioned Mother Hubbard wrappers cover up figures.

"It is time that American business quit trying to beat its enemies with catch phrases.

"Do not try to compete with the experts. It is time American business stopped this yelping about its constitutional rights and concentrated upon its constitutional responsibilities.

"If it had done that in the last election Harry Truman never could have been elected.

"The trouble with American business is that it has grown so satisfied with itself that it lets secretaries and takers of polls of opinion determine its course, rather than attempting to use the blessed privilege of private enterprise about which it likes to harp so much without knowing what it means.

"You can no more direct business by platitudes than you can run a board of commerce with wisecracks.

"I would suggest both to you and our dear friend Harvey Campbell that you read the newly published pamphlet by Dr. Harold G. Moulton, president of the Brookings Institution—the one and only nonpolitical and altogether scientific economic society of its kind on earth. You will find therein all that I have said about free enterprise. Dr. Moulton says, for instance:

" 'Certain evils * * * of competition. * * * Unscrupulous, shortsighted, or hard-pressed enterprisers often followed practices * * * disruptive to legitimate business. * * * Cut-throat competition * * * involved such practices * * * Government aid was sought. * * *

" 'The principle is the same employed in the regulation of sports. * * * Experience showed that rules had to be laid down * * * that an umpire is necessary. * * * Such rules do not destroy competition * * *'

"I know Dr. Moulton is right. He and I talked it over for some hours the last time

he was in Detroit. I harped on it for years before that. Such a program requires thought far removed from immediate profits, platitudes, and comical stories.

"Contrary to Dear Harvey, I am not opposed to real business leaders. I am trying to give them a chance against the bromides of the claptrap artists who think that a platitude will solve any economic problem, and that Bob Hope and his after-dinner wisecracks mean more than the profound lifetime studies of such scholars as Dr. Moulton.

"The Moulton pamphlet is just a chapter out of the new book he is having published, Controlling Factors in Economic Development.

"I would suggest that you and Mr. Campbell read it. Better still, have someone explain it to Harvey."

Elements of Defense for Peace

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me to the Washington-Lewis Chapter, Daughters of the American Revolution, Fredericksburg, Va., Tuesday evening, January 18, 1949:

Officers, members, and friends of Washington-Lewis Chapter, Daughters of the American Revolution, we are highly honored to visit your historic city and to have this opportunity to speak to the members of your great patriotic organization. The Daughters of the American Revolution have a proud history, and there is no other organization for which Members of Congress have more respect and admiration. We always listen attentively to your views, for we know that they are based on the highest degree of patriotism, that each of you is motivated by a genuine desire to preserve and serve this great country of ours.

And I might add that our country continues to need your service. I have recently returned from a visit to Europe, where I saw at first hand many of the problems and conditions about which we read. I wish it were possible for every American citizen to go on a tour of Europe. It would be an enlightening experience. It is not right, of course, to take comfort in the misfortunes of others, but no American who visits present-day Europe can return to this country without breathing a silent prayer to the Almighty in grateful acknowledgment of the blessed peace and security that belongs almost exclusively to the United States of America.

As I visited the war-devastated nations, I thought of an article by the distinguished war correspondent Quentin Reynolds in which he said that "millions of Americans live and die without discovering the land of their birth; it remains as unknown to them as does the second stanza of the Star-Spangled Banner." Mr. Reynolds was speaking of his experiences in Europe as he watched the misery and lifelessness of the refugees of the continent—people in whose hearts hope had died. He stated bluntly that though the years were tragic, they were the happiest he ever knew because for the first time he felt the pride of a discoverer and realized anew the greatness of our country.

I think I know what Mr. Reynolds meant. For in looking at Europe I felt that I, too, was seeing America for the first time. It is rather ironic, is it not, that we must go abroad in order to discover our own land? So I say again, I wish it were possible for every American to go abroad and make that discovery.

A wise man once said that there is no greater truth than that man fails to appreciate what he already possesses. We seldom really appreciate things until we are about to lose them—or have lost them. We never think of the blessings of the use of an arm until it is gone. Few of us really appreciate the joy of sight. Only the blind can do that.

It is much the same with human liberty and human rights. Men have fought, sacrificed, and died to gain them. But once these things are won, and seemingly secured, they are left to the care of everyone in general and no one in particular.

This kind of an attitude causes no great harm as long as there is no enemy to menace. But today the scene has shifted. During recent months many of our hard-gotten gains have been swept away and many more are in danger of being swept away. Unless we in America maintain a watchful eye, we may find ourselves in the same unhappy situation that plagues so many of the nations of the world at this very moment. Freedom is everybody's business.

In the field of international relations, America's resources, and the moral force of our will for peace, have made us—whether we desire it or not—the greatest power in the world for the maintenance of peace. We cannot, in our own self-interest or before the moral judgment of mankind, avoid this responsibility.

There is one great threat to the security of America and to the peace of the world. That is the aggression of the Soviet Union. We have made every effort within the United Nations to reach agreement with Russia. We have been forced to take peaceful steps outside the United Nations to restrain this aggression. One of these steps is the European recovery program for the rehabilitation of the countries of Europe, so that they may be self-sufficient, with the strength to determine their own form of government, free from Russia's force. We have been required to build up our military facilities. This is unpleasant and unpopular, but it is better to spend $15,000,000,000 today and to give up for a time our sons in peaceful training than to pour $500,000,000,000 and the youth of the land into the useless sacrifice of war.

Unfortunately, there is a great military vacuum among the western powers in Europe. The entire issue has, of course, been brought to a head by the mounting crisis in Berlin. The western democracies do not now have either the arms or the capacity to make the arms to equip a force capable of halting an onslaught by the huge Red army. The best we can hope to accomplish at the present time would be a delaying action, and this knowledge of our helplessness is one of the reasons why Russia has been so boldly aggressive in Berlin.

There has been considerable speculation as to whether the change in State Department leadership will mean a change in American policy toward Russia. I am confident that our new Secretary of State will not be soft in dealing with the Soviet Union. And in passing, I feel that I must pay tribute to the retiring Secretary, George C. Marshall, who has performed a difficult service with skill and courage.

One of the best methods of keeping the peace of the world is by maintaining our defenses at home. National defense involves a multiplicity of elements. It involves men, material, diplomacy, food—and above all, level heads. The first thing we must develop is a proper attitude toward our world position. We must realize that what America does is of tremendous significance to people the world over. And conversely, the things they do profoundly affect us. We live in an age where a mountain village in Greece, an outpost in China, a railroad line into Berlin, a desert in the Near East, can strike sparks of grave danger to the peace of the world. We have come face to face with the truth that no nation can live alone—that the dangers as well as the hopes of the world are inseparable from our own.

National defense means that we must keep our home economy strong. A country with a weak economy is a sick country. And we must not tear ourselves to pieces fighting among ourselves. Let us hope that the present shameful bickering does not extend beyond Inauguration Day.

National defense involves resistance to communism at home as well as abroad. We must be increasingly diligent in uncovering evidence of subversion and making it impossible for home-grown traitors to jeopardize our national security. There is a continuing necessity for action and investigation in this field by the Congress as an aid and as a spur to the law-enforcement agencies of the Federal Government. As individual citizens, resistance to communism means learning more about it, and especially learning about the techniques and devices employed by its adherents. It means learning to distinguish between honest liberals and false liberals.

But national defense means more than a mere negative attitude toward communism. It means developing a positive faith in democratic ideals and procedures. It means giving consideration to some of the increasingly complex problems that we face today; a way of reconciling the conflict between individual and collective rights; a way of making the general welfare the joint responsibility of the people, of the Government, of business, labor, and agriculture; a way of distributing more equitably the products of our economic machine without destroying that machine. These and many other problems that I might allude to call for the attention of an enlightened citizenry.

We are told that this past war was a war of ideas. Through the mesmerism of state education, the German people had developed a creed, and totalitarian methods stamped that creed on the souls of the German people. We see much the same situation being repeated in Russia today. We have tried to make a distinction between the people who live under dictators and the dictators themselves, but we have come to learn that the people make common cause with their rulers, that totalitarian ideas make headway only when the people themselves are derelict in their citizenship and weak in fervor for self-government.

For most of our life here in America we have paid little or no attention to the development of the thing which we have twice been called upon to fight. Our citizenship has been peaceable. We have made little or no effort to understand the forces acting in other parts of the world. We have not yet won for ourselves a diploma with distinction in our course of international training.

Whether wars will cease or not I cannot presume to prophesy, but of this I am certain—we cannot have an enduring peace until we have true knowledge of the world conditions which underlie peace and war. We need also to know the truth about our neighbors, not to speak of the truth about ourselves. There is no room at the peace table or in the work of reconstruction for hypocrisy, narrowness, prejudice, or any form of intellectual immaturity. Only by recognizing fully and frankly what is worst and best in the policies of our neighbors—friendly or unfriendly—and what is worst and best in our own policies, can we contribute to worthier policies for all. We are bewildered over the peace because we are unenlightened in the causes of the war. When it broke out, we knew too little about

Germany and Russia and Italy, less about the Balkan states, and still less about Japan, China, India, and Palestine. Now we are face to face with problems, responsibilities, crises, which demand in us as a people the greatest mental and moral soundness. Mental and moral soundness does not admit of any chauvinism or the narrowness of ignorance which sees nothing but good in our allies and nothing but evil in our enemies. Our citizenship must be based on an enlightened and spiritualized public opinion, a public opinion developed by right education. We shall continue to be adolescents in international affairs if we persist in buying our opinions from the newsboy, and taking them ready-made from professional pollsters. Only straight thinking, made possible by growing knowledge and vitalized by a new conscience, a finer faith, a kinder heart, can work out a new era.

To bear the burdens of peace, we must have an internal discipline as exacting as the external discipline employed in the making of a good soldier. Our Nation is only as fine as the individual men and women who compose it.

Elihu Root once said: "The art of self-government does not come to men by nature. It has to be learned; facility in it has to be acquired by practice * * *. Men must be willing to sacrifice something of their own apparent individual interests for the larger interests of city, State, country; and without that willingness, successful popular government is impossible."

In short, the American citizen of today must think. He must make up his own mind on the momentous international as well as domestic problems facing our Nation. He must be ever alert to corrupting influences from within and without, and such alertness can be brought about only by an active and intelligent interest in knowing how the affairs of the Government are being administered.

Someone has said, "Democracy never dies; it perishes through neglect." And that is perhaps the most serious indictment which could be brought against any group of citizens in the United States. If we permit our Americanism to wane, if we forget how glorious it is to be an American citizen, and if we are lax in building our physical and spiritual defenses, our Nation may easily lose its position in the world, and with it will go our chance to bring peace to a stricken humanity.

But when I am troubled with doubts, I look to organizations like yours and gain a new confidence that the American people will guard their priceless heritage.

A. A. D. Rahn

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include therein an article from the New York Times and a letter of my own concerning the recent passing of my very dear friend, "Andy" Rahn, who was for so many years such a vital and dynamic figure in Washington and national affairs. Past grand imperial potentate of the Shriners, successfull businessman, philanthropist, and gentleman, his loss is truly irreparable, and he is mourned by many throughout the Nation.

[From the New York Times]

A. A. D. RAHN DIES; HAD LED SHRINERS—MINNEAPOLIS LUMBERMAN, HEAD OF ORDER IN 1938—HELPED CAMPAIGN FOR HOSPITALS

MINNEAPOLIS, November 26.—Andrew A. D. Rahn, Minneapolis lumberman and former imperial potentate of the shrine of North America, died today at his home in Crystal Bay, Lake Minnetonka. He was 71 years old.

He had been active for years in Minnesota and National Republican politics, although he never sought or held office.

Mr. Rahn became a mason in 1906, a Knight Templar and a shriner a year later. Ill health forced his retirement from most of these activities several years ago.

He was named potentate of Zuhrah Temple of the shrine in 1922 and was made imperial captain of the guard by the shrine of North America at Toronto in 1930. Eight years later he was elevated to the highest rank within the gift of shriners. He became a 33d degree mason a year ago.

For a number of years he was a member of the national board of trustees of the shriners' hospitals for crippled children and a leader of the movement that established such a hospital in Minneapolis.

From 1934 to 1937 he served as chairman of the Northwest Shippers Advisory Board, a group which worked closely with the railroads in handling the annual grain movement.

At his death he was a vice president of Shevlin-McCloud Co., formerly the Shevlin-Carpenter-Clarke Co., the lumber firm with which he had been affiliated since 1905.

Mr. Rahn was a member of the National Press Club of Washington, the Columbia Country Club, Chevy Chase, Md., and the Union League Club of Chicago.

Born in Valparaiso, Ind., he was brought to Minneapolis by his parents 3 years later. He remained a resident of the city all his life, starting his business career as a newsboy and then going into the lumber business as a shipping clerk at the age of 13.

He married Anna Sophia Anderson in 1897. Mrs. Rahn died in 1945.

Surviving are three sons, Carl A. and Andrew A. D. Rahn, Jr., both of Billings, Mont., and Robert L. of Great Falls, Mont., and three brothers, Fred J. and William F. of Minneapolis, and Chris H. Rahn, of Coleharbor, N. Dak.

DECEMBER 10, 1948.

Mr. CARL A. RAHN,
Billings, Mont.

DEAR CARL: I deeply mourn the loss of my good friend of many years standing, your dear father.

He was in a class all by himself—robust character, clear thinker, sound able businessman, public-spirited citizen, eternally devoted to his family and friends.

Every time I met him I had reason to be astounded at his ability and knowledge. He was possessed of a very exceptional mind, penetrating and all-embracing. Few things ever escaped him. He had a heart of gold and was generous to a fault. Every good and worthy cause had his instant support. The appeal of a friend received his instant response, the call of his business or his lodge his ever-ready attention. When the Good Lord made him, He destroyed the model because there will never be another like him.

It was only natural that such an outstanding man possessing a kindly and benevolent spirit, such a warm-hearted and generous person, should have a host of friends. He had them in abundance in every station in life, among the rich and the poor and the lowly, among the humble and the great, and he enjoyed the high esteem of all.

A noble gentleman and a great American has gone to his eternal reward. A giant oak has fallen. A loving father and true friend has been summoned to the land from whose bourne no traveler ever returns.

I well know of the infinite devotion which he bore for you and the family, the affection which he felt for all of you, the admiration for you and the faith in you which always so profoundly moved him. If you can carry on in that faith and that tradition you will be fortunate indeed.

You have suffered an irreparable loss to be sure, but your loss is the loss of many. It is the loss of neighbors and friends, businessmen and statesmen, and just ordinary folk of the rank and file. His memory will linger long with us who knew him as a happy and gracious inspiration. His high example will continue to strengthen us and his warm-hearted friendship will continue to shed its serene rays upon us. We shall all be better men because of his life and his example and his friendship.

And through it all, may you and yours be strengthened and encouraged by the knowledge of his intrinsic goodness and worth, by devotion and faith to bear your sorrow with true Christian fortitude.

Please keep in touch with me,

Sincerely yours,

PHILIP J. PHILBIN.

The Aluminum Shortage

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. REES. Mr. Speaker, under unanimous consent granted by the House, I am including as a part of my remarks a statement by Samuel Moment, of the Bonneville Power Administration, Portland, Oreg., directing attention to the critical situation with regard to the shortage of aluminum in this country.

I deem it of sufficient importance to place it in the RECORD so the Members of Congress and others may be sure to read it.

The statement follows:

THE ALUMINUM SHORTAGE—HOW LONG WILL IT LAST?

(This story deals with the current power shortage and it is important to aluminum users because, to a very great extent, any improvement in the supply picture hinges on more cheap power. The views expressed are those of the author and not of the Bonneville Power Administration. Mr. Moment helped draft the Government aluminum-plant-disposal program for the Surplus Property Board, was consultant for both the Senate Small Business Committee and the WAA, and works for the Bonneville Power Administration on industrial power problems. His views summarize the current problem and what must be done to get more power for aluminum.)

The aluminum shortage has now become so severe that it is threatening the existence of the smaller businesses. It is reported that nonferrous foundries can now obtain assurance of only 10 percent of the amount of primary metal supplied to them in 1947. Secondary smelters expect a sharp decline in the availability of old scrap. Some small manufacturers of aluminum products state that they may be forced out of business.

SUPPLY IS SHRINKING

The most disturbing aspect of the aluminum outlook is that for the smaller companies the outlook may become much worse, and sources of aluminum may dry up for a few years. For the three large producers of primary metal, the present outlook is to maintain primary production around present levels until the power bottleneck is broken—and nothing is being done now to break the bottleneck. For the country as a whole, and the national defense in particular, the picture is very disturbing. The primary industry now has half the capacity reached at the peak of World War II. Requirements for the military program are expanding and will cut sharply into the already restricted civilian supply—possibly taking one-sixth of it by 1952. If this country embarks on military lend-lease to western Europe, then the civilian supply will shrink even more.

NEED DOUBLE THE CAPACITY

Whatever metal can be obtained intermittently from Canada, or by paying premium prices to Switzerland, or by reopening German and Japanese aluminum plants will not solve the problem. We need a dependable domestic capacity for aluminum upon which our domestic industry can continuously expand and on which the whole country can rely in the event of war. For security purposes, informed opinion in Washington is that we need at least twice the dependable primary capacity we now have.

This expansion can take place only if new power facilities are built in the near future. These facilities would have to be built by the aluminum industry itself, or by private utilities, or by the Federal Government, or by some combination of these three.

THE BAROMETER: POWER

Thus far the aluminum industry itself has not been able to provide most of the kind of power it wants. The capital required is very great. A power plant equals the cost of building an associated aluminum reduction plant. The three aluminum producers do not have equal ability to finance such expansion. Alcoa will add seventy to one hundred million pounds of capacity in the next 2 years in Texas, burning natural gas in engines to generate power. This gain will be offest partly by the permanent shutdown next year of the Niagara plant with 40,000,000 pounds of capacity.

A really substantial power expansion for aluminum, using natural gas or petroleum, faces competition with other growing demands for gas and oil, and the probability of a long upward-cost trend, particularly as the wells closest to reduction plants become exhausted. Aluminum could pay more for power and sell at a higher price for a time, but the aluminum industry is concerned with restrictive effects of price increases on markets.

The private utilities can finance power expansion for aluminum, also at an increase in cost to the industry and with the effect of forcing aluminum prices higher. But the aluminum industry and the utilities have not worked out any program as yet. The expansion of some 18,000,000 kilowatts which the utilities are engaged in for the next 4 years does not include specific provision for the needs of the aluminum industry. Most of this expansion will produce power at much higher costs than the aluminum industry believes it can now afford to pay.

LOW COST IS ESSENTIAL

The aluminum industry favors the construction of more Federal hydro projects because these promise to offer the lowest alternative costs of power, even though such costs will be higher than in previous years. Nearly 95 percent of all of the power comes from Federal dams, either in the Tennessee Valley or in the Pacific Northwest. The costs of power from all hydro sources—those owned by Alcoa and by the Federal Government—have been heretofore between 1.5 and 3.5 mills per kilowatt-hour. This is the cost equivalent of 1.5 cents and 3.5 cents per pound of aluminum. Recent increases in construction costs may mean that the most economical new hydro will cost between 2.5 and 4 mills to the aluminum industry. If such power is available, other industries and other users will be entitled to a share as well as aluminum. But the cost of the power is the governing consideration. It is largely fixed when the hydro plant is built, and it does not face rising costs as does power using oil or gas which are exhaustible and in demand for many other uses.

Power from gas engines as used at the reduction plant at Jones Mills, Ark., during the war cost about 3 mills per kilowatt-hour, based on gas at 5.5 cents per thousand cubic feet. If gas goes to about 11 cents, the cost of power at that plant would increase to about 4 mills per kilowatt-hour. Power from steam, using coal or oil, has cost large users around 3.5 mills per kilowatt-hour before the war, and would cost around 6 mills today. Therefore from the viewpoint of the aluminum industry hydro power is still the most economical choice and gas engine power a second choice.

RELIEF 5 YEARS AWAY

Today there is no Federal program to build more dams to help aluminum. In the Northwest, where the largest amount of undeveloped hydro power still awaits development, new dams are under construction, but not for aluminum. Needs of other users of power, particularly private and publicly owned untilities, are expected to take up the new power supplies as rapidly as they can be delivered in the next few years. If more power is wanted for aluminum, it will have to be taken from other users, or else more dams will have to be built. Since it takes 5 to 7 years to complete a big dam, the aluminum industry cannot look for such relief until at least 5 years from the time that Congress decides to go ahead with more Federal hydro. In order to avoid discrimination, any such program would also have to deal with demands from other industries producing electro products and needing large amounts of energy.

FOUR ALTERNATIVES

The alternatives can be summarized as follows:

1. A makeshift group of decisions can be made, such as paying premium prices for aluminum exports from Europe, reopening German and Japanese aluminum plants, and reopening some 100,000 tons of capacity in closed Government plants for which only very expensive power would be available. Such choices would not foster sound expansion of the domestic aluminum industry but could possibly give temporary relief to users who need metal and can afford to pay more for it.

2. Power can be rationed or allocated from other users for the aluminum industry. This alternative cannot be justified at a time when the entire country needs more power for all uses.

3. If a higher price level for aluminum is accepted, the aluminum industry alone, or in conjunction with the private utilities, can provide more power from fuel. This may require a rise in price of a few cents per pound of metal if coal or oil are used. Power from new steam plants could be provided in about 3 years' time. Manufacturing capacity for large steam turbines is filled until the second quarter of 1951, and delivery for aluminum power plants would start in 1953. Gas engines could be delivered sooner and apparently offer for the near future the most economical power alternative using fuel, provided the aluminum capacity is located near the gas fields. Over the longer term, gas may become more expensive.

4. If aluminum prices are to be maintained close to present levels, insofar as power costs can help, Federal hydro can be obtained. The power investment at these dams would, of course, be self-liquidating. This solution requires congressional authorization and appropriations for new dams. Initial power deliveries could be expected around 1956 from big multipurpose projects.

OUTLOOK

Obviously, there is no simple, quick solution to relieve the aluminum shortage in a sound manner. The shortage is probably here for some time. At least the safest guide for businessmen interested in aluminum is to allow for the high probability that aluminum will become scarcer for civilian uses as the military program expands. As for the longer term, that depends on the choice to be made by the aluminum industry and the Congress between gas, steam power, and hydro.

Why the Insurance Business Has Prospered in Connecticut and What It Has Done for the State

EXTENSION OF REMARKS

OF

HON. JOHN A. McGUIRE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. McGUIRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Jesse Randell, president of the Travelers Insurance Co., at the Hartford Rotary Club, Hartford, Conn.:

Strange as it may seem, Napoleon Bonaparte played a part in pushing Hartford into the insurance business.

England was engaged in a series of wars with Napoleon from the late seventeen hundreds to about 1815. And neither the French nor the English had much respect for the young American flag on the high seas. If one of our merchantmen encountered a French or British frigate, the American ship was almost certain to be out of luck. If she escaped being sunk, she was likely to be captured, and if by a British ship, her crew might be impressed into the British Navy.

The Napoleonic wars hit New England hard. The principal industry in New England at that time was shipping and trading—but soon our New England ships were all tied up at the docks for fear of capture. New England capital that had formerly flowed into shipbuilding and foreign trade began to pile up in idle hoards and its owners eagerly sought other profitable fields for its employment. In some New England towns these funds began to flow into the building of textile mills. In Hartford, some of this idle money found its way into the insurance business.

Insurance of a kind had been practiced in Hartford from the very earliest days of the colony. If one of the early settlers lost his home or his barn by fire, it was customary for his fellow townsmen to gather on his premises and help him rebuild. Later when money became more plentiful, it became the custom to contribute money rather than labor to help an unfortunate fellow townsman

to rebuild his burned home. But there were several objections to this voluntary insurance plan. In the first place, it was inequitable. Some people would contribute generously. Others would drop just a few pennies in the hat. Yet those who were the most stingy in their contributions would be highly indignant if others did not contribute generously, if they happened to suffer misfortune.

Finally it was decided to put these contributions on a businesslike basis to collect them before the fire rather than after, and to base them on the value of the property that each man wanted to have protected. The first fire-insurance policy was written in Hartford in 1794 and was underwritten by a group of men who called themselves the Hartford Fire Insurance Co. This was not an incorporated company and had no connection with the present Hartford Fire Insurance Co.

At about this same time, another group of Hartford citizens was engaging in underwriting the ships and cargoes that sailed out of Hartford, on much the same plan. It is quite possible that marine insurance could have become an important business in Hartford, had it not been for the Napoleonic wars. But when French and English commerce raiders tied up the ships in New England ports, it dealt a death blow to the infant marine-insurance business in Hartford, and Hartford men and Hartford money turned to insuring homes and business buildings on dry land.

Men of outstanding ability and character have been identified with the insurance business in Hartford since its earliest days. In my opinion, that was the reason why Hartford insurance companies grew and prospered while many companies in many other towns and cities sprang up like weeds and soon withered away.

The insurance business deals in promises, and a promise is only as good as the character of the men who give it. If they are prepared to back their promises with everything they own—as Hartford insurance men did on so many occasions—the insurance-buying public will have faith in their company, and it will grow, flourish, and endure. If, however, they are only fair-weather sailors, eager to take the profits when things are going well, but unwilling to stand the losses when they have made a miscalculation of risk, or luck is running against them; their company is very unlikely to live to celebrate its fiftieth or hundredth birthday, as so many of our Hartford companies have.

For example, the Hartford Fire Insurance Co., which was incorporated in 1810, and now ranks as the oldest stock insurance company in Connecticut, suffered a disastrous loss of $84,973.34 in the great fire in New York City in 1835. As a matter of fact, news of this loss came right after a dinner had been given by the management to celebrate the declaration of a dividend. Fortunately the dividend had only been declared and not yet paid; because soon the company found itself needing every dollar that it could find. Eliphalet Terry, who had become president of the company that year, pledged his own property to the Hartford Bank as security for drafts to be drawn, and started from Hartford to New York in a sleigh, with the mercury below zero, to deal with the situation in person. On arriving, he found most of the New York insurance companies bankrupt and the city in a state of panic. Property owners in the burned area were despondent, fearful that their losses would be paid at the rate of only a few cents on the dollar. Property owners outside the burned area had lost confidence in their insurance and felt that they were no longer protected.

Mr. Terry promised that he would pay in full all losses of the Hartford, and would also take new insurance. This promise, which was fulfilled to the last dollar, was the first note of cheer since the conflagration. And, as for his offer to take new insurance, that was eagerly accepted. Business poured in at very profitable rates and the deep gap in the company's assets was soon filled. Premiums rose from $19,260.15 for the 6 months ending April 1835 to $97,841.75 for the corresponding term the next year. Not only was the Hartford Fire saved by President Terry's courageous action, but its reputation was established and from that time on it became an increasingly important factor in the fire-insurance world.

The Aetna Fire, which was founded in 1819, escaped the New York conflagration of 1835, because it had not yet entered that city; but it was hit hard in the $6,000,000 New York City fire of 1845. When the news reached the Aetna that its losses in this fire would amount to about $115,000, President Thomas R. Brace called the directors together and told them that the calamity would probably exhaust the entire resources of the company. Going to the safe, he drew out the company's stocks and bonds and laid them on the table.

"What will we do?" someone asked.

"Do?" he replied, "Go to New York and pay our losses if it takes every dollar we have here—and my own fortune besides."

Mr. Brace did not have to draw on his own resources to meet these losses. When it became known that the Aetna was paying in full, it was flooded with new business and the drain on its assets caused by the New York conflagration was soon made good.

It would take hours to outline the histories of all of the Hartford companies and to touch on the many factors which contributed to their success. I have dealt with but one phase of the history of insurance in Hartford—the high character and outstanding ability of the men who directed the destinies of our Hartford companies. Perhaps I have attached undue importance to this one phase, but I do not think so. The only product that a pioneer insurance company had to offer was its promise to pay, under the conditions outlined in its policies. If the public had faith in these promises that company grew and flourished. These men who founded our Hartford companies and guided them through the trying days of their infancy had the wisdom and integrity to realize that if they wanted to build faith in their companies they must make good their promises to pay when other companies were unable to pay, even if it meant pledging their own fortunes to do so.

I have given you a little of the early history of the insurance business in Hartford. I have tried to explain the part that New England integrity played in the growth and prosperity of our local companies. Now I would like to say a few words about what the insurance business has done for Hartford and for the State of Connecticut.

There are some very obvious benefits that both Hartford and Connecticut has gained from having a score or more prosperous insurance companies domiciled in its midst. There are other benefits to both the city and the State that are not so obvious, but are just as important.

People who traveled extensively over the United States and Canada between the years 1929 and 1935 remarked that Hartford seemed to escape the ravages of the depression better than any other city they visited. I think this was true. And the reason for it was that never at any time during the depression were Hartford insurance companies closed down or working only part time. Insurance-company pay rolls were sustained on a remarkably high level during all those depression years—and Hartford's business and professional men benefited because Hartford people were still able to buy their goods or services. Insurance-company pay rolls furnish a solid backbone of buying power in times of prosperity—and a sustaining force in times of depression. Connecticut is known as the land of steady habits. It is much easier to maintain steady habits if you can depend on receiving your pay envelope in bad times as well as good. Thousands of Connecticut citizens who are employed in the Hartford insurance companies possess this comforting assurance.

Another very important service that the insurance business has afforded Hartford and its vicinity is that it has offered opportunities for our young people. This is very important. A town or city that offers few attractive opportunities for its young people is certain to lose many of them to other cities which can use their talents.

The insurance business offers a wide range of opportunities to the young people of Connecticut. If a boy has a good head for mathematics he can find use for his abilities in the actuarial department of one of our companies. If he is an artist or writer he may be able to fit into the advertising department. If he is an engineer, our Hartford companies employ hundreds of safety and fire-prevention engineers. If he possesses executive ability he has a good chance of rising to the top of one of the many underwriting departments. If his talents lie in the field or selling he has a wide range of jobs in the insurance field from which to choose.

Ordinarily a city of Hartford's size would suffer a big handicap from its proximity to a huge metropolis like New York. The metropolis would be like a magnet, drawing to it the most capable young people of the smaller city. But not only have the insurance companies helped Hartford to hold its own against the magnet of New York City, but they have also drawn into Hartford many outstanding men from all parts of the country. Yes, even from New York City itself.

One of the most important contributions made by the insurance business to the city of Hartford and the State of Connecticut is not obvious on the surface but it has been a very important factor in the prosperity of both the city and the State.

Nature was not generous when she laid out the State of Connecticut. She gave us no coal, no great deposits of iron, copper, lead, or other industrially important metals. We have no oil, and neither have we a sufficient acreage of level fertile soil to provide us with all the food we need. Successive ranges of hills running from north to south cut up the State and make it costly to haul heavy freight directly from the West.

It would not have been practical to establish a steel industry in Connecticut because all of the coal and ore would have had to be transported into the State and most of the finished products would have had to be shipped out. The automobile industry got its start within a radius of 30 miles of Hartford—but when it developed into a mass-production industry it moved closer to its supply of raw materials and more central to its market as a whole. The cotton-textile industry started in New England and flourished here for over a century; but in the past two or three decades it has been moving closer to its supply of raw materials. Connecticut as a State, and New England as an area, suffer a distinct disadvantage when it comes to many kinds of manufacturing. It is too far away from plentiful supplies of coal and raw material. It is too distant from the center of population in the United States.

But Connecticut must buy much of its food, all of its coal and oil, and many of its manufactured products from other parts of the United States if Connecticut people are to keep warm and well fed and to enjoy the comforts and luxuries of modern life. Connecticut money is continually flowing west across the Hudson River to pay for all these things we need. Unless an equal amount of money was not continually flowing east, across the Hudson River into Connecticut,

we would soon become a poverty-stricken corner of the United States. A State is no different from an individual, when it comes to money matters. If it continues to spend outside its borders more than it earns outside its borders it will soon find itself in trouble.

Here is where the insurance business has been of great help to the State of Connecticut. Insurance does not need large supplies of heavy raw materials such as coal and iron. Its raw materials are rock-ribbed integrity, of which we have always had a plentiful supply in New England; willingness to give prompt and friendly service—a characteristic which was well developed in Connecticut when the old Yankee tin peddlers started their rounds about 150 years ago; and the paper on which our policies are printed. The hilly contour of the State and our distance from the center of population are no handicap to us in the insurance business. Uncle Sam will carry one of our policies to anywhere in the country for a 3-cent stamp.

Insurance is bringing hundreds of millions of dollars every year into the city of Hartford. It is true that a substantial part of this huge sum flows out of Hartford each year in the form of claim pyaments, or is credited to policyholders' reserves under life insurance policies. But tens of millions are paid to Connecticut people in the form of salaries for the work they do in conducting the insurance business and millions are paid to Connecticut stockholders for the use of their money. All these millions of dollars that come from other parts of the country and are paid to Connecticut people by the insurance business help to counterbalance the many millions of dollars that Connecticut people must pay to those living in other States for the bread we eat, the coal that keeps us warm, for our automobiles, our gasoline, and the many other things we want and need that Connecticut cannot supply.

In recent years we have heard a lot about the difficult problem that Great Britain is facing because she must import so much of her food and other raw materials and because of her inability to produce sufficient exports to balance these necessary imports.

If it were not for the insurance business Connecticut might well find herself in the same difficult position as England is in today. So much of what she needs comes from out of the State. Connecticut manufacturers are finding it increasingly difficult to compete with those located closer to the supply of raw materials or closer to the center of their market. But, fortunately, distance is no handicap in the insurance business; the supply of New England integrity shows no evidence of running out and Connecticut Yankees have long possessed a sort of sixth sense which enables them to determine what people want and how they want to be treated; so I think it is safe to predict that the insurance business will long continue to be one of the mainstays of Connecticut's prosperity.

Credit Unions, the Poor Man's Friends, That Grant Credit Upon Character as Collateral, Oppose Regulation W

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. PATMAN. Mr. Speaker, Texas Credit Union League Bulletin for January 1949 contains an interesting resolution in opposition to regulation W. It is as follows:

VALLEY GROUP OPPOSES REGULATION W

In a move striking at regulation W, the Valley Federal Employees' FCU recently adopted the following resolution:

"Be it resolved, That this committee go on record as being unalterably opposed to regulation W, which has again been imposed upon this credit union.

"Being mindful that the purpose of Regulation W is supposed to be an anti-inflation measure, yet in practice it imposes discriminatory restrictions on the lower income groups and is ineffectual in regard to members in the higher income brackets, this credit committee desires to condemn particularly that portion of regulation W which requires payments of not less than $70 a month when the loan is $1,000 or more.

"The average take-home pay of our average member is a little more than $200 a month. Therefore, he would be barred from making a loan, say, for an automobile, because of his inability to meet this harsh and unreasonable payment. This would leave the member in the higher bracket in a very preferential position.

"This committee believes that this regulation strikes at the very root of the purpose of credit unions—that of providing a place for not only saving money but for making loans 'for a reasonable need and a provident purpose' at a reasonable rate of interest.

"This committee, therefore, recommends to the board of directors that they forward a copy of this resolution to the proper place for the lodgment of such complaints, together with any additional remarks that they might see fit to add which might give additional weight."

The same bulletin contains an interesting article about credit unions being ignored in a recent popular publication. It is as follows:

CARNEGIE FAILED TO FORM A FRIENDSHIP

Taking issue with a statement of Dale (How To Make Friends) Carnegie, noted writer and lecturer, with reference to having a bank or a personal finance company as a sedative for worry, the Fort Worth chapter of credit unions recently framed a resolution which was forwarded to Carnegie and the publisher of his latest book, How to Stop Worrying and Start Living.

Feeling slighted that credit unions had been ignored irate members of Fort Worth credit unions let it be known:

"Whereas Mr. Dale Carnegie, in his recent book entitled 'How to Stop Worrying and Start Living,' published by Simon & Schuster, New York, 1948, in part 9, chapter 30, rule 5, advises: 'Try to build credit in the event you must borrow. If you are faced with an emergency and find that you must borrow, life insurance and United States Treasury bonds are literally money in your pocket'; and

"Whereas credit unions are available or may be organized to serve most people and require no collateral for loans other than character and character is the collateral everyone may have: Be it

"Resolved, That this Fort Worth Chapter of the Texas Credit Union League request Mr. Carnegie to acquaint himself with the credit-union movement, sponsored and supervised by State and Federal agencies.

"And furthermore, that both Mr. Carnegie and his publishers, Simon and Schuster, New York, be respectfully requested, in any future editions of Mr. Carnegie's book How to Stop Worrying and Start Living, to insert the words 'First determine if you are eligible for membership in a credit union and borrow from them' after the words 'If you are faced with an emergency and find you must borrow.' "

Justice for Poland

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include a copy of a recent broadcast by W. H. Chamberlin over radio station WSPR, Springfield, Mass., entitled "Justice for Poland":

THE POLISH TRAGEDY

The fate of Poland is the greatest tragedy of the late war. From the very beginning of the war, Poland was overrun and subjected to savage tyranny and spoliation at the hands of its two totalitarian neighbors, Communist Russia and Nazi Germany. Poland lost a higher proportion of its population than any other belligerent power. Driven from Polish soil, its Government kept up the fight.

Hundreds of thousands of Poles fought for the United Nations' cause on land, at sea, and in the air. Polish troops distinguished themselves in campaigns in France, in Italy, in Germany. They stormed the difficult heights of Monte Cassino. But Poland as a free nation was erased from the map as a result of Soviet brutality and chicanery, aided and abetted by the fatal appeasement tactics of the American and British Governments. Its frontiers have been mutilated. It has been reduced in fact, if not in name, to the status of a Russian vassal province. Many members of its terrorist unrepresentative so-called government are not even Polish citizens in any proper sense of the term. They are men who have spent long periods of time in the Soviet Union, where they have become indoctrinated with communism and trained in Soviet methods of police tyranny and oppression.

Many of the details of Poland's tragedy escaped the attention of the American people in the excitement of the war. But the murder of a nation, like the murder of an individual, will out.

When Stanislaw Mikolajczyk escaped from impending legal murder or assassination in Poland a year ago there were two reasons for satisfaction. The first was that a courageous fighter for freedom had survived, perhaps to return to Poland after that country had been purged of its present totalitarian unrepresentative rulers. The second was that the full story of Poland's enslavement by Stalin with the contemptible acquiescence and even collaboration of the governments of the western democracies could and would be told.

Now Mikolajczyk has told this story in his new book, The Rape of Poland. The picture of the effort to appease Stalin at any cost in moral principle stands revealed in all its naked ugliness. Mikolajczyk was a prominent Peasant leader in Poland before the war. He was a member of the Polish government-in-exile until the death of General Sikorski in an airplane accident in July 1943. Then Mikolajczyk became Prime Minister, resigning this office toward the end of 1944.

Returning to Poland in the summer of 1945, he was the leader of the freedom forces in Poland so long as there was any prospect of achieving results by means of peaceful and legal opposition. He was an active participant in the Polish tragedy from the first act until the last.

The pattern of Soviet aggression, as unfolded in Mikolajczyk's pages, was subtle and varied, utterly inhuman and formidably successful, especially against the feeble and demoralized opposition which was encountered

in Washington and London. Some Soviet actions were so appalling in their mass cruelty and treachery that they could scarcely be believed if they were not confirmed by a vast amount of eyewitness testimony and circumstantial evidence.

Mikolajczyk makes out an unanswerable case for the guilt of the Soviet political police for the massacre of the thousands of Polish officers whose bodies were found in the Katyn Forest. There is, of course, no trace of pro-German, much less of pro-Nazi, psychology in Mikolajczyk's psychology. He often dwells on the horrible crimes committed by the Nazis in occupied Poland. But on the disputed question of who was guilty for the Katyn massacre he points an accusing finger at the Soviet Government, and musters convincing reasons for his viewpoint.

For example, the Soviet authorities, in reply to the searching questions of Polish diplomatic representatives in Russia, consistently lied about the fate of these officers, saying they had been released, suggesting such wildly improbable things as that they might turn up in Manchuria. Only after the bodies had been discovered by the Germans did the Soviet authorities invent the story that the prison camp in which the officers were confined had been abandoned to the Germans. There was no suggestion why, in such a case, not a single officer escaped. Moreover, diaries, newspapers, and unmailed letters found with the bodies fixed the time of the slaughter in April and May 1940, more than a year before the Germans invaded Russia.

Over a million people were dragged from their homes and deported from eastern Poland during the first Soviet occupation of that region. They were treated with such callous brutality both during the mass round-ups and deportations and in the slave-labor camps to which many were sent that probably a quarter perished of undernourishment and maltreatment. There is a vast amount of independent testimony to back up Mikolajczyk's strongest statements on this subject.

Finally there was the cruel cynicism of the Soviet attitude toward the heroic Warsaw uprising against the Germans in August and September 1944. The revolt was urged and incited by messages in Polish from a Moscow radio station. After it had broken out the Soviet Army stopped its advance on the very outskirts of Warsaw and waited until the Polish patriot forces had been exterminated in an unequal struggle with German tanks and artillery.

The motivation of this action, which was accompanied by refusal of permission to American and British planes to use nearby Russian bases in order to drop supplies to the insurgents, was only too obvious. It was to bring into the open and destroy the Polish nationalist forces which would otherwise have obstructed Soviet Communist domination of the country.

Soviet aggression against Poland also found expression in a climactic act of perfidy in the spring of 1945. It had been agreed at Yalta that the future Polish government should be composed of representative Polish leaders in Poland, along with members of the Soviet-sponsored provisional government and representatives of the Poles who had found political refuge abroad. Sixteen leading figures in the Polish underground movement which had kept up the struggle against the German occupation trusted the so-called word of honor of a Soviet political police officer that they would be assured safe conduct, came out of their hiding places, and presented themselves for negotiations.

These men were promptly arrested and the Soviet Government used the threat of executing them as a means of blackmailing other Poles into joining the new government on the terms laid down by Stalin. This was a direct slap in the face to the American and British Governments. The latter had even advised the Poles to open up negotiations. But even this crowning piece of Soviet brutality and bad faith failed to halt the appeasement policy or to lead to the logical consequence: Withholding of recognition from the Soviet-dominated Red quisling regime.

Along with these instances of mass cruelty and treachery, there was a subtler side to Soviet aggression. The outward forms of Polish independence were observed, although many high military and secret police officials in the new Poland understood Russian better than Polish and the leading members of the new Polish Government were Moscow-trained Communists, whose loyalty was to Stalin, not to their own country. Moreover, Stalin would periodically announce to the world that he favored a "strong independent Poland." And the unctuous voices of appeasement on the American and British radio networks would hasten to repeat this cheerful news to people who were pathetically anxious to believe the best about the Soviet Union and the worst about any nation it might be in process of devouring.

I think the most dramatic and revealing passage in Mikolajczyk's book is his account of the negotiations which he carried on in Moscow with Stalin and Molotov in October 1944. Churchill, Eden, and the American Ambassador, Averell Harriman, were also present. Mikolajczyk declared he could not accept the so-called Curzon Line as a boundary with Russia, since this would mean the loss of almost half of Poland's pre-war territory. Molotov suddenly remarked that Roosevelt had strongly endorsed the Curzon Line boundary at the Teheran Conference. Mikolajczyk had received a very different impression from Roosevelt during a visit to the White House months after the Teheran conference had been held. Then, as Mikolajczyk tells the story:

"I looked at Churchill and Harriman, silently begging them to call this damnable deal a lie. Harriman looked down at the rug. Churchill looked straight back at me. 'I confirm this,' he said."

As if this revelation of Roosevelt's deceit was not enough Mikolajczyk experienced disgraceful bullying at the hands of Churchill, who ought to be ashamed of the memory of this episode to his dying day. The climax was reached when Churchill, who had alternated between abuse and blandishments, assured Mikolajczyk that the British Ambassador would see to it that there was no Russian interference in what was left of Poland.

At this fatuous remark Mikolajczyk, usually a very patient man, burst out that he would rather die then and there fighting for the independence of his country than be hanged later by the Russians in full view of your British Ambassador. This, incidentally, is just about what did happen to such friends of the West as Petkov in Bulgaria and Mihailovich in Yugoslavia. Mikolajczyk would almost certainly have shared their fate if he had not escaped.

One finds in this book a specific first-hand account of the terrorist means by which Stalin's agents in Poland, Bierut, Berman, Gomulka, and others, wiped out all semblance of freedom in that unfortunate country. It is not only Americans of Polish origin who should become familiar with Mikolajczky's story. What happened in Poland has happened, with slight variations, in other countries behind the iron curtain.

It could happen anywhere, it could happen in America if there should be slackness and lack of vigilance against the aggressive threat of international communism, with its avowed aim of world conquest through world revolution.

It is high time that we should recognize, in the case of Poland, the generally accepted proposition that the world is interdependent. America will not be safe while Poland is not free. The liberation of Poland, of the other iron-curtain lands, of the oppressed peoples in the Soviet Union itself will make possible the realization of the fine ideal enunciated by Senator VANDENBERG when he called for an honorable peace in a free world of free men.

Our Foreign Policy—Europe Only?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. JUDD. Mr. Speaker, on January 17 I spoke of the State Department's policy these last few years of concentrating our efforts on defeating Russia in Europe in a gigantic gamble that, if we succeed there, the problems presented by Communist aggression in other parts of the world will become readily soluble.

Under leave to extend my remarks, I include two articles by Edgar Ansel Mowrer further discussing the terrible risks involved in such a policy even if maintained firmly. And who can have the slightest assurance that the administration would not reverse the policy over-night in an equally shaky gamble on getting peace in our time by a deal with the Soviets—very possibly, judging from past experience, at the expense of some of our friends or allies?

QUICK-TRICK FOREIGN POLICY RUNS GAMBLER'S RISK OF TOTAL UNITED STATES FAILURE, SOVIET TRIUMPH

(By Edgar Ansel Mowrer)

If President Truman's policy of bringing the Soviet Union to terms in 2 to 3 years succeeds, he and Secretary of State George Marshall will go down in our history as very great men. Their plan to apply steady pressure on Russia along a narrow front, their stubborn concentration on this area to the neglect of all other issues, will be reckoned masterly statesmanship. But if the policy should be unsuccessful—if 2 or 3 or 4 years from now the Communist bloc is as strong and aggressive as ever—then we Americans can note sadly that President Truman's lost gamble was more disastrous than the one F. D. R. lost during World War II when he decided to trust Russia.

EFFECT ON GERMANY

Consider the consequences: first, in Germany. We are babying the Germans to keep them on our side, at least temporarily. Their civil rights have been partly restored. German labor is allowed to strike. German newspapers are relatively free. Denazification has been turned over to Germans—which means that it has become a joke. The same industrial and bank magnates who supported and financed Hitler are out of the dog house and are being restored to managerial posts.

Instead of being kept divided, western Germany is being put under a unitary administration. The level of industry is being raised—and will be raised higher as the pressure against Russia increases. In short, western Germany is being helped to regain the same economic supremacy that Hitler used to enslave Europe. Such a powerful Germany will be in a position to resume a position of balance between the east and the west whenever the occupying forces pull out. It will again become a danger for the world's peace.

Or take the Berlin airlift. This miracle of Anglo-American daring and technique can be maintained for a considerable time. Perhaps two years, maybe even three, provided the tonnage transported can be increased to take care of the Berlin industries. But if at the end of three years nothing has been accomplished, the American people will decide to quit wasting money and pull out. The collapse will be worse than if there had been no airlift to begin with.

EFFECT ON GREECE AND TURKEY

Or consider American economic and military aid to Greece and Turkey. Despite this aid, the Greek Government seems about as far as ever from suppressing the Communist rebellion. The Greek regular army has reached a point where the men who resisted Mussolini with such passionate heroism no longer fight with any zest. If our policy of applied pressure should fail, and American aid to Greece be stopped in a couple of years with no improvement in the Greek situation, the position of the Greek Government would be hopeless.

In Turkey too, despite American aid, there is already a grave question of how long that relatively poor nation can afford to maintain so many able-bodied men under arms.

EFFECT ON ERP

The European recovery scheme is a major example of the dangers of concentrating everything on an uncertain short-term objective. By 1952—if the major foreign policy succeeds—the Soviet Union will have made a settlement with the United States on the basis of the Yalta and Potsdam agreements. All of Europe will again be able to act, if it desires, as a unit.

In that case, American failure to achieve the unification of western Europe will not be tragic. But if there is no peace with Russia and if at the end of 1952 the nations of western Europe still constitute so many separate political and economic units, each with its customs lines and overlapping dwarf industries and national plans, then the entire recovery scheme, the nearly twenty billion American dollars will have bought nothing but a little time. A real solution will be as far off as ever.

EFFECT IN THE FAR EAST

In the Far East, the future can be catastrophic. Secretary Marshall has always viewed the communization of China with equanimity. Not so Generals MacArthur and Wedemeyer and Chennault, whose combined wisdom may be as great as that of General Marshall. General MacArthur has informed the Pentagon that if China goes, he will need no less than 240,000 more Americans to keep Japan from following suit, and to protect it against Russia.

If China goes, Indochina, already half communized, is a push-over. Burma is wormy with Communists. Communist uprisings were recently suppressed by the British in Maylaya and by the Javanese in central Java. In India itself, communism tints the fine fertile soil of hopeless overpopulation.

If failure of the American policy should leave Russia in control of all Asia, the plight of the United States would be desperate.

EFFECT ON UN

Finally, what of the United Nations? The present quick-trick American policy treats the UN as a side issue, if not as an actual obstacle to the main purpose of pressuring Russia into coming to terms. If the short-term policy fails, the UN will be all that remains of the hope of peace. By that time it may be too discredited to bear the burden the peace-loving nations would wish to put upon it.

In short, in putting all our money on one card—quick victory—the American leaders are gambling with our very existence.

ACHESON COULD REMOVE SOME OF QUICK-TRICK POLICY RISKS BY PUSHING COLLECTIVE ACTION

(By Edgar Ansel Mowrer)

In the world of power politics, no country can afford to bet all its money on one trick, one hand, one game, or one rubber. There must always be something left for another deal.

President Truman's present foreign policy of reaching real peace with Russia within a relatively short time is one that will attract Americans. But I submit that the risks are excessive and unnecessary. The United States could carry out the same policy without danger if it would stiffen its attitude on only one point, and grant aid exclusively on American terms.

The new Secretary of State will have an unequaled opportunity to take the bugs out of the present foreign policy. In contrast to Secretary Marshall and Under Secretary Lovett, Secretary Acheson is known as a champion of international cooperation. Originally one of the Roosevelt group which sought the friendship of the Soviet Union, Mr. Acheson has become greatly disillusioned. But he is still likely to favor a collective rather than a nationalistic American approach to stopping Russia, and he is no fanatic for preserving the fetish of national sovereignty.

So far, the administration has followed the venerable theory of full sovereign rights. This has commended our policy to the fuddy-duddies who dominate the American Senate, and, of course, to the foreign countries that have been receiving aid on their terms rather than on ours. It has prevented us from bringing about a world that will not fall supinely into the arms of Russia should the present quick-trick solution fail.

RESPECT FOR TRADITION OF SOVEREIGNTY COULD CAUSE FAILURE

Writers like Hanson Baldwin have been insisting that we quit fooling and extend aid solely on our own terms.

Obviously, as Professor Quincy Wright wrote in 1947, a system of shifting sovereign nations is "as obsolete as feudal baronies." Yet, the United States of America, in its policy of saving human freedom, has stuck resolutely to it.

Examples are many. Because of consideration for the sovereignty of western Europe we have given these countries billions without requiring them to unite and thereby become permanently solvent.

We return rights to beaten Germany long before we are sure that the Germans will exercise them properly.

We respect the sovereignty of Greece to the point where we permit the Greeks to maintain a political regime and economic practices which prevent permanent results from our aid.

In the Middle East, we back the British in buttering up anachronistic Arab regimes instead of squeezing the Arabs into accepting the highly developed Israeli as teachers.

We properly scold the Dutch for cracking down by arms on the unruly infant republic of Indonesia. But we do not compel both the Dutch and the Indonesians to follow a peaceful pattern. We disapprove the apparently futile French efforts to keep possession of Indo-China by force. We do not attempt to make French and Indo-Chinese understand that this is a world where the use of national violence must be prohibited.

As for China, our policy there, beginning with F. D. R.'s unhappy abandonment of the National Government, has been a monumental flop. We neither stopped the Chinese Communists ourselves—as the Russians stopped our non-Communist friends in Poland—nor did we insist on a Chinese regime that could command the allegiance of popular masses. Nor did we give the shop-worn regime of Chiang Kai-shek the military means to overcome the Chinese cohorts of Moscow.

Therefore, if we fail to stop the Soviet Union within the next few years, we may find ourselves in a world where Soviet communism is no longer stoppable by anything but a death struggle wherein American and human freedoms will perish. In short, out of a preference for a quick-trick policy respectful of national sovereignty, we are risking our own existence.

WE CAN WORK OUT OUR POLICY WITHIN UN

The solution is to begin using our strength and influence not only to confound the Soviet Union but also to build a viable twentieth century world wherein Soviet communism will look like the reactionary tyranny that it is.

Admittedly, in any attempt to impose a better pattern upon the world, the United States would become a target for charges of imperialism. There is, however, no reason why the United States should act so much on its own. We ought long since have sought like-minded partners in planning the new world. Plenty are available. Nothing, for instance, prevents us from making the coming North Atlantic combine an open regional agreement within the United Nations, instead of an old-fashioned military alliance.

Once it is recognized that Germany, the Middle East, southeastern Asia, and south China are at the same time vital to us and too weak to maintain independence without outside help, that help ought logically be given not by the United States alone, but collectively. The free nations of the world should unite to save what is left of world freedom. In western Europe they should unite to save themselves.

Here, in accepting for the world the same idea of collective intervention that we recently accepted for the Western Hemisphere, lies the true supplement both of the Truman doctrine and the Truman policy of a quick success over Russia. A supplement that a long-time internationalist such as Dean Acheson, though not the architect of the policy, may seize upon and use for the good of America and the world.

Not the South's Fight Alone

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. HARRIS. Mr. Speaker, there is and has been much said about the South and about other sections of our great Nation. It has long been the opinion of the thinking people of this country that what affects one part of our Nation affects the entire Nation. No issue wherein the rights of the people are involved can be applicable to one section.

Much has been said about the States' rights. Many interpretations have been placed on it. A very fine editorial was carried in the El Dorado Daily News, of my home town, El Dorado, Ark., on December 30, 1948, written by the publisher, Mr. Clyde E. Palmer. He has designated an appropriate title for this editorial "Not the South's Fight Alone."

In order that the Members may have the benefit of the views expressed in this editorial, I include it with my remarks:

NOT THE SOUTH'S FIGHT ALONE

The term States' rights means far more than the South's attitude toward the race question and opposition to the FEPC. States' rights is a fundamental in the American conception of government.

From the very beginning of the American Republic there was a jealous attitude on the part of the States for maintenance of their indisputable rights as distinguished from Federal Government control or any political authority that did not derive its power from the States themselves.

There is no reason why States of the Northeast, East, North, and West—in fact, each and every State in the Union—should not be as jealous of their commonwealth rights as the States of the South. The same fundamental principle is involved, peculiar to each and every one of them. And that fundamental is the right of the State to control its own affairs.

The trend toward centralization of Government in Washington has been gaining rapidly during the past two decades. The New Deal did very much to speed this trend. Santa Claus almost reduced the States to serfs or vassals of the Federal Government. And this tendency, while not as pronounced now as in New Deal days, still is of such character as to threaten the very existence of the States as political units in the American Union.

Enactment of a Federal FEPC law would be just as inimical to the State of Colorado, for example, as it would to the States of Arkansas and Texas. Federal control of education would be just as harmful to the State of Michigan as to the State of Mississippi. And an antilynching act enacted by the Federal Government would be just as repugnant to the State of New York or New Hampshire as to the State of South Carolina.

This is so because the very fundamental principle of the right of States to regulate and control their own internal affairs is involved, no matter what portion of the United States may be affected. State control of tideland oil is just as important to an inland State—say Kansas—as to Louisiana, because the States' rights principle is involved.

Concerted action by all the States should be taken to halt centralization of government in Washington and for repeal of such existing laws as encroach upon the sovereignty of the various States. The South alone should not have to bear the burden of this fight. Other sections and States are also menaced. And it is high time for the States to make known in unmistakable language their opposition and their demands that further centralization of power in Washington cease and that the States be permitted to exercise their fundamental rights without interference or coercion on the part of the Federal Government.

The People Themselves Must Save Democracy

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered before the men's club of the United Presbyterian Church in Whitinsville, Mass., December 15:

Most Americans are underestimating the influence of modern doctrinnaires whose radical teachings have widely and deeply impregnated the social thinking of this generation. So subtle and insidious are these influences that many loyal Americans have been unconsciously respective to and moved by very radical ideas concerning religious, social, economic, and political fundamentals.

Attribute it to the materialistic philosophy of the age, if you will; attribute it to the advance of applied science, the super-mechanization of modern life, or to the various programs of organized radicalism which are coloring and shaping American thought, the fact remains that many important and influential groups in the Nation are losing sight of the very elementary principles upon which representative government and economic and political freedom are based.

On the strictly political side, the activities of radical organizations have come out into the open. There are underground movements, of course, and various strategies are employed, but the demand for drastic social change in the shape of the overthrow of existing institutions and the establishment of the regimented police state is a definite reality of the current American political scene.

The real question facing us is whether we desire our democracy, our free-enterprise system, and our personal liberty enough to make real efforts and real sacrifices to preserve and protect them. We can lose these priceless blessings and everything that goes with them through apathy, inaction, and default just as easily as by direct frontal attack. Once we lose them, it will be too late to recapture them. That is an axiom of history.

First of all, we should recognize the fact that our prized institutions are being challenged on a world-wide and Nation-wide basis and that the challenge is real, distinct, tangible, and imminent. It is only through the reawakening of the great moral, spiritual forces within the minds and hearts of our people which were responsible for the upbuilding of America and with it the greatest, most productive, most bountiful productive system ever known that we will be able successfully to defend our way of life against the ravages of communism and socialism. If we are willing to learn from the plain lessons of history and the demonstrated facts of human experience throughout the ages, we will come to a true realization of the imminent dangers which so gravely threaten today the basic values, ideals, and institutions which make America the great Nation it is.

To keep our governmental system adjusted to the demands of human progress, responsive to the needs of our people in this fast-moving, rapidly changing world, to preserve that balance at home and abroad which will insure the retention of freedom, opportunity, social justice, and true democracy, is the task which will critically test the intrinsic powers of restraint, discipline, intelligence, and courage of every true citizen. If we do not want to follow the example of European nations and thus sink back, as they have, into the quicksands of collectivism, retrogression, and darkness, we must be prepared now not only to guard but to nourish and strengthen democratic ideology, democratic methods, democratic enterprise, and democratic government. If we fail to respond as a loyal and unified people to the definite needs of the present, to the cause of a soundly progressive and dynamic democracy, our future course will follow the same pattern which has brought so many great contemporary nations to deterioration and ruin.

The new Congress can do much to guide the destinies of America safely, sanely, and wisely. But it will need the support, the encouragement, and the sustaining strength of the entire American people aroused to current dangers and determined to protect their heritage, if we are to escape the same fate that has overtaken so many others in this disordered and power-crazed world.

Republicans, Attention—Are We the Party of Opposition?

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, Felix Morley, in Human Events of January 5, 1949, challenges the Republican Party and clearly analyzes the position that our party is in. He makes a strong plea that the Republican Party be the real party of opposition under our two-party system. Under leave to extend my remarks I am including this article by Mr. Morley:

POSITION AND OPPOSITION

(By Felix Morley)

From the viewpoint of its inescapable responsibilities, the Republican representation in the Eighty-first Congress got off to an inauspicious start. The split over the chairmanship of its Senate Policy Committee emphasizes the persistence of serious moral weakness in the GOP.

If there is one lesson which the Republican leadership should have learned by this time, it is that the duty of the opposition is to oppose. The position of the opposition must be opposite to the position of the party in power. It may seem childish to reduce political philosophy to such elementary terms. But we must face the fact that never before in American history has political thought sunk to a level as low as that which is accepted today.

In 1936, Governor Landon led a gallant but inexpert fight. In 1948, Governor Dewey was technically expert, as shown by the way he captured the nomination. But gallantry was lacking. The character of his campaign showed everybody that the Republican Party as a whole has ceased to oppose. The bitter truth of that assertion can be demonstrated by a mere summary of the four great issues of the past 12 years. In none of them has the Republican Party fulfilled its function as a fighting opposition.

1. Should the United States abandon the principles of a Federal republic to become a strongly centralized socialist state?

2. Did the United States permanently abandon the traditional principle of neutrality when it allied itself with one European dictatorship against another?

3. Should the United States, having made such an alliance, abide by its choice, or should it now seek to restore its former enemies as potential allies for another war, against its former ally?

4. If the choice is hostile to Soviet Russia, should the administration be permitted to play into Communist hands by destroying the free enterprise system, regarded by the Communists themselves as the only effective barrier to their ultimate world-wide victory?

In summary form, those are the four great issues of our day. Every public controversy of the past 12 years falls under one or other of those headings. Every bill on which Congress has voted, every proposition on which editorials have been written, can be card-indexed that simply, though cross-references will sometimes be desirable.

II

Of course there is, or has been, room for debate on all these issues. They would not be issues if that were not the case.

But there is no raison d'etre for a political party which is continuously satisfied with taking an equivocal position on fundamental issues. A party exists for the sole purpose of giving organization and voice to the political thought of a section of the people. When a political party ceases to be outspoken, when time and again it fails to voice any clear-cut principle but merely sings the tune of another party in falsetto, then, it has outlived its usefulness.

Even without the repeated endorsement of a majority of the voters it would be incontestable that the Democratic Party stands for certain definite principles of government. Its principles are not the less real because, since the New Deal, they are completely at variance with those for which the Democratic Party used to stand.

Although it still avoids the label, the Democratic Party is now consistently socialistic in its political philosophy. The party leaders maintain that more and more powers traditionally reserved to the States, or to the people, should be assumed by the Central Government.

The Democratic Party endorses progressive extension of the Executive authority and seeks to impose a solution of practically every domestic problem from Washington. Its leadership believes in a centrally planned economy and regards the principle of States' rights with open aversion and contempt.

In foreign policy the Democratic Party has demonstrated that it believes in intervention, permanent military alliances, and, as a natural corollary, peacetime conscription. Under the Roosevelt-Hull leadership the concept of neutrality was completely scrapped in favor of the United Nations. "So Esau despised his birthright." And the value of the mess of pottage received in return is demonstrated by the way we are now forming a military alliance within the United Nations, directed against our great Russian partner in that enterprise.

When events of this character are transpiring; when the fundamental principles of the Republic are undermined in favor of a policy which is not merely inept but also, in the minds of many, un-American, it is the simple duty of the opposition party to confront the issues for what they are. Instead we have the sham and mockery of a "bipartisan foreign policy" which merely serves to conceal the dangers as the country drifts toward a third world war.

III

The explanation seems to be that people have been so bemused with words as to be no longer able to discern when a fundamental principle of this republic is jeopardized. The abuse of language has now been carried to the stage where the advocate of authoritarian government is called a liberal, while any opponent of militaristic imperialism is likely to be defined as an isolationist. Whom the gods would destroy they first make mad. Certainly the confused jargon which today passes for political thinking represents a collective departure from sanity.

Thus we have the spectacle of a group of Republican Senators attempting to oust Senator TAFT as chairman of the Republican policy committee in the Upper House. None of these young Turks, as the dissidents call themselves, made any criticism of TAFT's ability, integrity, or leadership qualifications. They merely agreed that the senior Senator from Ohio is too conservative; that, in the words of Senator IVES: "The party is not going forward under BOB." It would have been more accurate to put the period before the last two words.

There is an unconscious irony in the term "Young Turks," by which these self-styled Republican liberals describe themselves. For the actual young Turks had just one objective when they revolted in that country 40 years ago. It was to secure for Turkey control over Balkan peoples who were determined not to remain under any kind of Turkish rule. And history shows few failures more complete than that of the young Turks during the decade when they were in power.

So the Republican young Turks are aptly named. They seek to secure for the GOP the support of voters who have no intention of following any type of Republican leadership. And in chasing a political will-o'-the-wisp they are willing, like their prototypes in Turkey 40 years ago, to sacrifice their country for an opportunism which does not even have the merit of being intelligent.

IV

The function of an opposition party is to oppose. And if the Republican Party cannot find ground for intelligent opposition, in the muddled domestic and foreign policies of the present administration, then it had better make way for a real opposition, possessing at least the moral fortitude to take a stand on principle.

A little more of this young Turk business—of trying to outdeal the New Deal and of being more socialistic than the Socialists—and merciful extinction will bring an end to all Republican anxieties.

The country already has, in Henry Wallace, a political leader who has demonstrated willingness to oppose the Truman administration from the left. Mr. Wallace, like Senator IVES, calls himself a liberal and, thanks to the Communists, Mr. Wallace has the nucleus of a permanent, Nation-wide organization. If the Progressive Party continues it will certainly in time be taken over by the Communists who directed its 1948 campaign. But that is in any case the fate of a party more liberal than the Socialists. There is nothing to the left of the Socialists except Communism.

It is not enough to defeat incipient Republican movements designed to revitalize the party by making it more subservient than are the Democrats to well-organized pressure groups. Those Republicans who refuse to regard their party as anti-Socialist, who are unwilling to fight against the ceaseless subjection of the people to centralized dictation, should be expelled. HUGH SCOTT, the courageous party chairman, has again this week properly intimated as much. As Mr. SCOTT has good reason to realize, the people of the United States are no longer patient with the maneuvering of professional politicians for personal advantage. Too much is at stake. Americans who wish to retain the fundamental principles of the Republic are demanding a party which will fight for their ideals, instead of sabotaging them.

Thanks largely to Governor Thurmond, there is the nucleus of a strong States' Rights Party in the South. Its claim to Nation-wide consideration is not extinguished by the cheap jibe that racial prejudice is its only stock-in-trade. Thanks largely to Senator TAFT, there is also a nucleus of northern republicanism which takes a stand on principle. Its claim to consideration is not extinguished by Communist-inspired denunciations of the Taft-Hartley Act, parroted by people who have never even read the provisions of this law.

The crying need of the country now is for an opposition party which will really oppose. Republicans unwilling to do so should be encouraged to join with Mr. Truman or Mr. Wallace, depending on the degree of their liberalism. There are more than enough traditional Democrats, in Congress and out, to take the place of the faint-hearted who, for 12 years now, have chloroformed the Republican Party and made it a mere political encumbrance.

The Need for a Single Supply Catalog for the Armed Forces

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. ANDERSON of California. Mr. Speaker, to every soldier who served in the last war, to every taxpayer, the need for a single supply catalog for the use of the armed forces is clear. The enormous waste of critical materials, the waste of public funds, and the constant struggle to supply the men at the front with needed weapons, tools, clothing, and supplies were apparent to everyone.

H. R. 321 entitled "The National Defense Catalog Act" is the attempt by Congress to aid the armed services in this respect.

It is true that war is in itself a wasteful business; but great savings could have been achieved if there had been a general understanding of the effect of cataloging or supply operations. It has been estimated that many billions of dollars could have been saved if there had been a single supply catalog in use by the armed services at the time of Pearl Harbor. Perhaps the additional supplies that could have been made available by proper management could have shortened the war by speeding up the campaign timetables.

One aspect of the problem of supply cataloging is described in an article that appeared in the October 18, 1948, issue of Time magazine entitled "The Turn of the Screw." This article is so important that it is reproduced.

THE TURN OF THE SCREW

The United States and Britain are going to standardize screw threads. No great oratory attends this homely step, no military pageantry, yet it may be as important as half a dozen formal treaties.

The Americans will sacrifice their cherished Sellers screw thread profile in favor of a slightly modified British Whitworth profile, and the British will give up their 55° angle of thread in favor of the United States 60° angle. The agreement will eventually save millions of dollars, make cooperation in war and peace easier.

UNIVERSAL AND PERMANENT

Eli Whitney, an eighteenth century Massachusetts Yankee, went broke after his cotton-gin invention was widely pirated, and turned to making muskets. He got the idea of interchangeable parts. Before Whitney, each part of each factory product was different from its fellow on another product, even from the same shop. But every Whitney trigger fitted every Whitney gun. This principle of interchangeable parts became the basis of modern industry.

Obviously, it required exact and uniform standards of measurement. Lack of standard measurements messed up the trade between the American Colonies; though the United States Constitution directed Congress to fix the standards of weights and measures, Congress did nothing about it for 80 years. Congressmen were passionately interested in the subject, but they could not agree. Repeatedly Washington begged Congress to pass a standardization law; in 1795 he suggested that the United States adopt the new French

metric system. Jefferson thought he had a better idea; he wanted a system based on the length of a uniform cylindrical pendulum which, at 45° North latitude, would move at the rate of one beat a second. Congress did not go for that, either.

John Quincy Adams, as Secretary of State, in 1821 begged Congress to let him consult with foreign nations for the future and ultimate establishment of universal and permanent uniformity in measurements. No dice.

A decade later young Sam Colt ran away from home and, aboard a ship bound for India, whittled the wooden model of a pistol that was to become the great Colt revolver. Sam did not (by 200 years) invent the revolver, but when he got into production he extended Whitney's interchangeable-part system in the direction of the present-day assembly line.

In 1866 Congress finally got around to its duty on measurements: it backed into the subject by defining a meter in terms of inches, although it had never (and has not yet) defined an inch. Its definition of the meter was inaccurate in terms of the British inch, so when Thomas Corwin Mendenhall, head of the Office of Weights and Measures, defined in 1893 an inch as +.02540005 parts of a meter, the United States inch and the British inch came to differ by .000004. (This later got bargained out in an informal compromise.)

DO YOU REALIZE?

Meanwhile, more and more things (not including international relations) came to be held together by screws, bolts, and nuts. Their shape and kind were in chaos. In 1861 the Franklin Institute got together a group of engineers who adopted the design of William Sellers as the standard United States screw thread. Without it, the unified United States railway system could hardly have been built.

Britain standardized on the Whitworth thread. Sellers' thread is flat at the top, turns in toward the core of the bolt at a sharp angle, and goes through a flat valley at the bottom. Perhaps the less precipitous and more urbane British character accounts for the fact that the Whitworth thread is rounded, top and bottom. Anyhow, the two don't fit.

In World War I this was a source of great inconvenience. In World War II it was nearly a calamity. By 1943, 2,000,000 tons of United States steel was going into nuts, bolts, screws, and rivets. A B–29 has 225,000 bolts in addition to 250,000 rivets. If a nut fell off, it had to be replaced by one from the United States. All Birmingham and Sheffield could not make its twin.

William L. Batt, when he was in charge of international supply for the War Production Board, cried out: "Do you realize that in many cases British and American gun parts are not interchangeable even though the completed products are of identical design? Can you picture the vast stocks of duplicating parts we have been forced to maintain in the far-flung war theaters because our screws were different?"

Representatives of United States, British, and Canadian industry, meeting off and on since 1918, have finally hammered out a screw thread agreement in principle and expect to sign it next month.

Much is left to do before John Quincy Adams' dream of uniformity in measurements is achieved. The United States is still using the Queen Anne gallon, which the British abandoned long ago. Tons are different and so are bushels, and the Japanese picul (for measuring grain) means one thing in a seaport and something else inland. In these matters, as in other aspects of social integration, the world moves slowly.

Nevertheless, as Galileo did or did not mutter, it moves.

Another Valley Authority

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Sioux City Journal of Sioux City, Iowa, on January 17, 1949:

ANOTHER VALLEY AUTHORITY

As was expected, the Missouri Valley Authority threat again is in the foreground or will be when Senator MURRAY, of Montana, is ready to offer his proposal which the people of the States involved do not want. And what makes it worse is that President Truman has voiced his support of the movement to abandon the present plans for the Missouri basin which have been approved by numerous organizations in cities and towns along the stream and which if carried out would provide flood control, power development, and irrigation.

Senator MURRAY and two other Democratic Senators, GUY GILLETTE, of Iowa, and HUBERT HUMPHREY, of Minnesota, visited Mr. Truman at the White House and talked the thing over with him. The Senators said they were redrafting the old Missouri Valley Authority bill so as to leave the construction of dams and other facilities under the Army engineers and other existing Federal agencies rather than give it to a new authority. When the Murray bill is rewritten and presented a new name will be given the directing agency. It will be called the Missouri Valley Administration.

What was said about the rose under any other name smelling as sweet may be applied to this and it won't make much difference what the three Senators decide to call the proposed set-up, it still will be, in the eyes of the people in the valley, an authority and they assuredly will not like it. They never have liked the Murray idea of creating a Missouri Valley Authority and they repeatedly have said as much. And they will fight the new proposal and defeat it if they can, insisting that the Pick-Sloan plan is what they have wanted from the first and want now.

The Murray-Gillette-Humphrey proposal will be an effort to turn the Missouri Valley water-power projects over to the Federal Government under what is called a unified development. And if the proposal became law with an administration created, the agency would be an authority no less and the administrative work would be the same, no doubt. Senator MURRAY knows his original Missouri Valley Authority bill was unpopular with the people, who promptly resisted it. He cannot win their approval now by changing the word "Authority" to "Administration." The Montana Senator virtually admits this when he says "We want to get away from the use of the word "Authority" because of the kind of odium which has been attached to that name in connection with this proposed development." He and his fellow Democratic Senators may find that diction alone will not change the attitude of the people in the Missouri Basin.

The Pick-Sloan plan has stood approved for years by the people of the Missouri Valley. It is an intelligent and practical method of making use of the river for power development and irrigation. It is thorough in what it provides, dams for flood control, power development, and reclamation of arid and semiarid regions, and all that is needed to make it work is sufficient money appropriated by Congress to complete the projects under way.

Any intelligent person can see what would happen if a Missouri Valley Administration were set up. The personnel of that Administration simply would take over the Missouri River and in time would exert a dictatorial influence in handling the projects. Delay with new surveys and studies ordered would be suffered and Missouri River development and use would be postponed. Let the people of the Missouri Valley join in protesting against this new proposal and in demanding that the Pick-Sloan plan be carried forward.

Plenty of Money Should Be Available for Farm Loans

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. PATMAN. Mr. Speaker, the Government cannot use its credit in a better way than permitting farmers to buy their own homes. In this way the Government gets its money back with interest and we have a home-owner citizen instead of a tenant citizen. The Government is not running any risk. It is true that if Congress were to appropriate a huge amount for this purpose, it is possible that undue inflation would occur in land values. However, if Congress makes possible a large amount subject to the discretion of the President, then in the event of inflation in land prices, the President could withhold the amount for that purpose or it could even be withheld from a section where land values were unduly high. Too much cannot be said for this fine program. It is one of the best that Congress has ever adopted.

The following editorial appears in the February issue of the Progressive Farmer magazine concerning this program:

LET'S HAVE MORE MONEY FOR TENANT LOANS

During the current year, the office of the Farmers Home Administration serving Texas has loaned about $1,000,000 to tenants for the purchase of farms. During this period, 90 Texas farms have been purchased with FHA funds. The year is only about one-half gone. But FHA is out of loan money. No more loans will be made until another year starts on July 1, unless the new Congress meeting in January makes an emergency appropriation.

For the year, Congress put up only $15,000,000 for tenant purchase loans throughout the United States. The program is sound. The farms are being paid out far ahead of schedule. It is one of the few social programs on which the Government is getting its money back. There are still thousands of hard-working young farmers that need Government help to get farms of their own. It's a good investment for the Government, because it's an investment in better farming and more enjoyable farm life. Once Congress put as much as $50,000,000 a year into the program. It should come back to this amount. An appropriation of $15,000,000 seems just "piddling around" with a great national problem.

Second Annual Message by Governor Driscoll, of New Jersey

EXTENSION OF REMARKS
OF
HON. ROBERT C. HENDRICKSON
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, January 18, 1949

Mr. HENDRICKSON. Mr. President, in these days of turmoil, frustration, and strife, we who have been designated to guide our great Nation and the world to the ways of a just and lasting peace need all of the guidance we can obtain. A few days ago—last Tuesday, to be exact—a great Governor of the State of New Jersey brought to his legislature an annual message from which we can profit much. It treats with many issues with which we shall be confronted at the national level in an extremely intelligent and masterly manner. To us it may be materially helpful in developing a better Federal-State relationship. Because this is so, I ask unanimous consent that it be recorded in the Appendix of the RECORD as a guide in our approach to some of the very important issues which will confront the Eighty-first Congress.

I also ask unanimous consent to include leading editorials praising the Governor's forthright position.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

SECOND ANNUAL MESSAGE OF ALFRED E. DRISCOLL, GOVERNOR OF NEW JERSEY, TO THE ONE HUNDRED AND SEVENTY-THIRD LEGISLATURE OF NEW JERSEY, JANUARY 11, 1949

Mr. President, Mr. Speaker, and members of the senate and general assembly, in my inaugural message to the legislature on January 21, 1947, you will find the statement that the watchword for the next 3 years would be work. I expressed the hope that our work together would be intelligent and productive.

Since that time we have moved forward on so many fronts that it is proper that we pause at the beginning of a new legislative year to survey the ground we have covered and the pathway that lies ahead.

Our concern has been the business of government—the strengthening of our democratic institutions in an age when our Republic is under strong attack from within as well as from without its borders.

We have sought together to restore confidence in government as the guardian of our rights and the servant of our citizens. In our recognition that most of our modern problems are social and economic rather than political, all of the members of the legislature and the executive have, to a degree unequaled in the history of this State, put aside petty partisan considerations in favor of the general public welfare.

We have worked shoulder to shoulder in our successful efforts to protect our civil liberties. We have sought to secure the inherent dignity of mankind by the elimination of discrimination because of race, creed, color, or sex. * * *

Your action and the fine work of the Constitutional Convention have set in motion forces that have extended far beyond the borders of this State. We have acted while others have talked and in our action we have brought new hope to countless numbers of our fellow citizens who live in an atmosphere created by a fertile economy and yet are denied the opportunities of full citizenship and suffer the shame of cruel discrimination.

Together we have helped to make our judicial structure a shining example that other States are now eager to follow. By your action we have fortified the heart of our Republic, placing a sure, swift, and friendly justice within the reach of all who need its protection. The legislative processes have been strengthened. The first phase of State administrative reorganization has been practically completed, and a solid structure has been established for the effective management of the executive branch of our Government.

Our social-security program has been broadened and strengthened, and some 1,600,000 of our citizens are now insured against crippling loss of wages due to sickness or accident. Our workmen's compensation law has also been liberalized.

In contrast to those States that chose to ban the closed shop and thereby restricted collective bargaining in private enterprise, New Jersey sought labor-management understanding through the medium of the conference table and the creation of the institute of management and labor relations established in 1947 at the State university. The legislation creating this institute and its subsequent work have been favorably cited by resolutions of national labor organizations, as well as by management, as a model to be followed by other States.

Our willingness to pioneer in legislation designed to protect the security of our citizens has been matched by an unwillingness to wait for a Federal hand-out before undertaking the State's obligation to support our school districts and municipalities in their efforts to provide an adequate education for our children and decent homes for our citizens.

We have recognized that, if we are to obtain and keep good teachers, we must be prepared to pay reasonable salaries. For two successive years the legislature has progressively increased the minimum salary for our teachers. At the same time, the State has substantially increased State aid to the school districts for education. There is budgeted for this purpose for the current fiscal year, $32,337,057.03, of which $6,966,290.35 is allocated to the teachers' pension and annuity fund. This represents an increase of over 74 percent in State aid for schools budgeted during the past 2 years. We have also made a beginning on a capital improvement program for our State teachers' colleges and university.

Few States surpass New Jersey in the percentage of citizens owning their own homes. What is more important, New Jersey presently leads the country in the production of rental housing units. Nonetheless, mindful of the need for truly low-cost rental housing for veterans, your State government, in a friendly partnership with our municipalities, is now completing a $50,000,000 veterans' housing program. In proportion to the number of veterans, this program is the largest among all the States. It is interesting to note that the American Legion, in its convention at Miami, urged its housing committee to review the various State housing plans and endorsed in principle the New Jersey plan, which appears to have much merit and would be adaptable on a national scale.

Vast programs for the improvement of the commerce of the State; the development of an adequate State highway system; better county and municipal highways supported by increased State aid; improved rail and air transportation facilities in north and south Jersey, as outlined in my message a year ago, have been undertaken. * * *

Many of our activities have been directed toward improved public health and recreation. Citizen groups, as well as those professionally engaged in public-health work, have commended the augmented services being rendered by the reorganized department of health. Our public recreational areas are being continuously enlarged and protected. New techniques of protecting our beaches against erosion have been developed during the past 2 years. Sportsmen, farmers, and commercial fishermen have been provided new opportunities for the conservation, increase, and control of fish and game for public recreation and food supply.

We have attacked the problem of law enforcement in many ways—the consolidation of all major State law enforcement agencies in a new department of law and public safety, the development of youth-guidance programs, crime-prevention activities, and traffic-safety conferences. Our law-enforcement agents, including local police, have been recognized and treated as members of an important profession.

* * * We have striven to bring the compensation of our loyal civil-service employees into line with the current economic situation. We will continue to do so.

In all of these endeavors we have sought to establish a relationship of trust and confidence between the Government and its citizens. Our new constitution, the most enduring and important of all of the achievements of the past 2 years, is itself the product of the relationship to which I refer. Notwithstanding these social and political achievements, much remains to be accomplished if we are to advance the hopes and aspirations of our society under the republican form of government guaranteed by our Federal and State Constitutions. We have had some hard fights and may have made some enemies. All of this is to be expected, for every program designed to take government out of the easy ruts of complacency and neglect is bound to develop opposition.

During the current year we will devote ourselves to the consolidation of our gains, the perfection of our administrative organization, painstakingly testing the new activities of government that have been undertaken, and the new procedures that we have adopted. * * * Beyond this, however, there are certain pressing obligations that must be met.

The thought-provoking report of April 22, 1948, of the Governor's committee on civil liberties, under the chairmanship of Dr. Wilbour Eddy Saunders, stated: "The keystone of our American heritage is the importance of the individual person." I concur wholeheartedly in the conclusions reached by the committee in its report and strongly recommend that within the framework of the executive branch of our Government, presently consisting of 14 principal departments, provision be made by legislation for the accomplishment of the objectives of the civil liberties committee. I am aware of the fact that last year, while there was general agreement on objectives, there was limited agreement as to method. I am confident that where there is agreement with respect to objectives, differences with respect to method can be reconciled.

* * * * *

Adequate housing for our citizens within a reasonable price and rental range must be speedily provided. We should courageously and at once attack one of the most serious threats to the welfare of our State, namely, the slum areas which exist in every major community in New Jersey, as well as throughout the Nation. The recommendations made in my previous messages are even more pertinent today than they were when made. I again urge that you consider and adopt those recommendations. With the lapse of time since the conclusion of the

war and with rising costs and accompanying disillusionment, conditions in those blight areas have grown worse, not better. Our citizens do not want explanations. They want adequate homes. We want to rehabilitate our blighted urban areas before it is too late. Those areas place heavy moral and financial burdens upon our society which are unnecessary.

We have made little progress in our efforts to secure the adoption by municipalities of modern building, plumbing, and safety codes. The lack of these codes and the present conflict between codes of neighboring communities has retarded the construction of homes and increased costs. The temporary committee on housing will provide a full review of the factors affecting progress in both public and private housing as a basis for new legislation.

I recommend: (1) The adoption of modern building and safety codes which will incorporate the recommendations of the housing committee; (2) the aggressive enforcement of all laws and ordinances presently applicable to substandard housing; and (3) the broadening of the State housing authority and the use by this authority, subject to appropriate restrictions, of the State's credit for a substantially self-liquidating low-rental-housing and slum-clearance program of up to $100,000,000. Our task is to stimulate the construction of low-cost rental homes by private enterprise where possible, and to the extent necessary in blighted areas to provide State and municipal encouragement and, as need be in these areas, to exercise the full authority of the State and local governments to accomplish our objectives.

My position with respect to rent control, as outlined in two previous messages to the legislature, remains unchanged. I believe, however, that before effective State action can be taken, national policies should be decided. If the Federal Government decides to withdraw from this activity, New Jersey will be prepared to protect its citizens.

When the economic outlook is rosy, when business is booming and profits and wages and employment are at record highs, we are not inclined to be very much concerned with economic security. The conditions of the day create an atmosphere of risk taking, of assurance of continued prosperity. It is in times like these, however, that we are free to take inventory of our provisions for economic security to meet our current needs and to plan for the future.

The adoption of the sickness-benefit program, a brand new protection that began January 1, was accompanied by a reduction in the pay-roll tax for unemployment compensation. This tax reduction made available approximately $26,000,000 annually to be channeled into private enterprise and the development of new job opportunities. Two additional areas of insecurity remain to be covered in our State programs. One is the full coverage of occupational diseases under our workmen's compensation act. An increasingly complicated industrial process furnishes us with persuasive reasons why workmen's-compensation coverage should be extended to include all occupational diseases occurring in industry. I recommend adoption of the bill introduced last year providing for full coverage of occupational diseases. The other involves discrimination between employees of firms employing four or more and those employing less than four. This discrimination should be terminated. Workmen's compensation applies to these smaller firms as should the entire security program.

Current economic conditions of high wages and high prices require an increase in the present maximum benefit rate of $22 for unemployment compensation. If we are to provide employment security benefits, let us have them at a level which accomplishes their objectives.

The work of the institute of management and labor relations has been sufficiently noteworthy to warrant expanded State support. The two principal objectives of the institute are to promote harmony and cooperation between management and labor and to promote a greater understanding of industrial labor relations on the part of the general public. The attainment of these objectives will promote unity and the general welfare of our people.

The right to organize and bargain collectively, guaranteed in our new constitution, should be augmented by a State labor relations law applicable to intrastate employees. Our present minimum-wage law should be made more comprehensive.

* * * * *

We shall continue to support programs designed to provide adequate treatment for those who suffer with mental illness and to restore these persons as quickly as possible to a productive place in society. The need for research into the causes and prevention of long-term and chronic illness, and the treatment, as well as the development of new techniques for the care of the increasing number of our citizens so afflicted, is apparent. These problems will require our continuing attention. We may confidently expect that the private and public agencies of our State, which have been in the forefront of the struggle to develop new techniques made necessary by an ever increasingly complex society will provide constructive guidance in this field.

* * * * *

There is no more important obligation of government than to provide adequate training for the youth of our State. We all recognize the importance of securing and retaining the New Jersey public school system the best available teachers. These teachers cannot adequately perform their duties if they are harassed by economic burdens, nor can we expect our teachers to be wholly enthusiastic exponents of our economic way of life in the absence of reasonable salary schedules, permitting them to participate in the benefits of the private enterprise system.

Accordingly, I recommend again that minimum teachers' salaries be further increased.

Mindful of its own financial limitations and the untapped resources of our municipalities and of economies yet to be achieved, the State will continue its State-aid program.

* * * * *

We have provided new impetus for the development and use of our natural resources; for the prevention and control of cattle diseases; and for the improvement and development of our water suppy facilities. Our departments of agriculture and health have been provided with new and broadened opportunities for the maintenance of adequate food standards and services to our farmers. We must continue to support and strengthen these, as well as our other agricultural and conservation programs.

A commission appointed last year has been engaged in a constructive study of beach erosion. It has been working upon the development of a program designed to minimize the dangers of erosion, and to protect one of our most prized assets that annually attracts millions of citizens to our seashore communities from all parts of the country. The report of this commission should receive your careful study and should become a basis for action.

Domestic tranquillity has been the objective of Government in this country from the days of the founding fathers. Now that we have integrated law-enforcement agencies, with minor exceptions, within the new department of law and public safety, it is my hope that we may expand the activities of our State police school to provide adequate training for all men engaged in law-enforcement activities in this State. While providing in-service training for men and women presently engaged in law-enforcement activities, we will seek to establish a program that will provide training for all men and women who in the future may enter law-enforcement work. * * * It is proposed to mobilize the resources of the law school of our State university and to secure the cooperation of other educational institutions in support of this program.

* * * * *

A detailed discussion of fiscal problems will be contained in my budget message. We find ourselves in a national environment, marked by a threatened $4,000,000,000, or more, tax increase on the part of the Federal Government. A substantial portion of this increase will be collected from New Jersey citizens, as will reported increases in taxes in neighboring States—such as the income tax in New York which will be paid by citizens of this State to the extent of approximately $6,000,000. It is apparent that the New Jersey financial structure and State services are, to a considerable degree, subject to variable forces far beyond our power of control.

In addition to the requested increase in Federal taxes, it should be noted that there is a strong likelihood that Federal programs may place new pressures upon the States to spend additional sums of money on a matched-fund basis. Until these contemplated programs are fully developed, it is very difficult for the State to plan for its own future financial requirements for education, housing, highways, social security, and public health. This is to mention but a few fields where the Federal Government, backed by unlimited power to tax and to determine the value of the dollar, is seeking to expand its activities.

Our fiscal problems may be difficult, but they are not unusual. As a State, I dare say we have done well through prudent management and a careful husbanding of our tax resources. For example, according to reports of the United States Bureau of the Census, the average increase in total State tax collections for all States between 1945 and 1948 was 56 percent. The comparable increase in New Jersey was 20 percent.

The story of our State finances, as compared with other States, is to be found in the following distribution of per capita expenditures (1947):

Item	New Jersey	All States average
State operating expenses	$15.51	$23.86
Capital expenditures	5.72	6.82
State aid and shared taxes	18.45	18.75
Contributions to pension funds and unemployment compensation	20.07	7.72
Debt retirement	1.27	1.05
Interest payments	.61	.45

Comparative figures, however, offer little solace when it comes to meeting State obligations on a pay-as-you-go basis. Despite contrary influences elsewhere, we shall seek to keep our fiscal program within a reasonable limit. Admittedly, we are going through a transitionary period. It is especially appropriate at this time that we restudy our entire tax structure and assessment procedures. Our new constitution affords a solid foundation upon which this study may now be made. I have accordingly asked the commission on State tax policy to undertake a comprehensive survey of our entire tax system. Pending the receipt of its report, we shall confine our attention to the immediate needs of the next fiscal year.

The task ahead of us, while difficult, is clear. As we apply to it sound judgment, courage, and willingness to place the public

interest ahead of partisan consideration, we will continue together to build a better government and a fuller way of life. Being close to the major achievements of yesterday, we should feel compelled to match those achievements tomorrow.

Under divine guidance we should strive to continue an intelligent and productive work.

Neither to Right Nor Left

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. MILLER of California. Mr. Speaker, Justice William O. Douglas, of the United States Supreme Court, delivered an address at the Tenth Constitutional Convention of the Congress of Industrial Organizations at Portland, Oreg., on November 24, 1948, that I urge my colleagues to read.

Justice Douglas has made great contributions to liberal thinking in America. He seeks to preserve and strengthen the philosophy in government based on the concept of the dignity of man.

His address entitled "Neither to Right Nor Left" follows:

NEITHER TO RIGHT NOR LEFT

Today labor stands astride a world fraught with fear. It occupies a strategic position in the affairs of nations. By reason of its new strength, it is wooed as it has never been wooed before.

The Communists seek by infiltration to pervert it to their ends.

The totalitarians of the right would like to control labor's power so as to destroy it.

The Democrats of the world look to labor to keep the middle way open. They look to labor with confidence and with hope. They know that in the world today there is no stronger citadel of democracy than the halls of labor.

Labor's opportunity is unique. It is an opportunity to preserve the value of democracy in a seething, troubled world.

Labor has marched a long way down the corridors of history. In this country it had no sooner thrown off the chains of a chattel slavery than it seemed destined to be held in a new industrial serfdom. That fate was avoided by the devoted efforts of two generations. From the days of Bryan and La Follette the tide of liberalism ebbed and flowed, until at last under Franklin Roosevelt it gathered a mighty momentum and swept away the remaining threats of an industrial serfdom.

NEW STANDARDS OF JUSTICE

Collective bargaining was established and became the accepted practice and tradition. A host of laws designed to protect the worker were written on the books. Life, liberty, and the pursuit of happiness became a part of the philosophy of factory management. Human rights—not property rights alone—became standards of industrial justice.

The Nation's gains from the evolution that accompanied these reforms have been enormous. Although labor was the most obvious beneficiary of most of them, the victories were not narrow, class achievements. There was no appreciation from one class for the benefit of another.

The gains in a true sense were classless gains. They resulted in an increase in the standard of living that has vitalized the entire economy. They invigorated the whole body politic like a nutritious food in the blood stream. They strengthened the industrial system by removing sources of weakness. They created in the factories of America, largely through the institution of collective bargaining, a wholesome and friendly atmosphere for workers. Thus the rights even of the humblest worker are recognized. The ideals of justice are carried into the furnace rooms and machine shops of the Nation.

The human welfare state is the great political invention of the twentieth century. Labor was its prime promoter. It was the first group to feel most keenly the economic insecurity of the new industrial age. It was the first to acquire a mass consciousness of the ravages of the modern factory system and of the ruthless character of depressions. And so it moved for protection on various fronts—from workmen's compensation to unemployment insurance. But while labor was the prime promoter of the new human welfare state, all groups in society—farmers, business, and the professions—were its beneficiaries.

NEW PROBLEMS ARISE

It has been with those issues that labor has been largely preoccupied. And all those problems have not been solved. But they cannot be the sole concern of labor in the days ahead. New times have brought new and even greater challenges—challenges that should make labor an active participant in international affairs.

Labor is peculiarly qualified to bridge a gap that has been growing between the United States and Europe. It is from the lips of American labor that Europe can most readily learn how democracy and freedom can be peacefully achieved in a framework of government. There is a reason for this.

A new Europe is being born. New leaders have come to power in the countries of western Europe. In almost every case their political strength is in the labor movement. The political party with a labor base may be the Labor Party, the Socialist Party, the Social Democratic Party, or a party of some other name. The fact is that there has come out of the Nazi crucible of death a vigorous, alert and politically-minded labor party in every western European country.

The records of the Nuremburg trials show how well Hitler understood who his enemies were. In Germany and in every country overrun by the Nazi armies, labor leaders were the first to be gathered and shipped off to the concentration camps. Some miraculously survived; others escaped capture. New and hardened labor leaders have appeared.

They know only too well what happened to them and to their companions. They know why it happened. They are icily determined that it will never happen again.

These men learned, the hard way, the importance of government. They saw how easily governmental institutions in the hands of their enemies became the mechanism for their own destruction. They learned that politics was not a game to be played only by professionals. They discovered that politics at times is literally a matter of life and death.

MEN OF CAUTION

And so today they are cautious men. They are bitter, suspicious of all those who may be undisclosed agents of predatory interests. They fear the threat so frequently voiced in Soviet propaganda that an American imperialism may be extending its power into Europe through cartels, banks, and other powerful instruments of industry and finance. And they are less than ready to take a man's protestations of virtue and disinterest at face value.

They wish instead to know what he has done, what he has fought for, and what he had believed in during his entire lifetime. When they hear an American spokesman interpret the American way of life as some form of unbridled, unregulated, dog-eat-dog capitalism they want none of him. And they are powerful enough in their own nations to have none of him.

Out of this arises the importance of the fact that American labor carries good credentials to western Europe. Doors tightly closed to all others may open at its knock. Words from American labor promise to find quick acceptance.

The conventional diplomat will fail miserably in these revolutionary days unless he understands the rise of the labor governments of the world and can evaluate the factors that have created and maintained them. Only those who have insight into these forces, who share in heart as well as in mind an understanding of the labor struggle throughout the world, are equipped to interpret correctly and faithfully what they see.

Yet knowledge and understanding of both the American and the European labor movements is the one essential tool of modern diplomacy that is unfortunately missing from the equipment of our conventional diplomats.

It is in this precise respect that American labor can render a unique service, whether it represents the government in particular missions, or sits as an observer of the European scene, or acts as an educator of the rank and file of the people.

LABOR CAN HELP

American labor can help America understand that Europe under the political management of Socialists is not a continent turning Communist but a people struggling for things that are precious to men everywhere.

These labor governments of Europe are not to be scorned or feared. They seek to preserve the values of western civilization by holding the middle ground. They commonly have economic theories which are not wholly acceptable to a great many of our people. Yet on the fundamentals—the rights of man, his liberty, his dignity, his security—they are truly democratic. The spiritual values which they espouse make them our brothers. We have the same ideals of justice. We need them and they need us, if totalitarianism is not to rule the world. These are the things that American labor can help the American people to understand.

American labor has, moreover, tremendously significant messages for Europeans. It can prove by its own accomplishments that human welfare and progress can be achieved without class warfare. It can show that the successful struggle is indeed not along class lines.

We in this country will not understand the European labor movement unless we remember that it has to a considerable degree a class base. We are apt to underestimate the influence of the Socialist philosophers upon European thinking. The base of European labor is definitely not the perversion which Lenin and Stalin have made of the original Socialist theory. That is to say, European labor is not Communist. But history has woven the European fabric with a strange twist that has been omitted from our own.

CLASS SOCIETY CONCEPT

The development of the history and culture of western Europe has from feudal times been based on the concept of a class society. There were the lords and ladies of the castle. Then the hierarchy descended through the squires of the manor house, the artisans, and the peasants of the field. This was the historical condition which Marx—and those Socialist writers and thinkers who both preceded and followed him—observed. This then formed the base for their economic thought. To them the class society was the civilization within which men lived and within which they died.

These Socialist philosophers have profoundly influenced the thinking of the labor

movements of western Europe. For this reason when European labor has thought of replacing one government with another, or one set of government officials with another, it has thought largely of the substitution of one class for another.

The idea of class is foreign to us in this country. We are unable to function on a class basis for the simple reason that it is not part of our tradition.

Part of this attitude is due to our history. We did not build this country on class lines. Nor did we have to displace a class society when we cleared the forests and built our cities and highways. Consequently the notion of equality has always been open. And if it becomes closed we recognize the responsibility of government to reopen it. Man is born here not to class, but to opportunity. No feudal livery marks him. He stands on his own; there is no tradition that limits his potentialities.

This philosophy permeates our politics. While the aim of European political parties has been to draw men of different ideologies into separate disciplined groups, the aim of our parties has been to unite divergent groups into one. Our aim is for unity. That means compromise of various ideas and ideologies and the doctrinaire acceptance of none. It means the elimination of extremists—both right and left—and the development of middle-of-the-road policies.

FREE TO MAKE CHANGES

Our liberty is, indeed, the liberty to change from one dogma to another in a search for an equitable solution. For, as one distinguished jurist put it, the spirit of liberty as part of the American tradition is "the spirit which is not too sure that it is right."

This lack of class consciousness has other influences in our national life. It explains why we examine the man who stands for office not for his origin but for what he has done, for what he believes, for what his program is.

If we are satisfied with his character and philosophy, it is immaterial whether he comes from a mansion in Virginia, a log cabin in Illinois, a manor house in New York, or a farm in Missouri. That is why a goodly number of millionaires in public office today are widely recognized as active supporters of labor and exceedingly sympathetic to its hopes and causes. That is why many self-made men, who started from scratch and came to positions of power, have been repudiated because of their hostility to the great tide of liberalism that sweeps the world.

This attitude of ours is also due to the fact that we are a highly practical people. We are not beguiled and bewitched by theories. We have the knack of differentiating clearly the end from the means. We think in terms of results—hard, practical results. But we require that the means be fair to the individual.

It is for this reason that the American people, and primarily American labor, have not been captured by the propaganda of class warfare or a dictatorship of any class. They know that the promised substitution of one class for another in control of government or business is a highly theoretical proposal. It is merely a proposal for a different means to achieve public welfare. And that means, wherever it has been tried, has not only failed to provide a higher standard of living than we enjoy; it has meant a great sacrifice in liberty and freedom which men everywhere cherish.

ROAD TO DESTRUCTION

To American labor this invitation to class warfare is obviously a call to travel a side street which leads not to better living, but to destruction.

American labor much prefers to operate directly on its problems such as wages, hours, housing, and peace. It can do this at the bargaining table, at the polls, through organization, and through education and communication. These are the techniques that work; and they work immediately, directly, and fairly. They are not the complex brain-twisting, devious theories of communism. They are not the elaborate spinnings of the class-warfare conception. They are clean, hard-hitting, practical American ways to a wholesome result.

Our approach—the approach of American labor—is not to destroy. It is to pull and push and drive, with tremendous energy. American labor knows that it has a responsibility not only to its own members, but to the whole community. And American labor knows, too, that this obligation to respect the rights of others and to develop cooperative techniques in human relations is not merely a moral and patriotic duty. It is hard common sense. It is in that way and not by crushing all those who are outside of its own ranks that labor can secure a vigorous economy and a higher standard of living.

Labor's role in our national progress is unique and paramount. It is labor, organized and independent labor, that can supply much of the leadership, energy, and motive power which we need today.

American labor can do more than any other group to dissipate the notion that the fate of man is to pit class against class in a series of great blood lettings. It can help show Europe that it need not be the victim of the concept of a class society. The experience of European labor under Hitler proved that there was no safety in doctrinaire assumptions. The divisive influence of the Soviet—the pitting of each group against another—proves the same. American labor can help Europe understand these lessons.

WORKERS ARE FREE

American labor can show how a human welfare state creates health and stability throughout the whole economy, and works for the security and well-being of all classes. America has avoided the fate of the sweatshop. Our industrial plant today is one of the great strongholds of democracy. Our workers are freemen, free to vote, free to speak, and free to worship as they please. They are lashed to no one political party. Their unions are not puppets of a political clique. There is such a thing as industrial justice; and programs of social welfare and a rising standard of living for all go hand in hand.

These are things that American labor can show. It can also show that the world's path to peace and security is the one they took in escaping the industrial serfdom that threatened to ensnare them.

It can show how a human welfare state has managed to distribute in an increasingly equitable manner the dividends of modern technology; how the standard of living has more than doubled here about every 40 years. It can show how in that time the output per man-hour has more than doubled in manufacturing enterprises, with a decrease in the workweek of around 10 hours, while the purchasing power of the wages of the average factory worker has approximately doubled. It can show how almost two-thirds of the civilian labor force (agricultural labor excluded) are now covered by some form of unemployment insurance and over 98 percent by some form of old-age insurance.

Labor as a missionary of the American way of life can do more than this. It can help counter the Soviet propaganda that in the democratic nations of the world, war is the only device that government can design to give maximum production and full employment.

Those in labor circles know, as the distinguished President Philip Murray, of the CIO, has eloquently proclaimed, that real economic security lies only in maximum production and full employment.

DEPRESSIONS MAN-MADE

During the half century ending in the early 1940's the money earnings of the average worker in this country (agriculture excluded) rose over 250 percent. During that period the real earnings increased over 65 percent. But, nevertheless, the effect of the depression in the 30's was so severe that the real earnings at that time dropped practically to the level of 40 years earlier. One-fifth of our national labor force was idle. The dent in our national income was so great that it completely wiped out the gain in wage rates that had been painfully obtained since the early 1890's.

Violent swings in the business cycle are not as certain as death or taxes. Nor are they as inexorable as the law of gravity. They are man made; and being made by man, they can be controlled by man.

It is, indeed, cowardly to conclude that man is doomed to be the victim of his own business arrangements and that he is powerless to do anything about it.

It is, indeed, ironical and shocking to conclude that it is only through war that we can get maximum production and full employment.

We of the Democratic faith deny that there is any inevitability whatever in these predictions of despair. We believe that there are brains and character and ingenuity in this country and in the world adequate to substitute periods of production and employment for the man-made depressions we have suffered in the past.

The factors which bear on that problem are varied and complex. They touch all phases in the life of society. There is no easy or ready answer to the problem. It has many facets and angles. Labor knows this.

And so it is that labor has turned its attention to the interdependence of nations, to economics, to the relation of costs, profits, prices, to taxes, and to all the other factors that determine the prosperity and security of peoples and of nations.

MUST WORK PRODUCTIVELY

Labor is thus interested in the policy that determines what the level of production will be. Labor, management, and investors have a long-term solidarity of interests. Maximum production and full employment provide the only real security for all elements of our society. There is an overriding public interest that affects all business, including private enterprise. Production and employment are matters of great public concern. The basic security of the Nation itself depends on the ability of labor, management, and investors to work productively.

The Communists miss the point of history when they make class warfare the challenge of this age. That is not the challenge. The challenge is more subtle and more demanding. The challenge is to make the modern industrial plant operate smoothly and productively for the benefit of all.

This is not a job for one group alone. No one group has the technical competence, the know-how, the experience to go it all alone. It is, indeed, a joint responsibility of labor and management to see the modern industrial plant serves the needs of the public. The challenge is so fundamental that the survival of the democratic scheme of things may depend on the manner in which we respond.

The power labor has today constitutes a great leverage on our economy. The power it holds in the councils of nations will become increasingly great. Responsibility inevitably follows power. When the power is one over society and its welfare, the power is indeed a power in trust. So it is that labor, no less than management, has an obligation that transcends narrow, selfish interests. It is an obligation to turn its energies and resourcefulness not to protect vested interests, not to seek some temporary advantage, but to promote every known device which will lead

to maximum production and full employment.

WORLD-WIDE STRUGGLE

These are fateful days for all peoples of the world. Powerful ideological forces are pitted against each other. There is an increasing polarization to the left and to the right. But the great middle group in all nations are the democrats. They are the ones who have nourished freedom of speech, freedom of religion, freedom of conscience. They have built systems of government under which diversity among men is encouraged and glorified. They have refused to cast and mold man into one ideological pattern. They have proclaimed the great spiritual values of the brotherhood of man. They believe that the dignity and freedom of man are the ultimate aims of society.

It is essential that the democrats of the world stand united. The polarization to the left and right must not continue. It derives from despair and discord—often minor in character, that prevents unity and undermines strength. It is as if religious sects, quarreling over minor differences in their faiths, overlooked the essential unity of their creeds, that One Being rules the whole universe.

American labor can contribute mightily to the fusion of the various democratic groups of the world into a harmonious whole. American labor can teach class-conscious groups the folly of class warfare. American labor can spread the faith in the American way that builds a classless society without exploitation of any group.

MUST UNDERSTAND WORLD

This requires that American labor understand the world of today. It can no longer take refuge in the slogans of bygone days. It cannot indulge the luxury of complete preoccupation with traditional trade-union activities. It must understand geography and economics and history. It must be versed in the causes which led to Hitler and to Mussolini, to Lenin and to Stalin. It must be able to detect the early manifestation of new malignant growths of a social and political character.

The values of the democratic system are at stake throughout the world. The time for action is now. The task is for us, not for our sons or our sons' sons.

We know from our own experiences that labor has the character and strength to rise to real greatness. It has achieved maturity and wisdom.

Today labor, better than any other element in our society, can weld the democrats of the world into a group within its power to guide Western civilization, neither to the right nor to the left, but down the broad middle highway to abundance, to security, and to peace.

President Truman's Budget

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. REED of New York. Mr. Speaker, on Wednesday, January 19, I spoke over the Mutual Broadcasting System for 3 minutes on the topic of President Truman's Budget.

Under leave to extend, heretofore granted, I am inserting it in the CONGRESSIONAL RECORD:

The Federal Budget submitted by President Truman to the Congress in the light of the existing estimated debt of $251,569,000,000 is preposterous. The President is asking for a $41,900,000,000 peacetime budget. This means $282 per capita for Federal spending alone and does not include State, city, or local taxes.

This is the greatest peace-time budget ever submitted at any time by any country in all history. This means that a family of four must lay aside almost $100 a month for the Federal Government before they have one penny for themselves. In other words the average family of four must save $1,128 a year for the Federal Government alone, but such family of four must also save the additional sum to meet State, city, county, and local taxes.

Every time a man in the United States earns one dollar he must figure on saving 30 cents out of that dollar of income to pay his taxes, Federal, State and local. This leaves him 70 cents for himself and family of four. Then again this 70 cents he has left for himself and family has a purchasing power of 42 cents in terms of 1940 prices.

This means that the average family of four today has 42 cents in purchasing power for every dollar it takes in, if we measure purchasing power by the 1940 price level. In addition, the working people under covered employment in the Social Security plans are paying a gross income tax of about two billion dollars a year, which does not show in the Federal Budget as receipts. Nevertheless, the money in payroll taxes is received by the Government and is spent day by day in the operation of the Government.

All that is left in the so-called social-security trust fund is Government bonds, which the people themselves must redeem in cash before the trust fund can be spent for social-security benefits. This trust fund, so-called, now amounts to more than ten billion dollars in Government bonds. Every penny of it has been paid into the Treasury once in the form of payroll taxes, but the money has been spent by the Government for other purposes. This amount must be collected in cash once more before the OASI benefits may be paid.

This type of blue-sky financing will ultimately undermine the United States economy if we do not stop it. The time has come to put some old-fashioned common sense into the Federal management. The budget ought to be examined by the people in the light of what will ultimately happen to them in view of this type of left-wing financing.

Yellow Oleo: Prohibit Its Sale and Manufacture

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, no publication in America speaks with more authority as the voice of the dairy industry than does Hoard's Dairyman, published at Fort Atkinson, in my district of Wisconsin. For a discussion of the forthcoming argument over the oleo-tax-repeal measure, Hoard's Dairyman, on January 10, 1949, published an excellent report on the dairy industry's views, written by Milo K. Swanton, of Madison, Wis. After graduating from the University of Wisconsin, Mr. Swanton did agricultural extension work for a time, is a practical farmer himself, and for the past 12 years has served as executive secretary of the Wisconsin Council of Agriculture Cooperatives. He was the organizer and first president of the Madison Milk Producers' Association and a director of the National Milk Producers' Association.

Under leave to extend my remarks, I wish to include Mr. Swanton's article in Hoard's Dairyman in today's issue of the CONGRESSIONAL RECORD:

Dairymen, they say, are now talking a new language when they discuss the oleo question. Some oleo propagandists are claiming dairymen are in retreat.

On November 11, in Portland, Oreg., no armistice was declared by the dairy farmers from 47 States attending the annual convention of the National Cooperative Milk Producers Federation. There they reiterated their position that so long as the "butterleggers," as they called the yellow oleo makers, insist on the unfair trade practice of parading their product in imitation of butter's long accepted yellow color, there will be no armistice. The dairy farmers of this day are therefore sticking to their guns on the same basic issue of color on which they today, and their fathers before them, have fought.

November 11 dairymen attending the Milk Producers Federation annual meeting said in resolution:

"The crux of the situation, today as always, is the use of the color yellow by imitators of butter to produce, as nearly as possible, a butter substitute resembling genuine butter. Federal and State Governments should prohibit the manufacture and sale of oleomargarine colored yellow in imitation and semblance of butter. If this is done the butter-oleo trade war will be ended. It will then be practical to abolish the taxes, licenses, and fees affecting oleomargarine."

NEW STAND NOT A RETREAT

Clearly then this is no retreat. It simply means that from here on we should not recognize nor legalize yellow oleo margarine as we have done since 1886 by the old system of taxation. This so-called "retreat" is anything but a retreat. It is a forthright and sensible demand that henceforth prohibition rather than legalization must be the answer.

Lest there be any further misunderstanding of today's position taken by the dairy industry, the new policy of prohibition applies not to oleo as such. It applies only to yellow oleo designed to confuse, to confound, and to deceive consumers. If people want oleomargarine they are entitled to have it, knowing what they are getting. If they ask for and pay for butter, they are entitled to get real butter, not an imitation.

Consumers, I am sure, will agree with these dairymen that deception is a factor to be discouraged in the world of food. The theory of nutritive equivalency as a criterion for legalizing consumer deception by complete imitation in foods of vastly different origin should never be recognized. As in the use of beef or horse meat, which might be equally nutritious, the consumer at all times has a right to know which she is getting.

PRESERVE CERTAIN INALIENABLE RIGHTS

In the Declaration of Independence, reference was lightly made to certain inalienable rights. Dairymen believe that among these rights are certain God-given senses with which all natural persons are endowed. In the market place and at the table, whether at home or in public eating places, we have a right to rely upon our personal senses of sight, taste, hearing, smell, and feeling to help us in our selections of food and fiber. To deliberately confuse and deceive, to deprive and take away the use of any or all of these God-given senses is a

crime against the natural and inalienable rights of consumers.

Prohibiting rather than legalizing through taxation, the production and sale of yellow oleo is in reality a magna carta for consumers. This approach makes oleomargarine just as available in an equally nutritive form. At the same time it would preserve the consumer's right to distinguish the product by sight of color at all times and in all places.

Prohibiting rather than legalizing by taxation is not only safer for consumers, but it is also fairer in the long run for the manufacturers, wholesalers, and retailers of food products.

The dairy industry today has no quarrel with the old-timers who, seeing the need for control, thought of taxation as the only means then known to regulate the unfair trade practice of deception by color imitation. The most effective approach then known was the imposition of license fees and taxes.

MORE EFFECTIVE THAN TAXATION

In the new proposal dairymen show clearly that they are not interested in taxing food if there is a more effective way to protect the consuming public against deception and the dairy farmer against insidious, unfair competition. It is their desire that merchants be freed from the bothersome detail of tax accounting.

Naturally the question is asked, How can we, without using the power of taxation and relying upon tax records, feel any assurance of adequate control? With yellow oleo prohibited, enforcement officials as well as consumers would have a clearly and easily recognized product. If found yellow in public eating places or in commerce, it would be clearly in violation of the law.

By what means would violations be apprehended? Why does the dairy industry believe the new approach can be made effective? First of all, receding from the imposition of license fees and taxes is predicated on the stand that the first step must be prohibition of the manufacture and sale of yellow oleomargarine. The new proposal also demands prohibition of deceptive advertising. It would ban pictures showing the product as yellow and would ban the use of dairy farm and other dairy scenes which would tend to confuse consumer understanding.

Enforcement of the proposed oleo control and prohibition laws would be vested in the Federal Food and Drug Administration. This agency is best equipped to detect and to prosecute violators.

How will the new proposal meet enforcement within the several States? Remember a basic request of the new proposal is that State legislation also enforce prohibition against yellow oleo. Recent decisions of the United States Supreme Court have materially broadened the interpretation of the interstate-commerce clause. Those decisions have been important factors in leading to the policy of yellow oleo prohibition and elimination of taxation, because the effect of these court decisions has been to broaden the power of Federal control within the boundaries of individual States to a degree not previously considered possible.

CONGRESS HAS THE POWER

The power of Congress to regulate interstate commerce involving commodities which are conducive to confusion, deception, and substitution was reviewed by the United States Supreme Court in the filled milk cases. In *Carolene Products Company* v. *U. S.* (323 U. S. 15, 65 S. Ct. 1 (1944)), the Court referred to the fact that "when compounded and canned, whether enriched or not, they are indistinguishable by the ordinary consumer from processed natural milk, the consumers of these compounds do not get evaporated milk. * * * The prevention of such practices or dangers through control of shipments in interstate commerce is within the power of Congress. * * * Congress evidently determined that exclusion from commerce of filled milk compounds in the semblance of milk was an appropriate method to strike at evils which it desired to suppress."

The power of Congress to regulate interstate commerce has been further defined by the United States Supreme Court in the Agricultural Marketing Agreement Act in the case of *United States* v. *Rock Royal Cooperative* (307 U. S. 533, 59 S. Ct. 993).

In the Wrightwood Dairy Case, *United States* v. *Wrightwood Dairy Company* (315 U. S. 110, 62 S. Ct. 525), the Federal Court construed the act to apply to intrastate commerce because of competition with sales in interstate commerce.

In another Federal suit where the sale of drugs had passed through one intrastate exchange the Court held that the Federal act was designed to control the product all the way through its delivery to the ultimate consumer. These are but a few examples indicating such interpretations of Federal statutes as will permit Federal regulation of intrastate activities which affect the flow of goods in interstate commerce.

In their new approach the dairy industry is showing sound judgment and fairness. It is proof sufficient that the dairymen of this country are not basically desirous of taxing competitive foods. Their insistence on color differentiation shows that their basic interest is in consumer protection and honest competition.

The test of these new proposals will come when the Eighty-first Congress convenes. What the attitude of the oleomargarine industry may be, whether or not it will insist on taking away from American consumers their inalienable rights at the market place, remains to be seen. Color is the issue. Dairymen have indicated their willingness to meet the issue fairly and squarely in a way that will protect the rights of consumers.

And remember this stand of the dairy industry is a firmer stand—not a retreat. Their stand is for outright prohibition of color deception rather than legalization and recognition by taxation.

Teamwork in Using Knowledge

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. CASE of South Dakota. Mr. Speaker, under permission granted by the House, I am placing in the RECORD a practical and thought-provoking address by Rear Adm. T. A. Solberg, Chief of Naval Research, entitled "National Cooperation in Research and Development:"

NATIONAL COOPERATION IN RESEARCH AND DEVELOPMENT

(Address by Rear Adm. T. A. Solberg, USN, Chief of Naval Research, before the American Council on Commercial Laboratories at the Mayflower Hotel, Washington, D. C., November 3, 1948)

I welcome this opportunity to address this meeting of members of the American Council of Commercial Laboratories and their distinguished guests because your problems in industry are in many ways similar to ours in the Navy. We both are interested ultimately in production items for specific utilitarian purposes: we both are eminently practical in our point of view. Yet we both fully appreciate the importance of intelligent and imaginative progress, which makes us alert to every possibility in research and development, in management, and in cooperative effort.

All through the war, and particularly on VJ-day, all of us looked forward to the days of peace with the firm conviction that we would be able to follow our own individual pursuits and at somewhat relaxed and normal peacetime rate. Such, however, has not been the case. Everyone must feel the particular stress and uncertainty of present-day life.

Surely all of us have come to realize in this postwar period that we are forever faced with the possibility of wars even more total and more disastrous to the world than any previous conflict.

* * * For our own security as a nation it may be well that we are forcibly and continuously kept on the alert rather than to run the risk of going back to the complacent attitudes which controlled our national thinking after World War I.

* * * More thought is being placed on national economic and industrial strength, and on national security than ever before. Each is complementary to the other. Each is a necessity. Had this been realized between the last two wars, we would have been much better off today.

Consequently, in distinction to what happened after World War I, industry and government have kept closer together. But much more can and should be done to improve and perpetuate that bond.

One of the important factors in the promotion of national economic strength and national security is cooperation in research and development.

TIME LAG BETWEEN DISCOVERY AND USE

History records many instances where the lack of appreciation of the necessity for integrating scientific investigation with industrial development has cost many years in progress.

For instance, the basic discovery relating to electron emission from hot bodies probably goes back to German work in the 1870's. The existence of electrons was revealed through the work of Sir James J. Thompson, H. A. Lorentz, and their coworkers at about the turn of the century. However, it was not until some 15 years later that Lee DeForrest saw the practical possibilities in this field when he developed the radio amplifier tube. The story of the subsequent development of the almost fabulous electron industry is well-known to you all.

The significant point is that the interval from basic discovery to first practical application was about 40 years, and the interval from discovery to an established industry covered 60 years.

Again, in the case of Diesel engines it was about the time of World War I that Dr. Diesel brought forth the cycle named after him. But it was not until the middle thirties that the Navy obtained the high-speed Diesel engines required for our submarines. Perhaps some of you here do not realize that our streamliner trains are powered either by those same engines or modifications of them. The time lag was, again, appreciable.

The Navy was the first to support DeForrest in the practical application of electrons and also sponsored the development of the high-speed Diesel engines.

The Navy policy always has been to have its research and development come back to the man on the street whenever possible. This is one of the reasons why the Navy is particularly interested in fostering integration and cooperation on a Nation-wide basis in the fields of science and technical development.

COORDINATION OF KNOWLEDGE NEEDED

In the last war many lives were lost, large quantities of our natural resources were expended, our national debt was greatly increased—and much of this needlessly—because we were backward in military research and development. Our combined efforts toward national defense were not applied until the thick of battle had descended on us without warning.

Even then we were handicapped. First, because we had not done enough research on our own initiative, nor had we applied what we had properly and quickly. Second, we had not integrated governmental and industrial efforts in these fields.

And, lastly, we had not taken full advantage of all the available foreign scientific information which, if it had been applied and developed, could have covered, or answered at least in part, our own deficiencies.

Previously we have depended largely on foreign sources for scientific information and on our own industry for developments arising out of that research. This imposed a big handicap to smooth and rapid progress. It was partly responsible for the large gap between the time scientific information was available and the time when the improved materials, equipment, and weapons which stemmed from research came into use.

When hostilities became imminent, there was a frantic rush to put into useful end-products, every bit of usable scientific information.

Suddenly we became conscious of the fact that our allies also could help. Not only did they have their own fund of such information, but, in addition, through their intelligence agencies, and through intensive efforts to analyze enemy equipment and procedures, they had acquired much valuable scientific and engineering data previously undisclosed by our enemies.

I see in this audience several faces of those who visited and revisited in London for the specific purpose of picking up this information, bringing it home, and quickly translating it into our own useful war purposes.

Now conditions are changed. Foreign sources of new scientific knowledge are meager or nonexistent. We do, however, have access to much work which some of our former allies generously make available to us. Both they and we must break through the barriers and frontiers of science, which today are more challenging than ever before. The easy discoveries already have been made, and as we progress in science each step becomes more difficult and more costly. Research in nuclear physics, supersonic dynamics, and high-temperature metallurgy are typical examples of this.

It appears today that in research, and perhaps also in development, we have made at least a start on the road to becoming more self-reliant and more independent. During and since the last years of the war, industry has both expanded and added greatly to its research facilities. Industry, too, has wisely chosen the method of establishing nominally independent research departments under special management. The services also have recognized that they must be responsible for certain areas of research. But that is not enough.

CONGRESS SPONSORS RESEARCH

The Navy, speaking for my own service, was fortunate in that Congress established the Navy's position in research by creating the Office of Naval Research.

One of the chief functions of that Office is the planning, initiation, and support of basic research. About 75 percent of the funds go to universities and nonprofit institutions, and the balance is divided between industrial research laboratories and other Government agencies. The major portion is with academic institutions since there we find ample competent personnel to carry out our planned programs.

These programs, I should like to add, are designed to support in every possible way the development programs of the material bureaus. The results also are made available to the other services. This method of conducting our research not only gets the job done as far as funds permit, but also gives us the important byproduct of creating increased numbers of competent scientific personnel.

One university in one department has been able to double its output of doctorate students through support by the Office of Naval Research.

* * * * *

Looking at our past procedures in research and development, it appears that no comprehensive study has been made of methods of integrating scientific research and technical development. The lack of this has contributed to the large time gaps between the access of scientific data and the end products which come out of research. In fact one of the important problems of modern technology is that of streamlining this process.

As corollary to this, it does not appear that there has been, or that there is today, enough coordination and integration within the physical sciences themselves. There has been too much tendency for each individual scientific group to remain aloof from the others. To be sure, this is natural in view of the high degree of specialization required in modern science.

But today no one branch of science can be self-sufficient unto itself.

The compartmentation which exists in science today is disastrous to progress and to coordinated attack on any scientific barrier. The physicist needs the help of the chemist, and the chemist needs the physicist. The metallurgist needs the help of both. All need the help of the mathematician.

It is perhaps too early to determine what nuclear physics can contribute toward progress in the other branches of science. But it already is evident that its impact will be great, and therefore any effort in that direction can be expected to reap great benefits.

CONFERENCES TO EXCHANGE KNOWLEDGE

I personally am interested in seeing that the Office of Naval Research offers scientists in the same field of specialization every opportunity to confer with each other and with their colleagues in other sciences. I recently have made a point of discussing this with various directors of research among our contractors. We intend to continue our practice of calling conferences for discussion of highly important aspects of present-day research whenever it appears desirable.

Also, we intend to expand our work in conducting symposiums on subjects of interest to both industry and the services. Next week we have a large one on titanium. We are arranging jointly with the University of California for a symposium on research in the extreme low-temperature fields. In each case every effort is made to invite personnel from all interested agencies.

We feel that these efforts will contribute greatly toward promoting cooperation between Government, industry, and universities.

The above is only one aspect of the problem. Basic research also needs intimate integration with those who are responsible for applied research and development.

It will be in the interest of progress if the research scientist is made to realize the responsibilities and problems of the development engineer or technician.

The development engineer, by the same token, must be made to acquire a keen appreciation and understanding of the sciences underlying his interests. At some stage in the research process, definitely not at the end, they should collaborate. Only in this way can inordinately large gaps and delays between research and development be avoided.

Too often the applied scientist and the process and development engineer get their first information from a wrapped-up package of completed research.

The above ideas apply equally well between the development and production stages. However, there is a broader field where integration and coordination are necessary. That field lies in the industrial and governmental agencies which separately are striving for industrial progress and national security. In many respects they are complementary, and in many cases their aims are the same.

Are their efforts being integrated and coordinated so that both objectives are being attained to the maximum possible? I fear not.

To me, it is such an important point in our lives today that it merits much consideration and study by both industry and government. It will require the talents of many leaders in these fields on a continuing basis to insure that for all time to come our progress in industrial and national preparedness never lags but continuously advances.

A great portion of their efforts must be applied solely toward this problem of integrating and coordinating the efforts of all who are concerned with research and development.

THREE PROBLEMS IN COORDINATION

In this meeting sponsored by the American Council of Commercial Laboratories I feel that there is no more important message I can bring to you than to invite your attention to the topic of my address, "National Cooperation in Research and Development." In this respect, I believe we are confronted with at least three problems: (1) Collaboration between scientists not only in special fields but also in related fields; (2) cooperation between universities, industry, and the military; and (3) integration of research, development, and production.

Collaboration on the part of scientists will speed new discoveries and not only build up our store of knowledge, but will provide the means for more rapid progress. Less duplication will result. Time will be saved.

Neither the universities nor industry could long exist one without the other. Without them the military would be relegated to the scrap heap. The Navy recognizes that most major developments, either military or civilian, have always been shouldered by industry. On the other hand, in these days of turmoil and fear and suspicion it is self-evident that without the military of this country freedom of thought and industrial enterprise could not long exist. Certainly their cooperation is justified.

In order to progress, whether in military or civilian activities, we must apply basic knowledge to get the end products. Our rate of progress depends on our ability to rapidly understand and assimilate nature's phenomena. This calls for real teamwork in science and technology.

Your perspective naturally is broad and, therefore, can be very helpful, since you are interested in research, development, and also in the testing of the end results. Because of your varied and important coverage in so many fields of interest to the military establishment, your experience should be of great value in suggesting and working out the ways and means of such cooperation.

What can be done about these problems?

We must disseminate and exchange information. Without this exchange, time will be lost. There are, of course, confidential

areas both in the services and in industry which require special treatment. I believe it is of the greatest importance that these particular areas be integrated as soon as practicable and that there be direct, even though limited, exchange between industry and the military agency concerned.

My office has already laid before industry, through the Navy Industrial Association, a comprehensive picture of the Navy's research and development program. It is hoped that their interest will serve as a starting point for progress.

The Office of Naval Research sponsors a science and technology project with the Library of Congress, where all unclassified work is abstracted, indexed, and distributed not only to Government agencies, but also to industry qualified to receive such information because of work on a naval contract. It is our hope that this work will stimulate and increase the exchange and dissemination of information on a broader basis.

From our experience it is evident that support of basic research in universities and other technical institutions could be increased twofold. There are no doubt many who would oppose the use of academic institutions by industry. However, there are many advantages in using such facilities for basic research.

I firmly believe that, if selected basic work were so placed under well-controlled conditions, not only industry and the colleges would profit but also our national resources in science would be strengthened.

Another means of establishing good working cooperation is by the exchange of personnel.

It is believed that opportunities can be found here and there whereby research workers may be selected for an exchange tour of duty. If such exchanges can be made, without affecting the position and tenure of the individual concerned, there are many advantages to be gained both to the individual and to his establishment, whether it be industrial, academic, or government. My office already has such a policy in effect in its relations with universities.

Cooperative enterprise is one of the national assets of which we may justly feel proud. During the years 1940 through 1945 this shoulder-to-shoulder teamwork reached its peak, and we demonstrated to the world what a country of free individuals can accomplish.

Now, following conversion to peacetime status, we appreciate that the problems of peace are likewise proving to be grave. Furthermore, gradually the sinister fact becomes increasingly evident that we are not yet free to assume a world without the possibility of modern total war, and it becomes the paramount obligation of all of us to see that our magnificent and essential power of coordination is retained. This is surely possible and desirable in the broad field of research and development.

Effective cooperation is never achieved by words and intentions alone. Effective cooperation can only take place when the leaders of the country's efforts in industry, government, and academic life keep the goal constantly in mind and insure that the procedures are established and continuously improved to that end. The greatest and speediest improvement might well be accomplished by the action work of a selected group studying the problems involved.

It is my earnest hope, therefore, that we may each and all give much thought and effort toward improving our present procedures and our present position with regard to Nation-wide cooperation in research and development.

And, finally, that eventually there can be devised a program of national cooperation in research and development.

Nebraska State Association of Soil Conservation Districts Conducts a Fine Program

---

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. CURTIS. Mr. Speaker, the farmers of the State of Nebraska are very much interested in soil conservation. I am indebted to Mr. Everett M. Barr, president of the Nebraska State Association of Soil Conservation Districts, for a copy of the resolutions that passed at their recent meeting.

Mr. Speaker, I wish to extend my remarks by including a copy of the said resolutions:

RESOLUTIONS OF THE NEBRASKA STATE ASSOCIATION OF SOIL CONSERVATION DISTRICTS

I

Be it resolved by the Nebraska State Association of Soil Conservation District Supervisors, That the Soil Conservation Service of the United States Department of Agriculture be commended for the high quality technical assistance being rendered to the soil conservation districts; and be it further

Resolved, That our Congressmen and Senators be informed of the further need for this technical assistance commensurate with the increasing demand by farmers for help in planning and application of conservation to the farms and ranches of the State and Nation.

II

Be it resolved by the Nebraska State Association of Soil Conservation District Supervisors, That the Nebraska congressional delegation be urged to give full support to a land policy which would coordinate the efforts of Federal agencies now dedicated to proper land use.

III

Whereas the conservation of our soil and water resources is a joint responsibility of the community, State, and Nation; and

Whereas (1) the communities of Nebraska, to fulfill this responsibility, have organized 83 soil-conservation districts, including 98 percent of the farms and ranches of the State.

(2) The State is making available to these districts the results of scientific research, surveys, educational services, and other necessary support.

(3) The Federal Government, through its Soil Conservation Service, is furnishing qualified technicians to assist in the operation program of the district.

Whereas we now have a coordinated program of Federal, State, and community action on soil and water conservation, operating through soil-conservation districts under Federal and State law, in accordance with long-established agreements and understandings between the agencies involved, which program is bringing the services of the State and Federal agencies such as the experiment stations, Agriculture Extension Service, Conservation and Surveys Division, United States Soil Conservation Service, and other State and Federal services, into effective, correlated conservation action on the land.

Whereas soil-conservation legislation has been enacted in all the States and working agreements and understandings similar to those described above have been, or are, being established in all States and are now serving effectively in an action program: Therefore, be it

Resolved, That we, the supervisors of soil-conservation districts, representing 83 such districts and 98 percent of the farms and ranches of the State of Nebraska, do recommend:

(1) That action be taken to continue and strengthen this coordinated technical conservation program;

(2) That the technical services of the USDA be continued as at present through the Soil Conservation Service in cooperation with the States and districts, and strengthened as necessary to meet the increasing demand for this service by farmers until such a time as a more comprehensive land policy be adopted;

(3) That necessary action be taken and appropriations made to furnish assistance to soil-conservation districts through the Soil Conservation Service of the USDA to carry out an aggressive program of flood-control action on agricultural land as now defined by law;

(4) That the Secretary of Agriculture and/or Congress maintain the USDA program of technical assistance separate and distinct from its program of economic assistance and guidance;

(5) That the Secretary of Agriculture and the Congress so define and delineate the functions and responsibilities of the agencies of the USDA involved so that—

(a) The Soil Conservation Service, or a new and more comprehensive technical agency, will definitely have the responsibility for all technical assistance furnished by the USDA in soil and water conservation, and so that such assistance will continue to be made available in and through the soil-conservation districts.

(b) That any other type of assistance furnished to farmers by the USDA relating to agricultural conservation be furnished with due recognition of the technical responsibility of soil-conservation districts.

(c) That all services furnished by the USDA be so defined that conflict in service and duplication of activities will be prevented and coordinated effort will be established.

IV

Whereas the State soil-conservation committee of the State of Nebraska has rendered an invaluable service to the people of the State over the past 11 years through their devotion to the advancement of a comprehensive soil- and water-conservation program throughout the State under the principles of true American democracy: Now, therefore, be it

Resolved by the State Association of Soil Conservation Districts, That we commend the members of said committee, both past and present, for their effective service in the program of soil and water conservation now in operation in the State. To the retired members of this committee, Mr. W. W. Burr and Mr. W. R. Brokaw we extend sincere thanks and deep gratitude. To the new members of this committee, Dean W. V. Lambert and Director H. C. Gould, we extend welcome and we pledge to them and to Dean G. E. Condra our continued full cooperation and active assistance.

V

Whereas the Honorable Val Peterson, Governor of our State, has so admirably demonstrated his intense interest and active support of the soil- and water-conservation program of the soil-conservation districts of Nebraska: Now, therefore, be it

Resolved by the State Association of Soil Conservation Districts, That this body extend to the Governor its sincere appreciation and deep gratitude for his valued interest and splendid support of the soil-conservation districts of the State. To him, we pledge

our continued active cooperation in the conservation program of this State.

VI

Whereas the Nebraska Association of Soil Conservation Districts realize the new responsibilities which Gov. Val Peterson has assumed as chairman of the Missouri River States Committee of the Missouri Basin; and

Whereas they realize the importance to the whole economy of the people of the basin that this program be successfully developed; and

Whereas they realize the great importance of the authorized United States Department of Agriculture flood-control program in the proper development of the economy of the basin; and

Whereas the Nebraska Association of Soil Conservation Districts realize this program can never be fully developed without the understanding and full cooperation of all soil-conservation districts in the basin States, and realizing the added responsibility placed on the soil-conservation districts in the development of watershed protection in conjunction with the authorized flood-control program of the United States Department of Agriculture: Therefore be it

Resolved, That we pledge our complete cooperation to the Governor in his efforts to bring about the Missouri Basin development and in advising the people of our districts of its importance and their responsibility; be it

Resolved by the Nebraska Association of Soil Conservation Districts, That this be an expression of appreciation by the soil-conservation district supervisors to:

1. The Omaha World-Herald, and in particular Mr. Henry Doorly, publisher, as well as Mr. T. W. Summers, promotion manager, and Mr. Max Coffey, farm editor, for their generous and their outstanding interest and support in sponsoring the soil-conservation recognition program in districts throughout Nebraska and part of Iowa.

2. The Sioux City Journal Tribune publications and Sioux City Chamber of Commerce for their leadership and active interest and support in sponsoring the permanent agriculture program throughout 14 counties of northeast Nebraska and surrounding Sioux City trade territory within adjoining States.

3. To the newspapers and farm papers, both daily and weekly, and to the radio stations which have publicized extensive information regularly on the need for conservation, what people are doing in this endeavor, and the results they have received from such accomplishments.

4. To the many chambers of commerce, commercial clubs and other civic organizations, religious groups, and school officials, bankers, merchants, and other individuals who have contributed financially and with labor for their splendid support in pushing the soil- and water-conservation program more rapidly and extensively throughout the communities within the State.

5. To the many industries and in particular the farm equipment companies, who have been generous in their support financially and otherwise for the expansion of the complete soil- and water-conservation program.

Where Is the Voice of America's Conscience?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article by Mr. Alfred Kohlberg entitled "We Will Still Have To Live With Ourselves." It is a thought-provoking and challenging article and I am sure it will be of interest to Members of this House:

As long as our Republic lasts—no matter how much the people of the world may hate, revile, and distrust us, justly or unjustly—we must live with ourselves. Under our system of freedom—economic, political, educational, and religious—we have developed between two oceans a continent of individual human freedom and physical and economic well-being never before approached in the long history of mankind. As a result, but without conscious intention, we have developed a power—economic, military, and political—that makes us decisive in the world's affairs. But what of our educational, moral, and religious strength? Have we stood and do we now stand for the application of those moral and religious principles in the world's affairs which we so loudly profess? Have we professed our principles to the world, had them accepted by the world; have we and our allies fought for these principles and won in their name, only, on the day of victory, to meanly, secretly, and lyingly abandon them? While professing God, have we secretly served the devil? Have we played the part of Judas? Have we deceived our coworkers in the vineyard of the Lord, our allies for the right, as we and they saw the right, and while so deceiving them have we betrayed them into the tyranny and slavery of the latter-day devil, even though without receiving our pieces of silver? And if we did so, did we do it with evil intent; or were we slothful and so neglectful of our duty to our fellow men that we permitted our faithless servants to do this evil in our name?

Let us observe ourselves and our sins of commission and omission, dispassionately and objectively.

Three weeks after Pearl Harbor we gathered our allies against the Axis in Washington, and there, in the first meeting of the United Nations, we wrote down and proclaimed the principles for which we were fighting World War II. This was our solemn pledge to our allies and to the people of the world, allied, neutral, and enemy alike. It was likewise our allies' solemn pledge to us.

Among other statements we pledged: Our "countries seek no aggrandizement, territorial or other." "Second, they desire to seek no territorial changes that do not accord with the freely expressed wishes of the people concerned." "Third, they respect the right of all peoples to choose the form of government under which they will live; and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them." These, and more, were the solemn pledges of the Big Three, Russia, Britain, and the United States of America.

Those were the solemn pledges to the Poles who fought in the underground, and in the air over Britain; to the million Poles, who streamed out of the forced-labor camps of the Soviet Union, to the Poles who fought in north Africa, at Cassino, and in France. Those were the pledges for which 250,000 Poles died in the Warsaw uprising called for by the Soviet radio.

These were the solemn pledges that induced the Chinese to struggle and die by the millions for another 3½ years after Pearl Harbor, refusing all Japanese offers for a favorable peace and finally turning over 1,500,000 POW's to our General Wedemeyer—1,500,000 whom our boys didn't have to face in the Pacific islands.

These were the solemn pledges to our Yugoslav and Czechoslovak allies, to our Estonian, Lithuanian, Latvian, and Greek allies and also to our German, Austrian, Italian, Hungarian, Bulgarian, Rumanian, and Japanese enemies.

These pledges were made specific in special agreements, pacts, and declarations from time to time. For example, at Cairo in December 1943 in a public document signed by Churchill, Roosevelt, and Chiang Kai-shek we proclaimed:

"All the territories Japan has stolen from the Chinese, such as Manchuria, Formosa, and the Pescadores, shall be restored to the Republic of China."

Meantime, at the Tehran, Yalta, Potsdam and Moscow conferences and elsewhere, deals, some secret and some public, were made; sometimes in plain language and sometimes in weasel words. In these deals we gave Poland, Lithuania, Latvia, Estonia, Yugoslavia, northern Korea, and Manchuria to the Soviets in violation of all pledges. In peace treaties we turned over Rumania, Hungary, and Bulgaria to the tender mercies of the Soviets. Most of Austria and eastern Germany were sold into the same slavery. In China we immobilized the armies of the Republic by truce after truce until the Russians could arm the farm boys conscripted by the Communist dictators to overthrow our loyal ally, our only friend in the Far East except for the Philippines.

We dishonored our pledges. We betrayed 235,000,000 of our friends and allies to whom we had pledged the right "to choose the form of government under which they shall live." And we betrayed 90,000,000 of our enemies to whom we made the same pledges.

These betrayals were made by our appointed and elected servants, from Presidents to Secretaries of State and their advisers. We not only did not resist these infamies but actually approved them ostensibly because we feared the Soviet Union would desert us and make a separate peace, or because we didn't know the evil character of the dictator in the Kremlin, or because it may have saved some American lives over Japan, or because the President was ill and tired and his secret advisers pressed him to agree, or, as Elliott Roosevelt wrote, because they drank too much, or because, very simply, we were, and are, frightened by secret threats by Soviet diplomats.

Yet, even now, 4 years later, as we hear the cries of anguish from the slaves we traded into bondage in Czechoslovakia, from those few who escape from the Baltic countries in small boats to our shores, from the millions of Chinese who flee the terror of the Communist advance, and from the broken men who trickle back to Japan, Germany, Austria, and Italy from the slave camps of Russia, no American voices rise to say, "We are our brothers' keeper." We say, instead, of those Iranians and Greeks and Koreans and Chinese who hold back the Red tide of godless iniquity that threatens to break its bounds and overwhelm the world, that they must be corrupt and inefficient and maybe not quite democratic.

When we face the broken refugees from the nations we have sold into slavery, do we say, "Forgive us, for we knew not what we did?" or do we wear a mantle of false self-righteousness?

After observing the fate of China, of Poland, of Yugoslavia, and our other allies and fellow members of the original United Nations as organized January 1, 1942, who dares trust us? Even the Stalinist dictatorship has not stooped so low. However ruthless it has been to the allies who stood by its side in the terrible years of 1941 and 1942—China, Poland, Yugoslavia, Britain, and ourselves—it has kept the faith with that small minority of Communist agents who comprise its fifth column in every country in the world. It has observed its pledged official promise to destroy every free or capitalist government. If we did not know or did not believe those promises, that was only another factor in our mental and moral breakdown.

When do we awake to our infamy; when do we confess the sins committed against

our fellow men; when do we do penance for our past and seek to undo that evil—at least in part; or do we continue to meet with the slave master of the Kremlin and appease him with more millions of hapless humans while we talk of peace and justice?

Where is the voice of America's conscience? Why is it stilled? Even if we do not value the respect of the free men of the world, do we no longer value our own self-respect?

Where are the voices of Americans who can rouse us to disown the faithless servants who signed the documents that bound 300,000,000 people into a state slavery worse than the human slavery in our antebellum South? Where are the Wendell Phillips and William Lloyd Garrisons of twentieth-century America?

Pennsylvania Grange News Tells of Hawaii's Great Growth

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose an article from the November 1948 issue of the Pennsylvania Grange News, entitled "Hawaii, U. S. A., the Garden Spot of the Pacific," by Otto G. Janssen.

The article follows:

Shortly before Pearl Harbor, a writer from Hawaii traveling in the South stopped at the campus of his old alma mater to pay a visit to one of his favorite professors.

A colored gardener told him the professor was away for the summer.

"That's too bad," the writer said. "I wonder if you'd tell him his student from Hawaii called."

"From where?" the gardener asked.

"From Hawaii—way out in the middle of the Pacific Ocean."

"My, my!" the gardener exclaimed. "Way out in the middle of the Mississippi Ocean!"

Today, Hawaii isn't the geographical abstraction it seemed a few years ago. Thousands of farm boys who were stationed there during the war know more about the islands than they do many of the States. Postwar air travel has made Honolulu closer to Washington, D. C., than were most American cities just a few decades ago. The movement to make Hawaii a State has made the mid-Pacific Territory a topic of discussion in every home and classroom throughout the land.

Yet, there are many things about this typically American community that are not familiar to the average person.

For example, many people have little notion about the size of the place. It may come as a surprise that Hawaii is more populous than six of the States—Nevada, Wyoming, Delaware, Vermont, Montana, and Idaho. Official statistics for 1948 show a population for Hawaii of 540,500, nearly 90 percent of whom are American citizens. The city of Honolulu, with a population of 273,021, is comparable in size to Akron, Ohio, or Long Beach, California. Although, like the United States, Hawaii is a melting pot of many races, the majority of her citizens are Caucasians.

Hawaii is small in area, but it is larger than three of the States—Connecticut, Delaware, and Rhode Island. In fact, it is larger than the latter two combined.

The war emphasized Hawaii's importance as an agricultural producer, but few realize the high degree of technological progress her two main industries—sugar and pineapple—have attained. They are among the most highly mechanized and integrated agricultural producers in the world.

Ingenious machines harvest and lift the cane from the fields; mammoth trucks, railway cars, and elevated flumes transport it to the mills; crushers, centrifugals, and other machines convert it to raw sugar, ready for shipment to the mainland. A large percentage of Hawaiian sugar is now "bulk-loaded" instead of being bagged, thereby saving considerable time and expense. One out of every seven pounds of sugar consumed in the United States comes from Hawaii.

Comparable processes exist in the pineapple industry. Endless belts carry the fruit from field to portable bins; four-wheeled "go-devils" load trailer units for transport to Hawaii's nine canneries. Inside the canneries Ginaca machines, invented and developed in Hawaii, shell and core fruit in one operation, at the rate of 90 a minute. Ninety percent of the world's supply—18,000,000 cases annually—bears the "Made in Hawaii" label.

There are many other intriguing facts about these two industries. Hawaii's sugar farm workers are the best paid in the world on an annual basis. Both industries have developed at their own expense experiment stations that have won world recognition for their plant research and insect and plant disease control and irrigation projects.

To meet Hawaii's special conditions of terrain, much of the machinery and equipment is blueprinted and manufactured in the industries' own drafting rooms and machine shops.

Although sugar and pineapple constitute the backbone of Hawaii's economy, there are some 4,000 farms producing other products such as livestock, papayas, mangoes, coffee, macadamia nuts, rice, honey and vegetables.

The Parker Ranch on the Island of Hawaii is the second largest ranch in the United States, covering more than half a million acres.

Farmers of Hawaii are quick to take advantage of modern improvements. For example, "fresh" cows are flown to Honolulu and "dry" ones taken to the grasslands by air freight. Growers of orchids and other exotic flowers are doing a bustling trade in air shipment of blooms to mainland cities.

Although Hawaii is about 2,000 miles from the mainland, a lot of people do not realize that modern means of communication such as the airplane, radio, and teletype have kept Hawaii apace with the rest of the United States. The newsboy at the corner of Hotel and Alakea Streets in Honolulu shouts the same headlines as the vendor on the corner of Broad and High Streets in Columbus.

Recently, a motorist driving along a New York street in his convertible picked up his auto telephone and passed the time of day with a chap riding down Kaneohe Boulevard in Honolulu. A housewife shopping in a supermarket in Waikiki probably fills her basket with the same brand of catsup, soap, breakfast cereals, and frozen peas as her counterpart in Gary, Ind. Her husband most likely rides to work in the same make of bus as does the average mainland wage earner. Her youngsters shriek just as excitedly at "Roy Rogers" at Saturday matinees, and await the next issue of Superman comics with the same enthusiasm as the young people do in the States.

Hawaii has nine radio stations which feature all the major national network programs. The Lone Ranger, Portia Faces Life, and Bing Crosby programs are just as much a part of the evening's entertainment for the family in Hawaii as they are for millions of continental homes.

In addition to the national magazines to be found on every newsstand, Hawaii also has a good assortment of publications of its own. Fourteen newspapers are published in the Territory, including two dailies in Honolulu with circulations around 150,000 each. Magazines include the well-known Paradise of the Pacific, which recently celebrated its sixtieth year of publication, and Farm and Home, which is widely read by Hawaii's farm families.

Recently, Hawaii's Delegate to Congress, JOSEPH R. FARRINGTON, who introduced the Hawaiian statehood bill in the last Congress, was asked whether the people of Hawaii realized that they would have to pay taxes if Hawaii became a State. The fact is, of course, that the people of Hawaii have been struggling over the same income-tax blanks as the mainlanders. Last year they poured $107,000,000 into the Federal Treasury, more than was paid by 12 of the States.

As on the mainland, the church spire is a familiar landmark wherever one goes in the Territory. There are some 300 churches throughout the islands, representing all the major Christian denominations. Christianity was introduced to the islands by the New England missionaries a century and a quarter ago.

People going to Hawaii from the mainland sometimes inquire whether there are any American schools to which they can send their children. They are usually surprised to learn that the American pattern of education was established in Hawaii more than 100 years ago when the islands were still under a monarchy. English became the official language in the schools long before annexation. Back in the days of the California gold rush, many of the forty-niners sent their children to Hawaii to be educated. The sea voyage to the islands was faster and safer than the overland journey to the East.

Hawaii's public-school system ranks well above the standard in most American communities. There are 185 schools, with an enrollment of more than 80,000 and a teaching staff of 3,500. The University of Hawaii is a land-grant college like many other State universities with an enrollment of close to 4,000. In addition, there are 152 private schools and colleges. Although Hawaii's school children are of many racial stocks, more than 99 percent of them are American citizens. It is no wonder that a child in Hawaii of Chinese ancestry speaks quite naturally of our pilgrim forefathers.

Design for Election

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Sioux City Journal of Sioux City, Iowa, on January 20, 1949:

DESIGN FOR ELECTION

Representative CHARLES B. HOEVEN of the Eighth Iowa District has called attention to the socialistic trend of the Truman fair deal and has expressed his own doubts and fears about the future if the heavy spending and burdensome taxation contemplated to pay for sweeping reforms got the approval of the Congress. He sees Mr. Truman as left of center. He thinks the President is recommending that America embark on a course of spending and redistribution of property which has many of the earmarks of a program of state socialism such as weakened Great Britain and caused the economic disintegration of Europe.

Mr. Hoeven is a Member of the House of Representatives and a stanch Republican. He is a sound thinker, a good observer, a man who is blessed with practical common sense and one who believes in the free-enterprise system. He has not indicated at any time that he has any of the characteristics of the reactionary in politics. Instead, he has kept in step with the times, believing in evolution for a political party and recognizing that it must make adjustments according to changing social and economic conditions. He must be aware of what the Democratic administration is doing right now as it launches its so-called Fair Deal. Indeed there will be few persons failing to recognize it as a design for election, as a means to retain power.

It is not the first illustration of an election design. Franklin D. Roosevelt practiced it throughout his administrations. He catered to the "forgotten man" back in the New Deal days. He went farther than that, made a bold bid for labor's support by putting through legislation drafted to give it an unfair advantage over industry. And he went still further as he courted the subversive groups and rewarded them with Federal employment. All this was a design for election and reelection. It was much more political than eleemosynary; it was more a bid for support at the polls than an outpouring from a compassionate heart.

Mr. Truman has sensed just as Mr. Roosevelt did that vast numbers of the American people are susceptible to overtures from the Federal Government and that they eagerly respond when Uncle Sam dons a Santa Claus suit and insists upon its being Christmas from year's end to year's end. That is the incentive in the Truman proposals for widespread reform, for pouring out funds raised by heavier taxation and giving them in one form or another as largess to persons who thus have their own initiative, their own self-reliance, and their own dependability weakened and undermined. Indeed, if Uncle Sam is to stand ready at all times to succor the improvident, the waster, the ne'er-do-well, the unreliable, he will have more of them year by year accepting his gratuities.

This appeal to the cupidity of the American people may be politically clever, but it won't keep America great. We have been standing on our own feet as a people throughout our existence as a nation and we ought to stand like that ready to seize or create our opportunities and develop in character as we exploit our human and material resources. We shall be distressingly unfortunate if most of us permit this design for election to deceive us and forfeit in the process our birthright, political freedom as well as economic independence and social liberty. May a kind fate save us from becoming willing mendicants accepting hand-outs from any political party.

Extravagance in Government Spending

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, January 24, 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article which I prepared on extravagant Government spending, entitled "Where To Swing the Ax," and which appeared in the December issue of American magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHERE TO SWING THE AX

(By STYLES BRIDGES, United States Senator from New Hampshire)

The great responsibility that faces our national administration in America, I believe, is to put our Federal house in order. At present it is in fantastic and expensive disorder.

For 16 years the vines of bureaucracy have been spreading and intertwining themselves around our Nation's Capital. Today they are literally threatening to choke out our democratic way of life. There is a desperate need to prune and retrain this growth. But, believe me, it will be no easy or popular job.

I have spent most of the past 2 years grappling with the vines in this luxuriant wilderness. They are unbelievably tough and hard to get at. My committee cut away billions of dollars' worth of growth, only to find new vines shooting out in many other directions. To our dismay we found that despite our strenuous efforts, the Federal civilian pay roll will still increase by almost 150,000 officeholders this year.

Frankly, the rampant growth of our Federal Government frightens me. And my New England sense of thrift is outraged when I consider that my State of New Hampshire can be run for 8 years on what it takes to run our Federal Government for a single day.

Since the early thirties the executive branch of our Government has been growing like Jack's beanstalk. In 16 years the number of bureaus and agencies has shot up from 521 to 1,816. Federal expenditures to pay for these offshoots have increased 817 percent.

Our founding fathers, I suspect, would be appalled by the overwhelming power of entrenched, administrative bureaucracy in Washington today. As you may recall, they set up three equal branches of government—the Congress, the courts, and the administration, to serve as checks on one another. Today the administration has grown 49 times as big as Congress and the courts combined.

Perhaps you can comprehend now why it has been no simple matter for Congress to force economy and efficiency upon the administration. Sometimes in the past we have felt like Jack talking tough to the Giant.

What is most disturbing is that our Government has gotten so gigantic and so far into debt that we find ourselves up in a wild blue yonder where bureaucrats solemnly propose outlandish projects and talk casually in billions. Once I was arguing with an administrator about the necessity for a $8,000,000 project he was promoting. When he ran out of logical justifications, he hinted that he thought I was making an awfully big fuss over just "a little $8,000,000 item." Bureaucrats have a favorite wisecrack for referring to such picayune amounts of money: They are "only a drop in the budget."

In such a giddy atmosphere it is sometimes hard to realize that we have history's biggest mortgage hanging over our heads—$252,000,000,000. If that mortgage and the tax cost of our Federal Government cannot soon be reduced I believe we are heading into a national crisis. Already our tax rate is draining the fundamental savings of the American people into the United States Treasury, and is drying up the sources of venture capital, which supports our free enterprise system.

You may wonder how we got into this mess. It started, of course, when the New Deal decided that the solution to the depression was paternalism and pump-priming. In pump-priming, the theory is that it doesn't make much difference how you spend the money—just spend it. Then came the war, with its urgent requirements and its philosophy that money's no object!" More hundreds of new bureaus, piled helter-skelter.

Now we have peace and unparalleled prosperity, but we are still saddled with practically all of those emergency New Deal and wartime bureaus. Only the labels on the doors are different. We are finding there is nothing so permanent as a temporary bureaucrat. Of all the hundreds of wartime bureaus we have fully eliminated only one: the Office of Censorship.

At last we are beginning to appreciate the superb resourcefulness of the entrenched bureaucrat. Only a bureaucrat, for example, would think of camouflaging an unneeded photographer by keeping him on the books as a visual presentation information specialist.

Most of our Washington bureaucrats have a good deal of latent WPA-type evangelism in their souls and keep looking for new worlds to conquer. We call them empire builders. If they have gathered all the statistics that can conceivably be collected about funeral directors, they turn to producing vital statistics on the United States production of wheelbarrows, windmills, or glue. A Cabinet officer once expressed the conviction that if we let the military bureaucrats in the Pentagon have free rein, they would soon be literally trying to fortify the moon.

If one bureaucrat finds that a rival has acquired an outer office, two secretaries, and a red rug, he will—in monkey-see, monkey-do fashion—not be content till he has them, too.

Furthermore, the civil service (a hotbed of bureaucrats) encourages empire building by basing a bureaucrat's pay, among other things, on the number of underlings he can contrive to keep on his staff, rather than on the quality and efficiency of his work.

Congress has made a start in coping with these expensive swivel-chair imperialists. This past year we succeeded, for the first time in 17 years, in bringing the budget into balance, even though at a very high level.

It is high time for us to take a long, hard look at our Federal Government. What practices should be overhauled and what functions and services might well be abandoned or sharply curtailed? I will try to touch what I consider to be some high spots.

Consider first the lavish, unbusinesslike use the Federal Government makes of its manpower. In the past few years, for example, our bureaucrats have gone personnel crazy. They have hired 24,288 personnel specialists, who make an elaborate ritual of hiring the other help. While private industry gets along nicely with 1 personnel worker for every 226 employees, the Federal Government feels it needs 1 personnel specialist for every 83 employees. Congressional investigators concluded recently that the administration could save taxpayers $25,000,000 a year merely by making more efficient use of its personnel experts.

Or consider a few of the lavish ways the bureaucrats throw your money around on Alice-in-Wonderland boondoggling projects.

I'm thinking, for example, of the 124 steel filing cabinets that are unavailable for urgent projects because they are filled with 150,000 photographs taken at a cost of $750,000 by the Farm Security Administration and the OWI. The pictures bear such provocative captions as "Men Picking Their Teeth," "Oil Cans at the Side of a Filling Station," and "Fat Man Dozing." I believe we all can think of more effective ways for the Government to spend $750,000—and to use 124 steel cabinets.

That's a minor item, however, compared with the $55,000,000 spent each year just to bind and print the 41,000 books, booklets, reports, etc., that our bureaucrats deem to be deathless prose. (Among its other activities the United States Government is the world's No. 1 publisher.)

These United States Government publications have so aroused my curiosity that I

have been making an exhaustive study of them. Here are some samples that I picked up at random a few minutes ago from my collection: Mist Netting for Birds in Japan; Tales from Korea, by Y. T. Pyun; The Peruvian Fisheries; How To Talk on the Radio; Bat-Proofing of Buildings; Habits, Food, and Economic Status of the Band-Tailed Pigeon.

The publication on bat-proofing a building goes into considerable detail, but, as I gather it, the trick is simply this: You open a door of your building early in the evening to let the bats out. Then, when they leave, you close the door. That's bat-proofing a building.

These publications are typically printed up in lots of tens and hundreds of thousands, though it is hard to conceive of more than an extremely limited number of people being interested in them.

The Government Printing Office will testify to the profound lack of public interest in most of these publications. This is a sore point with GPO officials, because their storage rooms are jammed to the ceiling with hundreds of tons of dead, undistributed brainstorm publications that can't even be given away. I would suggest that the Government save the taxpayer $25,000,000 or so a year by confining the literary enthusiasm of its bureaucrats to obviously justifiable projects.

Let me mention a few other examples of the monumental lack of concern bureau chiefs often show for the taxpayers' pocketbook. We discovered last year an interesting $26,000,000 item buried in a mountain of justifications. The Air Force wanted to switch to a new-style uniform even though it still had available a huge backlog of the present-style uniform. The request was denied.

During hearings on interim aid to Europe, State Department officials proposed to buy more than a million tons of wheat at $125 a ton. We pointed out to them that just around the corner the Government's own Commodity Credit Corporation was selling wheat for $117. Why didn't they buy there? They did, at a saving to the taxpayer of $12,000,000.

We learned of another example of costly carelessness too late to prevent it. The Army tore down a multimillion-dollar camp in Alaska and sent the lumber to Seattle. There the Interior Department bought the lumber and shipped it right back to a point in Alaska within 10 miles from where the Army had shipped it.

Such follies do not even surprise anyone at all familiar with the interworkings of our Government with its jerry-built, feebly coordinated bureaus. There is continual duplication and working at cross-purposes. I earnestly hope we can bring the multitude of agencies into a tighter organizational structure and eliminate costly duplications of effort.

One consolidation might be made by bringing the 45 different offices or agencies concerned with housing, often unknown to one another, together. Most of these could be consolidated into one or two central housing agencies. The beauty of this, to the taxpayer, would be that a large number of agency heads would be reduced to bureau chiefs, at great savings in salary and the paraphernalia that goes with high office in Washington.

Here are three other logical consolidations that might be made: The numerous agencies gathering statistics (now often contradictory) might be brought into one large reporting outfit. * * * The 20-odd lending agencies might be consolidated. * * * And the many different transport agencies, such as the Interstate Commerce Commission, Civil Aeronautics Administration, etc., might be consolidated into a brand-new Department of Transportation.

Some of the vines of our Federal bureaucracy can be retained by consolidation. But there are others, I believe, that are begging to be pruned. No two students of government will agree which vines are most urgently in need of pruning, but from my work on various committees I personally would single out these eight for special consideration. They are all multimillion- or multibillion-dollar agencies.

Civil Service Commission: This contented, top-heavy Commission, by its policies, encourages bureaucratic empire-building and inefficient use of manpower, while falling down on its primary function of swiftly supplying the right employee for the right job. It should be overhauled or sharply curtailed.

Veterans' Administration: Because it clings blindly to inefficient, antiquated procedures, it wastes literally many millions of dollars each year in administering benefits to veterans. Its administrative costs are appallingly high per dollar distributed. If it tightened its administrative practices it would have more money left for veterans' benefits.

Bureau of the Budget: This Bureau has swollen faster than the budget. It now has more than 500 experts. Perhaps it is a coincidence, but as the Bureau has grown, the national administration has become more, instead of less, extravagant.

Maritime Commission: This is the Government's problem child, one of the most inefficient and arrogant outfits I have ever dealt with. The five commissioners are in a continual state of armed truce and have never gotten around to accounting for millions of dollars turned over to the Commission.

Bureau of Indian Affairs: Under the law the Indian Bureau is supposed to be trying to get the Indians on a self-sustaining basis. But year after year we are asked to appropriate more and more money for the Indian Bureau. Its pay roll has grown to 10,994 people, which I'm sure the Indians would agree is heap plenty bureaucrats.

Office of the Solicitor, Department of Agriculture: No one has been able to explain satisfactorily to me why the Department of Agriculture needs 400 on its legal staff.

Bureau of Foreign and Domestic Commerce: This was a brain child of Henry Wallace, and its export-control office has in the past been dominated by the "let's export a lot to Russia" crowd. This Bureau should reorganize its agencies for better service at less cost to the American people. It should aim its programs at protecting the commerce and industry of the men and women in America who must pay, through their taxes, the cost of government.

Tennessee Valley Authority: The administrators of this project, we have found, are continually trying to expand into socialistic experiments far afield from the original idea of conservation and power development. It also sinks money into huge parks, new manufacturing processes, and town planning.

Those are just eight of many dozens of Federal bureaus and agencies which, to my mind, need to be called to book on their extravagances, wool gathering, or inefficiency.

From your viewpoint as a taxpayer, however, these extravagances of agencies should not be your main concern. They cost you only millions. If you want to see where your billions are disappearing, then you should examine some of the broad, benevolent services the Federal Government renders its citizens.

These have made the United States Treasury the great national grab bag, and they raise the question whether the Federal Government—in promoting itself as the great white father in Washington—has not wandered far afield from the proper functioning of a Federal Government.

Consider this fact: The total hand-outs this year merely for subsidies to individual Americans and for grants-in-aid to local and State governments will total $5,500,000,000.

What are some of these services which might be considered as dubious projects for a Federal Government? On the surface, many of them may seem to be worthy causes, but take into account the bill for them that you must pay in taxes—and the pattern they are setting for Federal paternalism. Then ask yourself whether it would be advisable to either abandon or curtail them.

Airport aid: The Federal Government this year will chip in $40,000,000 to help plan and build local airfields. Requests on file for such aid indicate the ultimate cost may total $500,000,000. We have got to consider seriously how far we can go in this airport program and shape our policy toward the ultimate objective we wish to obtain through State and Federal cooperation.

Statistics for businessmen: The Bureau of the Census will spend $5,100,000 this year digging up facts about retail, service, wholesale businesses, and related data. If you are a businessman, are these facts worth that much to you? Or do you feel that private trade associations can make more of such surveys for themselves and take some of the load off the Federal Government?

Farm price support: In the coming year, because of bumper crops, this program may run into astronomical figures. You can get one clue to the probable cost to you by considering how much the United States taxpayer paid this past year to keep the price of one surplus crop—potatoes—at a high level: $44,000,000. Even the farmers of America who directly benefit from these programs are beginning to feel that the Government must take a more realistic approach to the support of farm prices.

Agriculture must be prosperous, and I am not suggesting that all farm-support programs be abandoned or slashed. Agriculture must be kept in sound condition in America, and our way to assure this is to provide farmers with some incentives to produce, but I do think they should be realistically scrutinized in view of present conditions and put on a more realistic long-term basis.

Rivers, harbors, flood control, and reclamation. In the coming year this program will cost you $775,000,000, the highest in history. Some of these projects are of immediate necessity, but in total they are justifiably known as the pork barrel. The wonderful opportunities for grab provided by Federal appropriations for local improvement have long been recognized.

But each year the grabs get bigger. It is well understood by local boosters that the best way to get their own pet project included is to trade support with other States. Thus, the 1949 program includes huge chunks for practically every State. I personally campaigned in vain to cut the civil-functions measure by at least $200,000,000. Our hearings were swamped with local boosters parading past us with open hands. During hearings on this bill, representatives of more than 20 State, county, and local chambers of commerce made pleas on behalf of various local projects. At the very same time many chambers of commerce were passing resolutions demanding more economy in the Federal Government.

In another case a corporation president was beating his chest around the country talking government economy, while his own subordinate was writing a protest to the Government for curtailing the Government's reporting of business statistics involving his particular commodity.

In Washington we call them the "I'm for economy—but" boys. During our hearings on the rivers, harbors, etc., bill, 400 people appealed to us on behalf of projects involved, and only one person appeared against the bill on the ground of economy. He represented the Virginia State Chamber of Commerce. His argument was that we cannot have our cake and eat it too. But he accurately referred to his testimony as "a still, small voice here in Washington."

Millions of Americans complain about high taxes and clamor for economy, but if we eliminate any services to which they have become accustomed they raise a storm of protests. Every year we add another billion or so to the services the Federal Government offers its citizens. And the American public leans more and more heavily on some sort of support from Washington. It is getting so that almost every citizen who runs into trouble in his career or in his business expects the Federal Government to bail him out.

I am a firm believer in adequate government service, and my record proves it. But I say that at present we are building up to an extremely dangerous situation, both economically and morally. We are inviting higher taxes and more socialization. But, more ominous, we are undermining the self-reliance of the individual citizen. The spirit of do-it-yourself is gradually being crushed in America by an omnipotent, monolithic Federal Government.

It is highly appropriate, I believe, that we reexamine the proper functions of government, and try to get back to efficient, economical bedrock operations.

What Population Growth Is Doing to Pacific Coast States

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. McDONOUGH. Mr. Speaker, the phenomenal growth of population in the Pactific Coast States of California, Oregon, and Washington which began during the war has continued in the postwar period, and shows no signs of reaching its peak in the near future. The West coast has met the challenge of the huge influx of persons immigrating from other parts of the Nation, and expanding industry has provided jobs for the horde of new workers. But the West coast has also found many new and acute problems growing out of its new population, problems of housing, public utilities, traffic, education, and medical care.

A recent article by Mr. Van Beuren Stanbery, western representative for area development, Office of Field Service, United States Department of Commerce, describes the population rise on the West coast and its effect on our Pacific Coast States, and points out the need for hastening economic development to keep pace with the population growth. I recommend this article to the attention of my colleagues in the House because Mr. Stanbery has presented an excellent survey of the situation on the West coast and its immediate needs:

WHAT POPULATION GROWTH IS DOING TO THE PACIFIC COAST STATES

(By Van Beuren Stanbery)

The war is over, but population is still growing rapidly on the west coast. From all parts of the country people are continuing to move to the snow-free lands of the Pacific slope. Why has this postwar growth occurred and what is it doing to the far West States?

Everyone knows that a huge influx of war production workers and wives and children of men in the armed forces poured into California, Oregon, and Washington during the war. Many observers thought the wartime migrants would leave when the war was over. But most of them stayed, as the California State Reconstruction and Reemployment Commission predicted they would back in 1944.

Since VJ-day the population tide has been running high everywhere. More babies, 3,750,000 of them, were born in the United States in 1947 than in any previous year. A rise of birth rates after the end of the war was expected by population students because that has been the historical trend. As in other wars, from Napoleon's day to this, there has been a sharp rise in births at the beginning of hostilities, a leveling off or even a decline while the war lasted, and then a postwar rise when the soldiers came home. The same thing happened at the end of World War I.

The postwar jump in birth rates is more closely related than one would think to migration to the Pacific Coast. When birth rates are high and the Nation's population growth is soaring, more people move West than when birth rates are low and our national growth has slowed down to a walk. The new infants do not pick up their swaddling clothes and hop into Fords and tourist pullmans, but many of their fathers and mothers, uncles and aunts, and friends of the family do, because business is generally good everywhere when there are lots of births.

The business cycle is an excellent population barometer for the far West States. When production indexes are climbing, their birth rates will rise and people east of the Rockies will take more chances on a new location than when pay rolls are shrinking and times are getting hard.

Contrary to popular belief, the so-called dust bowl migration of the 1930's to California, Oregon, and Washington was not nearly as large as earlier migrations. Approximately a million persons moved into California during the 1930 decade. But during the booming 1920's, about 2,000,000 came from other parts of the country, and for the 1940's, net migration into the State probably will exceed 2,500,000.

One thing is certain—the populations of the Pacific Coast States and of Arizona and Nevada as well have been for a long time and still are growing much faster than the national population.

The population gains of the far West States have been truly phenomenal. From April 1940 to July 1947 the Nation's population (excluding armed forces overseas) increased about 9 percent. But the Census Bureau estimates that for the same period population increased 43 percent in California; 39 percent in Oregon; 32 percent in Arizona; 29 percent in Washington; and 27 percent in Nevada. Florida was the only other State which showed anywhere near as high a rate of population growth.

Although no one knows just how fast people are now moving to the Pacific coast, the westward movement certainly is continuing. Using Census Bureau estimates as a guide, we see that California alone has (July 1948) some 800,000 more civilian residents than on VJ-day, not counting the return of veterans who had previously been Californians. About one-half of this postwar growth was from natural increase, the rest from net migration. The populations of Oregon and Washington are still continuing to grow, although at a slower rate than during the wartime and immediate postwar years.

What has this rapid growth done to the population pattern of the Pacific coast? For one thing, it has temporarily retarded the inevitable aging of the west coast population. Without the recent wave of births and newcomers from other States, the proportion of middle-aged and elderly people would have increased rapidly during the 1940's. But because the great majority of the migrants to the west coast were under 45 years of age (as they always have been in the past) and because births were so numerous, the percentages of the middle aged and elderly are still about the same as before the war. The average age of California's estimated 10,000,000 or more residents in 1948 is apparently even less than that of its 7,000,000 population in 1940.

Another general misconception is that California, especially southern California, is more heavily weighted with old folks than any other part of the country. Actually, eight other States had higher percentages of persons aged 65 and over when the last census was taken. And San Francisco had a slightly higher proportion of people aged 60 and over than lived in Los Angeles at that time.

As elsewhere, recent population growth has been concentrated in and around the cities. The big metropolitan districts of Seattle, Portland, San Francisco-Oakland, and Los Angeles grew about as fast as their respective States (an unusual occurrence), while many of the medium-sized communities up and down the coast grew even faster. The farming regions also gained population but their growth was relatively much slower than in the urban areas. Although generally looked upon as an agricultural State, California has become laterally a "State of cities." Only New York, and possibly Pennsylvania, have more urban residents and more cities of 10,000 population and over than are now in California.

How about jobs for all this horde of new workers? The expansion of the far West economy since 1940 has been even bigger than the most optimistic forecasts. Employment of all kinds is now approximately 60 percent higher in the three Pacific Coast States than in 1940. More people are now employed in California than at the peak of the war effort. At the same time, there is relatively more unemployment on the coast than in the Nation as a whole, although the proportion is not large in comparison to the labor force.

As had been predicted, the distribution of employment among agriculture, manufacturing, construction, distribution, and services activities has reverted to the prewar pattern. In April 1940 about 65 percent of all California employment was in distribution and services, the highest proportion of any State. Only about 35 percent was in the production of tangible commodities (agriculture, mining, construction, and manufacturing). The huge expansion of aircraft manufacture and shipbuilding during the war distorted this pattern, but after Japan was defeated the State's traditional distribution of employment was quickly restored. Although employment in all major activities is much larger than before the war, the biggest percentage gains have been in construction, Government work, and manufacturing.

The war pushed the Pacific coast's long awaited industrial boom over the threshold into reality. Manufacturers have rushed to take advantage of the suddenly expanded western markets and buying power. In addition, the mammoth steel plants at Geneva, Utah, and Fontana, Calif., and the new aluminum plants in Oregon and Washington are expediting industrial development by providing basic metals close at hand for fabrication in western factories.

According to Herbert F. Ormsby, research director for the California State Chamber of Commerce, approximately 3,000 new factories and 2,800 expansions of existing plants have been built or started in California alone during the last 3½ years. This capital investment totals over $950,000,000. Hundreds of new factories and plant expansions have also been built in Oregon and Washington. California now has 70,000 more retail trade establishments than at the prewar peak in 1941.

Along with these and other economic blessings, the rapid massing of people around west coast cities was bound to create many problems. From Seattle to San Diego there are long lists of home seekers, jam-packed streetcars and busses, people waiting in line at restaurants, railroad ticket windows, grocery stores, and doctors' offices.

Most acute are the shortages of housing and schools. Highways are crowded and need widening. Lack of adequate sewage disposal facilities causes trouble. State penal and medical institutions and public hospitals are overcrowded, some to the danger point.

In northern California there was not enough electric power in the spring of 1948, and some factories had to close down during a temporary "brown out." Californians are beginning to worry about whether they will have enough water and power for their future population, agriculture, and industries. The Pacific Northwest also will soon face a critical power shortage unless dam building is speeded up.

It is anyone's guess how long it will take to catch up on homes, schools, mass transportation, and other public facilities, water and power supplies in the far West.

The California State Office of Planning and Research reports that 105,000 housing units were built in California in 1946 and about 170,000 in 1947, each more than 20 percent of the corresponding national totals. But continuing population growth together with the fact that the number of families keeps on increasing faster than the number of people (as it always does nearly everywhere) will tend to prolong the housing shortage on the Pacific coast.

Local public officials are striving to catch up on their most urgent public-works projects in the face of material shortages and high prices. The State of California has embarked on a 10-year program of highway construction and institution building totaling a billion dollars. Oregon and Washington are also planning expanded public-works programs.

School-bond issues are being voted right and left, but schools cost a great deal more now than they did before the war. Moreover, the schoolroom problem differs from the housing problem in that the foreseeable peak of total elementary enrollment may be over by 1960. Many school boards are reluctant to go into debt to build additional rooms for the oncoming wave of young pupils which may subside, despite further inmigration, when birth rates drop again.

Farmers, industrialists, and businessmen generally are expanding their operations to meet the ever-growing west-coast demands. West-coast offices of the United States Department of Commerce are busy supplying economic data and technical advice to business firms and development organizations. Federal construction agencies, such as the Reclamation Bureau and Army engineers, have studied Pacific coast needs for water and land development and have come up with plans and schedules for the storage dams, irrigation, hydroelectric power, and flood-control projects that are essential for economic growth.

From the long-range point of view, the Pacific Coast has plenty of water and hydroelectric power resources to support a vastly increased population. The problem is one of economics rather than of engineering. Water and power become more costly as dams, conduits, and transmission lines become larger or more expensive to build. If irrigation water costs too much per acre, California farmers may not be able to compete with those in other areas. Industrial managers of California chambers of commerce are concerned now about the cost of water for future industrial users, who cannot afford to pay as high water rates as home dwellers. The Colorado River and other sources can supply southern California with enough water to support twelve to fourteen million people in that part of the State alone, but heavy industries and farmers may have difficulty in meeting the price. Proposals have been made for separating out industrial and storm water sewage and treating it for reuse by industrial plants.

Another proposal is that the Pacific Northwest electric power grid be connected with the California power grid to permit transmission of surplus power that could be generated on the Columbia River for irrigation pumping and other uses in California. With its year-round flow, the Columbia River might ease power shortages in California from its excess of falling water that otherwise would go out to sea without producing a kilowatt of useful energy.

The need for hastening economic development in order to keep pace with population growth is highlighted by what has happened to the per capita income of the Pacific Coast States in comparison with that of the Nation. From 1940 to 1946 the Nation's per capita income increased 109 perent, while that of the three coast States together increased more slowly, 95 percent, despite the relatively much greater economic expansion in the Pacific region. It takes time to build the dams, irrigation works, factories, warehouses, and stores required to create a hundred thousand or more new jobs each year. Accelerated development of its economic resources is urgent if the region is to maintain its relatively high per capita income.

Throughout the West, however, public and private organizations are adding their steam to the drive for economic expansion.

At its meeting last April in Sacramento, the western governors' conference asked the State commissions on interstate cooperation of the 11 Western States to determine a joint program for advancing industrial expansion of the West.

The Western States Council, composed of top chamber of commerce men, is encouraging increased activity on the part of industrial managers of State and local chambers.

The Pacific Coast Board of Intergovernmental Relations, an unofficial organization which is gaining prestige by ironing out administrative problems among Federal, State, and local officials, is sponsoring an extensive economic survey of the coast States to determine types of government action that would aid in expanding their economies.

One of the few metropolitan regional development organizations in the country, the San Francisco Bay area council, is mobilizing the efforts of official agencies, businessmen, and the public generally for intensified development of the nine-counties Bay area.

Because of their suddenly expanded growth, the far West States have been lifted to a larger and more important position in the national economy. The contributions they are currently making to national production are far greater than in prewar years. With the reasonable certainty of continued increase of population, manpower, agriculture, industry, and commerce, and the development of natural resources that will follow population growth, the far West States will further increase their contributions to the national economy and national security.

These States are more than merely the western edge of the Nation, they are the American rim of the Pacific—the corridor to Alaska, Hawaii, and the Orient. It is as important for national security that the economy of the Pacific seaboard be developed and strengthened as is continued development on the eastern seaboard. The increased population and more industrialized economy of the Pacific Coast States are bulwarks for national safety and for peace in the Pacific.

Dewey Voter Lauds Truman When He Blasts Reds, Aspires To Rescue World

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. MULTER. Mr. Speaker, the following column from the Brooklyn Eagle of January 23, 1949, in my opinion expresses the thoughts of a large segment of that part of our citizenry, which voted with the minority on election day last:

ONE MAN SAYS

(By Robert M. Grannis)

DEWEY VOTER LAUDS TRUMAN WHEN HE BLASTS REDS, ASPIRES TO RESCUE WORLD

I'll never forget that day long ago when my personal fortunes were at a low ebb. I was tired and cold and tomorrow was a big question mark. Then over a radio I listened to the late President Roosevelt's mellow voice saying we have nothing to fear but fear itself. I'm not a Roosevelt fan but the memory of that moment has meant a great deal to me. It was a light in the darkness, a clue to the solution of many problems.

And now I think I'll supplant that memory with one that is nearer and closer. President Truman's inaugural address came as an emotional lift in a period of world history when uncertainty blankets the hearts and minds of so many people all over the world. Here was something spoken not as eloquently as F. D. R. would have said it. Nor as dramatic. But behind the homespun Missouri tang was a magic appeal whose meaning no man could miss. The speech was as American as a day at Coney Island. As understandable as the voice of an announcer droning off the batteries for any day's game at Ebbets Field.

Half-truths omitted

Diplomatic half-truths were dispensed with for once and partisan politics took a back seat. One could listen and forget the tinsel and party exultations that marked the occasion.

Mr. Truman called the turn on communism, branded the Moscow conspiracy as the enemy of decency, and pledged America to the defense of freedom. He didn't reach into our pockets this time so much as he reached into our hearts and he dared to say that the American heart and conscience should be dedicated to the betterment of world conditions. For a moment—just for a moment—until I studied the text I was inclined to feel that perhaps we were about to embark on a new venture in reckless philanthropy. But that was not what he had in mind at all.

He merely asked that we divert some of our technical skill, some of our inexhaustible supply of know-how to undeveloped places where people know a yearning for something better but lack the method of accomplishment.

So here I am, a Dewey voter, going all out for the Democratic Party's standard bearer because I feel the color of his words is the American color and what he wants to do is the only right thing to do.

His task just beginning

But Mr. Truman's task is just beginning. He must make it clear that his speech does not mean we are about to make another and bigger hand-out. He needs to be specific for the benefit of anxious taxpayers

and for the benefit of broken people who have come to look upon the U. S. A. as a dollar sign. His speech meant nothing like that unless I'm terribly wrong. It meant that private resources and native brains must join in the task that Government started when it inaugurated the Marshall plan. It must do so for more than the hope of ultimate return on an investment. Both elements must act in the name of humanity.

We can't kill communism with bullets alone. But we can dull its impact on the lives of the miserable who reach for any straw, real or imaginary, by giving them the kind of cooperation that will make them full partners in the fight for freedom. And while we are advancing this cause we need to make it plain that there is no thought of diluting our strength so that we will become weak and an easy target for aggression.

We must help him

Those who think we can live alone, self-sufficient and with our backs turned to the hungry and distressed, are already dead. And those who think that communism is an unimportant comic strip in the newspapers of the world can say farewell to their freedom. I think we'd better take the advice of Mr. Truman and hope that time and experience will give him new wisdom to think as straight on the home front as he does when he looks across the world. It is our job to help him—Democrats and Republicans. This is no time to be concerned with party symbols—except the symbol of our greatest threat—the Moscow-made hammer and sickle.

Mr. Speaker, it is because our country can divide before election day and regardless of the result on election day consolidate its forces with the majority that we will continue to make progress—the kind of progress that will advance democracy and prevent the spread of communism.

Chester H. Rowell, Great American and Californian

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. JOHNSON. Mr. Speaker, one of the great jurists of our State, Justice Homer R. Spence, of our supreme court, delivered a short eulogy on Mr. Rowell at the meeting of the Commonwealth Club of San Francisco last April, and so did Mr. Ward, its secretary. At the time I read them I was under the impression that the Commonwealth Club did not permit reproduction of any of its publications. However, last fall when in California, I learned that reproduction of speeches, such as those mentioned herein, is permissible under the club rules. Consequently, under leave to extend my remarks, I am asking unanimous consent to have printed as a part of these remarks, the speeches of Justice Spence and Mr. Ward.

What impressed me most about Mr. Rowell, despite all his attainments in various fields of learning and activity, was the fact that he had a forward-looking mind until the day when illness overtook him. Several years ago I had the pleasure of having a short talk with him, and he told me that he had laid out work that would keep him busy for the next 20 years. Many men, as they grow older, begin to look backward and reminisce over the past. They also seem to feel that the outlook for the future, as their knowledge of the world becomes more realistic, is very dismal and pessimistic. Not so with Chester Rowell. He had an active, restless, and inquiring mind. He saw the bright side of the future. By his writing and speaking he analyzed public problems and outlined how they might be solved in the new world in which we live. His influence will be felt for a long time.

Justice Spence's and Mr. Ward's speeches follow, in that order:

ADDRESS OF JUSTICE SPENCE

As we open this meeting today, it is difficult for us to realize that the voice of another great leader in our club activities—a voice that was so often raised for our enlightenment—has been stilled and will be heard no more upon this earthly sphere. I refer to the voice of our esteemed member Chester H. Rowell, who recently departed from our midst.

As we think of the breadth of knowledge and of the diversity of activity of this man during his very full life covering more than eight decades, we are at once impressed with the futility of attempting, on this occasion, to make any extended reference to his many fine attributes and outstanding accomplishments. Fortunately, he was well known to, and was highly esteemed by, many people throughout the State, throughout the Nation, and in fact throughout the world; and it is therefore but natural that his fellow members of the press should have covered his life and work in well-merited eulogies which have been heretofore widely published. We nevertheless deem it appropriate, here and now, to pay our simple tribute, more particularly in appreciation of his contributions to the work of the Commonwealth Club of California.

Chester H. Rowell was truly a leader of men and a molder of public opinion. No problem, national or international, was to him so complex as to cause him to despair in attempting its solution, and no minor local problem was to him so insignificant as to escape his notice and consideration. We knew him as a thorough scholar, a gifted linguist, a penetrating analyst, a brilliant lecturer, a talented writer, a fearless publisher, an able and courageous political scientist, and a great humanitarian. We knew him as a man who had received countless honors, and who had served with distinction in various activities, public and private, looking toward the improvement of the social, economic, and political welfare of mankind. But we knew him best as one whose unquenchable thirst for knowledge was exceeded only by his unlimited ability to absorb that knowledge, and to apply it in a very practical manner toward the solution of every problem that arose. It seems to us that he lived by the motto voiced by our founder, Father Adams—"Get the Facts"—and his life seems to have been dedicated to the same purpose as that expressed in the constitution of our club, "To investigate and discuss problems affecting the welfare of the Commonwealth and to aid in their solution." In truth it may fairly be said that he personified the cherished ideals and traditions of this great organization.

Chester H. Rowell joined the Commonwealth Club in 1908 and was one of its most loyal and active members for a period of 40 years. Our records reveal that he was the speaker at our Friday luncheons on 40 separate occasions, and that he addressed our other club and section meetings at innumerable times. He served in 1928 as our quarterly luncheon chairman, and also served as a member of our board of governors from 1935 to 1939. Continuously from its inception in 1927, he acted as a member of our research advisory council. He was ever ready to answer the club's call to service, and it will be remembered that on more than one occasion, when some emergency prevented the appearance of our scheduled speaker, he would arise upon our last-minute request, and, without any apparent oportunity for preparation, would deliver a most thoughtful, informative, and entertaining address. Realizing his many significant contributions to the work of the club, the board of governors, in 1941, elected him to honorary membership, an honor which has been bestowed upon but few men during the 45 years of the club's existence. He held the unique distinction, for some time prior to his passing, of being our only living honorary member.

We shall miss our distinguished leader—his smiling countenance, his friendly handclasp, his sparkling wit, his dynamic personality, and his sage advice and counsel in the affairs of our club. Untold thousands of others, in organizations in which he led the way, will likewise miss his presence—groups striving for better international understanding and goood will, groups attempting to improve our own governmental processes in order to demonstrate their virtues in governing the affairs of men, and groups seeking to ameliorate the conditions of the less fortunate of the human race wherever they may be found. We fear that our search to find another to fill his place will be in vain, for nature, in its inscrutable way, seems seldom to create a man of the caliber of Chester H. Rowell. This noble citizen of the world was a scintillating star in our firmament, and we know that the light of that star will shine brightly in our memories, and that it will ever serve to guide and to inspire us throughout all the years of our lives.

Speaking on behalf of all the members of the Commonwealth Club, I extend our most sincere sympathy to his devoted family; and, in token of our high regard and affection, when we adjourn this meeting today, we shall adjourn out of respect to the memory of our esteemed honorary member, Chester H. Rowell.

ADDRESS OF MR. WARD

The man who never said "No" to a request to serve the Commonwealth Club of California has passed on.

Chester Rowell literally fulfilled Kipling's immortal precept, "He walked with kings—yet never lost the common touch."

It would be easier to reflect in words on paper the multiple facets of a diamond than to set down adequately what Chester Rowell meant to this club, his city, his State, his Nation, his world—or to you or me.

He was never a president of the Commonwealth Club, though he could have been if he wanted to. He held no elective public office—he had served in many such modest posts as elections committee clerk in the house of representatives and member of the State railroad commission—but he knew more practical and theoretical politics than any man we can think of.

Chester Rowell, boyishly happy in being a specialist in a score of foreign languages, and supermaster of his own, instead of parading that knowledge, rarely used words of more than three syllables—only two, where possible—and spoke vividly and forcefully without using a dozen adjectives per hour. His "Rowell-ese" summations of men and events of the day impressed and charmed our Friday audiences year after year. His ability to find humor, irony, and just plain fun amidst

the clash of armed ideas was typical of his capacity to be of the battle, yet far above it.

During the past decades there sometimes circulated from the lairs of the few who nursed grudges against Mr. Rowell because of his fairly earned victories over them, the wishful thought that Chester Rowell was "through." The huge audiences that continued to greet his every appearance on this club's platform and on every other important forum of this Nation, as well as abroad, again and again testified that he was still the revered sage of tens of thousands of his fellows.

Chester Rowell will never be "through" so long as the multitudes who have heard or read his millions of trenchant words continue to live; nor so long as there remains even one of the younger—and middle—generation of writers and workers for human betterment whose efforts he so generously encouraged with no possibility of personal advantage.

Already it seems strange to realize that the young newcomer to San Francisco seeking counsel or guidance cannot be told: "Go see Chester Rowell."

Highly Paid Propagandists Are Not Fooling the People With Their Arguments That the Basing-Point Pricing System Should Be Legalized Even in Cases of Conspiracy and Monopoly

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. PATMAN. Mr. Speaker, I am inserting herewith a legal opinion of a prominent law firm in Washington, D. C., Williams, Myers, & Quiggle, to the National Food Brokers Association, concerning the Robinson-Patman Act and a decision of the United States Supreme Court on the basing-point system. These prominent lawyers point out the following:

First. That all delivered price systems are not threatened by the Supreme Court's invalidation of the basing-point system in the Cement and other cases.

Second. A discussion of the unfair discriminations caused in certain industries against independent business under the basing-point system.

Third. Cautioning interstate sellers to read and understand the Corn Products, Staley, and Cement cases very carefully before joining in plans to avoid the law.

Fourth. An illustration of the kind of price discriminations properly outlawed by the Supreme Court in the cases mentioned.

Fifth. "We believe that the great majority of interstate sellers (and buyers) in the food industry will enjoy benefits rather than suffer burdens from the prohibitions of the Robinson-Patman Act which are enforced in these decisions."

The matter referred to follows:

Increasing discussion of the Corn Products, Staley, and Cement cases in the press and before committees of Congress, conveys an impression that the Supreme Court's invalidation of the basing-point systems of delivered prices in the glucose and cement industries, under the Robinson-Patman Act, threatens all delivered price systems and is creating such uncertainty and chaos in the pricing of goods as to make it imperative that Congress amend the antitrust laws, including the Robinson-Patman Act, so as to legalize delivered price systems generally. Some of the discussion has made reference to the delivered price system in the food industry, and we therefore believe we should supplement the views given you in our memorandum of July 19, 1948.

We believe the Supreme Court made it perfectly clear that the Robinson-Patman Act was not intended by Congress to prohibit any system of uniform delivered prices, such as basing point systems, zonal delivered price systems, etc. In the Corn Products case, the Court observed in the legislative history that one provision of the Robinson-Patman bill would have had the practical effect of requiring that the prices of all commodities sold in interstate commerce be computed on an f. o. b. factory basis, and would have prohibited any system of uniform delivered prices as well as any basing point system of delivered prices. The Supreme Court observed that such a drastic change in existing pricing systems engendered opposition which finally led to the withdrawal of the provision by the House Committee on the Judiciary. The Supreme Court then stated:

"We think this legislative history indicates only that Congress was unwilling to require f. o. b. factory pricing, and thus to make all uniform delivered price systems and all basing point systems illegal per se. On the contrary, we think that it left the legality of such systems to be determined accordingly as they might be within the reach of section 2 (a), as enacted, and its more restricted prohibitions of discriminations in delivered prices."

The actual price differences cited in the Corn Products and Staley cases indicate that one purchaser from a seller paid anywhere from 2 percent to 19 percent more for his goods than his competitor paid, and that the seller's net return from sales to such favored purchaser was anywhere from 4 percent to 38 percent less than the net return from sales to the purchaser who was discriminated against. It was such differences in price that the Supreme Court held were unwarranted price discriminations; and finding that such unwarranted price discriminations were systematc and necessarily resulted from the basing-point systems in the glucose and cement industries, when the basing point selected by the seller was distant from his point of production, the Supreme Court forbade the use of such basing-point systems.

It being our view that interstate sellers should read and understand these cases very carefully before joining in plans to avoid the law, which may prove ill-advised, we wish to set forth an illustration of the kind of price discriminations resulting from the basing-point systems condemned by the Supreme Court in these cases, in order that sellers may intelligently judge whether it is the law or such pricing systems which should be changed.

Seller S produces an unfinished product at his plant in Kansas City. One of his purchasers (A) is located next door to his plant in Kansas City; another purchaser (B) is located in Chicago. A and B use S's product in their manufacture of finished products which they sell in competition with one another all over the country. S, in Kansas City, charges A, in Kansas City, a Chicago base price of $2.09 per 100 pounds, plus 40 cents freight from Chicago to Kansas City notwithstanding there is no such freight haul, A being situated next door to S's producing plant in Kansas City. On the other hand, S, in Kansas City, charges B, in Chicago, the Chicago base price of $2.09, without any additional charge for freight, notwithstanding S must ship the goods from Kansas City to Chicago and actually pay 40 cents freight. A and B are competing in the sale of their finished products, and B has a distinct advantage over A insofar as B pays $2.09 while A must pay $2.49 per 100 pounds for the unfinished product that goes into their finished products. Thus, A has been denied the natural advantage of proximity to S's plant, the unfinished goods-purchase price advantage to which he is entitled to expect over purchasers at a distance. A has not only been denied the advantage, but he is arbitrarily required actually to pay more, 40 cents or 19 percent more, for the goods than B who is located at a distance. S netted $2.49 from A, including the 40 cents phantom freight paid by A, but only netted $1.69 from B since S absorbed the actual freight to Chicago. The discrimination in favor of Chicago and against Kansas City was 80 cents or 38 percent of the base price. This difference in price is utterly unrelated to any actual cost difference in S's sale or delivery of the goods. The FTC found and the Supreme Court affirmed in the Corn Products and Staley cases, that such a discrimination injures or diminishes competition between S's purchasers, A and B; and in the Cement case, that the discrimination substantially lessened competition between S and its competitors; and that the discriminations were therefore unwarranted under the Robinson-Patman Act.

We understand these Supreme Court decisions to mean, in essence, that systematic price discriminations are necessarily involved where the price basing point is distant from the point of production, as illustrated above. We do not understand that the Robinson-Patman Act forbids a uniform delivered price system (national or zonal). The Supreme Court said in the Staley case:

"But it does not follow that respondents may never absorb freight when their factory price plus actual freight is higher than their competitors' price, or that sellers, by so doing, may not maintain a uniform delivered price at all points of delivery, for in that event there is no discrimination in price."

If a finished-product producer in Wisconsin wants to sell his product at the uniform price of $3 per case all over the United States (familiarly known as the postage stamp delivered price), we think, generally speaking, that he is free to do so even though he must absorb substantial costs of freight to the distant points of shipment. It may be argued that it is unfair for buyers in Wisconsin to be required to pay the same price as California buyers, namely, $3 per case delivered; but however unfair this may be from an economic (or some other legal) standpoint, the Robinson-Patman Act does not prevent a seller individually (without collusion or collaboration with other sellers) from selling on such a delivered price system so long as it does not result in discriminations among his purchasers which substantially lessens competition with the sellor or injures competition among his purchasers or their customers. It may be that, as a general rule, it is unlikely that competition will be substantially lessened or injured if all purchasers of a seller have the same cost of goods, namely, the delivered price of $3 per case. In contrast, in the illustration set forth above fn this memorandum the cost of goods of purchaser A at Kansas City was 40 cents higher than the cost of goods of the purchaser B located in Chicago, a discrimination which seems utterly indefensible when it is shown that the seller charged A 40 cents freight which never occurred but did not charge his competitor B the 40 cents freight which actually occurred.

In conclusion, we believe that the great majority of interstate sellers (and buyers) in the food industry will enjoy benefits rather

than suffer burdens from the prohibitions of the Robinson-Patman Act which are enforced in these decisions. Only those sellers who have reason to believe that their delivered price system has an injurious effect on competition have a burden under these decisions to study their own competitive situations as well as the competitive situations of their customers and to take other reasonable precautions to eliminate discriminations, if any, of the magnitude and character found in these cases.

Address of Hon. Melvin Price, Member of Congress, at Jackson Day Dinner, Broadview Hotel, East St. Louis, Ill., January 15, 1949

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an address delivered by me at the Jackson Day dinner sponsored by the Democrats of St. Clair County, Ill., and held at the Broadview Hotel, East St. Louis, on Saturday night, January 15, 1949:

JEFFERSON TO TRUMAN

At this time of the year Democrats throughout the land have traditionally honored the memories of two of the great leaders of our party—Thomas Jefferson and Andrew Jackson.

It is a very great pleasure for me tonight to have the honor of participating in the revival of the custom here in our own section of the country. Years ago when democracy was ascending in St. Clair County we were filled with life and party fervor, and we sponsored several large gatherings of this sort. For a period there was a lull.

Something happened on November 2, 1948, that seemed to give the old Democratic mule a "shot in the arm", and so here we are today, well and happy, and eager to reconsecrate ourselves in the principles of Jefferson and Jackson that have been the real guiding force of the Democratic Party from its beginning. And I have great pride in the fact that the party as a whole does more than pay idle lip service to these principles. Under great modern leaders—Woodrow Wilson, Franklin Roosevelt, and Harry Truman—our party has given ample, positive proof that it truly is the party of the people that Jefferson and Jackson desired it forever should be.

As a party we can pay no greater honor to those two stalwart pillars of democracy than by applying the lessons they taught us to the present and the future.

The democracy which Thomas Jefferson fathered was an inspiration not only of the plain, freedom-loving people of our own Nation, but of the freedom-loving peoples of every land.

When we were drifting away from the principles of Jefferson and toward the government by privilege—which was the theory of Alexander Hamilton—Andrew Jackson was the hard bitten, fighting man of the people who gave the Government back to the people.

Jackson pioneered two frontiers.

One was the frontier of land as we developed the West. The other was a frontier of government, the broadening of the Government to let the plain people of the country enjoy the right to vote.

And neither Jefferson nor Jackson had an easy time fighting for their ideals—no easier than Roosevelt and Truman of the present era.

Always we have moved in the direction set by Jefferson and Jackson—a democratic government based on the broad participation of all of our people in the conduct of our Government—and in the benefits of our free enterprise system of economy.

And always other nations have looked to us for leadership by example.

Today our American belief in government by the people and in a free enterprise system of economy is under a dual challenge.

We hope that last November may have eased one challenge—the next few months may tell. But there has been a challenge at home from those who seek to tear down the strong national economy built by Franklin D. Roosevelt and the Democratic Party, to abandon the reforms which have pushed our national productive level to a record high, and to return to the futile system of government by privilege which had our private enterprise economy prostrate in 1932.

Those who seek to sabotage our private enterprise economy by catering to lobbies and pressure groups and seek to give the reins of government to the hands of the privileged few are the menace at home to our democratic government and to our free enterprise economy.

I said there was a dual challenge to our American way of life.

The second challenge comes from overseas. It challenges first all freedom-loving peoples in the path of its greedy expansion and ultimately—make no mistake—it challenges us.

This challenge comes from a hostile conception of government.

Where we have ideals—this other government has ideologies.

Where we have freedom—this other government has repression.

Where we seek to free people—this other government seeks to enslave them.

This other government bears the name of communism and claims that it is the true democracy.

It asserts that our free government of free peoples in a free economy is a government of capitalistic slavery.

It asserts that we are on the verge of economic collapse.

That is the second challenge to our American way of life.

Last November 2 also set back that challenge—counting heavily on the propaganda usages for a Truman defeat, the Soviet took a severe set-back when their guess was as bad as Dr. Gallup's. All through Europe those who are fighting hardest against Communist aggression see in the Truman victory an inspiration to carry on in their battle to spread real democracy through the unhappy nations of the Old World.

From the dawn of America the peoples of Europe have turned to us for inspiration.

Their eyes are upon us today.

They seek material help from us—true.

But they also seek assurance from watching our society that our way of life is a better way of life than the Communist regimentation which creeps closer to their borders.

We have witnessed funerals of freedom in several countries of Europe—some of them the homelands of many of you here tonight, or of your father or mother—and there are trouble spots in China and Greece, where the lamps of liberty are mighty dim.

All these upheavals abroad and uncertainties at home mean that our domestic policy and our foreign policy are completely interdependent.

More so than you might think. Like a vulture, the Kremlin awaits an economic collapse in the United States to prove the failure of the capitalistic system. That's the reason our domestic policy should be as nonpartisan in the months ahead as our foreign policy.

Americans of all political faiths should give their full support to President Truman in his efforts to preserve our domestic economy and in his efforts to lead the nations of the world to a peaceful settlement of their problems.

President Truman made a soul-stirring appeal to the new Congress for cooperation, and I have the feeling he will receive the cooperation he seeks. The partisan domestic policy brought on by the Eightieth Congress' refusal to cooperate with the President must disappear if we are to ward off the danger of economic collapse.

If an effective bipartisan foreign policy is to continue, sniping on the part of Republican headline hunters will not help. There was much of it in recent months.

And both at home and in our foreign affairs we have been endangered by isolationism.

There still exists the isolationism of the prewar variety, the blindness of those who think we can live as a peaceful and prosperous island while the rest of the world is torn by strife and chaos.

There also still exists the isolationism which holds that we can have a successful economy as long as big business makes big profits, regardless of the welfare of small businessmen, professional people, farmers and workers.

This I call domestic isolationism.

So as we enter the new year and a new Democratic administration in Washington, and in the State of Illinois, we find we are sorely beset with desperate problems at home and abroad.

Successful candidates of last November today are starting a tour of duty through which they should ever be mindful of their obligation to the people who registered their confidence in them at the ballot box. It is not enough to verbally thank the voter and tell him you appreciate his vote. From the moment an elected official of the Federal Government, State or county takes his oath of office he should start to deliver on behalf of his people.

People appreciate good, honest, and faithful public service. They appreciate hard work on the part of their public servant. Prove your good intentions as public officials and you will always have public support.

Illinois has had few Democratic governors—but we as Democrats can point with pride to the records of those we have had. Altgeld, Dunne, and Horner, have been the only elected Democratic governors since the Civil War. We haven't had quantity, but no one will deny that the Democratic Party has sent quality to the Governor's chair in Springfield.

And now we can add the name of Adlai Stevenson. At the start of his administration we have the confidence that he, too, will merit a position of honor alongside Altgeld, Dunne, and Horner.

While Adlai Stevenson is taking good care of the business of the State of Illinois, President Truman will be fighting in Washington to keep our national economy strong and to dispel the fear of a recession at home and the spread of communism abroad. We have learned that you can't sit back and let these matters take care of themselves. The Eightieth Congress somehow had the idea you could. The people wisely disagreed with the Republican Congress and agreed with President Truman.

We would certainly be unwise to sit idly by and watch Russia draw the iron curtain around country after country in which once men were free. If we did, it would be only a question of time before we would face the same peril—alone.

It doesn't take too much imagination to believe, as the Soviets press on, that we hear the muffled death rattle of freedom.

And what of our domestic economy as we creep toward a decision of our world responsibilities?

The inflation boiler is near the bursting point.

There may be a few pennies relief here and there but in the over-all picture prices and profits are out of balance with the rest of the economy. President Truman realized this in 1948 as he pleaded for action from a noncooperative Congress. He realizes it now as he asks for remedial measures from a Congress composed by majorities from his own party. It is for Congress to follow the leadership of the President in solving this problem—and it is not necessary that the Congress be a rubber stamp in so doing. If Congress has a better way of meeting the situation than those that come in the President's proposals, the President would work with the Congress. It is a matter of cooperation and there is no reason why, with the executive and legislative branches of Government working together, the issue can't be squarely met. I feel that it will be.

There are too many Members of this new Democratic Congress who remember the collapse of 1932—the bread lines, the apple peddlers, the long lines of the bank runs, the despair that enshrouded our Nation. Those were the days of misery and despair—and economic blizzards—the result of the reaction and inaction of the Republican Party.

Make no mistake, if Franklin Roosevelt had not corrected the abuses of a Republican administration and put our free-enterprise economy back on its feet, we might well today have some other form of government than the free American democracy all love so dearly—the democracy of Jefferson and Jackson, of Wilson, of Roosevelt, and of Harry Truman.

The Eightieth Congress road-block threatened to send us into depression and economic chaos by letting inflation rage unchecked. The Republicans pursued a philosophy of defeatism, expecting us to live on a left-over economy in the atomic era. In 1948 as in 1920 they wanted to go back to normalcy, forgetting that you can't turn backward and progress at the same time. We must go forward.

This has always been the Democratic philosophy since the days of Jefferson and Jackson.

It is still the Democratic philosophy today.

The goals of the Democratic Party stand unchanged by time or events.

They are based on the granite of honest conviction.

And the goals are the goals of the people.

The people want peace.

Peace among ourselves at home.

Peace among nations in the world.

The people want to govern themselves with fairness to all and with injustice to none.

They do not want to be governed by the few for the few.

The people want America to continue to be a land of equal opportunity.

In a courageous state of the Union message President Truman set forth to the Eighty-first Congress the goals of the people. He outlined a simple, common-sense program to carry us toward those goals, in orderly progress.

His proposals were not new. Many times since he took up the burdens of his great office he had appealed to Congress to act on them. Congress heeded not—some Members attacked them violently—they were distorted and twisted—some sneered that they were strictly political.

Let us examine these proposals.

Not in the heat of political passion but in the light of reason.

The President proposes that we go forward with a program.

Not drift into confusion and chaos with a program. Who is so fearful as to say that this is wrong?

The President said that we must secure fully the human rights of our citizens.

Are Americans against such a program?

The President said that we must develop our human resources—he said we should give more economic security to the people.

He said we must raise our standards of education.

He said we should get rid of our festering slums and build decent houses at fair prices.

Are there still some who oppose good schools and good housing?

The President said that agriculture, business, and labor must move forward together.

Are there some who would limit this progress to big business?

The President asks for more industrial expansion to get more production—Are there some who would prefer the economy of scarcity to the economy of plenty?

Truman said that our gains in national income should be shared by those of low income.

Who will openly say this is wrong?

The President said that we must achieve world peace based on principles of freedom and justice and the equality of all nations.

President Truman continues to express faith in the United Nations. He said we should continue to help friendly and freedom-loving nations to rebuild their war-torn economies.

These are steps that lead to peace—not to war.

But nowhere is a parallel of the conflict between Jefferson and Hamilton more closely drawn than in the long fight the President has had with Congress to legislate to curb inflation. Through the Eightieth Congress there was a dispute between those who served the interests of all the people and those who served the interest of a selfish few. Let us hope that the valiant battle which President Truman waged and won last fall, will have its influence on the new Congress. There are indications that it will.

Since 1933 great gains have been made for our people—for all of our people—under the principles of Jefferson and Jackson followed by Democratic administrations.

As Democrats we may be justly proud of our party's past achievements.

But our performance of the present and in the future are of far greater importance to the Nation.

What of the present?

And what of the future?

Today we fight and tomorrow we will fight the battle of every American citizen to make our Nation a place for all of its citizens to live in peace and decency.

We must make more of the good things of life and share them fairly.

We must show the world that our democracy and our free-enterprise system offer more than any form of despotic totalitarianism.

We must profit by the lessons which cycles of war and depression have taught us.

We have learned that true democracy is the best form of democracy.

We have learned that freedom is a greater source of energy than expression and regimentation.

We have learned that our own Nation cannot prosper in a climate of internal economic isolationism.

We have learned that the manufacturer cannot prosper if the farmer is bankrupt.

We have learned that the interests of management and labor are mutual and that neither can be strong and prosperous unless the other is equally healthy from an economic viewpoint.

We have learned that the Nation is no stronger than its weakest citizens or its scarcest resources.

We have learned that it is sound government and sound business to say, "Yes, I am my brother's keeper."

These things we have learned and proved in our domestic history.

But what of the world?

I believe that we have learned that no nation can isolate itself from the rest of the world any more than one segment of our society can isolate itself from another.

We know that a healthy interchange of goods and raw materials, of ideas and information between nations is a requisite of a healthy world society.

From our domestic history we know that a healthy economy and a healthy government go hand in hand.

Now we seek through the United Nations to build a world political organization that will enable the men of good will of this world to secure a lasting peace.

I have said that there are political struggles within this world organization between those who believe in the American form of democracy and those who have distorted the meaning of democracy to cover a government imposed upon the people in their name from above but without giving these people the actual right to govern themselves.

There is also an economic struggle between these two forms of government.

For a free economy is just as much a part of our way of life as a slave economy is a part of the regimented way of life.

If our way prevails we can raise the economic level of the rest of the world to our own.

If the opposing way prevails it will drag the rest of the world and ultimately us down to its level.

When we seek to raise the world to our level, instead of letting it drag itself and us down to the other level, we are seeking a prize worth while.

And that is the crux of the economic warfare that we wage as a part of the cold war.

Just as we reject this backward economic pull, so we reject efforts to retreat in the field of governments.

We resist this at home.

We resist it abroad.

We believe that the peoples of the world should have the opportunity to work out their own destinies in a democratic manner.

From the lesson of our domestic history we seek to show them the way.

We have learned from our own past that a sound economy and a sound government are necessary for domestic tranquility.

To achieve international tranquility we seek to follow the same formula.

We are embarked upon a course of unselfish moral leadership.

Our belief that a sound world economy is a requisite of a sound world political organization to preserve our peace has led us to offer to share some of our resources with other nations of good will whose economies have been smashed by the war.

In the European recovery program we are striving to put steel girders into the structure for peace that we are building in the United Nations.

This economic and political program is the only way in which we can secure the sound peace that all men of good will dream of and desire above all else in these days of cold warfare and cold terror.

Our great stake in curing Europe of her economic ills is the long-range benefits the whole world will receive when the Red menace is overcome. The threat of Soviet domination must be halted in Europe before it engulfs all the world.

Without economic recovery the chances of success for the United Nations are slim.

In our hands we hold the lamp of liberty and true democracy.

To free peoples we offer the tools with which they can become as strong and free as we.

We offer them the chance to shape their own destiny through their own efforts.

Not all nations wish to join us in these efforts.

Some prefer first to impose their political authority upon the peoples to whom they promise help, and they refuse to cooperate in a plan which respects the human rights of those it seeks to aid.

The bleak darkness where once glowed the lights of freedom in Poland, Czechoslovakia, and Hungary tell us that all too plainly.

The course taken by our Government will determine whether we find a lasting peace of free nations or whether we move toward the indescribable terror of atomic war—and that might well mean the end of civilization. There will be no road back from an atomic world war III.

These are the problems the present-day successor of Jefferson and Jackson faces. Harry Truman has no easy task. Today the mantle of world leadership rests upon our shoulders as Americans. We had that leadership once before, after World War I—and we failed.

President Truman, supported by the people, enters into a new administration dedicating it to the cause of world peace and determined to travel on a road that will lead all nations to an understanding and good will.

God grant to this humble man from Missouri, who so appealed to the hearts of his people that against the heaviest of odds he retained his leadership of the Nation—the wisdom, the vision, and the strength necessary to attain his one overpowering ambition—to lead us to lasting peace.

World peace is America's challenge.

It has long been our dream.

Let us make it our destiny.

American and British Taxes

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. REED of New York. Mr. Speaker, we are now told by Sir Stafford Cripps, Chancelor of the Exchequer, that Great Britain leads the world in the tax load when compared with the United States. Well, what of it? We carry our own tax load and also carry a goodly part of the British socialistic tax load. Perhaps we can do more if Argentina can be prevailed upon to clothe more of our needy children.

Under leave to extend my remarks, heretofore granted, I am inserting an article which appeared in the New York Tribune, Thursday, January 20, 1949:

CRIPPS SAYS BRITAIN LEADS IN TAX LOAD—$276 A PERSON, COMPARED WITH $264 IN UNITED STATES

LONDON, January 19.—Great Britain leads the world in the burden of taxation placed upon its people, according to figures submitted to the House of Commons today by Sir Stafford Cripps, Chancellor of the Exchequer.

He reported that Britain will have imposed taxes equal to $276 for each man, woman, and child in the United Kingdom in the current fiscal year ending March 31. This was broken down into $156 direct taxation and $120 indirect.

The United States in the same period will have imposed per capita taxes of $264, of which $208 will be direct and $56 indirect, he said.

He listed Canada third, with $104 direct and $84 indirect taxes for a per capita total of $188.

The Common Sense of a Fighting Marine

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. KEATING. Mr. Speaker, a Marine Corps general, now Director of Reserve Training, Maj. Gen. W. T. (Johnny) Clement, pointed out in down-to-earth language at the All Services Review recently held in Rochester, N. Y., the necessity for complete team work if our defense establishment is to be fully effective.

No doubt the present unification legislation can be improved but no law can force the true spirit of cooperation which arises from the heart and will to work together for a common objective.

Under leave to extend my remarks, I include the following editorial from the Rochester Democrat and Chronicle, quoting from the splendid address delivered by General Clement:

NOT SEPARATE

The Air Force is the country's first line of defense; therefore service in it is attractive to young men who understand why the country's defense must be both strong and alert, and who wish to be in the first line.

But the Air Force cannot exist or work or fight by itself. It will be effective only as it is conceived to be part of the whole defense organization. That its most intelligent leaders and the most intelligent leaders of all defense services know.

In Rochester last Friday took place an impressive demonstration of the willingness of all services to cooperate. It was perhaps the first time in any American city that high representatives of all services took part in ceremonies focused on over-all defense.

The meaning of this cooperation was well expressed by Maj. Gen. W. T. Clement, Marine Corps Reserve director, when he said:

"May I counsel against entering into contentious arguments about the relative importance of any arm of the service that is charged with the defense of our Nation. No single arm of any service ever won a major battle, let alone a war. Battles are won by teams trained in the specialty of their particular service and welded into a superteam. Every championship football team must have a man who can hit the line, a man who can run the ends, and one who can take to the air with passes. A winning military team must have all phases and types of attack ready for use if it expects to win."

That from a marine whose outfit's conspicuous fighting in the Pacific won it new laurels; but which from the beginning of the corps' history has believed and known how to cooperate effectively with other service branches.

Coordination of the services needs further implementation on the highest level. The helps to closer coordination that Defense Secretary Forrestal is urging should be granted by Congress. But it is important that the common sense, the vital necessity, of coordination be imbued all through the personnel of the services.

This Friday's all-services review emphasized, and it is further emphasized in the invitation of Herbert W. Cruickshank, of the Gannett newspapers, to head not just an Air Force procurement committee locally, but a committee which has the cumbersome but meaningful title of Military and Naval Civilian Component Personnel Procurement Committee. This committee has been developed by the National Guard, the Naval Reserve, the Marine Reserve, and the Army and Air Force Reserves.

We say in our pledge of allegiance that we have "one Nation, indivisible; with liberty and justice for all." Such a Nation needs one defense, indivisible into separate service loyalties, but each charged and alert to do its special part in the whole team's work.

More About the St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. WHITE of Idaho. Mr. Speaker, since inserting in the CONGRESSIONAL RECORD a memorandum concerning the proposed construction of the St. Lawrence seaway and my comments thereon, I am in receipt of a letter from Chairman Huntress of the National St. Lawrence Project Conference calling attention to the fact that the letter from President Brown of the Cleveland Cliffs Iron Co. had been omitted from my presentation in the RECORD. In fairness to both Chairman Huntress and President Brown there is inserted herewith Mr. Huntress' letter of transmittal and the communication in question:

NATIONAL ST. LAWRENCE
PROJECT CONFERENCE,
Washington, D. C., January 21, 1949.

Hon. COMPTON I. WHITE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: Thank you for your letter of the 17th. I notice that you inserted in the RECORD a memorandum which I sent you calling attention to a letter from Mr. Alex C. Brown, president of the Cleveland Cliffs Iron Co., bearing upon the newly found Labrador-Quebec ore.

Inasmuch as the memorandum is pointless without a copy of Mr. Brown's letter, I am wondering if you won't be good enough to insert it. I am enclosing another copy.

Incidentally, while in earlier stages of the St. Lawrence controversy it was contended the project would be a great boon to the area of which you speak, the moving argument for it now is to throw Lake Superior ore industry to the mercy of the foreign ores. This would hardly be helpful to the area of which you speak.

Sincerely yours,

CARROLL B. HUNTRESS.

THE CLEVELAND-CLIFFS IRON CO.,
Cleveland, Ohio, December 31, 1948.

Mr. CARROLL B. HUNTRESS,
Chairman, National St. Lawrence Project Conference, Washington, D. C.

DEAR MR. HUNTRESS: You have asked me to clarify certain portions of my letter to you of December 23, 1948, regarding the proposed St. Lawrence waterway, which I am very glad to do. Perhaps the simplest way is to summarize my letter something as follows:

Wide publicity as to large ore reserves in Labrador and Quebec has been used to renew public interest in the waterway.

I presented my opposition views to the committee of the House in 1941 and to the committee of the Senate in 1947.

My opposition and my reasons are still unchanged.

National security does not require the importation of foreign ores through the waterway to make up for depletion of the Lake Superior district ore reserves.

Approximately 2,000,000,000 tons of ore constitute these reserves besides an almost unlimited tonnage of taconite and jasper capable of being concentrated into high grade ore.

The development of these concentrating processes is promptly proceeding with a view of providing in ample time an adequate supply of ore.

This development program, highly important to national security, should not be delayed or discouraged by agitation for a St. Lawrence waterway which would admit cheap foreign ores in foreign bottoms manned by cheaply-paid foreign labor.

Upon the successful culmination of this taconite program, the self-sufficiency of this country on this vital raw material may depend.

To allow our steel industry to become dependent on foreign ore is unthinkable.

To make the Labrador and Quebec ore available to the midwest steel industry would not be a threat to the taconite program because neither would the tonnages be great enough nor the cost low enough to seriously affect the normal development of this program.

As far as Labrador and Quebec ores are concerned, the above is true whether or not there is a St. Lawrence waterway.

But the threat to national security arises from admitting through the St. Lawrence cheap ocean-borne iron ore.

The resultant discouragement of the taconite program, the demoralization of Great Lakes shipping, and the increasing dependence of Midwest steel plants upon a foreign ocean-borne ore supply is a serious threat to national security.

Perhaps it might not be amiss for me to add that it is my view that the public interest aroused in the Labrador-Quebec ore deposits is being used as a smoke screen by the proponents of the St. Lawrence waterway to blind the public to this obvious threat to national security of making an important part of the steel industry become dependent upon a foreign ocean-borne ore supply, made doubly uncertain by the insecurity of exceedingly long open shipping routes.

Very truly yours,

ALEX. C. BROWN.

It appears the opposition to the construction and use of the St. Lawrence seaway goes to the protectionist theory and not to the expansion of the industrial utilization of miles and miles of inland shore line around the Great Lakes with increased security to our shipbuilding and defense industries with the advantage of accessibility to sea-borne transportation.

In considering this advocated protectioned policy, implemented in the most part with tariff on imports designed in the first place to protect United States labor from the competition of cheap foreign goods produced by cheap foreign labor, a policy intended to restrict importation of manufactured goods and agricultural commodities rather than raw materials to supply the factories of this country.

SUPPLEMENTING THE TARIFF PLAN

To restrict competition from foreign countries we find that many devices have been resorted to effectuate a limitation on imports but this is the first instance that has come to attention where it is seriously contended that a physical barrier should be maintained to impede the importation of raw material as a source of supply to our manufacturing industries, a barrier that now obstructs seaborne commerce from access to the vast shore line of the Great Lakes with opportunities for added security for our industrial shipping and defense manufacturing plants.

Britain's Cold War

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 17, 1949

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wisconsin Jewish Chronicle of January 14, entitled "Britain's Cold War":

BRITAIN'S COLD WAR

Bevin is determined to prevent settlement of the Palestine crises even at the risk of wrecking the United Nations and robbing the people of the world of the shaky peace which they have been enjoying since the end of the war.

Ever since the Palestine question has been thrown into the laps of the United Nations, he has been conspiring to wreck all efforts toward a peaceful settlement either through direct negotiations or international intervention. Though it was through the request of the British Cabinet that settlement of the Palestine issue was placed before the international organization, he has persistently been taking the position that the UN settlement must be predicated on his own solution only, thus impudently telling the United Nations that it has no independent status as a judge in an international dispute. With a trigger in his hand, he has been telling that body "you either decide in my favor or else I'll begin shooting."

While pressing for his own solution he has not only violated all the rules of diplomatic decency, but also defied the United Nations directive against giving aid and comfort to combatants. His moral indignation was in a complete hibernating process when the Arab states began war in defiance of the United Nations, and when they attempted to overrun a country in violation of an international edict. His conscience awakened only when the Arab aggressors were being beaten back by fist and gun. He had no troubled conscience, of course, when Arab maneuvers and scheming were threatening to undermine the United Nations.

It has often been said by people familiar with Mr. Bevin's methods and mentality, that when the Palestine situation reaches the point of saturation, he would deliberately create an incident with a view to upsetting the possible peace. It now appears that those people were not talking idly. Even before Egypt indicated peace willingness, Mr. Bevin attempted to shock the world with the peril of Israeli penetration into Egypt. And even though Egypt never tried to invoke the so-called mutual defense pact with Britain—a pact which Egypt attempted to invalidate on the ground that it was of a dangerously unilateral character—Bevin extended a hand of generosity and offered to save the land of the Pharaohs from the hand of the Jews.

Now that Egypt has manifested a desire for peace, and when UN machinery has been set into motion for an Israeli-Egyptian settlement, Mr. Bevin has decided to use the claws of the British lion to keep the parties involved from signing an agreement of peace. His motive is simple. His aim is clear. His display of power was intended as a suggestion to the Arabs not to make peace with Israel because he would see to it that Britain fights the battles for the Arabs.

Israel is too small to cope with the British lion. Nor has it any intention to fight. All it wants is peace. All it wants is what has been granted it by the United Nations. All it has done was to protect itself against aggressors. Britain, under Bevin, seems to be determined not only to undo Israel's victories, but to liquidate Israel, if possible.

Understanding Taft-Hartley

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Washington News of January 24, 1949:

UNDERSTANDING TAFT-HARTLEY

"A lasting national labor policy," says Secretary of Labor Tobin, "can be founded only upon understanding and justice." Correct.

Therefore, Mr. Tobin says, it will not be enough to repeal the Taft-Hartley law and restore the Wagner Act with improvements suggested by President Truman. Congress and the people must understand what was wrong with the Taft-Hartley Act and why it needed to be repealed, so that no future Congress will enact a similar law.

Well, just exactly what is wrong with the Taft-Hartley Act? In what specific ways has it injured, or could it injure, the country's workers? Mr. Tobin should explain that to Congress and the people, if he can.

Twelve years of hard experience created wide understanding of what was wrong with the Wagner Act. As written and administered, it strayed far from justice. Under it, the Government fostered the growth of labor organizations, gave unions and their leaders tremendous power, but did not hold them accountable for how the power was used. So, inevitably, the power often was abused at the expense of workers, employers, and the public.

As an effort to provide fairer balance in national labor policy the Taft-Hartley Act may go too far in some respects. Yet in 17 months under it union membership has grown and union wages have risen, while strikes and strike costs—in earnings lost by striking workers, in production lost to the country—have declined.

If there are actual reasons the Taft-Hartley Act needs to be repealed, Congress first should find out and let the people know what those reasons are. Secretary Tobin, union leaders, and other advocates of repeal should be required to submit proof in public hearings instead of merely offering assertions.

All can agree that the Taft-Hartley Act is not perfect. But the record provides no better basis for Mr. Tobin's sweeping charge that most of it is unfair, unworkable, or unnecessary than for the union leaders' cry that it is a slavery law.

What Congress and the people need to understand is the truth about the Taft-Hartley Act. The truth could prove to be that it needs amendment and improvement, but not repeal. The truth certainly is that a return to conditions under which Government helped unions and union leaders to gain power without responsibility would not be justice and could not be the foundation of a lasting national labor policy.

The Dairy Industry Is at the Legislative Crossroads

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, there has been too much said and written about the oleo-butter controversy, but I wish to state that the real question to be faced is not butter against oleo. The big question in the controversy is whether or not ersatz dairy products are to be made legislatively equal to dairy products. The farmer pays for inspecting his crops that are shipped interstate. If the Eighty-first Congress, after all of its criticism of corporations, wishes to relieve the 28 big oleo corporations of paying one-fourth cent per pound tax or inspection fee, that is its responsibility. The dairy industry objects to using skim milk and a vegetable oil to make a product, coloring it, and make it look like a dairy product. Then inject a vitamin and acids to make it have some of the properties of a 100 percent dairy product. And then give it a shower bath of skim milk to make it smell like a dairy product.

The threats to the dairy business are the oleo versus butter, filled cheese, where butterfat is wholly or partially replaced by vegetable oils; filled evaporated milk; filled cream, filled ice cream; and the greatest threat of all the Magic Mix. Less than 20 percent of the milk produced in the United States is made into creamery butter, while 50 percent of the milk produced is marketed as fluid milk. The Magic Mix is made by incorporating 3½ percent vegetable oil in skim milk and selling it as bottle milk. If oleo equals butter then the Magic Mix equals bottled natural milk. This Magic Mix can be made up for 5 cents per quart at this time. If the Eighty-first Congress makes oleo legislatively equal to butter and does not protect the color of the dairy product, they may be called upon to legalize these other ersatz products, including the Magic Mix. Of course I contend that oleo is not equal to butter nor is Magic Mix equal to natural fluid milk.

What is really disturbing about this controversy is that many good people have been deceived by the oleo promoters, and here are a few facts that no one has yet successfully refuted:

First. No one, including scientists, has yet proven by experiment that a vegetable oil is nutritionally equal to an animal fat;

Second. No experiment has been conducted to prove that vegetable oil equals butterfat without the use of at least two dairy products in the experiment.

Third. The Chicago orphanage experiment was phony as the children had butterfat in whole milk to drink.

If oleo, with 80 percent vegetable oil and 15 percent skim milk, is nutritionally equal to a 100-percent dairy product, butter, then Magic Mix, with 3½ percent vegetable oil and 96½ percent skim milk, is most assuredly equal to natural milk.

Why wreck the dairy industry? Why the antibutterfat attitude of this administration? If this road is to be followed, then skim milk, which as yet has no substitute, will be more and more of importance. The importance of the high test cow will diminish in the picture, and the skim milk cow will be substituted as the cow of the hour.

Two and one-half million people in the United States produce milk, and over 10,000,000 people are employed in the dairy industry. The dairy industry rightfully represents 25 percent of the national farm income. Do you wish to add millions to the list of unemployed? It might be well to stop, look, and listen before wrecking the butter industry. Already there is a movement on foot to publicize and dramatize the use of bottle milk of lower butterfat content. During this week there are to be hearings held on the proposal to further reduce the duty on butter and American cheese, although the present duty on butter and American cheese is now the lowest duty on butterfat of any of the dairy products imported.

The dairy cow that produces 40 percent of the beef and veal of the Nation is surely face to face with the would-be destroyers of the greatest single food product ever known to man; yes, the most important protective food. The per capita production of milk in the United States in 1948 was the lowest per capita production since records have been kept, being only 783 pounds.

The old adage, "Don't kill the goose that lays the golden egg" can now be revamped to read, "Don't kill the cow that produces the golden product."

Immediate Release of Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks, I include copy of New York State Senate Concurrent Resolution No. 8, introduced by Hon. Benjamin F. Feinberg, of Plattsburg, N. Y., the majority leader of the New York State Senate. The resolution was adopted both in the New York Senate and in the Assembly on January 10, 1949, condemning the acts of the Hungarian Government for the arrest and imprisonment of Cardinal Mindszenty and urging the President of the United States, the Secretary of State, and the Members of Congress from the State of New York to do everything in their power to bring about his immediate release:

Whereas the whole civilized world and all individuals who believe in God, regardless of race, creed, or denomination, have been profoundly shocked by the arrest and imprisonment of His Eminence Josef, Cardinal Mindszenty by the Communist Government of Hungary; and

Whereas it appears that there is no justification for this arrest and imprisonment but that it is actuated solely by the desire to destroy religious freedom and freedom of worship; and

Whereas every right-minded person in this country must desire with all his heart to do something to bring about the release of this great churchman: Therefore, be it

Resolved, That the Senate of the State of New York express its utter condemnation of the act of the Hungarian Government and be it further resolved that the President of the United States and the Secretary of State and the Members of the Congress from this State be urged to do everything in their power and to use every legitimate force to bring about the immediate release of Cardinal Mindszenty; and be it further

Resolved, That a copy of this resolution be transmitted to the President of the United States, the Secretary of State, the United States Senators and the Members of Congress from New York State and to the Hungarian legation in Washington.

Aid for Distressed Blizzard Areas

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. MILLER of Nebraska. Mr. Speaker, the northern and western half of Nebraska has in the past 2 months, suffered with several severe blizzards that have brought real catastrophe to this area.

I have had many telephone calls, wires, and letters relative to the suffering and expected loss of livestock due to these blizzards. I do want to report that the American Red Cross has been rendering an excellent service to this stricken area. When I notified them of the dire distress their wheels of relief were started within the hour. They are still working and bringing much relief to distressed families. The Fifth Army Command, with headquarters in Chicago, and the Sixth Army from Lowry Field, Denver, Colo., have also cooperated in bringing relief to man and beast. But this help is but a drop in the bucket as compared to what is needed.

I have had conversations with Governor Peterson, of Nebraska, and he has requested aid through the Air Force Rescue Command. I have joined with Congressman CASE in asking the Federal Works Agency to make money available to South Dakota and Nebraska. These funds, of which more than $300,000 remains available, are from the President's emergency appropriations. This can be funneled through the Governor's emergency program in the State. They are available now. These areas need help at once. A few days delay may increase the loss of livestock to 75 percent or more.

I note that legislation has been introduced which will set up a special Government agency with funds for future emergencies. This is good, but I must remind you and Members of Congress that this

stricken area needs relief now, and not in 3 or 4 months. It may well take several months to get appropriations through the Congress and operating in a Federal agency.

This blizzard is bringing untold suffering to human beings. There has been loss of life. It is a catastrophe that cannot be overstated. The loss of livestock will be felt in the food baskets of you in the East. I cannot emphasize too strongly how terrible this catastrophe is to the people involved. The need in this stricken area may continue for 90 days or more. I have urged the Red Cross, the Army Air Force and the Federal Works Agency to cooperate and work with the State to continue relief work as long as it is needed. Local communities have nearly exhausted their resources. The deep drifts and continued snow, with subzero weather, have been more than the individual or local communities can meet.

I would suggest, Mr. Speaker, that we ought to make preparations now for the floods which will certainly follow when this snow begins to melt in the spring. This must be included in the legislation. The amount of water in this unusual snow could well cause another flood disaster in which we will need all of the facilities of the Federal and local governments to prevent serious loss of life and property.

Italy's Former African Colonies

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. ROONEY. Mr. Speaker, I have previously called the attention of this House to the fact that the basic principles of fairness and justice require that Italy be granted United Nations trusteeship of her former African colonies. The Italian people should not have to suffer some 46,000,000 inhabitants crowded into an area about the size of Arizona or New Mexico.

I am in receipt of a copy of an appealing editorial on this subject written by my friend Generoso Pope, publisher of Il Progresso Italo-Americano, addressed to the President of the United States, to the Secretary of State, and to every Member of Congress. Under the permission heretofore granted me, I include it with these remarks:

To the President of the United States:
To the Secretary of State:
To every Member of Congress:

What the Eighty-first Congress will do in the realm of domestic policies and foreign affairs will vitally affect the present and future not only of our own citizenry but also of all mankind. As I think of the enormity of the problems before you, I recall a section of President Lincoln's annual message to Congress in 1862:

"Fellow citizens, we cannot escape history. We of this Congress and this administration will be remembered in spite of ourselves. No personal significance or insignificance can spare one or another of us. The fiery trial through which we pass will light us down, in honor or dishonor, to the latest generation. We say we are for the Union. The world will not forget that we say this. We know how to save the Union. The world knows we do know how to save it. We, even we here—hold the power and bear the responsibility—we shall nobly save or meanly lose the last, best hope on earth."

How timely and appropriate in this historic appeal. What a stirring and striking parallel. The world is menaced by economic disruption and social chaos fanatically fostered and determinedly directed by the zealots of the totalitarian Communist slave state. More than ever before in its history, is our country the hope and protector of human decency and freedom, the dynamic and decisive force for world reconstruction and lasting international harmony.

Thanks to the generosity of our people and their vibrant idealism and strong sense of responsibility, the world still has a chance to come through—free and able to make solid progress in the peaceful advancement of the ideals of western civilization and human well-being. I continue hopeful, despite the debacle in China, the grave difficulties in Palestine, the barbarous blockade of Berlin, and the rise of Communist terror regimes in Europe. My faith in America is boundless. It is with a full realization of the conditions at hand that I now appeal to you to consider anew the situation in the highly strategic Mediterranean area. Once again this sector of the globe is pivotal in the fortunes and fate of peoples and civilizations. I refer to the plight of the talented Mediterranean people—the Italian people—with whom our Nation has a great spiritual and physical kinship.

The new Italy is democratic to the core. It has successfully resisted and beaten back the craftiest and most lavishly financed Communist assaults. Today, Italy occupies the most strategically important position in the Mediterranean area. Democratic Italy is one of the few nations which now enjoys the friendship and trust of the Arab world as well as Israel. It is in the best interests of our country to strengthen Italy's international role as a force for freedom, world reconstruction, stability, and peace.

For some time the world has been waiting for a just and sound settlement of the Italian colonial question. To hand over, under one guise or another, any of these colonies as war loot to Britain or any other colonial power would be simply a return to the fatal folly of imperialist colonialism. That would be disastrous especially because of the Dutch aggression in Indonesia. What is needed today is an entirely new approach—a breath of fresh clean air in this sphere of international relations. Here our own country, which never resorted to colonial domination, can and must give world leadership.

In April the question of the disposal of Italy's African possessions will come before the United Nations for a final decision. I urgently appeal to you to do everything in your power to have our Government take the initiative towards having the UN assume the trusteeship of the Italian colonies and assign Italy as the trustee of these territories.

To date, about $1,000,000,000 of Italian money has been invested in improving these African lands. Hundreds of thousands of Italians have had administrative and agricultural experience in these areas. Italy alone of all the democratic nations has the necessary available manpower, the vitally important geographical proximity, and the adequate technical skills and intellectual capacities to serve as the UN trustee, improve the material conditions of the natives, and systematically prepare them for their eventual national independence. By giving democratic Italy an opportunity to discharge this great humane responsibility, we will be strengthening her prestige and prowess as a force for international security. The contemplated Atlantic alliance would be useless if strategically placed Italy were kept out or kept weak. America alone cannot defend the entire free world. We need help from our friends. Our friends should be strengthened. To pursue any policy in Africa, Europe, or elsewhere which would weaken any of our friends would mean simply piling more heavy burdens on the American people. Our national welfare and security demand a different course.

Moreover, we will also thereby help Italy ease the terrific pressure of her surplus population. Impoverished Italy has a population density of 140 to the square kilometer—almost double that of the naturally wealthy France, which has only 76. Through granting Italy this outlet in Africa for her surplus population, we will be strengthening her economy by thus reducing the number of unemployed. Otherwise, our entire economic aid program to Italy will tend to be a policy of patching leaks and scurrying for pans in order to catch the dangerous and continuous drip caused by the heavy excess of population.

I earnestly plead with you to do your all to have the full weight of our Nation's moral prestige and material prowess placed on the side of justice for the talented, industrious, and peace-loving people of Italy. The greatness and strength of our country can and must assure democratic Italy the UN trusteeship of her former African possessions.

GENEROSO POPE.

Truman Plan To Help Improve Living Standards Is Practical

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. MULTER. Mr. Speaker, the following item which appeared in the Brooklyn Eagle of January 23, 1949, is an excellent exposition of that part of President Truman's inaugural address dealing with the Far East and Middle East:

TRUMAN PLAN TO HELP IMPROVE LIVING STANDARDS IS PRACTICAL

(By Ernest Lindley)

The fourth course of action outlined by President Truman in his inaugural address—the cooperative development of backward areas of the earth—is not a new idea. It was current after the First World War. There was talk then, some of it at the highest official levels, of cooperative development programs under the League of Nations. But little came of it.

During the recent war, Franklin D. Roosevelt and Wendell Willkie, among others, saw the importance of raising the living standards of the people of the Middle East and Far East. Willkie had much to say about this in his book One World. Roosevelt hit the theme repeatedly, especially in his conversations with representatives of middle eastern nations.

During the Casablanca conference at the end of 1942, shortly after the Allied invasion of northwest Africa, Roosevelt talked with the Sultan of Morocco about the development of the resources of Morocco. He drew a sharp distinction between the old methods of colonial development, under which wealth was drawn off for the benefit of the exploiting

power, and a cooperative development which would raise the living standards of the native peoples.

On his return from the Teheran Conference of 1943 and the Yalta Conference of 1945 he talked in the same vein. One of the specific problems which engaged his attention was watering the Saudi Arabian Desert. He explored at some length the possibility of drilling more wells. He even took up the matter with King Ibn Saud.

Frances Perkins, former Secretary of Labor, in her book The Roosevelt I Knew, records some of F. D. R.'s comments on the poverty of the Near East:

"When I get through being President of the United States and this damn war is over, I think Eleanor and I will go to the Near East and see if we can manage to put over an operation like the Tennessee Valley system that will really make something of that country. I would love to do it."

The idea of a big near eastern development program has been discussed repeatedly in the State Department and other agencies of the Government. It has been talked about a great deal also in British circles. In both countries, persons familiar with the Near and Middle East have realized that the best long-run answer to communism in that part of the world would be a rise in the standard of living of the people. The long-run answer is the same in the areas still farther east. This is fully realized also by the leaders of the new nations in the Indian Ocean area.

Most of Asia has thrown off the yoke of old-fashioned imperialism. It does not want, and will not accept, economic or financial imperialism. But it does want technical and scientific aid from the west and some financial help in developing its natural resources and industries.

President Truman took this idea of long standing and made it for the first time one of the guiding principles or courses of action of American policy. He did it in a way expertly devised to obtain a favorable response from the peoples of Asia and other economically backward areas.

Almost certainly, if Roosevelt had lived, this course of action would have been outlined in much the same terms—perhaps before this. But it could hardly have been done better than Mr. Truman did it.

The idea, moreover, is thoroughly practical. It need involve no great drain on our resources. It will provide some outlets for American-made machinery—probably some contracts for American construction firms. But it calls, most of all, for the services of American technicians in many fields. It does not mean feeding or clothing the rest of the world, but helping economically backward peoples to learn how to feed and clothe themselves.

Mr. Speaker, the foregoing reechoes my own sentiments as expressed on the floor of this House on several occasions. I hope that before this session closes we will see that type of program activated.

National Health Plan Rates High With Britain's Voters

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include two significant items. The first is a letter published in the Washington Star on December 24, 1948, effectively answering the vicious and roundabout attack made by Columnist Dorothy Thompson on the proposed national health-insurance legislation and inserted in the RECORD January 17. The second item is one of the most recent appraisals of the operation of the British system of national health service.

I think my colleagues and the American people as a whole are entitled to have the facts regarding the popularity and effectiveness with which national health insurance is operating abroad and to have some better appreciation of what an American system of health insurance would mean to our own people. Mr. Edelman's letter serves to shed some light and to counter Miss Thompson's distorted view of the situation.

Judging from the statistics that follow, the British people seem to feel that their system of health insurance is a pretty satisfactory one and is serving to meet a basic national health need.

The matter referred to follows:

[From the Washington Evening Star of December 24, 1948]

HEALTH INSURANCE DEFENDED

To the EDITOR OF THE STAR:

Dorothy Thompson's column on health insurance, published on December 20, struck me as being utterly smug and altogether lacking in understanding of the basic medical-care problem confronting most American families today.

"All our analyses of the problem of health have brought us again and again up against a single stone-wall barrier—the inability of millions of the people to meet the costs of health services," says the report of the National Health Assembly, which met in Washington in May 1948.

In another section of the report this statement was made: "* * * at a maximum, only about half the families in the United States can afford even a moderately comprehensive health-insurance plan on a voluntary basis. The net result then would be to leave without adequate protection the very groups—those with incomes below $3,000—whose plight the Nation needs most to remedy in order to raise the country's level of health."

Miss Thompson boasts of the fact that in Europe, rather than wait her turn to see a doctor serving people under health insurance, she chose to pay extra in order to patronize what was the equivalent of a black-market physician. Like the propagandists for the AMA, Miss Thompson infers, but presents no facts to prove, that the so-called panel patients in England or elsewhere are treated less capably and with less feeling than the same individuals would be treated if they came to the doctors as private patients at a higher fee.

Miss Thompson's article reflects the petulant attitude of the economically well-padded few who, being able to pay thousands for an operation or to have their hands held or their neuroses pampered, scorn taking their turn under a system that meets first needs first. Nevertheless the tens of thousands of people in Sweden, Denmark, Holland, France, and England who voted time and again for health insurance have shown that they know it to be a system under which doctors first serve those who need medical care and only later look after the frustrated females. If anything further is needed to refute Miss Thompson and prove that health insurance is socially desirable and economically sound, the most recent survey conducted by the British Institute of Public Opinion can be cited (the Institute forecast the election of the Labor government in 1945 with an error of only 1 percentage point).

That survey shows that the people of Great Britain have acclaimed the British Government's national health insurance program as the most popular of all its activities. Furthermore, the survey indicates that the vast majority of those treated said that they were satisfied with the care they got and had no criticisms.

In Britain, as in other countries, national health insurance has been tried, has worked, and is approved. Should not America, whose dollars now help to rebuild devastated Europe, also have the benefits of national health insurance for its people? I, for one, vote "Yes."

JOHN W. EDELMAN,
Washington Representative, Textile Workers Union of America, CIO.

[From Public Opinion News Service]

NATIONAL HEALTH PLAN RATES HIGH WITH BRITAIN'S VOTERS—PROGRAM FAR MORE POPULAR THAN ANY OTHER LABOR GOVERNMENT MEASURE, SURVEY SHOWS

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N. J., December 17.—The powerful political appeal of national health insurance, a program which President Truman has repeatedly urged Congress to adopt, is evident in one nation which recently put such a program into effect—Britain.

British voters in a nation-wide survey have voted the national health scheme the best thing which the Atlee government has done since coming to office more than 3 years ago. It far outranked any other measure in popularity.

The British program went into effect July 1, just about the time when Democratic Party leaders were preparing the 1948 Democratic platform, which pledged a national health program for "adequate medical care." President Truman reiterated his support of the idea in many campaign speeches and Washington observers believe that it may be one of the President's "pet measures" for action in the Eighty-first Congress.

The British survey was conducted by the British Institute of Public Opinion, which forecast the election of the Labor government in 1945 with an error of only one percentage point.

BRITISH POLL

"What would you say is the best thing this Government has done since it came to office in 1945?"

	Percent
National health scheme	35
Increased pensions, looked after old people	12
Nationalization of industry	7
Kept rationing, kept food prices down	4
Wage increases, holidays with pay	4
School meals, raising school leaving age	2
Improved housing	2
Prevented unemployment	2
Stood firm against Russia	1
Miscellaneous and no answer	21
Done nothing good	10

When the British health program went into effect, Britishers flocked to doctors, dentists, clinics, and hospitals by the scores of thousands to take advantage of the free medical services provided under the plan.

In fact, more than a third of the adult population used the services of the plan during its first 3 months of operation, according to another survey by the British Institute. More women were treated than men.

In October the British Institute asked voters:

"Have you had occasion to use any of the services of the national health scheme during its first 3 months of operation?"

The results:

	Yes	No
	Percent	*Percent*
National	38	62
Men	33	67
Women	43	57

The vast majority of those treated said they were satisfied with the care they got, and had no criticism.

"Were you satisfied with the treatment that you received or did you have any criticism?"

	Percent
Satisfied	35
Dissatisfied	3
Total treated	38

In this country a number of proposals for national health legislation have been considered in the past 2 or 3 years. Extensive hearings were held last year on a proposed National Health Insurance and Public Health Act, sponsored by Senator JAMES E. MURRAY, Democrat, of Montana, and other Senators.

Under this bill people covered by the insurance would receive preventive, diagnostic, and curative services by their family physicians, with the service of specialists as required. They would also receive hospital care, laboratory and X-ray services, unusually expensive medicines, and special appliances. Dental care and home nursing would be provided to a limited degree.

Employees would pay 1½ percent of their earnings up to $3,600 and their employers would contribute a like sum. If self-employed, the person would pay the entire 3 percent up to $3,600 of his earnings.

"Operation Hay"

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. CASE of South Dakota. Mr. Speaker, on the second of January, there swung into western South Dakota, along with other portions of the West, the most severe snowstorm on record. The wind blew at hurricane speeds from Sunday afternoon of January 2 until Wednesday, January 5. The actual snowfall was difficult to estimate because measuring equipment was buried as the snow was whipped into drifts of such heights that the true fall on the level could not be measured.

In some States, snow of several feet was reported. The actual fall in the Black Hills of South Dakota might have been measured in feet; out on the prairies to the east it was probably not more than 15 to 30 inches, but the winds created drifts on highways and in railroad cuts of from 20 to 35 feet. The storm has been followed by at least two storms of almost equal intensity but of less duration, alternating between some sunny days and many nights of subzero temperatures.

The result has been severe upon both the human and livestock population. State and local agencies have been doing what they could to meet emergency calls for food, fuel, and medicines. The Red Cross has operated on a disaster basis and has been of unforgettable and invaluable assistance.

Among the emergency steps taken to rescue or save some of the livestock was what is now coming to be called a hay lift, a name coined, I suppose by mental association with the Berlin air lift.

On the afternoon of Saturday, January 8, as the first reports began to trickle into my office from an area without trains and without newspapers for the week, I received a telephone call from Kirk T. Mears, county agent in Pennington County, one of the large countie in western South Dakota, and of which Rapid City is the county seat.

Mears said that stockgrowers were beginning to get out on to the ranges and were finding an appalling situation. Cattle had traveled with the storm and while hundreds undoubtedly were buried in cuts and drifts, scattered bunches were seen from the air stranded far from feed and water. He said that it had been suggested that concentrated feed in the way of cake or cubes might be dropped to these bands by plane if some way could be found to provide temporary financing of the purchase of the livestock food.

It so happened that only the day before I had discussed with Mr. Dillard Lasseter, director of the Farmers Home Administration, the status of the remnant collections on the old rural rehabilitation emergency feed and seed loans which had been allocated to the several States. I knew that ther were some unloaned balances in those trust funds and it occurred to me that loans now for this purpose would be in keeping with the original purpose of the funds.

Although it was Saturday afternoon, with the cooperation of the gentleman from Georgia [Mr. PACE], I located Mr. Lasseter who was on Capitol Hill, and discussed the situation with him. He grasped it quickly and acted promptly.

What followed has been most interestingly told in a radio interview between R. F. Mauser, a county supervisor for the Farmers Home Administration, and Announcer Scott, of station KOTA, Rapid City. In order that the Members of the House may know how a hay lift operates and how the Air Force turned some of its training activities into a practical and realistic operation with benefits to sufferers in this disaster as well as to the crews, I have asked permission to place a transcript of their interview in the RECORD. The date of the broadcast was January 13, 1949:

Mr. MAUSER. Most of us have just dug out from the storm; I am speaking principally of those of us who are fortunate enough to live where facilities were available to help us dig out. Not so fortunate are some of the farmers and ranchers whose only contact with the outside world has been the radio—the recent blizzard was something for the farmers and ranchers to cope with and some of them still have to use emergency facilities such as airplanes in order to get desperately needed supplies.

Miss SCOTT. I have been among the isolated, so to speak, and I know that I would have certainly welcomed the radio messages I have been hearing, if I had livestock that needed feed.

Mr. MAUSER. My apologies for not introducing you this morning, Theda Nelle, but it seems so natural to have you on a radio program with me that I forgot, Miss Scott, home agent from Huron, has been here on an extended Christmas vacation.

Miss SCOTT. I wonder if you will tell me something about the emergency feed program, I have sort of lost track of things so to speak, and I have been very interested in the emergency feed program.

Mr. MAUSER. Representative FRANCIS CASE, upon hearing desperate circumstances some of our farmers and ranchers found themselves in after the storm, contacted Mr. Dillard B. Lasseter, National Administrator for the Farmers Home Administration, to find out if there was some means by which the Farmers Home Administration could be of assistance. Mr. Lasseter immediately contacted our state director, E. R. Arneson, by telephone and authorized him to take whatever steps were necessary to aid distressed farmers and ranchers.

Miss SCOTT. If I remember correctly, this isn't the first time that the FHA has been called upon to assist in emergencies. What kind of a program was worked out?

Mr. MAUSER. Mr. Arneson immediately called me by telephone, and asked me to cooperate with County Agent Mears, who had also been contacted by Mr. CASE, to set up a ranchers' emergency feed committee. The committee selected was Emmet Horgan, president of the South Dakota Stock Growers' Association; Ed Denslow, farmer editor of our Station KOTA; and Eddie McMahon, rancher committeeman for the Farmers Home Administration.

Miss SCOTT. For the benefit of someone who might be listening who has not heard about the distress signals worked out by this committee, why wouldn't this be a good time to give these people the information so that they could use them if they are in need of feed?

Mr. MAUSER. I will be glad to—we finally got the committeemen together, and, with the assistance of County Agent Mears and myself, a program was worked out whereby the Army Air Force would fly feed to distressed ranchers who had notified us or the committee of their needs, if they had communications available, or, if not, to use the old fox and geese signal in the snow where they wished this feed to be dropped. If more than a hundred cattle needed feed, an extra spoke was to be put in the wheel.

Miss SCOTT. Let me see; did I get this right? Suppose I am now in need of feed, can I stamp out a fox and geese circle?

Mr. MAUSER. Yes; that's right.

Miss SCOTT. This circle should be at least 50 feet or so in diameter, or outlined with hay to be plainly visible to the pilots, should it not?

Mr. MAUSER. That's right. And it should be placed where the feed is to be dropped, or as near to the livestock as possible.

Miss SCOTT. I understand the Farmers Home Administration is the loaning agency. How are they going to get repaid?

Mr. MAUSER. The committee took this into consideration, too. It was determined that the Farmers Home Administration would buy the feed, or authorize its purchase, together with the cost of transporting it to the Rapid City Air Force base. This cost would have to be borne by the farmer or rancher getting the feed; and if he was not in a position to pay for it immediately, the Farmers Home Administration would accept a promissory note for a reasonable length of time, bearing 5 percent interest. The committee felt that any farmer or rancher in need of this type of assistance would certainly be more than glad to repay the Government for the cost of feed and transportation to the base.

Miss SCOTT. That certainly sounds reasonable and would be a great accommodation to a farm or ranch family who were isolated in the blizzard.

Mr. MAUSER. Representative FRANCIS CASE arranged with the Army Air Force to fly this feed to distressed farmers and ranchers at no cost to them.

Miss SCOTT. It seems to me I heard the Air Force speak of this as operation hay and that a near miss on this kind of bombing run was considered a good score—sounds rather an interesting version of the bombing practices we have all seen out here.

Mr. MAUSER. Yes; and after watching these boys from a vantage point of a C–47, which still had a lot of the equipment in it from war days, they haven't lost their bomb-dropping eye yet. Lts. Clarence Hall and Lorimer Peterson were the pilots of operation hay and Sgts. C. King and A. Martin were the bombardiers on the run. As we were ready to take off, one of the pilots jokingly remarked, "If the cows have horns, they would hang a bale of hay on each horn," and after watching them Tuesday I'm not so sure that they couldn't have done it.

Miss SCOTT. You say as we were ready to take off—who did that include?

Mr. MAUSER. The Air Force boys I mentioned, Kirk Mears, and myself carried out the first flight on operation hay. Tuesday was the earliest that air base personnel could get planes in readiness after the storm. They had a lot of digging out to do, too. We had two requests for feed at the time we took off—one from S. E. Swanson, from east of Caputa, and one from Carl McDonald, east of Underwood. After the plane had been taxied out on the runway, 1½ tons of hay and 1,200 pounds of cubes were loaded into the C–47. The Army calls this plane the "flying boxcar," and it is truly named. We got this feed into the plane with room to spare. After it was loaded, we taxied out to the end of the runway and took to the air. The navigator had consulted with Mr. Mears and myself regarding the route to be flown and they had this mapped out like they were on a bombing run with the targets marked on the map.

Miss SCOTT. This all sounds very fascinating and yet rather frightening to me; was it hard to find the so-called targets?

Mr. MAUSER. We had, or thought we had, quite an accurate description of the so-called targets, but when you get into the air things look a lot alike, especially with all the snow on the ground, and we had some difficulty in locating the first target.

Miss SCOTT. In other words, cattle, fence rows, and hills all look much alike from the air, especially if landmarks are covered with snow.

Mr. MAUSER. We certainly found that out when we got into the air. That is why I say that any future requests for dropping feed should be identified by the fox-and-geese circle that we suggested so that it will eliminate the possibility of error. We had no difficulty in locating the second target and about 10 bombing runs were made over this target to get the feed unloaded. The cargo door was left off the plane when we took off, to make it easier to unload, but even so, you don't get a chance to kick out too many bales of hay on a limited space traveling 150 miles an hour.

Miss SCOTT. I imagine a mercy run, bombing starving livestock with hay was much more satisfying than the bombing with the intent of destruction, even though it was in defense.

Mr. MAUSER. After working with these boys it was easy to see that they enjoyed these missions.

Miss SCOTT. I'm a curious soul, and I think it would be interesting to find out more about how these hay bombing missions were carried out—how did you heave the hay?

Mr. MAUSER. The hay was stacked in the plane and anchored and we loosened about four bales at a time and shoved them in front of the door, ready to shove them on out. The door was just large enough to let one bale out at a time, and we didn't dare stack them for fear that one of the bales might hit the tail. After the target was sighted, the pilot got ready for the run, lowered the plane to a couple of hundred feet above the ground and then used the same signals that were used when they were dropping paratroops. When the plane reached a point above the target, a green light would go on next to the door, then we would start heaving bales and keep on heaving until a red light indicated that the target was passed. Then the pilot would again gain altitude, make a big circle, and make the run again.

Miss SCOTT. How many runs were needed to unload the hay?

Mr. MAUSER. This same bombing run was made until we got all the hay out. I think we made about 10 runs. We got more skilled at each run; on the first run we only got three bales out, and on the last run we got six. When we really got good we were out of hay.

Miss SCOTT. Sounds rather dangerous to be up there with the door off; was there a great deal of hazard connected with it?

Mr. MAUSER. Yes; there was some danger, but the Air Force took care of that. The floor of the plane was, of course, very smooth metal, and after loading the hay which was mixed with some snow, the floor was as slick as ice. To avoid any accidents, the bombardiers tied themselves to the opposite side of the plane with rope so that any lurch of the plane would not throw them out. Everyone was, of course, equipped with a parachute, but at low altitudes this would not be much good.

Miss SCOTT. After you finished these bombing runs what did you do?

Mr. MAUSER. We asked Captain Richardson, who was in charge of operations at the base, if it would be possible to take a look at the blizzard area after the mission was completed in order to spot other distress signals and he readily agreed, and as we had heard rumors of a distress area north of Philip, we took off for that section and made quite a thorough search of the area without sighting any other distress signals. We saw a large number of ranch homes where there was no evidence of anyone having been in or out of the building site. We also spotted a number of bunches of cattle that appeared to be isolated several miles from any visible feed supply although they appeared to be making attempts to graze. That section of the country appeared to have the heaviest snow because from the air it looked like one huge white blanket had been spread over everything, with just a few ranch buildings and clumps of trees showing through.

Miss SCOTT. That sounds like it might have been quite a sight, though I am sure a person would feel that lonesomeness and the disaster that lay in the drifts of snow. Did you return to the base then?

Mr. MAUSER. After circling the area north of Philip awhile, we headed north-northwest, as the pilot would say it, until we reached Faith and then headed southwest toward the Rapid City Air Base. The country looked pretty much alike, lots of snow, heavily drifted, except that the country around Faith and west of there didn't appear to have quite as much snow as the territory further south, as it appeared that some of the ridges had less snow on them.

Miss SCOTT. I know that this is going to be a hard question to ask, and a painful one, but would you care to venture any statement on the apparent stock loss in this blizzard?

Mr. MAUSER. Just what the stock loss will be is anybody's guess at this time. Until farmers and ranchers are able to get a complete count on their stock, no guess is going to come anywhere near the actual loss. I do know this: that the area we covered by plane on Tuesday should have contained a lot more cattle than we were able to see from the air. Lack of feed isn't the only problem. All water holes and creeks are buried in snow. While stock will be able to subsist on snow for awhile, they are going to have to get to water soon if they are to survive. That's one thing we cannot fly to them in a C–47.

Miss SCOTT. Yes, that's right—and I know that there will be a lot of heartbreak and labor for the farmers and ranchers to get livestock to water—and to feed. The thought of livestock suffering from lack of feed or water will certainly be one of deep concern to our farmers and ranchers. I certainly do feel for them, and I am really deeply concerned and I hope that as reports come in from the many families I know, they will not have many losses.

Mr. MAUSER. This emergency feed program set up by the Farmers Home Administration is for the purpose of getting feed to farmers and ranchers in extreme emergencies. We want to be of help to every farmer and rancher who had no other means of saving his livestock from starvation. It is hoped that no one will make unnecessary demands upon this service, but we will make an effort to help those who call on us, or put out the fox-and-geese signal indicating the need of feed for starving livestock. We have just received authorization to use this emergency fund for loans in cases where the road may be opened somewhere near a ranch home, but the rancher is unable to get to his feed; this of course is also an emergency measure and should only be used where absolutely necessary.

Miss SCOTT. As of this morning, then, this service would still be available to a farmer or rancher in desperate circumstances, who sends word, or marks his ranch with the distress signal?

Mr. MAUSER. The Marshall flying service and individual flyers who are covering the West River area—and they are doing a fine job of it—are reporting any distress signals of this nature that they see to County Agent Mears.

Miss SCOTT. Since I am more acquainted with Pennington County, my thinking would quite naturally be concerned to a large extent with Pennington County, but what about ranchers in other counties?

Mr. MAUSER. This service is available in the entire West River section of South Dakota—in other words, the blizzard area—however, all requests should be reported to Rapid City since if feed is to be flown, it will have to be transported to the Rapid City Air Base for loading. I would like to ask that any farmer or rancher who has received feed through this emergency feed program, as soon as he is able, contact the county FHA supervisor in the county where his ranch is located, and arrange for the payment of this feed, or the signing of a note. This is important and should be taken care of at the earliest possible date. We will maintain a record of where and how much feed was delivered at each location.

Miss SCOTT. Because I know so many of the farm and ranch families, as I said before, I have been concerned about the after effects of the blizzard, and I, for one, think that the program of emergency feeding for snowbound livestock is a very fine thing. With several organizations concerned in such a program, and the details that had to be worked out, I am very glad that I have had this opportunity to talk with you about the first runs that were made to carry feed to the livestock.

Mr. MAUSER. I want to thank you, Theda Nelle, for helping me with this broadcast this morning. I almost became a casualty of "operation hay" as part of a bale of hay came back into the plane and hit me in the eye, so your assistance on this program this morning is doubly appreciated, as it would have been rather difficult for me to read all of this script with this one good eye.

Miss SCOTT. I am very glad to be here again, I always enjoyed these broadcasts.

Mr. MAUSER. The Air Force base personnel, especially Captain Richardson, who was in charge of operations, are to be commended for the fine cooperation they have shown in this emergency. The interest of Representative FRANCIS CASE, though he was in Washington, is evidenced that he has the interest of the West River people foremost in his mind even though he was busy with the opening of the Eighty-first Congress. We sincerely hope that the present good weather conditions continue and that "operation hay" will no longer be necessary.

Unfortunately, Mr. Speaker, the good weather of the day of the broadcast has not continued steadily. "Operation hay" is continuing and additional measures are now being undertaken to break open the trails and roads so that the stock can be moved to water as well as hay and fodder.

The Federal Budget

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the following editorial is from the January 17 Wisconsin Tribune, of Wisconsin Rapids, Wis., which is located in a county in my district where industry, business, and agriculture are of near equal importance. The editorial indicates our responsibility is to, first, eliminate unnecessary functions of government; second, reduce waste and extravagance in government; third, discourage people in high places from making statements that result in increased unemployment; fourth, make the powers that be realize that factory pay rolls and national farm income are handmaidens and that the national income is seven times the amount of factory pay rolls and seven times the national farm income.

The editorial:

THE FEDERAL BUDGET

Accustomed though he is to talk in terms of billions of dollars where Federal finances are concerned, Mr. John Q. Citizen may be pardoned for finding it difficult to comprehend the record $41,858,000,000 peacetime budget which President Truman has submitted to Congress for the 1949–50 fiscal year.

A better understanding of what these astronomical figures mean may be had by analyzing them in terms of their local impact. For example, Wood County taxpayers will be called upon to pay $16,082,000 in direct and hidden taxes as their share of the new Federal budget, according to an analysis just made by the Wisconsin State Chamber of Commerce.

The same study shows that Wisconsin taxpayers will be required to divvy up $863,140,000 as this State's share of the Federal spending burden in the next fiscal year. This amount is five times the total amount of State and local general property taxes levied in 1947 and collected in 1948 for all purposes. It is also four times the total amount spent by the State government in 1948 for all operating costs, including all school, highway, and welfare aids, all the money collected by the State and returned to local governments, all State trunk highway and bridge construction and maintenance outlays, and all other operating and maintenance costs of the State government.

Wood County's share of proposed Federal spending for the coming year amounts to almost 6½ times the total of all taxes on real and personal property collected in this county in 1948, according to State chamber of commerce analysis.

The Truman budget anticipates that outgo will exceed income by $873,000,000, which deficit would boost the Federal debt to $251,925,000,000 at the close of the 1949–50 fiscal year. Some rough figuring with pencil and paper indicates that this debt represents somewhere in the neighborhood of $130 per acre of area in the continental United States. Narrowing it down to the 1,142,817,821 acres of our 6,000,000 farms, it comes to around $220 an acre. Going a step further, the debt figures out to be a mortgage of approximately 175 percent of the 1940 valuation of the 48 States and the District of Columbia, which amounted to $144,631,431,000.

After reading these figures, Mr. John Q. Citizen may still be a bit hazy about the full meaning of the $41,858,000,000 budget and the $251,925,000,000 Federal debt estimate. But he should have some idea, at least, of how they are going to affect his pocketbook. What is spent in Washington comes from all of us, to greater or lesser degree. They haven't yet found money growing on trees.

Situation in China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a copy of an interview with Mr. Jack Beall on the program Headline Edition, over the ABC network, at 7 p. m., Friday, January 21, 1949:

Mr. BEALL. What is the situation in China as a result of President Chiang's leaving the Government?

Mr. JUDD. Doubtless Chiang Kai-shek is leaving because he knows that the Communists do not want genuine peace now any more than they have previously. What they want is conquest. But there are some in China who hope that if the generalissimo is out of the picture the Communists may be willing to negotiate. The Chinese Constitution provides that in the absence of the president, the vice president, General Li Tsung-jen, shall exercise all of his functions. So the generalissimo, in line with the complete devotion to his country which has marked his whole career, is voluntarily absenting himself in order to let others try.

Mr. BEALL. Can the acting president, General Li, make peace?

Mr. JUDD. Mr. Beall, it has never yet been possible to make an honorable peace with Communists anywhere. Usually the Communists set up an arrangement called a coalition which looks like peace, or even democracy, but which leads without exception to complete subjugation. For weeks our papers have talked about war or peace for China. Those were never the alternatives. The real alternatives were and are resistance or enslavement. The President of China, knowing for more than 20 years the facts of life with respect to world communism—the facts which the President of the United States announced to Americans only yesterday in his inaugural address—will not be party to a surrender that will make China a complete satellite of the Soviet Union.

Mr. BEALL. What is likely to happen now?

Mr. JUDD. Should the new Chinese Government refuse to yield to Communist enslavement and decide to fight on, with or without Chiang, and if necessary as a government in exile, there still would he hope, if America would change her policy from moral lectures plus some relief to one of real assistance. China's cause is hardly less hopeless than Harry Truman's appeared only 4 months ago. Nearly everyone said he had wholly lost the support of the people and even of his own party. But Truman's victory brought back morale to the Democrats as if by magic.

A statement by the United States of genuine support of the Government of China would bolster morale there almost as rapidly.

But if the United States persists in its blind policy of virtual abandonment of a loyal ally, then today's events in China will mean that those, there and here, who have fought Chiang all these years have won. China will go behind the iron curtain. Her long-suffering people will have peace—the peace of enslavement. After the appropriate period of good behavior and pretended democracy, any Chinese who dares to disagree with the Communists will go the way of Masaryk and Petkov. They will have the peace of the grave.

World communism will have won its greatest victory since it seized Russia in 1917. The United States will have an avowed enemy instead of a proved friend on the western shore of the Pacific.

Our country will have suffered a terrible defeat—a disaster for which we and our children will be paying, I fear, for many years to come.

In All Ways Rabbi Halpern Gets Close to His People

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. MULTER. Mr. Speaker, each week the Brooklyn Eagle selects an outstanding citizen of our community as the "man of the week," and in its Sunday edition presents his record to the people.

I am very proud that the "man of the week" of January 23, 1949, is Harry Halpern, rabbi of the East Midwood Jewish Center, with which I am very proud to be associated. The following is the item which appeared about him in the Brooklyn Sunday Eagle:

IN ALL WAYS RABBI HALPERN GETS CLOSE TO HIS PEOPLE

(By Violet Brown)

Religion at the bustling East Midwood Jewish Center is as homely as a fresh-baked loaf of Sabbath bread.

Six hundred religious school kids approach the story of the Maccabees with as much gusto as if those ancient heroes were Superman or the paratroopers of Bastogne; the women of the sisterhood argue over Ibsen; and tired businessmen flock to the Sunday night sermons.

There is a bubbling liveliness, at the center of which sits the rabbi, Harry Halpern of the twinkling eye and ever-present cigar, a latter-day Micah whose approach to the-

ology seems based on that simplest of Biblical advices: "And what doth the Lord require of thee but to do justly, and to love mercy, and to walk humbly with thy God?"

His small office is right off the entrance of the big center at 1625 Ocean Avenue, jam packed, unadorned, as physically close to the people walking outside as is the rabbi's spirit. When the center nursery school closes for a holiday, there is never any question about what to do with the current goldfish or turtles. They are boarded in the rabbi's office—and they get fed on time, too.

Everyone walks in on the rabbi, the troubled mother, the paroled convict, the big manufacturer, the chastised small boy.

A CASE IN POINT

They all get a hearing, but the rabbi is apt to put himself out most for the boy.

There was, for instance, the 9-year-old ordered to bring his father to school to hear the details of his crime. This was too dreadful to contemplate, so the youngster went instead to a place where he was sure a man would be understood.

"Please, rabbi," he begged, "please come to school and tell the teacher you're my father."

Halpern was a bachelor at the time—and knew the teacher—but he went, straight-faced, introduced himself, and won clemency for the sinner.

He is still interceding for young people. The center will celebrate the twentieth year of his coming to the congregation and the twenty-fifth anniversary of the congregation itself this spring by completing the fund-raising for the $500,000 religious school and youth center which will be built behind the synagogue on East Twenty-first Street.

"It's not going to be a ballroom for us, or a big marble building we can talk about," says Halpern. "It's going to belong to the kids."

Two things led Halpern to the ministry, he says lightly—"an affliction (I love to make speeches) and a desire to be a social worker (I like people and I like to help them)."

HIS FIRST SPEECH

His affliction manifested itself early.

The hard-working elder Halperns, who had met on the ship bringing them to America, lived on the lower East Side in the first years of their marriage.

In the evening Papa Halpern liked to take a stroll with his eldest. One evening he stopped to listen to a political speech and when father and son returned home the mother asked the 5-year-old boy what the speaker had said. She meant it jocularly, but Harry told her—with gestures. The Halperns, their son says, were "extremely quiet people," and this unexpected vein of oratory charmed them. With more pride than modern psychology, they used to say, "Make the speech, Harry," whenever visitors appeared after that, and he did.

By the time the boy was 12 the Halperns lived in Williamsburg, and Harry was acting as boy rabbi for the wise old rabbi he now considers his mentor, Rabbi Samuel Rabinowitz, who shared his religion with the children as much as with their elders. Thanks to Rabbi Rabinowitz, Halpern early was able to give an affirmative answer to the two questions he puts to doubters these days—"Will religion help a person when he's down in the dumps?" and "Will it help give him a basis for a good life?"

GOT TWO LAW DEGREES

Still speaking, Halpern whizzed through Eastern District High School, winning a city-wide extemporaneous speaking contest, and City College, getting his degree in 2½ years. He went to the orthodox seminary now known as Yeshiva University and was ordained at the Jewish Theological Seminary.

In between, he got his master's degree at Columbia, taught and preached at the Jewish Communal Center of Flatbush, and tested his chosen course by taking time out to get a bachelor of laws degree, cum laude, and a doctor of jurisprudence degree, also cum laude. (Having tried it, he left the law to his brother Isidor, a Court Street trial attorney. Another brother, Peretz, followed Harry's steps into the ministry, and the fourth brother, Louis, became an advertising man.)

Halpern's enthusiasms also include teaching, and his parishioners have heard him lecture on the modern drama, the modern interpretation of the Bible, and Jewish literature. Knowing this pleasure of his, they gave him a thank-you note 2 years ago by establishing a $50,000 fellowship in Talmud at the Jewish Theological Seminary in his honor.

Nine years ago, he married an attractive social worker and school teacher named Mollie Singer. They have a pretty blond 4-year-old daughter, Deborah, who is, as might be expected, the apple of her father's eye.

WORK IN ZIONISM

In terms of achievement he probably values most the work he did on behalf of zionism, undertaken at a time when it was an uphill job. He helped found the Flatbush Zionist Region and was president of the Brooklyn Zionist Region, largest membership unit of any Jewish organization in the United States. It was a solemn day for him when the State of Israel, for which we've been waiting for 1,900 years, finally was proclaimed.

"We do not come bearing a sword," he commented then. "We want only to live in peace and security, to dwell with our neighbors without fear."

It was a victory for the spirit he had expressed one night at an ordinary Friday evening service, many years before.

"It is not in slavish surrender or in cowardly retreat that we shall find salvation," he said, "but in a courageous and dignified preservation of the ideals and traditions of our people and in a heroic, even militant, defense of them in the face of those who attack us. Let it not be forgotten that in so doing we are not fighting for ourselves alone. We are the shock troops in a battle which threatens the extermination of all minorities. * * * We dare not abdicate our place as the defenders of justice and truth. It is heroic Jewish fighters and not Jewish appeasers who will win the day for our sorely tried people."

As the people of the East Midwood congregation will tell you, Ocean Avenue has its prophets, too.

Mr. Speaker, I am happy to join with the people of Brooklyn in this salute to one of its outstanding citizens.

Fifty Years of Forestry

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1949

Mr. CASE of South Dakota. Mr. Speaker, 50 years ago last September forestry began in the national forests of the United States. Case No. 1, for the first sale of timber under supervised cutting, took place in the Black Hills of South Dakota.

The anniversary was appropriately commemorated at Nemo, S. Dak., September 19, 1948, with a program which ranged from the chopping of trees by veteran log-cutters to the dropping of trained fire-fighters by parachute.

Two outstanding addresses were given, one by Lyle F. Watts, Chief of the United States Forest Service, and the other by Guy N. Bjorge, general manager of the Homestake mine, largest private timber operator in the area, with an outstanding record for cooperation in sound timber management.

Because the wise use of our timber resources is so vital to our national economy I am placing these addresses in the RECORD with the permission of the House.

FIFTY YEARS OF FORESTRY

(Address by Lyle F. Watts, Chief, U. S. Forest Service, at program in observance of fiftieth anniversary of the establishment of the Black Hills National Forest, Nemo, S. Dak., September 19, 1948)

We are gathered here today within sight of the spot where real forestry first began in the national forests of the United States. Here, half a century ago, was made the Government's first timber sales under supervised cutting—the first attempt at scientific timber management in the national forests. It was "case No. 1" in the records of Government forestry.

I doubt if that first timber sale here in the Black Hills caused the news wires to hum all the way across the country, or that it made any big headlines in the great metropolitan newspapers. But it was an event of historical importance. Its effects were far greater than many of the other events that made the now forgotten headlines of that day. It started something that is still growing. It was an important first step in the movement for conservation of natural resources—a movement that may well determine whether our Nation, or indeed the human race, is to survive and prosper on this earth.

Today we celebrate the accomplishments of 50 years of forestry in the Black Hills.

From the 1870's, when the Black Hills were first settled, until the national forest was established, there had been unrestricted cutting of timber, and no effort was made to stop forest fires. Even before the area was settled there had been many bad fires.

The town of Deadwood, as you know, got its name from the tangle of fire-killed timber that the earliest settlers found in the gulch.

Fire and wasteful cutting were playing such havoc that back in the nineties local people began to realize that the timber supply was diminishing at an alarming rate, and that something should be done about it. The mining industry, especially, was worried about the supply of mine timbers. The movement that started then resulted in the creation of the Black Hills Forest Reserve—the area that now comprises the Black Hills and the Harney National Forests.

The first sale of timber was made about a year after the forest reserve was established—in 1898. It was in some ways a rather elementary attempt at scientific timber cutting. Some mistakes were made at the start. But essentially it was a sound undertaking. It proved out.

HOMESTAKE BOUGHT FIRST SALE

The case No. 1 sale was made to the Homestake Mining Co. It was the first to make application to purchase timber from the forest reserve. In passing from the period when all timber-cutting was unregulated to the start of supervised cutting and the requirement to pay for the timber cut, the company experienced many difficulties.

Plans for the sale had been drawn up by the Bureau of Forestry of the Department of Agriculture, but the men in charge of the forest reserve at the beginning were General Land Office appointees who knew little about forestry, and most of them probably cared less.

To its everlasting credit, however, the Homestake Mining Co. played fair with the forestry movement from the start. It gave this first attempt at forest management its full support. Eventually it put its own timberlands under management and now practices forestry that is on a par with that of the Forest Service.

The Black Hills Forest Reserve became a national forest in 1905, when the United States Forest Service was established and placed in charge of the reserves. In 1911, part of the original reserve was made a separate national forest—the Harney.

AS MUCH AS HAS BEEN CUT

It has been estimated that a billion and a half board feet of timber was used in the early mining days of the Black Hills, from 1876 to 1898.

From the time of the case No. 1 sale up to now, nearly another 1,333,333,333 was cut, or a grand total of about 2,800,000,000 to date. At the same time, the forests, under management as a renewable resource, have continued their growth.

It is estimated that there is now in the national forests of the Black Hills, a total 2,300,000,000 board-feet of standing saw timber—nearly as much as all that was taken from the forests since the first settlers arrived.

You might call that a case of eating your cake and having it too.

THIRTY-SEVEN MILLION FOR CUTTING ANNUALLY

The development of the two national forests has contributed greatly to the economic development of the whole Black Hills area. Today these national forests are managed for permanent production—for what foresters call a sustained yield.

They are growing enough timber so that each year they can supply 37,000,000 board-feet of live saw timber, plus several million feet of additional material that can be removed by thinning young stands and cleaning out dead or defective trees.

The two national forests provide range for 25,000 head of cattle and 20,000 head of sheep. The forests are used by something like half a million people each year for recreation purposes. There is a large deer population which assures the sportsman a good chance to bag his deer each year.

The forests protect the watersheds on which originate Rapid and Spearfish Creeks and several other headwater tributaries of the Cheyenne and Missouri Rivers. They protect the sources of water supply used for domestic purposes by Lead, Deadwood, Spearfish, Rapid City, and other towns; water used for hydroelectric power purposes and for irrigating a substantial acreage of farm lands.

The utilization of the national forest resources provides employment for many people. Enough timber is coming along to sustain a sawmill industry that not only can supply local needs, but also ships out Black Hills products to help supply the needs of other less fortunate States.

FEW FORESTS EQUAL THESE

Very few of our national forests anywhere in the United States are in as good condition as the two in the Black Hills area. In many places here, you can see seedlings, saplings, pole-sized trees, intermediates, and mature trees all in the same stand.

That means that under good forest management you can keep cutting mature timber and always have plenty more coming along. The timber crop is being well managed, and the local people strongly support the management policies. Most of the grazing lands on the forests are in good shape, and those that are not can be improved in a short time.

The cash receipts of the national forests are steadily going up; and, since 25 percent of all the receipts go to the local counties, that means that more money is coming along each year to help improve county roads and support local schools.

The going has not always been easy. We have had some heart-breaking set-backs. Tornadoes have laid down long stretches of timber across the forest. Fire has been a constant menace. The Rochford fire of 1931 and the McVey fire of 1939 each burned over nearly a township of forest land. There were other bad ones, too.

At the beginning of the century, one of the worst outbreaks of pine beetles in history occurred in the Black Hills and caused a heavy loss of timber. This year we have been going through a similar situation, but with emergency funds made available by Congress, we believe we shall succeed in controlling the insect attack this time.

But in spite of bugs and fire and wind and high water, we have made a lot of progress. The trees even managed to grow under both Democratic and Republican administrations.

PUBLIC HAS COOPERATED

The progress made has been possible largely because the people here believed in these forests, and in what they stood for, from the very beginning. I want to compliment the people of the Black Hills region on this splendid support and cooperation they are giving the Forest Service in the protection and development of the national forests. They have been especially alert to the need for fire prevention, and when fires do occur they turn out promptly to help put them out.

There is a cordial partnership here. When we fight fires, we are protecting both Government property and private homes. It is the best kind of cooperation; it works both ways.

It is most gratifying to the Forest Service to know that you folks here in the Black Hills are keenly interested in what goes on in the national forests. You think of them as your forests, and that is exactly what they are.

These are public forests. They belong to the people. The Forest Service is your agent, charged with managing them in your interests.

The basic principle under which our national forests are administered is the greatest good of the greatest number in the long run. The Forest Service holds steadfastly to that principle. It is endeavoring to administer and develop these forests for maximum, permanent service to the communities, the State, and the Nation.

SUSTAINED YIELD, MULTIPLE USE

In line with that objective of the greatest good of the greatest number in the long run, we have two major administrative policies.

One of these is the policy of sustained yield, which I have already mentioned. It applies not only to timber, but to range forage for grazing, to game and fish, to recreational facilities, and to water supplies.

The other major policy we call multiple use. You can see how that works right here in the Black Hills. The national forests are managed not only to grow timber and to protect watersheds, but to furnish grazing for livestock, to provide a home for wildlife, to maintain scenic values, to provide opportunities for recreation, to support local industries and employment, and many other services.

All of these uses and services are coordinated in over-all, multiple-purpose management plans. Such multiple-use management brings the highest total of public benefits and services from a forest area.

The past half century, as I said, has seen some very encouraging progress in the Black Hills forests. But we aren't done yet. There is a lot more to accomplish, a lot more improvement and development work to be done.

During the thirties we made some rapid strides with the help of several Civilian Conservation Corps camps in the Black Hills and Harney Forests. These young men of the CCC built many miles of roads, developed recreational areas, look-outs and other fire improvements, and ranger stations. They did timber-stand improvement work, which will make possible better and faster timber growth on 240,000 acres. When the war came along, it was not possible to go ahead with this kind of improvement work, nor even to maintain many of the improvements we had.

For effective fire protection we still need more roads and more communication facilities. We need more timber-stand improvement, more recreation facilities, and a lot of other improvements. We are going ahead with the program of improvement and development just as fast as funds become available.

NOT SO GOOD ALL OVER

The need for forest restoration and improvement and development is not confined to the Black Hills alone. In fact, with its two fine public forests as going concerns, the Black Hills are comparatively well off.

Nation-wide, our forest resource is dwindling. We are taking timber from the forests of the United States faster than it is growing back.

The total volume of standing saw timber in the forests of the United States today is probably only about half of what it was 50 years ago.

One-sixth of all the commercial forest land in the country has been so depleted by fires or by destructive cutting that it is now producing little or nothing. A good share of the rest is growing only a fraction of what it could. The increasing scarcity of good, easily accessible timber stands is reflected in the high prices people have to pay for a few boards to mend the back steps or for most other forest products today.

Our national forests and most other public forests are being managed for a sustained yield. That case No. 1 sale here in the Black Hills involved something like 15,000,000 board feet of timber, plus some cord wood, for about $15,000.

From that small start just 50 years ago the timber-sale business on the national forests of America has grown to nearly 4,000,000,000 feet, valued at more than $20,000,000, in the past fiscal year.

With adequate funds for access roads to open up remote areas and with adequate funds to prepare plans and administer timber cutting, the amount cut from the national forests could be increased in a few years to more than 6,000,000,000 feet a year. Both the forests and the Nation would benefit thereby.

But the public forests comprise only about one-fourth of our commercial forest area.

Three-fourths of our commercial forest land is privately owned; and the private forest land is by and large the best forest land, from which the bulk of the Nation's timber supply must come. But a recent survey showed that only 8 percent of all timber cutting on private lands could be classed as good from the standpoint of keeping the forest land in full production.

Sixty-four percent of all cutting was poor to destructive.

NEED FOR ENERGETIC MEASURES

If our country is to stop the downward trend of our forest resources and get on the road to timber abundance, we shall have to take strong and energetic measures to build up timber growth for future needs. We shall have to put idle forest lands back to work. We shall have to see to it that good management is applied to all forest lands, public and private.

Our Black Hills forests are helping to point the way. They have demonstrated that forests are a renewable resource, that forests can be managed for permanent production. Already the area here where scientific timber

cutting was first attempted in the national forests has produced another crop of timber. Second cuttings have already been made on parts of the area.

The essence of the plan on which that case No. 1 timber sale was based was to cut carefully and clean up the logging slash, and to leave seed trees and young trees to grow for the future. It sounds pretty simple now, doesn't it? But it was a revolutionary idea at that time—just 50 years ago. And it hasn't gotten around any too widely yet. As I indicated a moment ago, even that simple, elementary type of forest practice has yet to be applied to 64 percent of all private forest lands.

But the development in sound forestry practice that started with case No. 1 here in the Black Hills is still going forward. Research and experience have brought many improvements in forest management and cutting practice since that first attempt. Different methods have been worked out for different forest types. Scientific forestry is now standard practice throughout all the national forests. It is gaining ever wider acceptance on other forest lands.

And I am confident that the developments in forest conservation that started here with case No. 1 will go on until permanent timber abundance for the whole country is achieved, until forest conservation is a Nation-wide reality, and the forests of the United States will be contributing their full values and benefits toward the prosperity and welfare of our people.

Industrial Side of Forestry

(Address by Guy N. Bjorge, general manager of the Homestake Mining Co., at the fiftieth anniversary of forestry, observed at Nemo, in the Black Hills of South Dakota)

Mr. Chairman, Mr. Watts, Mr. Case, Mr. Mundt, and other distinguished guests, ladies and gentlemen, it is a great honor for us in the Black Hills to have the Chief of the Forest Service and the many other distinguished guests with us on this occasion.

I deem it a privilege to represent and speak for the industrial side of forest management here today.

Fifty years ago today the Black Hills National Forest was established by proclamation of President William McKinley. Prior to that, the Homestake Mining Co. owned and operated the Black Hills and Fort Pierre Railroad, a narrow-gage railroad, from Lead to Piedmont by way of Englewood, Woodville, Robaix, and down Elk Creek. In 1897 construction of a branch line to Nemo and Este was started. A circular-rig sawmill at Este was completed in 1898.

A NATURAL SELF-SEEDING AREA

Those who operated mines in the Black Hills beginning in 1876 needed timber for mining and wood to feed the boilers for power. They thought of their stay here as temporary and so had no thought of the future. They, therefore, cut all of the timber—the large for mine timbers and the small for cordwood, for fuel. It was then common practice to cut timber indiscriminately on any unclaimed land and to cut clean. Today we would not tolerate such forest practice, but we cannot criticize those early pioneers for their methods for, had we been among them, we would doubtless have done just as they did.

Fortunately for us and for posterity, this Black Hills area is one of the best natural self-seeding areas in the world, and all of the areas that were almost completely denuded 50 to 70 years ago are now beautiful forests, which in some years will be ready for another harvest, but this time by other standards.

Pursuant to act of Congress of March 3, 1891, President Cleveland had set apart as a forest reserve certain tracts of land in the Black Hills of South Dakota in the vicinity of the mines by a proclamation dated February 22, 1897. But the effect of this proclamation had been suspended by the act of Congress of June 4, 1897, until March 1, 1898, and that act had provided that the Secretary of the Interior might make rules and regulations for the sale for use in the States where they were situated of so much of the dead, mature, or large growth of trees upon the forest reserves as might be compatible with the utilization of the forests.

In April 1898 the Homestake Mining Co. made application to the Secretary of the Interior to purchase wood and timber upon the Black Hills Forest Reserve even before the final establishment of that reserve by proclamation of President McKinley. As a result of that application, a sale was made, and that was the first timber sale of the United States Forest Service.

HARVEST AND USE WISELY

With that sale began the improvements in cutting practice which have progressed to today's standards of forest management and sustained-yield cutting. Many forest sentimentalists have advocated the philosophy expressed in George Pope Morris' poem:

"Woodman, spare that tree!
Touch not a single bough!"

But that philosophy is not the basis for the right policy of forest management. Today the recognized policy is—

First. To harvest the forest crop for the benefit of mankind in such a way as to improve the forest and to provide a steady and continued yield of forest products; and

Second. To make the most complete utilization possible of the trees that are cut.

The three great natural resource industries are agriculture, the forest industry, and the mineral industry. To these might also be added the development of power. The lure of gold brought the pioneers to the Black Hills.

The mining industry needed timber and power, and so with the development of logging and lumbering and of hydroelectric power we—and I now speak of Homestake—are engaged in three of these industries.

As I have stated, the pioneer miners were wasteful of the forest resources. But not so today. We have for many years cooperated wholeheartedly with the Forest Service in our forest management. We have worked with them to determine the proper cutting for sustained yield and operate entirely on that basis.

COOPERATION WITH FOREST SERVICE

We have also cooperated fully with the Forest Service in the prevention and suppression of fires in the forest. In nearly 40 years of logging and lumbering in this Nemo area only one dwelling in Nemo and one small house at one of the camps was destroyed by fire and there was not one major forest fire. We have aided materially in the suppression of every major fire in the northern part of the Black Hills.

In the recent infestation by the Black Hills beetle we worked with the Forest Service in eradication in several areas on our land, on other private lands, and on the forest reserve.

We are glad to join in paying tribute to the excellent work of the Forest Service and to express our appreciation for the friendly cooperation of its personnel.

Now for the other part of forest-management—utilization.

In mining we use a great deal of timber. At full-scale operation we have used upward of a million feet of timber a month. We have striven to improve methods so as to reduce timber needs and in this progress has been made.

The primary purpose of our logging and lumbering operation is to produce mine timber. But there are many logs from which mine timbers cannot be made. From these and from side cuts lumber is made.

By making all grades of lumber, grain doors, molding, various short-length material, building lath and snow fence lath, maximum utilization is attained. There is, of necessity, much waste material from a sawmill, but most of this is used for fuel.

Transportation of earlier days restricted operations of one sawmill to a radius of about 15 miles. So, small and rather crude mills were built in the forest to serve areas of approximately this size. Such were our mills at Nemo, Camp 5, and Moskee. With the development of fast truck and trailer haulage for logs the possible radius of operation increased to 50 miles or more.

We, therefore, began study of the possibility of an improved mill to serve a larger area. This resulted in the location of our new modern sawmill at Spearfish. This location was selected, first, because it was out of the forest and so free of the forest-fire hazard; and second, in order that the sawmill employees might have the benefits of schools and social life provided by such a pleasant community as Spearfish.

Although we are in the business of logging, of harvesting the forest crop, we are endeavoring to do so in such a way as to maintain a perpetual yield and also to preserve the forest as the perfect recreational area and playground that it is.

In closing I shall express our feeling for the forest by quoting from Joyce Kilmer's poem Trees:

"I think that I shall never see
A poem lovely as a tree.
A tree whose hungry mouth is prest
Against the earth's sweet flowing breast;
A tree that looks at God all day
And lifts her leafy arms to pray;
A tree that may in summer wear
A nest of robins in her hair;
Upon whose bosom snow has lain;
Who intimately lives with rain.
Poems are made by fools like me,
But only God can make a tree."

Inaugural Address of Gov. Chester Bowles

EXTENSION OF REMARKS
OF

HON. CHASE GOING WOODHOUSE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the inaugural address of His Excellency, the Governor of the State of Connecticut, Chester Bowles:

Mr. President, Mr. Speaker, and members of the Connecticut General Assembly, by law and by tradition, we are gathered here today to consider how we may best carry out the responsibilities which the people of Connecticut placed in our hands on November 2. During the next few months, we shall be working closely together in the development of our legislative program. What we do, or what we fail to do, will affect, for good or ill, the life of every Connecticut citizen.

In this inaugural message, I shall touch but briefly on my specific recommendations for legislative action. This is not because my recommendations are lacking in urgency, but because I believe that our success will be determined by our ability to develop a common ground of understanding and respect; and that the first step in the development of such understanding is a full and frank discussion of principles.

Let me say at the outset that I do not believe we can afford the luxury of narrow-minded partisanship. Political parties are instruments by which we make our democracy responsible and effective, not weapons to harass and stultify the orderly development of government. They cannot be allowed to become ends in themselves.

In times past, we in Connecticut have been accustomed to lead the search for new methods to refine and improve the democratic process. An early Connecticut citizen, Thomas Hooker, gave the world its first written constitution. Connecticut abolished slavery 80 years before the Civil War. In the 1800's, Connecticut took a prominent part in Jefferson's fight for political democracy and Jackson's fight for increased economic democracy.

Connecticut was one of the first States to establish public schools and hospitals for the mentally ill, the deaf, and other handicapped persons. In the present century, Connecticut, by its support of the reforms of Republican Theodore Roosevelt and Democrats Woodrow Wilson and Franklin D. Roosevelt, has continued in the forefront of enlightened governments.

Contrary to the dire prophecies of the conservatives, the legislative reforms of the past have not ruined industry and trade, corrupted the poor, or led to socialism. Instead, industry and trade have developed hand in hand with social progress, and Connecticut has become one of the wealthiest States in the Union.

RESPONSIBILITY

It is our responsibility at this session of the legislature to reaffirm the liberal tradition of our State; to push forward the frontiers of security, freedom, and opportunity for every Connecticut citizen.

Our task will not be an easy one. We are living in a period which breeds sharp controversy and in which unhealthy and dangerous signs of extremism are all too apparent. As public problems become more complicated, many of us are tempted to reduce issues to political clichés and to wrap our own ideas and those with which we disagree into separate vacuum-packed containers, labeled, respectively, "good" and "evil."

In our complex and often frustrating world, this kind of reaction is understandably human. But if we expect our efforts during the next few months to be effective, we must strive constantly to minimize our conflicts, and to broaden, wherever possible, our areas of agreement.

In a philosophical sense, we divide broadly into four political patterns. At one extreme are the reactionaries who make no bones about their preference for the past over the present, much less the future. At the opposite fringe are the radicals who dislike our economic, political, and social structure so intensely that they can see only one solution, and that is to blow the whole works sky high. Between the extremes of right and left are the conservatives and the liberals.

At least 90 percent of us fit more or less generally into these two middle groups. So let us disregard the extremists and examine the difference between those of us who consider ourselves liberals and those who consider themselves conservatives.

The fact that conservatives and liberals have traditionally disagreed is basically healthy. That is the way our democratic society learns and progresses—the way it backs out of blind alleys and pushes ahead once more toward our goals of security, opportunity, and freedom for us all.

Since colonial times conservatives have continued to be conservative, but the reforms which their fathers opposed have become the established institutions which the sons upheld as sound and desirable.

Liberals have continued to be liberal, but they are learning that idealistic dreams and brilliant schemes are not enough; that public programs must be worked out the hard and careful way and made to fit—not just the views of a handful of theorists, but the complicated needs of all of our people.

The pulling and hauling of the liberals and conservatives, while healthy and desirable, is often an uncomfortable process. In the heat of controversy, liberals are sometimes inclined to class all conservatives as "reactionaries," or even "Fascists," plotting to set up a Wall Street dictatorship. Conservatives, similarly, are sometimes inclined to class all liberals as "radicals," or even "Communists," determined to destroy our Constitution, enslave our people, and wreck our private-enterprise system. Against this kind of political hysteria, let me repeat, we must all be everlastingly on guard. In this explosive world it is more than just unhealthy. It is dangerous.

LIBERALS AND CONSERVATIVES

Now let us examine the liberals and conservatives a little more closely. Those of us who consider ourselves liberals feel a justified sense of pride in the accomplishments of the American liberal tradition. Since the days of Jefferson and Jackson we have been in the forefront of the struggle to achieve an increasing measure of economic, social, and political democracy for all of our people.

We who consider ourselves liberals, however, have no right to be smug. Although Franklin Roosevelt's New Deal achieved many great things for the American people, it never did solve the problem of unemployment. In 1939, 6 years after Herbert Hoover left the White House, there were still 70,000 men and women walking Connecticut streets in search of jobs.

At the risk of establishing myself as a heretic, let me add that I am not certain that we liberals have the final answer to unemployment today. Full production and full employment have been established in the postwar years, not because we have finally developed the basis for a permanent balance between wages, prices, and profits, but largely because of our vast military expenditures and the program of Marshall plan aid to Europe. In a sense, our employment problem has been solved, not through our own economic and political wisdom but by the intransigence of Marshal Joseph Stalin.

We who consider ourselves liberals have a bad habit, too, of skipping lightly over some of the more boring details of governmental operations. We are great hands at writing eloquent declarations. But we sometimes fail to consider the administrative problems involved in putting our policies into effect. Frequently, in our impatience for a better life for all of our people, we have underestimated the hard realities of budget and finance.

The goal we liberals must set for ourselves is to make Connecticut a proving ground of competent liberalism. Good government must display a healthy respect for other people's money. Sound government requires the fullest application of our energy toward practical ends. Intelligent government should be as economical and diligent an operation as we are accustomed to associate with Yankee enterprise.

I have been frank in analyzing the shortcomings of those of us who call ourselves liberals. Perhaps those of you who consider yourselves conservatives may feel that I am entitled now to suggest a few of your own handicaps.

FUNDAMENTAL PROBLEM

If I may say so, I believe that your fundamental problem lies, not in any lack of humanity and good will, but in your failure to recognize the urgency of many of the needs of our people; in your tendency to feel that public problems, if left alone, will eventually solve themselves; in your reluctance to use governmental powers to meet issues which clearly cannot be handled in any other way.

You are right when you say that too much government is dangerous. But sometimes you overlook the fact that if we refuse to employ enough government in the face of problems which only government can solve, then we may eventually end up with more government than otherwise might have been needed.

The challenge which you conservatives must meet is to make conservatism in Connecticut adaptable to our ever-changing social needs. You regard centralized power with justified suspicion. But remember that whatever success we may have in solving our problems here in Connecticut will ease the pressure to pass those problems on to Federal jurisdiction. Local institutions that are strong and effective are the best insurance that we can have against the arbitrary use of centralized authority.

We liberals and conservatives will continue to disagree. Undoubtedly, we will disagree at some points in the Connecticut legislative session of 1949. But let us strive to see that our disagreement, if it comes, is an honest disagreement of principles and procedure, and not a disagreement born of the political clichés and the blind prejudices which make constructive thinking impossible.

EDUCATION AND SCHOOLS

I have a feeling that the extent of our real differences is often exaggerated. As an example, consider the development of our educational system.

A little more than 100 years ago there did exist a tremendous controversy throughout Connecticut and much of America on the subject of education. The liberals proposed that free public schools should be established and that every child, regardless of the income of his parents, should be taught at least to read and write. The conservatives of that day felt that education for the so-called masses was fraught with revolutionary dangers, and the fight raged hot and heavy for more than a generation.

Since then, liberals and conservatives have worked side by side in all of our 169 towns and cities to develop our Connecticut schools. Today, thanks to these joint efforts, we are providing most of our children with a reasonably good education.

I wonder, however, if our present educational standards are really as good as they should be? The average Connecticut boy and girl drops out of school at the end of the second year of high school. This is no better than the national average. Only one out of seven Connecticut boys and girls goes on to college. Again, this is no better than the national average, which includes low-income States, such as Mississippi, Louisiana, and Tennessee. This means that we are lagging behind many other States.

Is there any real disagreement between us when I say that our Connecticut school system should be improved and strengthened in every practical way?

The future of our civilization depends on the ability of liberals and conservatives together to solve through democratic action the complicated problems which surround us. These problems are certain to grow in complexity as the years go on. They represent an ever-growing challenge to our educational institutions. We cannot build a future which will safeguard the children. But we can build children which will safeguard the future.

We need better schools. We also need more schools, and quickly. If we don't take action soon—bold, forthright action—our school system, instead of growing stronger, will begin to come apart at the seams.

The problem is clear. The number of births in Connecticut in 1948 was more than double the number in 1939. Unless we build new schools in a hurry, instead of 25 children in a classroom, we will soon have 40 to 50; and, as a result, substantially lower educational standards. Our cities and towns

cannot finance the building of the necessary schools without State aid. Surely most of us—conservatives as well as liberals—will agree that such aid on a generous basis must be forthcoming at this legislative session.

We will need many new teachers, too, 50 percent more at least—if we expect to maintain our prewar standards of education. I am sure that both conservatives and liberals in this assembly will vote together again to expand our facilities so that the necessary teachers can be trained in the next few years.

We must remember, too, that the crisis in education extends beyond our primary and secondary schools. There is a growing agreement among us that every qualified boy or girl is entitled to an opportunity to go to college, regardless of the income of his parents. We must work toward that ideal as rapidly as possible. Connecticut University is badly overcrowded. A continuation of the building program there is essential.

LABOR LAWS

Our labor laws, no less than our ideas on education, offer us an opportunity for nailing down the fiction that conservatives and liberals are doomed to perpetual disagreement. When unemployment compensation, workmen's compensation, and social security were first proposed, many conservatives disagreed. But in the last few years, in their speeches and political platforms, they have accepted these programs as essential factors in our increasing economic democracy.

Can't we agree now to bring these programs up to date? If unemployment insurance and workmen's compensation are right in principle, why should we continue to limit their coverage to employees of firms employing more than four or five workers? Why don't we give every Connecticut worker the right to this basic protection? Other States have already taken this step. Why should we in Connecticut lag behind?

Here's another point. In theory at least, we have accepted the principle that workers should be protected against loss of employment for reasons beyond their control. Thus, a worker receives compensation if he receives an injury on the job. He gets compensation if the plant shuts down for lack of orders and throws him out of work.

But what happens if he is unable to work because of illness; or because he breaks an ankle playing baseball with his youngsters? Should he be denied reasonable compensation? I don't think so, and I hope that a majority of you—conservatives as well as liberals—will agree.

Here's still another point on labor legislation. In some Connecticut factories, men and women, working side by side with equal skill at identical work, receive different rates of pay. Why not stop this obvious discrimination?

OLD-AGE ASSISTANCE

Let's take old-age assistance. Today there is a $50 limitation on the aid, exclusive of medical care, which the State can give to a needy old person. In many cases this is insufficient to provide a decent minimum of food, clothing, and shelter. The only limitation on old-age assistance should be the actual need in each individual case; need established by expert social workers and based on the current cost of living. I am sure that we can agree on that.

Some of the eligibility requirements—the so-called pauper clauses—in our Old Age Assistance Act are clearly wrong. They destroy the purposes of the act and take away something of the dignity to which our old people are entitled. Let us act together in the next few months—conservatives and liberals—to put our old-age assistance program on a decent human basis.

HOUSING

Let's move on to the question of housing. Our lack of modern housing at fair prices is undermining our society at its very foundation. When adequate housing is lacking families are broken and torn, children are brought up in squalor and bitterness, and the sense of security which can develop only in decent homes becomes impossible.

Our tragic lack of housing is a problem which concerns every individual in our State—conservatives, liberals, all of us—regardless of our incomes. Democracy can easily lose its meaning to those who are forced to double up in slum tenements.

The housing crisis did not develop overnight. Even before the war, one-third of our people were inadequately housed. Since then, tens of thousands of Connecticut homes and tenements which were scarcely fit for minimum living in 1939 have deteriorated still further. Our population has increased substantially. Home building has been held down, first by the war and then by scarcities and high prices. As a result, the shortage has grown steadily more critical.

Today, as everyone knows, even the most efficient of private builders cannot build homes to rent for less than $85 a month. That's exactly three times the average rental that Connecticut families are paying today. It's more than twice as much as most families can afford. The gap between the kind of rentals which our people need and the new rentals which private industry can now build at a profit is staggering.

If we expect to build homes at rentals that the majority of people can afford to pay, we must provide some kind of Government help. This fact must be clear to all of us—conservatives as well as liberals. So let us move boldly ahead together to meet our crucial housing problem. Let us authorize an all-out building program for the coming biennium—with rentals in reach of the average Connecticut family.

Here is another point on the housing crisis. The critical shortage of housing and the gradual emasculation of our Federal rent control program has led to an epidemic of evictions, which I am sure must disturb all of you—regardless of your political viewpoint.

The Eviction Act passed by the special session last August has certain basic defects which make it almost ineffective. I hope that an eviction law with some real teeth in it will be passed by this session of the assembly.

We also need a standby rent-control act to take the place of the monstrosity which passed the last assembly. I defy anyone—conservative or liberal—to explain how this act could possibly be made to work without turning rent control into the most sordid kind of political football. Read it some time and see if you don't agree with me.

MENTAL HOSPITALS

Another problem on which action is urgently needed has been referred to as the "shame of the States," not just the conservative States or the liberal States, but all the States. I am referring to mental hospitals. If any of you doubt the urgency of the situation in Connecticut, I suggest that you visit any one of our State hospitals during the next few weeks.

The legislatures of several States are now taking vigorous action to correct this long-neglected problem. Will we in Connecticut refuse to accept the challenge? I do not believe so.

Here's another question, minimum wages. When a Federal 40-cent minimum wage was established in 1938, many of you conservatives viewed this step with sincere alarm. Since then, most of you have accepted it as reasonable and fair.

The 40 cents an hour minimum wage of 1938 has now lost half its purchasing power. I propose that we establish an over-all minimum wage here in Connecticut that will take into account the increase in the cost of living, in other words, 75 cents an hour. I hope that there is no disagreement on this.

Our limit on savings bank insurance policies should also be brought in line with living cost increases. I suggest an increase from $3,000 to $5,000.

EQUAL RIGHTS

One last question. Conservatives and liberals alike believe in equal rights for every citizen, regardless of race, creed, or color. And yet, today, January 5, 1949, nearly 100 years after the Civil War, it is still impossible for a Negro citizen to volunteer for our National Guard. The reason for this lies in the traditional Army regulations. You alone can correct this shameful discrimination in the State of Connecticut.

These, then, are the main features of the economic and social program on which I hope you will take action in the coming session. As men of good will, I am confident that we can reach agreement on them. I shall offer you more detailed recommendations on each in the next few days. In the meantime, let us add them all up.

Could this program, by any stretch of the imagination, be considered extreme? Not unless you are prepared to repudiate a basic tradition of New England—the tradition of social responsibility.

In our smaller towns, rural areas, and city neighborhoods the principle of the friendly neighbor has been accepted and firmly established since Colonial days. When your neighbor's barn burns down or a falling tree crushes in a section of his roof, you pitch in with hammer and saw. If he becomes sick, you call a doctor and see that his children are taken care of after school. In the traditional New England community, the slogan, in other words, has rarely been "live and let live," but rather "live and help live."

GOOD-NEIGHBOR PROGRAM

The legislative economic and social program which I have outlined briefly adds up, it seems to me, to a Connecticut good-neighbor program on a State-wide scale. If we agree on it, we will have taken a bold step together toward our democratic goal of a high minimum level of security plus maximum opportunity and freedom for every Connecticut citizen.

But effective modern government calls for more than a willingness to apply the principle of the friendly neighbor to the problems of our State. In addition to warmth and human understanding, our Government should possess a high degree of administrative efficiency.

Our Yankee forefathers gave us the principle of social responsibility in human relations. They also taught us to despise waste, inefficiency, and lost motion in any form. Government today, faced with complicated new problems in a complicated new world, is necessarily big government. But the fact that government is big does not mean that it must be clumsy.

Since election day I have been almost continually occupied in a detailed study of the finances, budget, and operation of our State government. With the aid of an able group of assistants, I have probed deeply into the workings of our governmental machinery. I have personally interviewed most of our 108 State departments and commissions.

The task has been a big one and the time has been short. I do not pretend to know all the answers. But I do know this: If we are going to make our Connecticut State government really efficient, we have a big job ahead of us.

MODERNIZING STATE GOVERNMENT

Our long overdue effort to modernize our State government can easily bog down in political bickering. To avoid this, I propose the appointment of a temporary nonpartisan commission with a mandate to study our State government with the utmost care and to report as soon as practicable its full recommendations. This commission

should be set up at once so that there can be no delay in tackling this essential job.

Part of the responsibility of this temporary Commission on Organization should be a reclassification study of our State wage scales. In the meantime, I urge you immediately to establish the $180–$240 increase of 1946 and the 10 percent increase of last winter as a permanent part of our basic salary structure. This represents simple justice to the 16,000 men and women who work for our State government.

There are several other emergency actions which we must take promptly in the interest of increased efficiency in our State administration.

All of us—conservatives as well as liberals—agree that we must do everything within our power to bring labor and management together and to reduce the differences which lead to strikes. This will require a completely new kind of department of mediation and arbitration. We need legislation on this.

We must also establish a new department to handle housing. Our present housing administration was developed before the nature of the housing crisis became clear. When I say that it is wholly inadequate to our present urgent needs, I do not mean to cast any reflection on the caliber and integrity of the men now in charge. But if we expect to get homes in a hurry, we must have the tools to handle the job.

PUBLIC WORKS PROGRAM

Another urgent administrative problem involves our public works program. As I have already pointed out, most of our schools, buildings, hospitals, and institutions, were well below standard in 1939. For many reasons—some good and some not so good—very little has been done since then to expand, improve, or even to repair them. The situation today has passed the point where we can temporize, delay, or postpone.

Our long deferred building needs are so vast that we cannot possibly meet them all in the next 2, 4, or even 6 years. Obviously, we must tackle first things first. For this reason, I have requested all departments, including the highway department, to prepare their building recommendations on a 10-year basis, with a clear statement of priorities. This will enable us to move ahead with the greatest possible efficiency and economy.

On a 10-year basis, our building program will clearly become more manageable. More than that, a long-range program of this kind will provide a bulwark against unemployment and recession here in Connecticut. By planning our public works in advance, we will be in a position to speed up our building program if hard times threaten, and thus take up any slack which occurs in private employment. Such foresight here would also enable us to get our full share of Federal funds as quickly as such funds are made available.

The size and importance of our building program calls for the establishment of an independent department of public works headed by the most competent staff we can find.

There are several other administrative problems on which I hope you will also take action. We should revise the system of payment for our probate judges, many of whom are now paid more than the members of our State supreme court of errors. We should require State attorneys to give full time to their work. We should rewrite our election laws. We should provide recourse to State primaries so that our political parties will be more directly responsible to the rank and file membership. Liberals and conservatives who are sincerely interested in better government should find no difficulty in agreeing on these questions.

BUDGET

Let me now discuss briefly some of the more important questions on the development of our budget for the next biennium.

There is nothing to be gained by refusing to face up to the fact that Connecticut is confronted with a difficult economic problem. The figures presented to me by the various State agencies in making their budget requests for the next biennium totaled $400,000,000, which is $160,000,000 more than these same agencies will spend for the current biennium. These estimates, delivered to me on November 15, in accordance with the law, were drawn up before election day—in other words, before anyone knew whether the next budget would be presented to you by a Republican or Democratic Governor.

Some of the requests for additional funds were the direct result of price increases in the last 2 years. Food and clothing for our institutions and welfare services are up nearly 40 percent. Building repairs and upkeep is substantially more expensive. Most of these price increases will necessarily be reflected in our budget for the next biennium.

Some of the requests for additional funds were based on recommendations for expanded services, many of them highly desirable. The most urgent of these will appear in my budget recommendations. The others must be canceled or postponed.

Fortunately, the new housing program and the increase in old-age assistance will require only $4,000,000 for the coming biennium, which is less than 2 percent of our present total expenditures.

The total addition to our 1949–51 budget due to increased costs of essential services, increases in present services, and for new programs will be manageable without undue increases in our total tax income. The difficulty lies not so much in the cost of current programs but in the cost of the badly needed new buildings and long-postponed major repairs, which make up the bulk of the $160,000,000 increase which has been requested.

Some of these requests are, I believe, unnecessary, but a major part of them are not only justified but long overdue and must be included in our 10-year building program. The most urgent needs should be scheduled for the coming biennium.

The question of financing this long-postponed building program is crucial. In any well-run business such a program would be paid for out of capital reserves accumulated in the period when building was impossible. That is the way American corporations have financed the tremendous capital expansion which has been in progress since 1946, an expansion running into billions of dollars.

Every well-run State government has followed the same procedure. California, Michigan, and New York, and many other States have been able to handle most of their postwar building through reserves which were prudently built up during the war years. New York State alone put aside a postwar building fund of $540,000,000. California's fund totals $476,000,000.

Our postwar needs here in Connecticut, as in other States, have been obvious for many years. It is unfortunate that we lacked the simple foresight to put aside the necessary funds to handle them. Our inadequate $16,000,000 postwar building fund has long since vanished—most of it into the general fund—to pay for current operating expenses.

As a result, we must now start from scratch in tackling the problem of financing this long-term building program—a program which was, from the start, an obvious postwar necessity. A bond issue of some kind seems inevitable.

One final word about the budget which I shall present to you on February 1. In past years, the budget has been presented on a piecemeal basis. The separation of expenditures and income into special funds and budgets has made an over-all understanding of the State's financial situation difficult.

The new budget for the coming biennium will be a complete, comprehensive statement of Connecticut's needs, resources, income, and commitments. It will give you not only my best judgment of the total minimum program required, but also a statement of our total income needs and the sources through which I recommend these needs should be met.

I sincerely hope that the consolidated budget which I shall present to you on February 1 will help you in the general assembly to a clearer understanding of the over-all financial problem of our State, and encourage you to tackle my budget recommendations, not piecemeal but as integrated parts of an over-all program.

INFLATED PRICES

There is one final subject on which I shall comment briefly. Rising prices have threatened the stability of our economy and the security of our people for the last 2½ years. They have added substantially to the cost of our State and local governments. These inflated prices have been unnecessary as well as dangerous.

There is at least some indication that the price problem may begin to ease in the next few months. The November and December cost-of-living statements of the Department of Labor clearly show some slight downward trend.

I am confident that the newly elected government in Washington will, if necessary, use all the power of the Federal authorities to see that the upward rush of prices is not resumed. We here in Connecticut should continue to watch developments carefully. Needless to say, I shall use whatever practical means I can to ease the cost-of-living problem in our own State wherever that may be possible.

URGES COOPERATION

I have outlined the tremendous task that lies before us. I have stressed, not the difference which may divide some of us, but the areas in which all of us, conservatives as well as liberals, can surely work constructively and effectively together.

The legislatures which have met here before you have frequently touched greatness. Others have bogged down in mediocrity under the pressure of petty politics and of selfish interests.

Similar pressures will be brought to bear on you in the months that lie ahead. I urge you, in all earnestness, to reject them, and to listen instead to the voice of our Connecticut people. These are trying times; and for those who believe as we do in the dynamic future of our American democracy, there is urgency in the air.

Let us pray then that God may give to all of us the vision to see the possibilities that lie before us; the tolerance to work with one another on the basis of understanding and respect; the humanity never to turn our faces from the needs of our people; the courage to move forward toward a tomorrow without fear.

The Late Thomas M. Owen, Jr.

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. RAINS. Mr. Speaker, Mr. Thomas M. Owen, Jr., one of Alabama's beloved

sons, died at the Bethesda Naval Medical Center on December 5, 1948. Mr. Owen was a member of one of Alabama's most distinguished families. He had a long record of outstanding service with the National Archives here in Washington. On the occasion of his death Mr. Wayne C. Grover, Archivist of the United States, wrote a letter to all the employees of the National Archives paying a justly deserved tribute to Mr. Owen. I appreciate this recognition of the service of this notable Alabamian, and include herewith the letter with my remarks:

THE NATIONAL ARCHIVES,
December 9, 1948.

To All Employees:

The death of Thomas M. Owen, Jr., a retired member of the staff of the National Archives, occurred at the Bethesda Naval Medical Center on December 5, 1948, after several months of illness.

In point of service, Mr. Owen was one of the oldest employees of the National Archives. He was appointed Chief of the Division of Accessions on May 14, 1935. When the Division of Veterans' Administration Records was created in June of 1938, Mr. Owen became its Chief. Although changes subsequently occurred in the name of that Division, Mr. Owen continued to serve as its Chief until March 1948, when he was compelled by his physical condition to give up active work. He retired because of physical disability on August 20, 1948.

Mr. Owen was a graduate of the University of Alabama. He served as an officer in the field artillery during World War I and thereafter was active in organizing the American Legion in Alabama. For some years prior to joining the National Archives staff he served as assistant director of the department of archives and history of the State of Alabama. In 1933 Mr. Owen was elected national historian of the American Legion, and he served in that capacity until his death.

As a veteran himself and as a national officer of the American Legion, Mr. Owen was intensely interested in the welfare of veterans and particularly in the preservation and administration of veterans' records in a manner that would facilitate their use for the benefit of veterans and their dependents. Because of this interest and by reason of his previous archival experience, Mr. Owen, during the decade in which he had charge of the noncurrent pension records of our Government, contributed immensely to the work of the National Archives by providing for the adequate preservation of these valuable records and by making them, year by year, more and more readily available for use by veterans and their dependents and by others.

Tom Owen was not only a capable and faithful employee, but he was a kind, friendly, and considerate man who had an abiding faith in his fellow men. He loved people and was genuinely interested in them, their problems, and their successes. The welfare of employees under his supervision was a matter of real and continuing concern to him. He will be missed by a wide circle of friends.

The National Archives is grateful for the faithful and efficient manner in which Tom Owen performed his duties and is glad that it had on its staff a man of such outstanding good will.

WAYNE C. GROVER,
Archivist of the United States.

Let's Talk About Iowa

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1949

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks, I include herewith some most interesting information about the great State of Iowa, compiled by the Iowa Development Commission:

1948 IN IOWA IN REVIEW

Iowa commerce during 1948 unfurled a banner of wealth which flew from some standards at heights rarer than at any other time in its history.

A generally higher level of postwar prosperity was indicated in a highlight review of business and industry during 1948 by the market and research division of the Iowa Development Commission.

The State's industrial economy was expanded and agricultural production bid fair to equal the record crops of 1947. New records in wages and employment were established. Retail sales reached an all-time high while banks reported a high level of business activity. Iowa continued as a leading consumer market in the Nation.

AGRICULTURE

Preliminary estimates show that Iowa farmers ended 1948 with farm records of production and income approaching an all-time high. Cash farm receipts for Iowa led the Nation, with every indication that 1948 farm recipts would equal the 1947 record of $2,410,111,000.

Corn production was the greatest in Iowa's history. The 1948 harvest yielded 666,730,000 bushels, more than double the 1947 crop. The average yield per acre of 61 bushels was another record, beating a previous high of 60 bushels in 1942, and dwarfing the 30.5 bushel yield in 1947.

Total tonnage of feed grains, hay, and forage crops produced in Iowa exceeded any other year. Harvest of oat, soybean, and popcorn crops was greatly increased over 1947.

Iowa continued to produce 10 percent of the Nation's food supply. The State led the Nation in the production of beef cattle, hogs, eggs and poultry products, and honey.

The per farm income was expected to easily reach $11,500.

Iowa's agriculture in 1948 outranked the Nation in value of farms and buildings ($3,611,139,829), percentage of farms owning automobiles (253,993 cars), value of farm machinery ($354,263,259), number of tractors (200,043), rural telephone development (85-percent ownership), rural electrification (80 percent of farms), and 90 percent of Iowa's farmers own radios.

INDUSTRY

Industry continued to steadily expand during 1948, showing a significant increase in production and earnings. Value of manufactured products last year was estimated at $1,815,000,000, a 10-percent increase over 1947. Forty-eight new manufacturing industries were known to have established operating plants, with the reported investment set at $7,502,000. Four major expansion programs were started. Only the $5,000,000 Maytag expansion program at Newton was reported, making a conservative grand total of $12,502,000 in new industrial investment in 1948. These new 1948 industries created 2,778 jobs.

Around 300 new industries have been established in Iowa since the end of the war which have created approximately 20,000 jobs.

Another conservative report places industrial investment in Iowa since the war's termination at $100,000,000, which in turn has returned $3,000,000 in new property tax revenue, excluding sales and income taxes, to Iowa cities and towns. In addition, the 20,000 jobs, based on an annual average income of $2,400, has added $48,000,000 in new pay rolls.

Meat packing, food processing, manufacture of farm machinery, and printing and publishing continued in that order as Iowa's top-ranking categories of industry.

EMPLOYMENT AND WAGES

Rate of employment reached record proportions and unemployment continued at a negligible level. Manufacturing employment was reported at 153,750 workers. The overall pay roll last year increased 15 percent, while the average industrial weekly wage was $53.04, both records. The weekly wage average represented a 9.7-percent increase over 1947.

Increased pay rolls and wage scales improved per capita income and buying power. Since 1940 per capita income in Iowa has increased 136 percent. Retail and service trades hired steadily and professional services were in constant demand.

SALES AND TAXES

Retail sales climbed to a new all-time high estimated at $2,374,712,000 as compared to $2,051,923,650 in 1947.

Iowans paid nearly a half billion dollars in Federal taxes, a new peak.

Revenue from 8 of Iowa's 13 special taxes—those which reflect aggregate sales—was more than ever before. The following table compares the 8 taxes collected through 11 months, showing 1948 increases, and one decrease:

Tax	1947	1948	Percent of increase
Sales	$40,840,314.68	$47,631,163.08	16.63
Use	5,045,690.85	7,236,771.65	43.42
Individual income	10,388,887.15	16,443,387.82	58.28
Corporation income	2,243,158.65	2,690,255.69	19.93
Cigarette	4,076,725.05	4,426,199.52	8.57
Beer	2,540,492.15	3,071,263.43	20.89
Inheritance	2,497,306.87	3,160,875.08	26.57
Chain store	30,839.12	30,705.06	−1.43
Total	67,663,414.52	84,690,621.33	
Decrease (chain store)		−134.06	
Net increase in 1948		17,027,206.81	

Federal Scholarship Plan

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1949

Mr. FURCOLO. Mr. Speaker, for some weeks I have been preparing legislation to incorporate the details of a plan that, for convenience, I am terming the "Federal scholarship plan."

The aim of the Federal scholarship plan is to enable at least 5,000 high-school students a year to complete a college education when in the absence of

the Federal scholarship plan they would be unable to do so. The plan also serves the same purpose for at least 500 college students a year to continue through postgraduate work.

For the sake of brevity, I will refer only to college and postgraduate higher education, although actually the plan is intended to include students who will continue their education after high school, whether it be in a college or some other institution of learning. The figures used in the appended chart are based on a college period of 4 years or a postgraduate period of 4 years. Since many courses would not take that length of time, it is probable that the Federal scholarship plan would benefit 7,000 or 8,000 students a year, rather than the figure of 5,500 on which the plan is based. And, of course, there would necessarily be some corresponding minor adjustments to be made in the financial figures.

The benefits of the Federal scholarship plan are intended to be furnished at no actual cost to the Federal Government. The Federal Government does provide money in the initial period of operation of the plan, but this money is not provided in the form of the usual appropriation. It is with this understanding that I say that the benefits are made possible by the Federal Government, but still at no actual cost to the Federal Government.

The Federal scholarship plan is based on two major premises: First, no qualified high school or college student should be deprived of a higher education because of financial inability to pay for it; and, second, in its present financial condition, the country is unable to provide that education free of charge.

I hope that eventually the time will come when this country can offer higher education to scholastically qualified students at absolutely no expense to the student. Post high school education should be free to those of our students who want and are qualified to continue higher education.

The country has not yet reached the stage where it feels able to provide higher education free of charge. Until that times comes, I advocate the expedient of what I am terming the Federal scholarship plan.

We must not lose sight of the fact that the country suffers in losing the potential qualities that have not been brought to fruition simply because thousands of individuals have been deprived of educations to fit their individual abilities. It is a public problem directly affecting the welfare of the community, State, Nation, and world. It is for that reason that I am introducing legislation to inaugurate what I have termed the Federal scholarship plan.

The Federal scholarship plan provides for a method of advancing money to a limited number of qualified students by appropriation of Federal funds for that purpose. The money so advanced is to be repaid by the students at stated intervals over a period of 10 years beginning after the educational period.

The plan calls for the cooperation of the States in two ways: First, some financial assistance; and second, selection of students.

The total yearly number of high-school students who will receive money for higher education is set at 5,000. The number of college students who are eligible for Federal assistance to continue postgraduate studies is set at 500. Incidentally, the ratio of these figures can be adjusted to meet the educational needs of the country if a survey shows that the greater need is for postgraduate students.

The amount of money to be advanced to those students continuing on from high school to college studies is fixed at a maximum of $1,000 per year. College students who are going on to postgraduate schools will receive a maximum of $1,500 a year.

The maximum time period for either group is 4 years of college studies for high-school students; or 4 years of postgraduate work for college students.

On the basis of a 4-year term, those granted aid for college or post-high-school studies will repay the Government at the rate of $250 a year for the first 4 years and $500 a year for the next 6 years. Postgraduate students will repay the Government at the rate of $250 a year for the first 2 years, $500 a year for the next 2 years, and $750 a year for the next 6 years. Repayments do not begin until the first year after the study period is completed.

In the year after such payments have been completed so that the entire loan has been repaid to the Federal Government the student will make a "gratuity payment" equal to 10 percent of the total amount advanced to him by the Federal Government. For students who have accepted aid for less than the 4-year basis, the amount of repayment is determined proportionately so as to be fully repaid at the expiration of 10 years from the time of completing their institutional studies.

On the above basis, the Federal Government would "appropriate" about $167,000,000 over a period of 14 years or a little less than $12,000,000 a year for the Federal scholarship plan. Fourteen years after the commencement of the Federal scholarship plan it is unnecessary for the Federal Government to make further "appropriations" because the plan has then become a self-sustaining revolving fund that finances itself. The Federal Government does not get back its "appropriations" for the initial 14-year period until 10 years after the Federal scholarship plan is ended, whenever that may be. The necessary "appropriations" for the first 14 years for the Federal scholarship plan are shown chronologically in the appended chart under "Appropriations."

In addition to the above Federal appropriations, those States that accept the terms of the Federal scholarship plan will contribute at the ratio of $100 for every $1,000 advanced by the Federal Government. The total yearly contribution of all the States is shown on the appended chart under "States." After the first 14 years of operation of the Federal scholarship plan the total expense to the States is figured at $1,150,000 a year or $50 for every $1,000 loaned to the student. The amount per State of course depends upon the population of the State—the students being apportioned among the States by population. The yearly contribution of an average State would be about $48,000 for the first 14 years and about $24,000 thereafter.

The contribution of the States differs from that of the Federal Government in that the Federal Government's contribution is simply a loan, whereas that of the States is an outright gift.

The money advanced by the Federal Government to the students is repaid by the students over a 10-year period in the amounts indicated on the chart under "Student repayments." The amounts in that column of the chart are figured after deducting an estimated 10 percent loss on loans not repaid by students because of death, poor risks, and so forth. By the fourteenth year, the yearly repayments of students comes to $20,700,000. In addition to that amount, the student also makes a gratuity payment to the Federal Government of 10 percent of the total amount of aid received by him. The total amount of this gratuity payment is $2,300,000, or, again deducting the estimated 10 percent loss, $2,070,000. That gratuity payment is made the year after the student has repaid his entire loan. That amount is shown on the chart under the column headed "10 percent gratuity."

The estimated expenses of administration of the Federal scholarship plan are shown on the chart under "Administration." Beginning with the fifteenth year, and continuing at that yearly figure after that time, the yearly administration expenses are estimated at a maximum of $500,000.

A summary of the plan, as shown on the chart, indicates that when the plan gets under way a total of $23,000,000 a year is being given to approximately 20,000 college students and 2,000 postgraduate students. During the first 14 years the Federal Government has appropriated an average of $12,000,000 a year to make the plan possible. Beginning with the fifteenth year, the Federal scholarship plan is self-sustaining in that the yearly expenses of aid to students and administrative costs run to $23,500,000 a year and the Federal Government is taking in approximately $23,920,000 a year, which consists of student repayments in the amount of $20,700,000 a year—after 10 percent bad-debt reduction—and $2,070,000 a year gratuity repayment—after 10 percent bad-debt reduction—and $1,150,000 per year from the States. That leaves a balance of approximately $420,000 a year which would be available to the Federal Government either to reduce the amount of the States' contribution or to cover an error in the estimated administrative expenses or bad-debt losses.

The Federal scholarship plan must be considered beginning with the fifteenth year after its inauguration, which is when it becomes a revolving, self-sustaining fund. Beginning that year, the Federal Government makes no further appropriation but simply carries the total $167,000,000 appropriation during the in-

itial 14-year period as an accounts receivable, which will be repaid in full 10 years after the completion of the Federal scholarship plan, whenever that may be.

The Federal scholarship plan is not financed by one single appropriation in the true sense of the word. The money advanced by the Federal Government is not an appropriation, but is simply a loan, a continuing loan.

If this continuing loan be interpreted as an appropriation, it is important to note that the appropriations by the Federal Government are simply made for the initial period of the Federal scholarship plan. After the first 14 years the Federal scholarship plan is self-financed and the Federal Government makes no further appropriations.

I will not at this time outline in detail the method of selection of students or the type of administration necessary. Briefly, the number of students allotted to each State would be in proportion to the population of the State. As far as possible, the selection of students would be a function of the individual State, subject only to the restriction that there be no discrimination based on race, creed, or color. As far as possible, the student himself would select the institution in which he wished to continue his higher education. The Federal Government's administrative duties and expenses would simply be ir connection with supervising the entire Federal scholarship plan to see that all students were given a fair opportunity to compete within the State and that there was no discrimination based on race, creed, or color. I have felt that the students should be apportioned on a State rather than a National basis, so that students of those States on a lower educational level would not be foreclosed from the plan. If students are not apportioned among the States, the result of national competition might see students from the more highly educated States being the only beneficiaries of the Federal scholarship plan.

The Federal scholarship plan does not interfere in any way with the curriculum of any institution of learning. It does not put the Federal Government into the field of education. Using the same educational system that we now have, it simply enables worthy students to continue their education, where, in the absence of the Federal scholarship plan, they would be financially unable to do so.

The Federal scholarship plan is intended to help only those students who meet two qualifications: (1) Their high school work established beyond question that they are good material for post high school study; and (2) they are unable financially to pay for higher education. The Federal scholarship plan has suitable safeguards to see that those two requirements are not evaded.

Let me emphasize that the Federal scholarship plan is in no way associated with and is not intended in any way to interfere with any Federal aid to education program. Whatever is done to put the Federal scholarship plan into effect is not to be at the expense of Federal aid to education. Any Federal Government money used in the Federal scholarship plan is not to come from any Federal aid to education appropriation.

There may be some who will feel that the Federal scholarship plan will not function because the students will not repay the loan. That is a possibility. I, for one, am willing to risk that possibility. I will have some statistics to present when the legislation comes up that I believe will warrant my stand. The Federal scholarship plan may perhaps be an answer to that part of the President's budget message—page 146, CONGRESSIONAL RECORD, January 10, 1949—that read as follows:

It has become increasingly obvious that the national welfare demands that higher education be made available to more of our talented young people. We should now determine the soundest and most practical means of providing additional opportunities for capable young people who could not otherwise afford a college or university education.

I respectfully submit my proposed Federal scholarship plan for the consideration of Members of the Congress.

Federal scholarship plan

[Basis of 5,000 college and 500 postgraduate students a year; college students $1,000 a year, postgraduates $1,500 a year. Repayments over 10-year period beginning after education completed]

Year	Expenditures			Total expenses	Receipts			Total receipts [1]	Appropriation
	To college	To postgraduate	Administration		From States	Student repayments [1]	10-percent gratuity [1]		
1	$5,000,000	$750,000	$150,000	$5,900,000	$575,000	0	0	$575,000	$5,325,000
2	10,000,000	1,500,000	175,000	11,675,000	1,150,000	0	0	1,150,000	10,525,000
3	15,000,000	2,250,000	200,000	17,450,000	1,725,000	0	0	1,725,000	15,725,000
4	20,000,000	3,000,000	225,000	23,225,000	2,300,000	0	0	2,300,000	20,925,000
5	20,000,000	3,000,000	250,000	23,250,000	2,300,000	1,237,500	0	3,537,500	20,712,500
6	20,000,000	3,000,000	275,000	23,275,000	2,300,000	2,475,000	0	4,775,000	18,500,000
7	20,000,000	3,000,000	300,000	23,300,000	2,300,000	3,825,000	0	6,125,000	17,175,000
8	20,000,000	3,000,000	325,000	23,325,000	2,300,000	5,175,000	0	7,475,000	15,850,000
9	20,000,000	3,000,000	350,000	23,350,000	2,300,000	7,762,500	0	10,062,500	13,287,500
10	20,000,000	3,000,000	375,000	23,375,000	2,300,000	10,575,000	0	12,875,000	10,500,000
11	20,000,000	3,000,000	400,000	23,400,000	2,300,000	12,037,500	0	14,337,500	9,062,500
12	20,000,000	3,000,000	425,000	23,425,000	2,300,000	15,525,000	0	17,825,000	5,600,000
13	20,000,000	3,000,000	450,000	23,450,000	2,300,000	18,112,500	0	20,412,500	3,037,500
14	20,000,000	3,000,000	475,000	23,475,000	2,300,000	20,700,000	0	23,000,000	475,000
15	20,000,000	3,000,000	500,000	[2] 23,500,000	1,150,000	20,700,000	2,070,000	[2] 23,920,000	[3] 0

[1] After 10-percent deduction for "bad debts."
[2] After fourteenth year, figures are constant.
[3] Surplus $420,000.

The Nebraska Blizzard

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1949

Mr. MILLER of Nebraska. Mr. Speaker, several Members of Congress have called attention to the terrific storms prevailing in Nebraska, South Dakota, and the Mountain States. These storms are so devastating that it is impossible to estimate just how much damage may eventually occur. Snow up to 60 inches, with drifts from 10 to 20 feet high have so blocked roads that the people in the storm area are unable to get food for themselves or their livestock. This is an emergency of such proportions that it is essential that all Government agencies work together in order to meet the catastrophe which has come to these good people. It will be impossible to estimate the number of livestock lost, or the damage to the economic structure of this area. In western Nebraska alone 13 lives to date have been lost due to the blizzard. It is estimated that livestock losses will run from 40 to 75 or even 100 percent.

With the tremendous amount of snow in this area, there is no question but floods such as this territory has never seen before will come, when the snow begins to melt and the spring rains come. The Nebraska delegation is introducing legislation to provide emergency funds, which can be made available through the Governor of the State, to meet these anticipated floods. It is absolutely necessary to be prepared. The floods may well be more than the communities themselves can stand. I am hoping that the legislation will be given prompt and favorable action. The telegram from Governor Peterson reads as follows:

Disaster prevails over one-half of Nebraska due to up to 60 inches of snow and a continuous series of high winds and blizzards extending over several weeks. No relief in sight. Bureau of Reclamation today turned over to us for emergency use Government-owned equipment and all contractors' equipment being used on its job with operators. Bureau is making no charge for this assistance. Request that Corps of Engineers be ordered to do the same thing on all projects in which it is engaged in the Missouri Basin with authority to shift equipment where needed. Many human lives lost. Property damage terrific and every indication that it will be worse in next 60 days.

VAL PETERSON,
Governor of Nebraska.

Information on Profits, General Foods Corp.

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1949

Mr. JAVITS. Mr. Speaker, there is appended a summary of the testimony of Clarence Francis, chairman of the

board of directors of General Foods Corp., before the Joint Committee on the Economic Report. This information gives such vital statistics on the profits of one of our great food-purveying companies as to be of interest to every Member in the current debate about the social implications of high corporate profits and their effect on our price structure:

TESTIMONY OF CLARENCE FRANCIS BEFORE THE JOINT COMMITTEE ON THE ECONOMIC REPORT

It is an honor as a citizen, and a responsibility as a businessman, to appear before you. Your inquiry into the nature, extent and human consequences of an industrial system based on profit can be a monument for the world to see. It can be a token of the fact that democratic capitalism has the strength and vitality to turn its analytical facilities critically upon itself.

I. TABULATION OF COMPANY DATA

A. Profits

1. Related to units of output: Frankly, there is no common standard whereby we may add up the unit output of all of our factories and use such a figure as basis for comparison with earnings.

2. Related to invested capital: Our invested capital is $324,000,000. We earned 5.6 percent on invested capital in 1940, 6.1 percent in 1947, and estimate our earnings to be 8.1 percent in 1948.

3. Related to net worth: The technical concept of net worth omits the factors of real value which have been paid by the company in acquiring some of its branded products. The percentage of profit indicated on this basis fluctuates from 18.8 percent in 1939 to 12.9 percent in 1947, and on the basis of the current profit estimates will be 17 percent in 1948.

4. Related to sales: In 1938, 1939, and 1940, we earned 10 to 11 percent on net sales. But this rate had fallen to a range of 4½ to 6½ percent in 1945, 1946, and 1947, and the "guesstimate" for 1948 is 6 percent.

5. Related to employees: In the past 10 years this has varied between a high of about $1,500 in 1946 and a low of about $1,000 in 1945.

B. Disposition of profit

In 1938 retained earnings were $2,500,000. This represents about 20 percent of the total amount of earnings that year. In 1946 General Foods had its biggest retention, $10,000,000, or about 48 percent of all net profits.

C. The disposition of retained earnings as between debt retirement and new investment

During the period 1938 to 1947, there was no over-all debt retirement by General Foods. In 1944 an issue of preferred stock was retired but an even larger issue of preferred stock was issued in 1947.

In the 10 years 1938 through 1947 about $50,000,000 has been retained in our business out of earnings. This is an average of about 32 percent of all profits.

D. For new investments give types of assets

Our principal source of funds was the retained earnings of $50,000,000, plus additional sums of $32,000,000 for stock, $27,000,000 in notes, and about $22,000,000 representing an increase in payables, mostly current accounts payable; $70,000,000, by far the largest share of this new money, has gone into inventories. Fixed assets of plant and equipment have absorbed $30,000,000 (this figure is net after depreciation and retirements), our current receivables $17,000,000, and our current cash position has increased by $14,000,000.

II. SPECIAL RESERVES

General Foods has not set aside any such special allowances or reserves. In no cases have any reserves or allowances been made which would not be allowed for tax purposes.

III. PRICING POLICIES

A. What pricing policy did you follow for 1948?

We have priced to maintain a sound franchise for volume production over the long run at levels which will achieve stabilized consumption, stabilized employment, and some incentive for ownership of General Foods stock. In direct answer as to 1948 prices, we did all three things mentioned on your questionnaire. Some we have reduced, others we have raised, others have been kept unchanged.

B. How are prices fixed; what factors are taken into account?

On the basis of all known or probable costs and on more or less reasonable assumptions about the decisions which competitors will make on their prices or their promotion or their new products.

The cost of the raw materials in our business is the prime factor, however, of price determination, with labor as the second most important item. Thus, our prices are determined in the main by farmers, by governmental support prices, by barriers to world trade, and other such factors.

C. Discuss the factors outside your control which have influenced the profits in your company, e. g., money supply

Some of the factors outside our control which have influenced our cost, and hence our profits, have been the whims of nature, domestic and foreign governmental policies as they affect agricultural production and prices, and the changes in prices and availability of raw materials.

D. To what degree do you consider your own costs in fixing prices to meet competitive conditions?

In the highly competitive food business, a sales-minded company will do everything to avoid creating a price advantage for a competitor or a price advantage to a substitute product. We have already indicated that our long-range purpose is the establishment of stable and expanding franchises.

E. What profit level do you expect to achieve when prices are determined?

That question implies that we set a profit rate, and, having determined what the profit will be, then set a price to achieve it. This is not what happens with us. We set a price within the range permitted by competition and by our costs and then we have to live within the profit which the product can achieve under these conditions.

F. Could you have charged more for your product and thereby realized greater total profit?

We certainly could have charged more for some of our products and realized greater total profits.

IV. LEVEL OF PROFIT

Adequate profits for our company are those which will assure financial soundness and continuity of policy as well as operations. That profit has at least three major jobs to do.

First, profit must pay a sufficiently attractive return to the man who has saved his money to turn that money into risk capital. Second, out of that profit must come enough capital to provide for part of the needs of a growing business. The third positive function of profits is to keep General Foods in a good working-capital position to enable it to have on hand the inventories it needs to meet its customers' wants and to handle the increased receivables that come from a growing business.

In your second question, you ask if we would agree that profits are ever too high. Economically, profits can be too high in periods of scarcity. The situation can only be solved fundamentally by increased production. Are profits ever too high socially? They perhaps might be if the investor was unduly rewarded at the expense of other classes in the community, or if profit contributed unduly to the cost of living.

We believe that inflated prices where they exist, and inflated profits where they exist, are directly related, and will not be solved until some semblance of peace and stability descends upon the earth.

V. SOURCES OF CAPITAL

A. Why have you not paid out a larger portion of earnings and raised equity funds by sales of stock?

The simplest answer, I suppose, is that capital raised by reinvesting earnings in the business is costless capital. We have raised in the domestic market since the war, through the issuance of securities, about $35,000,000 net in new capital. In the past 4 years we have raised nearly $34,000,000 through earnings retained in the business. Thus the net amount raised in the security market since the beginning of 1945 is almost identical with the amount secured through retained earnings.

CONCLUSION

We in our business feel most keenly the need for balance in administering our three-way responsibility to the American consumer, to our associates in this business, and to the 68,000 men and women whose faith has been shown by their investment in General Foods. We who are charged with administering this company would serve its interests badly by shifting the fruits of the enterprise too heavily toward any one of these groups.

Congress Should Probe Trade Pact Between Indonesia and United States Promoter

---

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Star of January 18, 1949:

CONGRESS SHOULD PROBE TRADE PACT BETWEEN INDONESIA AND UNITED STATES PROMOTER

(By Dorothy Thompson)

Inasmuch as the American Government has committed itself to support the Indonesian Republic and a considerable part of the American press and radio are attacking the Dutch as exploiters of the riches of the Indonesian states, it is well to inquire whether all Americans are disinterested.

In this connection, Congress should investigate a trade agreement allegedly made in Habana last January between the Republic of Indonesia, as represented by the Indonesian trade commissioner in New York, Dr. D. Soemitro and three ministers of the Republic—A. K. Gani, A. Maramis, and H. Laoh—and a New York City promoter.

Whether this agreement ever was ratified by the national convention of the Indonesian Government is unknown to me. But the agreement, which I have seen, is perhaps the most scandalous proposition ever made by an up-and-ooming promoter to a supposedly sovereign state. If carried out, it practically would put the whole economy of Indonesia into the hands of an American corporation, under conditions whereby the

risk would be carried by the Indonesian Republic and a straight 7½ percent profit guaranteed the corporation. This would be on every single transaction within a total and exclusive monopoly over import and export trade between the United States and the Indonesian Republic—not barring other incalculable profits.

SOLE AND EXCLUSIVE AGENT

It would make the corporation for 15 years the sole and exclusive agent of the Republic in negotiating with American interests regarding all developmental enterprises owned and operated by the Government—including negotiations for loans and other government projects (communications, hydroelectric, etc.) which might require American financial, technical, and other aid, with the corporation, of course, entitled to additional compensation for its services.

Furthermore, in this remarkable agreement the Republic would abdicate many sovereign powers—guaranteeing the corporation against excessive taxation, restrictions on transfers of funds, etc., and issuing it a blank check to form subsidiaries with, in effect, extraterritorial rights.

Under the stock arrangement the corporation would have 51 percent of the voting stock—while the employment of Indonesians in the executive staff would be limited to a minority. Inasmuch as the effectiveness of the contract concerning developmental enterprises demands that the Government retain mineral and other subsurface rights and resources, the Government is required to pledge the retention of socialization in behalf of an American exploiter-corporation.

Whoever drew up this contract understood, as well as the Russians, how socialization of enterprises may be turned to the profit of foreigners.

PREAMBLE OF AGREEMENT

In the agreement's preamble, the Indonesian Government, recognizing that the dispute between the Netherlands Government and the Republic has resulted in cutting off foreign supplies, finds it urgent to approach farsighted and sympathetic American businessmen. And lo! One is there to lay hands on one of the world's richest raw-materials sources, of course in the name of the rights of man and for the purpose of giving the Indonesians, for the first time, the promise of a prosperous economy.

Presumably, individual Indonesians, party to the agreement, would participate in preferred and nonvoting stock, retailing for a bagatelle, with the entire American import-export trade as a guarantee of profits.

Congress, I think should investigate what has happened to this agreement, and who its American associates were or are.

Such a contract, furthermore, would exact a commission to the corporation not only on all purchases and sales between the Indonesian Republic and the United States by other American or foreign importers and exporters, but also extort a commission on purchases made for stock-piling purposes by the United States Government itself. It is, therefore, clearly within the field of legitimate Government investigation.

The Rough Riders

EXTENSION OF REMARKS

OF

HON. LEONARD W. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. LEONARD W. HALL. Mr. Speaker, James Patrick McGovern, of the District of Columbia bar, a captain in the American Expeditionary Forces during the First World War, and the special Washington representative of the Arizona Daily Sun, has written a tribute in verse, to the Rough Riders, and dedicated it to the Fiftieth Anniversary Roosevelt Rough Riders Association.

This timely and appropriate tribute appears in the November-December 1948 issue of American Poetry magazine, official organ of the American Literary Association, and reads as follows:

THE ROUGH RIDERS

Charge, charge of San Juan Hill, charge, charge again,
Resounds as half a century enshrines
The memory of deeds of supermen,
Whose dauntless valor swept the Spanish lines.
Roosevelt and Wood, for whom life's peak was fame,
O'Neill and Capron, for whom scorn mocked at death,
Men white and red, of every rank and name—
All thrilled with a devotion dear as breath.
True warriors they were, first volunteers,
From mountains and from plains of the broad west,
Virile, bold, and peerless pioneers,
Exploring in a new horizon's quest.
They stormed the heights of glory with white fire;
Forever shall their hearts inspire.

Walter Gieseking

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. PATTERSON. Mr. Speaker, we have witnessed, in the past few days, an exhibition of unparalleled administrative inconsistency and ineptitude.

Walter Gieseking, concert pianist, has been the principal in this not so funny comedy of errors by our Government. Gieseking intended to enter this country and embark on an extended concert tour commencing last evening in Carnegie Hall in New York and continuing to Waterbury, Conn., and other communities thereafter. Considerable speculation had been raised as to Gieseking's affiliations with the Nazi regime in Germany by several patriotic American organizations. These groups protested vehemently against his appearance in this country.

On December 13, 1948, I inquired of the Department of Justice the status of Gieseking, and requested information relative to his affiliations and actions under the Nazis. On January 14, I was apprised by the Immigration and Naturalization Service, under Commissioner Watson B. Miller's signature, that an investigation had been undertaken which had revealed no information that would dispel rumors of Gieseking's activities on behalf of the Nazis. The communication further informed me that as of July 16, 1948, the Department of State advised that a world-wide look-out was placed to forestall the granting of an immigration visa for entry into the United States.

That is the background of the outrageous performance by agencies of our Government.

Gieseking had been cleared by the military government of Germany in 1947, considered as unfit for entry to this country by both the State and Justice Departments, granted a visa by the State Department, held for a hearing by the Immigration and Naturalization Service upon his entry last Saturday, and given permission to leave the country voluntarily this morning.

This is not solely a question of the right hand not knowing what the left hand is doing; it seems that sections of one agency do not know what other sections of that same agency are doing.

A world-wide look-out had been instituted last July by the Department of State, yet metropolitan newspapers in New York and Waterbury had carried reports of Gieseking's prospective appearance in those cities for the past 2 months. What are the facts relevant to Gieseking's blacklisting by the American military government in the fall of 1945 and his reinstatement in February 1947? What liaison is in effect between the Department of State in Washington and the consular offices throughout the world?

These are questions which must be answered to the satisfaction of the American people. I know not Gieseking's complete record, and cannot pass on his qualifications for entry; but it is not asking too much for our governmental agencies, charged with the admission of immigrants, to assure that no person of questionable character shall be permitted to enter this country.

Florida Likes Margarine

EXTENSION OF REMARKS

OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the January 23 Orlando Morning Sentinel:

FLORIDA LIKES MARGARINE

Floridians should begin to realize that the margarine battle current in Congress to the extent of half a dozen bills and some rather vitriolic discussion is an issue, the outcome of which will have a direct bearing on the cost of living in Florida and on several phases of the State's economy.

The several bills now before Congress have as their objective the removal of Federal taxes on the sale of colored margarine—10 cents per pound—and reduction of the Federal retail, wholesale, and manufacturing licenses imposed.

Most casual observers, while recognizing in the issue a struggle for position in the marketing of butter as opposed to margarine, have generally failed to bring the subject close to home in their consciousness, feeling that it had no close application to local conditions here in Florida.

Quite to the contrary, however, Florida and its people have a big stake in the controversy, as is demonstrated by the fact that

this State has the highest per capita consumption of margarine in the United States. Added to this is the fact that 95 percent of the fats and oils consumed in margarine come from the cottonseed, soybean, peanut, and corn farms of the South, a large proportion of which are located in Florida.

Therefore it is not only the consumer in Florida who should be vitally interested in getting his margarine at a lesser price, but the producer as well who will profit from the production of soybeans, peanuts, and corn in a greater amount if margarine, sans high taxes and licenses, can be produced in larger amounts.

It seems that there is general agreement that the tax on colored margarine and the high licensing fees required to sell, wholesale, and manufacture are not only discriminatory and unfair, but are definitely detrimental to the South and to the production of cottonseed and soybean oils. The margarine interests have pointed out that the regulations, as at present constituted, are unfair to the poor man and help keep up the cost of living, since they add an artificial pricing element to the cost of margarine.

Federal regulations now impose a tax of 10 cents a pound on colored margarine, $48 annually for a retail license to sell it, $480 a year for wholesale license and $600 a year for a manufacturer's license. The proposed bills in Congress ask for elimination of the 10 cents tax per pound, and reduction of the license rates.

Proponents favoring lifting the margarine restrictions claim that reduction of butter consumption in the Nation has not been due to margarine competition, but to the fact that there is an insufficient supply of both butter and margarine to meet actual needs of the growing American population. Though milk production has increased tremendously, dairy farmers find it to their advantage to sell their products as whole milk, ice cream, cheese, or canned milk. Fluid milk is by far the most profitable market for the dairy farmer, netting the producer almost twice as much as when sold for making butter. It is estimated today that 5,800,000 additional dairy cows would be needed to meet the Nation's milk needs.

That Florida housewives are taking more and more interest in the possibility of buying margarine at lesser price is indicated by the large numbers of Florida letters on the subject now found in the mail bags of Florida legislators in Washington.

Hokum Arguments for Right To Illegally Use Basing-Point System Disseminated Over Entire Nation for Purpose of Misleading People—It Has Been Said a Lie Has No Legs and Cannot Stand but Has Wings and Can Fly Far and Wide

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. PATMAN. Mr. Speaker, I receive letters every day from small businessmen complaining about the Supreme Court decision outlawing the basing point; it is contended that their supply of steel or cement has been cut off and cannot be restored until Congress legalizes the basing point. The big and powerful lobby—the biggest in the Nation's Capital, listed as receiving $11,000 a month and all expenses—is responsible for this false propaganda. Of course, I receive a lot of letters every day from small businessmen who are not deceived by this propaganda praising the Supreme Court decision outlawing the basing point when used illegally and protesting against Congress making any change.

One thing is certain about the illegal use of the basing point and that is it destroys the private-enterprise system and creates a monopoly. Did it just happen that no one wanted to go into the cement business the last 20 years? No; a lot of people with venture capital would have been glad to go into the cement business and they had available huge quantities of limestone for that purpose, but they would not dare enter that field when the big established cement plants could put them out of business by the use of the basing-point system. So, in 20 years only two new mills have been constructed; one for export business in Pennsylvania and one to furnish the cement for the Mount Shasta Dam on the Pacific coast.

ARGUMENT THAT BIG COMPANIES ABSORB FREIGHT TO DISTANT CUSTOMERS IS ABSOLUTELY FALSE

Under the Pittsburgh-plus basing-point price system a customer near a steel mill in Indiana or Illinois would have to pay the regular price for steel that was paid at Pittsburgh and in addition would have to pay an amount equal to the freight rate from Pittsburgh, although the steel was delivered at the mill where produced and not shipped at all. That is called phantom freight. Birmingham, Ala., became a steel-making center. If a fabricator of steel in Chicago offered to purchase from a Birmingham mill he would be quoted a price the same as the price at Pittsburgh with freight from Pittsburgh, not Birmingham. It being several times as far from Birmingham to Chicago than it is from Pittsburgh to Chicago and the rate is higher in proportion such sales are not normally made; if so, the Birmingham mill would have to absorb the extra freight on what is called the cross haul—a haul into a territory where it would be more economical to serve with products from local mills. In a sellers' market like we have had for many years there has been practically no cross hauling and practically no absorption of freight. That argument presented in the case of cement and steel is phony. But there has been a lot of phantom freight paid.

CUSTOMER ALWAYS PAYS THE FREIGHT

A contractor near Fort Worth in Texas complained to me about the outlawing of the basing point, contending he used a lot of cement and since that decision he had to pay a lot more for his cement because the cement mills had quit absorbing a part of the freight charges. He will doubtless learn as many others have that he is being misled.

HOW THE BASING POINT PRICING SYSTEM WORKS AGAINST PUBLIC INTEREST

Let us assume that a purchaser of cement has his place of business and wants the cement delivered at Fort Worth, Tex.

We will assume too that there is a cement-manufacturing plant at Fort Worth. Instead of one basing point as in the old Pittsburgh-plus steel case there are a number of basing points for cement. Since the location of the basing points are determined by the Cement Institute it is presumed that they are established at points that will give the cement manufacturers the maximum benefits. Therefore the purchaser at Fort Worth will be required to pay railroad freight charges from the nearest basing point, although the cement is delivered right there in Fort Worth. If in this case the basing point is El Paso, 500 miles away, and the railroad freight rate from El Paso to Fort Worth is $1 per barrel on cement, this $1 extra charge will be added to the cost of each barrel purchased at Fort Worth and is not shipped on the railroad at all. This goes on all over the country and the amount of phantom freight collected in this manner exceeds by several hundred percent the small amount of freight that is absorbed by a cement mill when a shipment is made over into another basing-point territory.

COURTS MOVE SLOWLY

The courts have taken more than 20 years making it plain to lawyers and litigants the meaning of certain anti-trust laws and what can and what cannot be done under certain laws. Now, after 20 years of litigation and when the courts have finally determined how these laws should be interpreted the big cement and big steel trusts want Congress to write new laws, using new phrases, words, and definitions which would enable them to stay in the courts 20 more years getting them interpreted.

Such a change would not be on the side of the people; it would be on the side of monopoly and greed.

FEDERAL TRADE COMMISSION AND THE COURTS HAVE DONE THEIR DUTY—WILL CONGRESS UNDO WHAT THEY HAVE DONE IN THE PUBLIC INTEREST?

The basing-point pricing system has been used to stop competition, to crush competition, to prevent new industries, to fix prices against the public interest, and to create monopoly. The cement trust and the steel trust have been caught red handed—in the act. It took 20 years to prove conclusively that they were guilty. It cost millions of dollars of the taxpayers' money. During this time they were continuing to exact extortionate profits from the helpless people. I cannot believe that Congress will fall for the fallacious arguments of the highly paid lobbyists and lawyers of these convicted trusts that they cannot understand what the law means and therefore the law should be written over and much plainer. What they want is a law that will legalize what they have been doing. That is the only kind of law they will be able to understand.

Membership of Committees

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. HÉBERT. Mr. Speaker, Mr. David Lawrence, the eminent columnist,

yesterday expressed sentiments which are universal.

Since I was "purged" from the Committee on Un-American Activities because I had exercised the right of freedom of expression and thought in accordance with my appreciation of American constitutional government, I have been deluged with letters of protest from every section of the country.

It is my belief that the Members of this Congress should be appraised of the universal resentment which has arisen in this country against such procedures by those who are supposed to believe in the principles of freedom of thought and self-government.

For this reason, I have obtained permission to bring Mr. Lawrence's timely article to the attention of the House as an example of what fair-minded people are thinking and saying. It follows:

EIGHTY-FIRST CONGRESS SEEN EARNING REPUTATION AS MOST INTOLERANT—METHODS OF DEMOCRATS IN FILLING COMMITTEE POSTS ARE CRITICIZED

(By David Lawrence)

The Eightieth Congress may have been the worst Congress from some viewpoints, because it refused to spend more of the public's money for social-welfare projects, but the Democratic majority in the Eighty-first Congress is starting off to earn the title of the "most intolerant."

The Democrats already are talking of forbidding any public hearings whatsoever on new legislation to replace the Taft-Hartley Act. The House of Representatives is talking of allowing only a day to consider minimum-wage legislation and to steam-roller a new bill through without hearings, thus depriving the citizens of an opportunity to be heard.

But the most amazing example of a denial of the rights of the people is the capricious way the leadership of the Democratic Party in the House has decided on certain committee assignments.

MEMBERS MUST BE LAWYERS

Only lawyers, for instance, are to be permitted to serve as members of the Democratic majority on the House committee investigating un-American activities. This is but a subterfuge to get rid of Representative HÉBERT, of Louisiana, who did not support Mr. Truman in the last election but voted for Gov. Strom Thurmond.

The specious argument that only lawyers can serve on the Un-Amercian Activities Committee can rise to plague the Democrats. For it can lead to demands for discrimination in choosing the members of other committees. Perhaps the Democratic chiefs will be asked to decide next that only Members who once held cards in labor unions are eligible for membership on the House Labor Committee or that only persons who have once been farmers can serve on the Agriculture Committee.

It would be in line for Members with banking experience to insist that they should have precedence in selections for the Banking and Currency Committee, which could mean that men of one viewpoint could dominate such a committee.

The hypocrisy of the action taken by the Democratic leaders becomes immediately apparent when it is noted that the rule about lawyers only is not to be applied to the House Judiciary Committee, which has charge really of all legal matters and problems relating to the Federal judiciary and the judicial code.

BASIS OF ELECTION

The people of America do not choose their representatives in Congress on the basis of their experience in certain professions or occupations. The people of all districts have a right to representation on important committees because of the all-around ability of the men or women elected.

To say that Representative HÉBERT, of Louisiana, Democrat, who already has had experience on the House Un-American Activities Committee and is generally regarded as fair and impartial in his handling of witnesses, is now to be unseated because he doesn't happen to have been a lawyer is to give an example of arbitrariness and intolerance which certainly doesn't come under the head of either fair deal or liberalism.

Even lawyers can be headline hunters. Also the theory that lawyers make the best jurors has often been disputed. Certainly not all lawyers are judicial-minded. Many of them are prosecution-minded. There is, therefore, no real logic or consistency in the new rule. It can only mean that the Truman administration is back of the purge and that, sooner or later, if the author of the red-herring phrase has his way, the Un-American Activities Committee will be stripped of its powers and perhaps abolished—and all Communists will then have a right to rejoice.

Were this the only issue involved, it would be serious enough, but a trend toward squelching an opposition viewpoint is dangerous. In a communistic regime the one-party system flourishes, but in a democracy opposition, even within a political party, has always been considered healthy.

National Capital Proposed for the West

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. PATMAN. Mr. Speaker, I have received a letter from Aubert Edgar Bruce, 328 West Twelfth Street, Claremont, Calif., which contains a very interesting suggestion. It is thought-provoking and should receive consideration. It is as follows:

CLAREMONT, CALIF., *January 14, 1949.*

Hon. WRIGHT PATMAN,
House Office Building,
Washington, D. C.

MY DEAR SIR: In connection with any scheme for taking up the slack in labor during periods of depression, may I offer the following:

Why not secure the appointment of a commission to investigate the feasibility of erecting a new capital city for the Nation, to be located somewhere in the eastern Rocky Mountain region, perhaps 200 miles or so southeast of Denver, where the waters of the Arkansas River would be available for use?

Some obvious reasons:

1. Many of the Government buildings in the present location are obsolete and cannot be remodeled or enlarged. I refer especially to the Capitol, Treasury, and White House, among many others.

2. Washington is vulnerable to attack by sea, land, and air; let us have a capital more difficult to reach by land and air and impossible to reach by sea.

3. Washington has two climates, bad and worse. The efficiency of every Government employee would be increased definitely by the climate of the region mentioned.

4. Traffic conditions in Washington are intolerable and cannot be improved. Lay out a new capital city in keeping with our place as the greatest Nation in the world, with streets and boulevards at right angles, ample parkways and parking spaces, adequate railroad and airport facilities, and, in general, a city that we could be proud of and that would be sufficient for the next 500 years or more.

5. The center of population is moving westward and the center of activity for the next 1,000 years will be the Pacific basin. Put the capital city where it will be nearer the center.

Other valid arguments might be presented. My idea is to appoint a commission, nonpartisan, composed of geologists, civil and sanitary engineers, city planners, architects, and so forth, to search for a suitable location, perhaps near the conjunction of Colorado, Kansas, Oklahoma, Texas, and New Mexico, somewhere north of Amarillo, and at an elevation of 4,000 to 5,000 feet above sea level. The construction of such a city would afford employment for thousands of artisans of all kinds over a period of years. It is doubtful if all the Government buildings in Washington are worth more than a billion dollars and many of them should long ago have been charged off and now be valued at $1. A billion dollars appropriation would start the plan and other sums could be alloted to it from year to year.

I commend this suggestion to your careful consideration.

Respectfully,

A. E. BRUCE.

Speaking of Money

EXTENSION OF REMARKS

OF

HON. WALTER E. BREHM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. BREHM. Mr. Speaker, many prominent and distinguished citizens reside in the Eleventh Congressional District of Ohio, which I have the honor to represent. Not least among them is Mr. J. Keller Kirn, Sr., a retired banker and authority on monetary matters.

Mr. Kirn resides in Lancaster, Ohio, and recently wrote an article dealing with monetary problems which was printed in the Ohio State Journal. It affords me much pleasure to extend Mr. Kirn's remarks in the CONGRESSIONAL RECORD and I feel certain that they will not only prove interesting but enlightening to all who might read them. The article follows:

PRINTING-PRESS MONEY

Germany's new order adopted printing-press money, and Germans, like many of our citizens before election said "We never before received such high wages, nor such high prices for farm products and livestock, nor had as much money in our hands, pockets, and banks. All our factories are busy and we have no unemployment." Their fool's paradise turned into hell when they baled their printing-press money because they could get more for it as waste paper, as shown on page 27 of the November 22, 1941, Saturday Evening Post. They, like many of us, thought it can't happen here.

High prices do not reflect greater values but printing-press, cheaper dollars. Prices and wages had been so high during the time of paper money that the Greenback Party was organized in 1874 to oppose the resumption of specie payments. This legal tender paper, after being in use 17 years, during which it was below the value of gold coin (it requiring at one time $2.85 of paper money to equal $1 in gold), was redeemed

beginning January 1, 1879, under "an act to provide for the resumption of specie payments" passed in 1875 and directing the Secretary of the Treasury to redeem, in coin, the United States legal-tender notes then outstanding on their presentation for redemption. Have we their wisdom and courage?

Roosevelt repudiated the "redeemable in gold" clause on our bonds, took all our gold coins and currency redeemable in gold, and forced us to take printing-press money, with which Uncle Sam has become the largest bloated bond holder to keep bonds from selling for less than their face value. Perhaps the Redeal will improve on the New Deal by printing more money to pay our national debt. Why tax?

Roosevelt reduced the gold content of our dollar from 25.8 to 15.238 grains and thereby reduced our dollar to 59.06 cents. Reducing the standard of a yard from 36 to 18 inches will produce more yards but not more material.

Roosevelt raised the price of gold from $20.67 to $35 per ounce. Gold mine owners were very grateful to the poor man's champion for $14.33 more per ounce.

Roosevelt adopted Bryan's 16-to-1 policy by dividing the price of gold $20.67 per ounce by 16 to fix the price of silver at $1.29 per ounce. Then he sent his silver-purchase program as a must measure to Congress. At that time the market price of silver was 32 cents per ounce. It had been 24.5 cents per ounce before he announced his silver-purchase program and his intention to fix the price of silver at $1.29 per ounce. This withdrew silver from all other countries and forced China to adopt printing-press money. The poor man's champion benefited only silver-mine owners. China outlawed opium; England forced continued sales. China's tragedy is an English-Ruinusvelt-Russian tragedy. If we allow Russia to have the exclusive right to use her printing-press money in Berlin to lift her blockade, Russia will control not only Berlin but also all of Europe. Protest now.

Peace and prosperity are possible if we emulate Switzerland, the only country on the gold standard, and the only country enjoying peace and real prosperity. Herbert Hoover tried to emulate Switzerland. Time writes history.

House Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1949

Mr JONES of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of a letter addressed to me by the Louis K. Juden Post, No. 63, of the American Legion, of Cape Girardeau, Mo. The letter follows:

The Louis K. Juden Post, No. 63, the American Legion, Cape Girardeau, Mo., under meeting date of January 5, 1949, passed the below listed motion:

"By motion duly made and carried, the adjutant was directed to convey to the Congressman from the Tenth Congressional District of Missouri, the sentiments of this post to the effect that the House Committee on Un-American Activities should be continued with adequate funds for its business but in view of some criticisms and apparent injustices on account of treatment of witnesses before it and the investigation of matters about to come before it, that certain restrictions should be made as to the conduct of the investigators to the end that the witnesses may be protected and given fair opportunity and also that certain regulations should be had preventing advance publicity and comment during the investigation by members of the committee and committee investigators."

Your earliest attention in expressing the sentiments of this post will be greatly appreciated.

Very truly yours,

SANFORD G. JONES,
Adjutant.

Listen for Democracy

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1949

Mr. McDONOUGH. Mr. Speaker, the January 12 issue of the Pathfinder includes an interesting article by Wheeler McMillen entitled "Listen for Democracy." This article is worthy of attention because it spotlights one of the most vicious and insidious methods used by the Communists to betray the American way of life and undermine our Republic. The continued misuse of the word "democracy" to mislead the average citizen to believe that the United States is in fact a pure democracy with a democratic system of government is one of the Communists' main lines of attack. The United States has a representative form of government, and so long as we continue to be governed by elected representatives and officials, so long will we continue to have a republican or representative form of government. In its true political meaning, the term "democracy" represents a worthy aspiration. In its use by the Communists, it represents a synonym for communism and should be so recognized.

The article follows:

LISTEN FOR DEMOCRACY

Those who would weaken the United States from within have quietly launched a new drive. The alert patriot will have little trouble to discover it. He will have to do no more than to observe as he reads and listens.

This new foray follows an oft-repeated pattern. First the high Communist command decides the party line. Instantly all party members zealously adopt it. The soft-minded, easy-mark fellow travelers take it up. Then thousands of perfectly good Americans innocently let themselves follow along.

The innocents fall in with the party line because the idea looks good on the surface. Communist technique calls for using just such devices.

The new drive proposes merely a stronger effort to put over an old item in the party line. The idea itself looks almost too simple.

What is it these enemies now want us to do?

To get out of our heads the idea that the United States is a republic; they want us to call our country a democracy.

Once they convince us that we are a democracy, they can then assail whatever may characterize a republic as undemocratic.

Those who promote this attack realize that a government that approaches pure democracy holds weaknesses equaled by no other form except pure despotism. They expect that as long as Americans are allowed to go through the motions of voting, the deluded people will be satisfied without the actual power which they do hold in a representative, decentralized republic.

Russia is a democracy so far as voting goes, but the voter exercises no power. The Communist idea of a democracy is a country where everbody votes while a few elite at the top command all the power. Democracy has become essentially a Communist word.

The framers of this Government took equal pains to avert the evils of autocracy and the perils of democracy.

They adopted the representative plan which made the United States a true republic. To the Federal Government they permitted only a few powers and put limits upon those. They carefully balanced the powers of the legislative, executive, and judicial branches.

All other powers were reserved to the States and to the people. Thus the United States became a republic of free people. The free people proceeded within 16 decades to produce the most glorious well-being for themselves that human beings ever enjoyed.

The Communists know all this. They realize that to take over a productive, prosperous America would be a tough, almost impossible job.

They figure that a good long depression would give them a chance. That's why they support big Government spending for everything, why they favor work stoppages, and any sort of disruption. They believe that their chances for taking over will be helped by substituting a democracy for a free republic. They think the next step is now to get us to call our republic a democracy.

In its social aspect, democracy is a worthy aspiration. In its true political meaning democracy is not a bad word; nor, when people are prepared to bear its full responsibility, is democracy a bad thing.

But, as we are, the Republic feeds our strength and protects our freedom. The powers of government are delegated. The uses of power are filtered. No one clique can seize or hold them. A democracy would make that possible.

The American Republic! Let's keep it!

"Forgotten Man" Gets Hit Far the Hardest

EXTENSION OF REMARKS
OF
HON. CHARLES H. ELSTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1949

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in the Cincinnati Times-Star of January 14, 1949:

"FORGOTTEN MAN" GETS HIT FAR THE HARDEST—TRUMAN WOULD DOUBLE HIS SECURITY TAXES AND USE THE INCREASE ($2,279,000,000) TO HELP BALANCE THE BUDGET

(By Morris D. Ervin)

WASHINGTON, January 13.—Speaking of demogogy, in the President's annual message, in his economic message, and now in his budget, it is made to appear that the Chief Executive is asking for only $4,000,000,000 in additional revenue from increased taxes and that most of this, if not all, is to come from corporations and individuals in the higher income brackets. The little fellow, "the forgotten man," is to go scot free.

A cursory reading of all three of these messages would give that impression, and many commentators have swallowed it.

FAR FROM TRUTH

But, as a matter of fact, nothing could be farther from the truth. If the President's recommendations are followed by Congress the little fellow, the man with an income of only $1,000 or $2,000 a year, will be relatively harder hit than the richest man in the United States. The forgotten man hasn't been forgotten in the budget.

The reason why the President and his budget advisers have been able to make it appear that the citizens in the smaller income brackets has been favored is that most people apparently still do not understand how the social-security fund operates.

There is still a widely held and erroneous notion that revenues collected through social-security taxes go into a special fund and are used for the payment of old-age pensions, unemployment insurance, and the like, and for nothing else.

That, however, is not the way it works. Revenues collected through social-security taxes go into the general fund of the Treasury and are paid out in cash for current expenditures. All that the social-security fund gets is an I O U from the Treasury.

IN SIMPLIFIED FORM

Here is the way it works in simplified form: If Joe Doakes makes a salary of $3,000 a year he pays $30—or 1 percent of his gross income—in social-security tax. That $30 in cash is turned over by the tax collector or to the Treasury and it goes into the general fund. The Treasury then gives the Social Security Board an I O U which states that the Treasury owes the Social Security Board the sum of $30 on which it will pay interest at the rate of approximately 3 percent, more or less, also payable in I O U's. Then it takes the $30 cash and spends it on national defense, flood control, or to pay the President's salary.

Now, if Joe decides to retire and asks for his old-age pension the Social Security Board pays it to him and bills the Treasury for the proper amount which the Treasury then procures by collecting some more taxes from Joe and others.

Now, the point of all this is that the Treasury is collecting a great deal more money from social-security taxes than it needs to pay social-security benefits. And the difference between what social security costs and what the Government collects from social-security taxes is what the little taxpayer—for nearly all social-security taxes are paid by the small taxpayers—contributes to the current upkeep of the Federal Government.

Let's see what this contribution amounts to now and what the President proposes that it shall.

And it should be borne in mind that the social-security tax is an income tax on gross income, not net income. There are no exemptions. You pay the tax on every dollar you earn up to $3,000. If you earn more than $3,000 you don't pay anything on that.

Under current tax rates the Government this year will collect $2,610,000,000. It will spend $1,963,000,000. The difference is $647,000,000, which is the amount of money the social-security taxpayers are contribting to the ordinary current expenses of Government.

PILING IT ON

Now, Mr. Truman proposes that next year the present social-security tax rate be increased from the present 1 percent on employees to 1½ percent. In addition to this he would levy an additional one-half percent for health insurance. And on top of this he would raise the amount of income on which taxes are collected from $3,000 to $4,800. In other words the tax on Joe Doakes, who makes $3,000, would be increased 100 percent. In the case of the man who makes $4,800 the increase would be more than 100 percent, which is considerably more than the tax increase which the President proposes for corporations or for taxpayers in the high brackets.

This increase in the tax rates would bring in total revenue, according to the President's estimate, in the amount of $5,284,000,000. That is $2,674,000,000 more than is being collected from these same little taxpayers this year.

But does the President propose to increase social-security benefits by this amount? He does not.

For all social-security purposes the President proposes to spend next year the amount of $2,358,000,000. That is $395,000,000 more than will be spent this year. But he proposes to collect $2,674,000,000 more in taxes. The difference, $2,279,000,000 is what the little taxpayer is being asked by the President to contribute to the ordinary expenses of Government. It is considerably more than the $1,700,000,000 by which the President's total budget for next year exceeds that for this year. In other words the President plans to take care of his entire budgetary increase and more by the simple expedient of doubling that tax paid by a worker who makes $3,000 or less and by more than doubling it if he makes $4,800.

The Forgotten Man is remembered.

Social-Security Program

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following resolution adopted and recommended by the Michigan State Council, United Automobile Workers of America, affiliated with the American Federation of Labor:

Resolution 3

Social-Security Program

Whereas President Truman has consistently urged the immediate extension of the social-security program; and

Whereas these recommendations are in substantial agreement with those of the Federal Social Security Board, and the program of the American Federation of Labor: Therefore be it

Resolved, That the Michigan State Council, United Automobile Workers of America, affiliated with the American Federation of Labor, go on record, this 12th day of December 1948, as wholeheartedly endorsing the following proposals:

1. Substantial increase in old-age and survivors' benefits.

2. Permit pensioners to earn up to $40 monthly, without loss of benefits.

3. Extend coverage to farm and domestic workers, self-employed, and others—not now employed.

4. Extend unemployment insurance coverage to employees of small firms, public employees, and others not now covered with increased jobless benefits.

5. Enact disability insurance to protect workers from loss of earnings caused by sickness and injury.

6. Increase Federal benefits to match State aid for dependent children, needy, aged, and blind.

7. Make eligibility for old-age benefits at the age of 55 years, and minimum benefit $100 per month.

8. Increase grants to States—taking financial resources of States into account more completely; and be it further

Resolved, That the Michigan State Council, United Automobile Workers of America, affiliated with the American Federation of Labor, go on record (this 12th day of December, 1948) as urging that in the financing of the program (as recommended by President Truman), the American Federation of Labor emphasize its opposition to financing the major portion of increased costs out of higher pay-roll taxes—particularly on wages and salaries of those in lower-income groups; but that it urge an increased emphasis on financing the broadened social-security program out of general tax funds levied principally on the basis of ability to pay.

Make the Mails Pay Their Way

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Santa Monica (Calif.) Evening Outlook of January 13, 1949:

MAKE THE MAILS PAY THEIR WAY

The recent substantial increases in postage rates, designed to meet higher operating costs, will still leave an estimated $470,000,000 postal deficit this fiscal year. They raise the question whether the Post Office Department should not be required and allowed to pay its own way altogether. With the President asking for an added $4,000,000,000 in taxes to support "big" Government, is it too much to suggest that such an established and income-producing branch as the Post Office Department be placed on a paying basis?

Main reason for the deficit is that the Department is not allowed by Congress to operate in the black or even as a business enterprise. As a totally dependent arm of the Government, it receives its expenses by detailed appropriations from Congress and turns its postal revenues into the Treasury. Unlike any successful business, therefore, it cannot meet its expenditure with its own income. In addition, it has no hand in fixing the amount of that income and expenditure. Postage rates are set by Congress, railroad carrying charges by the Interstate Commerce Commission, and payments to air lines by the Civil Aeronautics Authority.

Thus the Post Office Department's operation is subject to all sorts of governmental interference, with the balancing of its budget regarded as the least important consideration. If the United States wants to subsidize steamship lines to its Pacific islands in the interests of national defense, it is the Post Office Department which bears the burden through high steamer rates for mail carrying.

Under these conditions, it is meaningless to say that the Department does not pay for itself. Given enough independence to balance its own budget, it should be able to prove that it can stay out of the red and still maintain some of the Government-rate subsidies. According to the Hoover Commission, whose job it is to find means of streamlining the Government, postal expenses could be reduced $200,000,000 to $300,000,000 a year by

operating the Department as a business independent of Congress. With political considerations out of the way, postage rates could be adjusted to actual income needs.

First-class mail is already carried at a healthy profit—enough to allow, in the interests of American aviation and education, a continued loss in air-mail and second-class matter. But third- and fourth-class rates for circulars, catalogs, and packages are maintained at an unnecessary yearly loss of $160,000,000, of which the mail-order houses are the principal beneficiaries. The merchant who contributes to his community through wages, taxes, and property improvement is undersold by these houses, whose only local overhead is the mailing charges which are kept low by Government subsidy. When the Postmaster General can raise such rates as these to conform with expenses rather than with the devices of Congress, then we may rightfully inquire whether the Post Office Department is operating on a paying basis.

Our Soldiers, Sailors, and Airmen

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1949

Mr. McCORMACK. Mr. Speaker, pursuant to unanimous consent, I am inserting in the CONGRESSIONAL RECORD a lyric poem, dedicated to the National Military Establishment, entitled "Our Soldiers, Sailors, and Airmen," which, in my judgment, should stir the blood of freedom-loving people all over the world and, so far as the citizens of these United States of America are concerned, might well be regarded as a modernized Battle Hymn of the Republic. The author is my friend of many years, James Patrick McGovern, of the District of Columbia Bar, a captain in the American expeditionary forces during the First World War, and the special Washington representative of the Arizona Daily Sun, of Flagstaff, Ariz., where he lived as a youth while overcoming tuberculosis. Captain McGovern is an active member of the Bethesda-Chevy Chase Post, No. 105, of the American Legion, Department of Maryland, which published his widely read Poems of World War II in 1945. It is my understanding that the Conservatory of Music of the Peabody Institute of Baltimore has placed his lyrics for the song Our Soldiers, Sailors, and Airmen in the hands of one of its distinguished composers for a setting worthy of their exalted sentiments. The poem is set forth as follows:

OUR SOLDIERS, SAILORS, AND AIRMEN

We are stalwart many millions
With the spirit of the West;
Our State has rock foundations
Of faith which God has blessed;
We have built our mighty riches
With justice fortified;
Our hearts have most loved freedom,
Forever true when tried—
Forever true when tried.

(Refrain)

Our land was won by freemen,
And free it must remain;
Hail to soldiers, sailors, and airmen,
Our country in freedom shall reign.

We never have known slavery,
And swear we never will;
Our hearts for friends are peaceful,
For foes—well, blood may spill;
We don't like atom bombing,
We lions are not cruel;
But if our foes are savage,
Hard lessons are our rule—
Hard lessons are our rule.

(Refrain)

Our land was won by freemen,
And free it must remain;
Hail to soldiers, sailors, and airmen,
Our country in freedom shall reign.

We are the sons of fathers
Who loved their liberty;
We are the sons of mothers
Whose freedom braved the sea;
We are the faithful brothers
Sworn to protect our land;
And we will be new fathers
To make it ageless stand—
To make it ageless stand.

(Refrain)

Our land was won by freemen,
And free it must remain;
Hail to soldiers, sailors, and airmen,
Our country in freedom shall reign.

St. Mary's Church

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following address in observance of the one hundredth anniversary of St. Mary's Parish in the city of Lawrence, Mass., by the Very Reverend Joseph M. Dougherty, O. S. A., prior of Villanova College:

"Remember the days of old. Think upon every generation and ask thy Father and He will declare to thy elders and they will tell thee." (Deuteronomy 32: 7.)

We come here this morning to cherish the precious memories of the days that are gone and to offer a prayer of thanksgiving for God's providence in the past and in the spirit of those stimulating emotions to set our faces resolutely toward the days that lie ahead.

We gather this morning to render fond tribute to our ancestors in the faith, who during the turbulent nineteenth century, brought the religion of Jesus Christ to the valley of the swift-flowing Merrimack. No wealth or earthly prestige was theirs for despoiled of their lands, oppressed by unjust taxation they excited only the ridicule and derision of the so-called native Americans. Ah, yes, just 100 years ago one of the worst calamities of modern times, the man-made famine of 1848 drove the builders, the first St. Mary's, from holy Ireland. In that dire period literally millions of the Irish people in the unscrutable designs of divine providence were scattered to the four corners of the earth. But with them in spite of persecution and want, they brought an unconquerable love for the Madonna and the Child. It is just and fitting on this the one hundredth anniversary of the founding of St. Mary's that we render our praise for these hardy pioneers who braved insults, ridicule, and persecution. Well may we commemorate the one hundredth anniversary of St. Mary's parish for the parish is the common denominator of the living church of Jesus Christ. In the parish church the individual is brought into contact with the saving sacraments of our holy faith.

Although each parish has a definite territory it has buildings and other physical property. The teaching commission and the driving force of a parish depends on the spiritual authority of the Pope, the vicar of Jesus Christ. No priest may stand in any Catholic pulpit, nor may he administer the sacraments unless he be approved by the authority of his bishop. The bishop in turn is in direct communication with the Pope. Indeed he is required periodically to make his ad limina visit to the feet of the holy father. Whenever a priest offers the holy sacrifice he is obliged to pray for his bishop and the Pope. The Catholic Church has been well named the Christo-centric church. All of our ceremonies, our devotions, our architecture bespeak the power of the Divine Christ and this power is made available for the individual through the administrations of the parish clergy. The teaching authority of the vicar of Christ which we love and cherish furnished the understanding of the antiquity and solidarity of the Catholic Church, a condition which the enemies of the church regard with hatred but a fact which they cannot ignore.

There are two incidents from the New Testament which dramatically prove the divine character of Peter's mission and indicate to all believers the power of the Catholic Church. Peter was no coward. Indeed he was a brave man. However when he relied solely on his own strength he failed and failed miserably. "You will all be scandalized in Me this night for it is written I will smite the shepherd and the sheep shall be scattered." But Peter said to Him, "Even though all be scandalized yet not I." Jesus said to him, "Before the cock crows twice thou shall deny Me thrice." But he went on speaking more vehemently, "Even if I should die with Thee I will not deny Thee." (Mark 14: 27–31.)

And while Peter was in the courtyard there came one of the maidservants of the high priest, and seeing Peter warming himself she looked closely at him and said: "Thou also wast with Jesus of Nazareth." But he denied it, saying: "I neither know or understand what thou art saying."

Contrast this miserable denial of St. Peter with the zeal with which he preached for Our Saviour when he was inspired by the Holy Ghost. "Men of Israel why do you marvel at this or why do you stare at us as though by any power of our own we made this man walk. The God of Abraham, the God of Jacob, the God of our Fathers has glorified His son, Jesus." Cited before the Sanhedrin St. Peter persisted in his fearless declaration of the divinity of Jesus Christ, so that they had a mind to slay St. Peter. Then there stood up in the Sanhedrin one Gamaliel, a teacher of the law, respected by all who heard this historic judgment. "Now I say to you keep away from these men. Let them alone for if this work is from men it will be overthrown but if it is from God you cannot overthrow it." The judgment of Gamaliel has been sustained by 19 centuries of opposition and frequent bloody humiliations. And with all the vicissitudes and humiliations heaped upon her with the rise of empire, with the boast of material power, the voice of the white-robed figure who sits on the fisherman's throne is a factor to be reckoned with in the affairs of men. The historic fact of the Catholic church is portrayed most graphically by the English writer MacCauler. "The Catholic church saw the commencement of all the governments and of all the ecclesiastical establishments that now exist in the world. She was great and respected before the Saxon had set foot on Britain, when the Grecian eloquence still flourished in Antioch, when the idols were still worshiped in the temple of Mecca.

"And she may still exist in undiminished vigor when some traveler from New Zealand in the midst of a vast solitude takes his stand on a broken arch of London Bridge to sketch the ruins of St. Paul."

Even in our day in the vigor of our holy faith we can discern the fulfillment of those prophetic words of our divine Saviour in answer to Peter's declaration of faith: "Thou art Peter and upon this rock I will build my church and the gates of hell shall never prevail against it." We rejoice today therefor because there have been completed a hundred years of administration of the sacraments of Jesus Christ in this unit of His Church, St. Mary's of Lawrence.

We hail that long line of zealous priests and devoted laity of St. Mary's Parish.

Oh who shall fathom the depth of that mysterious, that abiding love binding our Catholic people so closely to the priest. To them who grasp the genius of our holy faith the explanation of this love is clear because the priest brings to the faithful the power of the divine Christ. When he ministers he imparts the infinite merits of the Saviour. When he sacrifices he holds in his hands the body and blood of Jesus Christ. That deep affection for the priesthood so characteristic of the Catholic laity has an additional foundation in the history of the trials and privations of the people of Lawrence. When puritanical bigotry tried to crush the initiative of Catholics, when our people were deprived of employment with notices that "No Catholics need apply," the priest was there to uphold their rights and to speak out boldly in their defense. When the pinch of want caused hunger there was always a sainted priest like Father Tate who collected money and doled out food even at the expense of his own health.

CHAMPIONED RIGHTS OF PEOPLE

When greedy mill owners treated their workers like cattle, when men, women, and children labored 12 and 14 hours for a mere pittance, without any protection from whirring machines, the priest was the sole champion of their rights. Anyone who has even a casual acquaintance with the history of industrial New England has a deep appreciation of the respect and love accorded to the priests of the Merrimack Valley. Little wonder then that the people of Lawrence cherish their priest and they, like the Israelites of old sustaining the aims of Moses whilst the battle raged, they have always appreciated the zeal of their priests.

It is a difficult task, indeed, to do justice to the long line of priests who have labored in St. Mary's parish. The stories, the incidents, the trials and sorrows, the celebrations and demonstrations of faith comprising the rich history are so varied and numerous that it would take hours to give them merely passing reference. I shall confine my remarks to a brief outline which will recount some of the high lights of the long and fruitful years of St. Mary's.

OUTLINES HISTORY OF PARISH

Father James O'Donnell, the founder of St. Mary's parish, said the first mass in Merrimack Hall, then located at Jackson and Common Streets, on Christmas Eve, 1948. The following year he completed a wooden structure which served as a church until the building of a stone church in 1852. Father O'Donnell died in 1861 and was succeeded by Father Mullen, who remained until the end of 1865, when he was returned to reopen Villanova College, closed by the Civil War. Father Edge held the pastorate of St. Mary's from 1865 to 1870. It was the vision of Father Edge that planned the new St. Mary's, this present structure, whose cornerstone was laid in August 1866.

On that occasion, Dr. Moriarty, renowned for his oratory, was the speaker. In an eloquent sermon, Father Moriarty predicted that "the good people of this parish would soon complete their work by raising the cross of Christ on the high pinnacle of St. Mary's, where the first beams of the rising sun would shine upon it, forecasting the long generations of Catholic faith in the city of Lawrence."

Father Edge was succeeded in the pastorate of St. Mary's by Father Galberry, who subsequently was consecrated bishop of Hartford, Conn. Under the leadership of Father Galberry, the present church was completed and the old St. Mary's renovated for school purposes. From 1872 until 1886, the parish was administered successively by Father Gilmore, Father Daniel Regan, and Father McEvoy. Father James T. O'Reilly was pastor of St. Mary's parish from 1886 until his death in 1925, a period of some 40 years. Father O'Reilly, in 1912, when the forces of atheistic socialism sought to entrench themselves in this city because of labor unrest, became a national figure. In the parish calendar, which he founded in 1896, he waged a ceaseless and effective campaign against the propaganda of this dangerous foe. When, in February 1912, this Godless group paraded through the city leading the misguided worker who bore red flags and placards with the phrase, "No God. No Master," Father O'Reilly fearlessly and singly denounced this malicious organization. His zeal and his efforts for the beloved country and our holy faith culminated in a magnificent parade of 30,000 on Columbus Day, waving American flags and brandishing thousands of copies of Father O'Reilly's slogan for God and country, "The Red flag never! The Stars and Stripes forever!"

This effective demonstration projected by Father O'Reilly proved him to be a generation ahead of his time. Today we salute the memory of Father James T. O'Reilly, a great priest and a great American.

In 1925 Father Michael Sullivan was appointed rector of St. Mary's. He was succeeded by Father James McDonald, who endeared himself as a young priest by organizing his famous cadet corps, among whose members was the present pastor of St. Mary's, Father Martin. Father McDonald was succeeded in 1935 by Father Patrick Campbell. Father Daniel Driscoll was appointed to St. Mary's in 1941, and he was succeeded by Father John Martin. I feel that the priests and laity recognize the magnitude of my obligations on this historic occasion, and I know they will understand that the limitations of time and memory preclude the possibility of rendering an adequate tribute to all who have labored so well at St. Mary's. The records show that over 100 Augustinian priests have been assigned to St. Mary's.

BLESSING FROM FATHER O'MAHONEY

I feel that there is one priest who symbolizes in a striking way the outstanding affection of the people of St. Mary's. This morning I bring you a blessing from Father O'Mahoney. Father Dan, as you all so affectionately call him, is well past the three score and 10. He is in his ninety-third year. His steps are faltering now and when I left him at Villanova, he said: "Good-by, Father dear, and give my blessing to all my loved ones in Lawrence."

An event of great significance for St. Mary's parish occurred in 1859. At that time the sainted Father Edge prevailed upon the Sisters of Notre Dame to teach the pupils of his newly founded school. To the many sainted women of the Sisters of Notre Dame who have labored so well for Christ in St. Mary's parish for the past 90 years, we render thanks to Almighty God.

The genuine regard and high esteem accorded to these sisters by the good people of St. Mary's parish is only a slight measure of the magnitude of their contribution to the catholicity of this city. Their real worth is known to God alone who will reward them for their innumerable deeds of heroic self-sacrifice in this parish.

We are honored this morning with the presence of our beloved archbishop. Your excellency, in the name of our Very Rev. Father Provincial, in behalf of Father Martin and all the Augustinian Fathers, I thank you for your graciousness and your never-failing kindness to our order. In a comparatively few years you have, by your zeal and gentle kindness, won the hearts of the Catholic of the great archdiocese of Boston and you have particularly endeared yourself to the people of Lawrence. Our archbishop is a prelate of zeal and vision.

Already the walls of a Catholic hospital are arising in Lawrence. With a clear understanding of the need for Catholic education and with a burning zeal for souls, Archbishop Cushing, you have summoned the Augustinians and commissioned them to establish a college for men and women in the Merrimack Valley. Through the inspiration of your characteristic energy, our Father Provincial has established this institution, Merrimack College, under the able guidance of the learned Dr. McQuade. In the short space of 2 years two buildings have been constructed, another acquired, and a student body of 400 has been enrolled.

Our Very Rev. Father Provincial, I know, is deeply moved this morning in the recollection of many dear memories of his youth in old St. Mary's. I know that Father Sullivan is not well disposed to flattery. However, the occasion warrants that due recognition be accorded him as the superior of our order. He has accomplished much for the salvation of souls, the advancement of our order, and the glory of Holy Mother Church.

LISTS EDUCATIONAL PROJECTS

So, in the spirit of this historic occasion, let us look at the record, in the words of a famous American statesman. During the more than a decade of years Father Sullivan has completed the following projects in the educational field alone:

At Villanova, more than $2,000,000 has been expended for improvements and building, including a new monastery, a large library housing 500,000 volumes, a naval science building regarded by the Navy as the model for all such buildings and the first such structure to be built by any college in the United States, and a chemical engineering building of the latest construction.

In Cuba, the Pearl of the Antilles, under Father Sullivan's direction, the Catholic University of Habana has been established with two buildings complete and a third undergoing construction. In our high schools in far-off California, Father Sullivan has expended over $200,000.

Requested by the archbishop of Boston to erect a Catholic college in the Merrimack valley, Father Sullivan immediately directed that suitable land should be acquired, and construction was started immediately. On the occasion of a visit of inspection to the new college site, he directed that more land be acquired. A total of 160 acres now forms the campus of Merrimack college. The prophetic statement of Father Moriarty, the founder of Villanova, made at the cornerstone laying at this church, August 1866, has been fulfilled. Father Moriarty foretold that the parishioners would complete St. Mary's Church, and on its highest pinnacle they would place the cross of Christ, where the first rays of the rising sun would shine upon it, forecasting the long generations of Catholic faith in the city of Lawrence.

Father Sullivan, in founding the first Catholic college in the Merrimack Valley, has admirably substantiated the prophecy of Father Moriarty. In the dim vista of the future already we can see the thousands of our Catholic boys and girls who will be the beneficiaries of our Father Provincial's foresight.

The Augustinian Fathers have every reason to believe that the people of the Merrimack valley will support them in this great educational project of our order. Our Father

Provincial has already committed us to an expenditure of over $1,000,000 for Merrimack College. This represents an enormous outlay of money, an outlay in addition to other expenditures of our order. I am sure that the descendants of the founders of old St. Mary's will not fail us in this emergency. We have the tradition of 10 decades of our Catholic people who have sustained their Augustinian priests in every possible emergency. And on this historic occasion, with the memory of your loved ones fresh in your minds, I ask you to match the generosity of our Father Provincial in the construction of Merrimack College.

Let each family of St. Mary's pledge today at least $100 toward this worthy project as a symbol of love and devotion to Archbishop Cushing. This sum need not be paid today, but let each family of old St. Mary's accept this challenge to its loyalty as a sacred trust, as a vow to be fulfilled over the years. Let it be a symbol of confidence in Father Sullivan, our provincial, who has so generously expended the resources of the Augustinian order with faith and vision toward another hundred years of Catholic progress in the Merrimack Valley.

Contributions to Volunteer Fire Companies Should Be Tax Exempt

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1949

Mr. BOGGS of Delaware. Mr. Speaker, during the past year it has been my privilege and my pleasure to become very closely associated with various volunteer fire companies and their members. Among other things, that association has been highly educational. As a result, I have today the greatest respect and a much fuller recognition of the value and importance of volunteer fire companies to our way of life in this great Nation.

At the same time I have learned of many of the problems with which these volunteer fire companies are confronted. Perhaps their greatest problem is that of acquiring sufficient funds to enable them to perform their unselfish duties as fully and satisfactorily as they wish to carry them out. To a very large extent these volunteer fire associations are dependent upon contributions from individual citizens and grateful business enterprises. I have learned, however, that the size of many of these contributions is restricted because under our present tax laws such donations may not be deducted for income-tax purposes. This is a situation, Mr. Speaker, which in my opinion merits and needs correction at the earliest possible date.

Consequently, Mr. Speaker, I have today introduced into the House of Representatives a bill to which I urge all the Members of the Congress to give full and sympathetic consideration. This bill provides for an amendment to our present tax laws by which contributions to volunteer fire companies will become deductible for income-tax purposes. I wish to point out, however, that this bill does not in any manner alter the present total limits on the amounts of individual or corporate incomes which are deductible for tax purposes.

Let me point out to you, Mr. Speaker, and to all the Members of the House of Representatives, some of the reasons why this bill should be acted upon favorably and enacted into law.

From the best information available to me, I learn that there are only about 900 full-time professional fire departments in the United States. On the other hand, I am told that there are more than 14,000 volunteer fire companies. In this connection I wish to point out that the paid fire companies are maintained through local taxation. And the taxes paid by individuals and business enterprises for this purpose and for their own protection are deductible in determining the amount of Federal income tax to be paid. In justice and in fairness to those who support volunteer fire companies, it seems wholly clear to me that payments for the same purposes in rural communities should likewise be tax-exempt.

Let me point out to you, Mr. Speaker, that our Federal Government has a direct obligation to these volunteer fire associations. In nearly all of the communities throughout the Nation served by volunteer fire companies, our Federal Government has post offices and other public buildings and properties of tremendous value. For the protection of these public buildings from destruction by fire, our Government is wholly dependent upon the unselfish services of the volunteer firemen. I am not suggesting that these firemen be paid or that they receive any Federal subsidy, but I do say, Mr. Speaker, that we should enable these companies to raise larger sums of money by reason of tax exemption to donors so that our own public property may be more adequately protected.

Volunteer fire companies are to a very large extent educational organizations. For many years in thousands of communities they have conducted campaigns to educate the public in fire prevention. The number of lives and the property values saved from the ravages of preventable fires cannot be ascertained in dollars.

In that connection I want to point out, Mr. Speaker, that new methods for preventing and fighting fires are constantly being developed. The volunteer fire companies conduct classes at which their members are trained to become skilled in these new methods. But new methods require new equipment and new materials, and I am sure that there are many volunteer fire companies in the country today who are fully cognizant of better and improved fire prevention and fire-fighting methods, who solely for lack of adequate funds cannot apply these methods. Certainly by the enactment of this bill we should help to enable them to do so.

That volunteer fire companies are at least quasi-public organizations is a fact already widely recognized. This is evidenced by the fact that State and municipal governments in many cases are making direct contributions to America's volunteer fire associations. With such being the case, I again say that certainly we should enable these companies to supplement their available funds by enabling grateful citizens and corporations to make tax-exempt donations.

Everyone who has ever lived in a rural community also knows that the very existence of a volunteer fire company in that community represents an actual annual dollar savings to him by reason of reduced fire-insurance rates. Our Federal Government is enjoying the same saving on the insurance on its public buildings.

And finally, Mr. Speaker, I want to emphasize the great value of the unselfish citizens who comprise our volunteer fire companies in time of local or national emergency. Their training and their skill and their knowledge can always be counted upon to counter the effects of an emergency of any scope.

In view of the foregoing and much more that could be said, I again urge that this proposed legislation be acted upon favorably by the Members of this Congress.

Address of Hon. Estes Kefauver, of Tennessee

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1949

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a speech delivered January 21 by Senator ESTES KEFAUVER, of Tennessee, at the banquet in St. Joseph, Mo., honoring the 10 outstanding young men of 1948. This speech was carried over the facilities of the American Broadcasting Co. I believe the speech will be of intense interest to every Member of the Congress for its patriotic expression of the liberal and progressive ideals which are today motivating the young men and women of America.

The speech follows:

This is a unique experience for me. With three growing children at my house, I enjoy frequently the "breakfast of champions," but this is the first time I have addressed a "dinner of champions."

In the field of politics, some of us get to be champions in devious ways. For example, back when I was a student at the University of Tennessee, I tried for the football team and was a pretty fair substitute. A few years latter, as a candidate for Congress, I became a star player. Still later, when I was running for the Senate, I noticed I had become a member of the all-southern team. So, 6 years from now if I seek reelection, you can receive the news that I was an all-American with complete understanding of how a politician gets to be a champion.

These champions we salute tonight are most unusual. All of them are young—none older than 36. They represent all phases of our national life: a mayor, a governor, a

Member of Congress, a baseball player and manager, a labor leader, an executive of a cosmetic manufacturing company, a dean of law, a public relations expert who overcame blindness, a newspaper reporter, and an instructor in surgery. So you will see that youth is moving up in many fields of human endeavor.

This is quite a contrast to the picture of 1915, when young men were taught to be seen and not heard—to wait until they reached middle age to take part in the business, professional, civic, and governmental affairs that affected them.

The movement we know as the "Jaycees" had its origin right here in Missouri, when a bond issue to provide funds for a parkway in St. Louis was being proposed. A young man by the name of Henry Giessenbier had an idea, and he built a foundation under his dream. Thirty-two young men of St. Louis met in an attic on October 13, 1915, and formed what later became the first junior chamber of commerce in the world. From this humble and inauspicious beginning, the organization has spread to the extent that every State—with the exception of Vermont, which again became a notable exception in 1936—has Jaycee organizations. Too, Jaycees are international in scope, having chapters in nearly 50 foreign nations.

This is the thirteenth year that the distinguished awards have been made, and it is altogether fitting that the anniversary should be held in Missouri, the place of Jaycee nativity.

To these 10 outstanding young men I offer profound and sincere congratulations on your attainments. It is remarkable that you should have achieved a place of leadership in your respective fields so early in life. Only in America, of all the nations, is such a situation possible; for it is here that we enjoy the equality of opportunity that limits our people only to their diligence, their abilities, and their willingness to work hard.

This should be a strong indication to the peoples of the world that our democracy has something to offer any people anywhere, and it is a timely indication. You and I are witnessing a struggle of ideologies at this time between our democratic way of living and the way of life advanced by the Soviet Union.

It is an ever-increasing struggle in which each side seeks to propagandize its own assets and the weaknesses of the other system. When an unfortunate incident, such as a lynching, occurs, the official Russian newspaper, Pravda, and other Soviet media of communication play it up as a weakness in the democratic system, rather than as an exceptional departure from the true democratic method.

In this element of the cold war we would do well to appreciate the effectiveness of our own system—of the power of our freedom, so aptly pointed up by Dr. Max Ascoli in his new book of the same name. We need urgently to grasp the idea that our democratic way of life has a great potential of influence on the course of events in the world today. We can hardly sell the rest of the world on the merits of our mode of living—our system of government—unless we, ourselves, have a deep and abiding comprehension of its validity.

It is never necessary to apologize for the position we assume under the democratic system. Sometimes we are ashamed that a few of our citizens, failing to recognize the principles of democracy, commit acts that are not in keeping with our mode of life; but such is not a reflection on the principles for which we stand, rather, only an indication that we have not yet reached the point of perfection. An un-American activity no more changes the basic principles of our system than a man jumping out of the twentieth-story window changes the law of gravity. The basic fundamentals of our way of life are sound, and, I repeat for emphasis, we need have no apology for them.

If the great masses of the people in Russia and other communistic states ever gain an understanding of the rightness of democracy, I fear not their decision as to whether they will accept it for themselves. After all, we followed in a voluntary manner the course that we did when our Government was formed. We might have selected another form, yet the choice of our founding fathers was democracy, because democracy is more akin to the principles on which the very universe is operated.

If there is one single thing that our young people can take the lead in, at this moment, it is the task of selling democracy to all people everywhere, in America and ou*.

We are proud of the economic success of our system of government—a system that has provided greater production and better distribution for more people than any other nation has yet approximated. Some of us are constrained, unfortunately, to think that we should content ourselves with helping the war-torn nations of the world from an economic standpoint only. That, in my opinion, is a drastic mistake. Europe and Asia need these material aids, of course, but they also need the succor our fundamental freedoms can provide even more.

Our democracy has its weaknesses. The President pointed out some of these to the Congress 2 weeks ago in his message on the state of the Union. We need to correct these weaknesses as rapidly as we can with efficiency. We need better low-cost housing, and we need it urgently. We need to establish better educational advantages. We need to develop further our natural resources, and a score of things can be done to enhance the economic opportunities of our people. But there are other requirements which are not within the realm of the material.

Our great need, and one that our young people can do a great deal about, is to dispel the notion, expressed by too many, that another depression is more to be feared than another war. I say our youth should take the lead in this matter, because the youth of our land will do the sacrificing if we enter a third world war. It doesn't matter much how many dollars you have in your pocket if you are trying to protect your family from an atomic bomb, or a guided missile, or some other weapon of war that may be perfected.

Don't think for a minute that you are powerless to do something about another war. You are here from all over the United States, and you are the ones who formulate public opinion. Public opinion influences your lawmakers and your administrators. We had a lucid example of the ability of the ordinary citizen to make himself heard in the recent elections. All the influences in the Nation were agreed on the election of Governor Dewey, except one, the opinion of the great masses of the people. After all, that was the only important one. It isn't often that the people speak, but when they do, it is in an effective voice. What I am saying to you is this: You have great influence, and all you need to do is to use it. Speak out for democracy; speak out for world peace. No law is stronger than its interpretation; no theory is stronger than its practice. Democracy means what you and I make it mean.

There is another weakness in our system that the youth of our land can do much to overcome, and that is the tendency to rely too strongly on traditions and time-honored customs. I favor traditions when they are good traditions; I am all for customs when they are right. But nothing is right just because it is old. Most of our traditions are honored because they are good in the first place. When a tradition, or a custom, or a law is bad, regardless of how old or how new it may be, I say we should replace it with something better.

Our electoral college system is a good example of a tradition and a custom that has outlived its usefulness and should give way to a plan that is in keeping with our present-day demands. I am not one to want to wait until a President is again elected on the basis of a majority of the electoral votes though his adversary received the most popular votes, before doing something about it. I say we should change the system before a national calamity results.

There is another matter that should gain the attention of our youth. We have had too many mergers and trusts and monopolies. There was a time in our national history when this type of business operation could have been condoned. That time has long since passed. The young man who desires to enter business and make his own way cannot succeed if big business is permitted to stifle the competition he provides.

We have made some progress in dissipating monopolies, but the task is not yet complete. Big business has large staffs of competent legal minds, and these alert lawyers and executives have discovered loopholes in the law through which big business is able to evade the intent of Congress in preventing monopolistic mergers. Unless we put our finger in the leak and plug the loophole, all the good intentions we hold will be but naught as the great wave of monopolistic control sweeps the struggling small-business man out to sea.

The leak can be plugged, but it will never be if small-business men sit idly by while monopoly business operates its lobby in Washington. Here again, the voice of the masses will be heeded if it is heard. We can save the dike if you, the young businessmen of America, will see to it that we get help in strengthening our antitrust laws.

I am not fearful that you of the Jaycees will be complacent about critical issues. Your record of working for the civic betterment and the community good dispels any fear that I might conceivably entertain on this score. I would inspire you to continue and expand your efforts regardless of the possibility of criticism. Anyone who does anything is criticized. Sometimes the criticism is justified, but more often the contrary is true.

My father gave me a rule one time that I have tried to follow implicitly since. The rule is: "Be sure you're right; then go ahead." The occasion arises frequently when we experience difficulty in recognizing just what is right; but, by being honest yourself and proceeding with an open mind, somehow or other you can always determine right from wrong. When this ultimate is reached, nothing should deter you from reaching the goal for which you strive. The only time to worry about this matter of criticism is when you find that nobody is criticizing you. Inactivity is about the only condition that results in the cessation of criticism.

There is strong motivation for these several matters I have brought for your consideration. There is the motivation of achieving for yourselves the standard that our honored guests have reached. There is the motivation of being able to look back on a job well done. There is the motivation of doing our part to make our democracy work better so that it will become a reality rather than a beacon of hope for other people. There is the motivation, finally, of bridging the gaps for those who must pass this way after us.

Paraphrasing the words of the poet, we should not become weary in building the bridge after we have passed over, because others must come this way, and we are privileged to build for them.

Brief Report of My European Trip to My Constituents

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include a copy of my brief report on my European trip:

A BRIEF REPORT ON MY EUROPEAN TRIP TO MY CONSTITUENTS OF THE TWENTY-NINTH CONGRESSIONAL DISTRICT OF NEW YORK, DELIVERED TO THE WOMEN'S REPUBLICAN FEDERATION OF CLUBS OF ORANGE COUNTY ON JANUARY 14, 1949

After my reelection, I accompanied by husband to England.

I felt this would be a great opportunity for me to see and study conditions in Europe and to report back to you.

The voters of the Twenty-ninth Congressional District have always been deeply interested and concerned with foreign policy, and, of course, now, with the possibility of World War III in the future, this interest is greater and more intense than ever.

I traveled as a private citizen—that is, I was not on any congressional committee—and I paid my own way. This enabled me to see the things that I wanted to see and that I felt would be of vital interest to you.

Of course, when I went into Germany, which is a conquered and occupied country, I was in the care of the United States Army, who helped me in every way and showed me every kindness and courtesy as your Representative.

First, we will talk about England, because England, through language and the common law that we have inherited from her, influences our thinking and our future more than any other nation.

England is greatly changed since the war. She is now a highly socialized state, with nationalization going on apace. I heard part of the final debate on the nationalization of the steel industry in the House of Commons. Here again one cannot help but be impressed by the similarity of the Labor government and our present New Deal administration, and the arguments of the opposition are very much the same as those of the Republicans in Congress.

The strength and weaknesses of both are the same. The Labor government has established firm control on industry and commodities. It has thereby brought life to a dead level, but it has given the majority of the people security. Everything is provided from womb to tomb, and security is the cry of the majority everywhere in our time.

True, the young and the ambitious are leaving England and you see the familiar ad flashed on the screen in the movies and other theaters, "Emigrate to Canada by air," and many are taking the advice.

The conservative forces are trying to champion free enterprise, but always with reservations. This, of course, is a great weakness and one that is shared by the Republican Party. It is the reason neither party wins elections.

Mr. Morrison in speaking for the nationalization of the steel industry made this point abundantly clear when he said: and this quotation is only from memory, "the opposition is constantly posing as the champion of free enterprise, but always with reservations. We, on the contrary, are for Government ownership with no reservations." That is the story in a nutshell. It is the positive against the negative approach and the positive always has, and always will, win out in the end.

Food in England is sufficient but dull. It is of course far better in the country, near the farms than in the cities. This is true all over Europe.

Government regulation and regimentation in England have already broken down the traditional English respect for law and the so-called Stanley inquiry and trials put many government employees and secretaries in a very dubious light. This is something new to England and they are not very proud of it. It is probably the only thing that might cause the defeat of the Labor government in the next general election.

What of England's future? Quite frankly, I think her future is overseas in those great dominions where the high tradition of English law, patriotism, and culture will continue, with some modifications surely, but where they will still be preserved practically intact. I believe the wave of national socialism which started in Germany in the 1840's and which has now swept over England will have a very great influence on the United States. If you study the program of the present administration dispassionately and with an eye on what has already happened in Europe you cannot fail to see that the program is the same, that the appeal is the same and that it has come out of the terror and fear of modern war which has made the peoples of the world want only one thing with all its drabness and dullness—security.

France in many ways appears more unchanged than one would expect. True the black markets flourish openly and impudently. True the French, as usual, are the great individualists of Europe. They refuse to be regimented and they never will be because they simply will not obey the laws that would achieve this end.

Food in France for the average citizen is way below prewar standards, but the hotels and restaurants in Paris are as good as ever due to the black markets. This is an unhealthy condition and one that is fraught with danger to the government and the nation.

Here again people can live far better in the country districts and the farmer, here as in the whole of Europe, is monarch of all he surveys.

The French people have turned away from communism. In the last election 80 percent of the Communists lost their seats, which is a pretty conclusive defeat.

The French people are not temperamentally fitted for communism. They are too independent. Their good taste and their sense of beauty also preclude their adoption of such a philosophy.

After seeing Paris, still the same, although greatly in need of some fresh paint, one cannot but feel that this people will survive as they always have. It is hard to explain the reason, but as the French have aptly said: "There are some things that cannot be explained by reason." One of those things is beauty and patriotism, and France still has both and they will survive with her, with the indomitable spirit of her peasants and the leadership of her women, who have kept the French family intact through the centuries. France will perhaps be invaded again but she will "bow before the blast in silent deep disdain" and after the conquerors have passed on she will still be there a little battered perhaps, but still fundamentally unchanged.

From Paris I went to Frankfort, an overnight train ride. On my arrival I was met by Lieutenant Nicholson, of the WAC, who stayed with me all through my German trip and arranged for me to see everything I asked to be shown during my brief visit.

I had not seen Germany since 1936, and that was practically the high tide of the Nazi regime. It was the year of the Olympics and Germany was full of tourists, many young boys and girls from the colleges and universities of the United States. They were all filled with admiration for the efficiency, courtesy, and cleanliness of the country. You heard many such remarks as: "Gosh, I think we fought the wrong guys in 1917."

The Germans may have believed some of this very superficial talk and again repeated the mistake of thinking that if they went to war the United States would not come in against them.

Whatever the cause, the Germans showed the most unbelievable stupidity in going to war in 1939. They have always had a curious habit of committing suicide and this time they encompassed the suicide of Germany herself.

At the present time Germany is a cancer in the center of Europe. The situation there must and does have repercussions all over Europe and the United States. For this reason it is well, if possible, to see Germany and at least to study and read up on conditions there.

As I have said earlier Germany is a conquered and an occupied country. Peace does not exist there or in Austria as yet; this should never be forgotten. We talk of peace, but as yet there is no peace in Europe.

The first thing I saw was the devastation of Frankfort. The destruction is about 70 percent. Imagine a city like Buffalo destroyed 70 percent. The living conditions are, of course, terrible, the overcrowding is a problem that breaks down morale and morals. You see both in Frankfort and Berlin, masses of rubble with a small stove pipe sticking out at a strange angle, and you realize that human beings are living there and have lived that way for 3½ years. No domestic animal could survive these conditions.

The German food ration is 1,800 calories a day with some slight increases for men doing heavy physical labor and pregnant women, but in no case is it satisfying. The average daily diet is black bread, ersatz coffee or thin cocoa in the morning, a thin soup and more bread at noon, and some vegetables, cocoa, and again bread at night. The children get about the same. The amazing thing is that they look as well as they do, especially the children.

Of course, there is a great deal of tuberculosis and many diseases caused by malnutrition among the children and you see no fat people and very few old ones. But still there are 45,000,000 Germans in bizonia and 20,000,000 in the Russian zone at the present time.

My next visit was to two DP camps outside of Frankfort. There are now 269,810 DP's left in Germany; of these 265,872 are living in camps.

The Baltic camp, where the Estonians, Latvians, Lithuanians, Ukrainians, and Poles are, near Frankfort, has 6,100 people living in barracks. The camp is self-governed under the supervision of the United States Army. There the people live off the German economy; that is, their rations are the same and come from the same sources. They have their own hosiptal and school, they work with and for the Germans and they also make and sell things in the camp itself. They have to pay 70 marks per head a month for their subsistence to the German economy.

These people have, of course, suffered intensely, they were driven from thier homes, torn from their families and their possessions. They have lived in camps, many of them, for 3½ years in very overcrowded conditions. I went into the rooms and saw many about 20 by 40 feet long, with narrow windows at one end. In these rooms four or five families would be living with partitions made by curtains or sacking. They eat their mid-day meal from a community kitchen and during the day the women sit

in the windows sewing and making what things they can, for sale.

The courage and patience of these people is admirable and a lesson to anyone who sees them. The chlidren were coming out of the various schoolrooms during my visit. Each nationality has it's own school conducted in it's own language. The children were just like school children the world over, noisy and to all intents and purposes happy.

About 50 percent of the Balts want to go to Canada, and many are waiting and hoping that they can get to the United States—in spite of all they have been through, they still hope.

The Jewish DP camp is differently set up, in that it is a village within a village, more like the ghettos. Here the people were living in small houses overcrowded but not as much as in the barracks. Here again self-government under army supervision prevailed. There are still 76,432 Jewish DP's in Germany. They do not work with or for the Germans, quite naturally, so that there are many idle in their camps. For that reason they are even more anxious to get away from Germany, a land they hate and that has nothing but the most horrible memories for them.

Many of those that I saw were planning to go to Palestine, but a considerable number wanted to come to America where so many of them have relations.

I visited the school where the children were being taught Hebrew and where we greeted each other with the salutation "shalom."

These Jews are very jealous and tenacious of their language and traditions for which they have suffered so much, as is testified to by the books containing the lists of their martyrs at Dachau. For this reason many of them want to go to Palestine and live in their own way among their own people.

One thing impressed me very much all over Europe and that is the intense national consciousness of all people. They are more jealous of their national traditions and culture than ever before in the world's history and in many instances this same jealousy poses a barrier to understanding, that is going to be hard to bridge.

The American women in Frankfort, wives of Army officers and members of the WAC are doing a fine piece of work to try and help the women and children and the many orphans that are in need. I visited the shelter in the Frankfort station that they run, and also a large orphanage in which they are interested; where babies from 1 day to 3 years are being cared for. Many of these infants are illegitimate and their future is not a bright one. But our American women in the occupied zone are once more giving voluntarily of their time and substance to help the unfortunate.

It will be a sad day for the world and for America when the volunteer who gives a cup of water in the name of Christ is replaced by the professional do-gooder who earns his or her living by caring for the widows and orphans of the world.

Before going to Berlin on the Air Lift, I went to Wiesbaden for a briefing on the operation from General McLean.

The general pointed out that the Army Air Corps could carry on the air lift, or "operation vittles," indefinitely.

There are 5,000 men, all Army Air Corps, working on this operation. There are also WAC and civilian employees. General Cannon, the commanding officer is at Wiesbaden, from which field many of the planes operate. By far the greater number, however, operate from Rhein-Main Field at Frankfort. This field is the largest in Germany or the Continent, having an area of 2,000 acres.

Our war planes are based near Munich, this is unfortunate, because if you look at your map you will see that these planes are in a pocket in the southern part of Germany, that in case of invasion from the east, and we all know that is where the invasion will come from, they will have to fly northwest in order to be in position to repel the attack on the Rhine.

The ideal position for basing these 150 fighter planes would be on the west bank of the Rhine, in France. So far the French have been unwilling to give us these bases, although they would certainly expect our fighter planes to come to their defense in case of attack. This is only one more case of misguided nationalism that is holding up progress in western Europe.

Plans are now being drawn for an airfield in Vienna, the present one being in the Russian zone, so that if Russia decides to cut off Vienna, as she has Berlin, it would be impossible to operate an air lift to that city.

We are allowed by the Russians, to send one plane a week to Warsaw with supplies for our Embassy, but the plane cannot remain there and must make the return trip immediately to its United States base.

It is a humiliating situation to an American to hear of these many petty insults given our Nation and our nationals by our so-called ally.

It is humiliating to be told by our Army officers that when they come face to face with three Russians on the sidewalks of Vienna, they have to decide quickly whether they will go into a shop or walk down another street, because they know that these same Russians, always armed with tommy guns, will push them off the sidewalk.

Lieutenant Nicholson and I started off on the air lift on December 7. We put on slacks, as we were told we must be prepared to put on parachutes and jump if necessary. These planes are all C–54's, equipped with Pratt & Whitney engines. They take off 5 minutes apart, 24 hours a day, except when the fog is what is called soup. They fly in heavy fog, and are able to do so on account of their mastery of instrument flying.

Each plane carries a load of 10 tons. Our plane carried coal in sacks, as it is usually handled in Europe.

We sat up in the cockpit with the pilot, copilot, and engineer, this is the crew all air-lift planes must carry. The crew check all equipment and instruments and are then ready for the take-off. We took off in fairly heavy fog and the pilot let me listen to the directions being given from the ground as we did so.

The plane in front of us was 300 yards away on the ground and the one behind us the same distance.

Everything is run off to a split second and the orders are that if a plane is 1 or 2 minutes late on arrival in Berlin it does not land but turns back to it's base, as it would throw the whole convoy out.

The air-lift crews are young and come from all parts of our country. They are doing a difficult job quietly and efficiently. They do not look upon themselves as heroes, and yet they well might, because they have done more for our country's prestige and for the discomfiture of the Russians than any of our two-by-four politicians, who posing as statesman got us into this absurd and humiliating position. It is indeed a case of: "Their's not to reason why, their's but to do and die."

True the air lift is not the answer. True the air lift ought not to be necessary. But through the blunders of our civilian leaders it has had to be. It is magnificent, romantic, supremely quixotic if you will.

Here is a conquered and blockaded city, reduced to rubble, 80 percent of it completely destroyed, and we had a great hand in this destruction.

And now our young men are there 24 hours a day bringing loads of food and fuel out of the sky to this beleaguered city, flying in through a graveyard to the field, and nothing could be a more appropriate approach to Berlin.

They are the knights in shining armor of our modern mechanical world. And when you wake up in the night in Berlin and hear the droning of the planes overhead, you thank God for them, and you say a prayer for the spirit for which they stand. For youth, for courage, for forgiveness not only of the enemy abroad, but forgiveness for the foolish little men at home that made all this necessary.

After our take-off and after getting over the Taunus Mountains the weather cleared and we were able to see the ground below. This, of course, was the Russian zone. Not a creature seemed to be stirring, the big Auto Bahn, which is comparable to one of our express highways, linking Frankfort and Berlin, was plainly visible in both my air-lift trips, I never saw but one automobile on it. Smoke came from some of the factories, but on the whole the stillness was impressive and melancholy. The Russians are destroying the forests at a rapid rate and most unscientifically. Germans are leaving the eastern zone whenever they can sneak out, although this, of course, is a highly dangerous proceeding.

On arrival in Berlin we were met by General Hodges and his aides who drove us around Berlin so that I could see the devastation. Having known the city in the past it was, of course, a surprise and shock to see the almost complete destruction, and it was, and still is, a mystery as to where the population live in this mass of rubble. Power and light are only on in Berlin for 2 hours out of 24 for the German population. Food and heat not more than adequate, and one must bear in mind that many of these conditions have been going on for 3½ years. Americans here at home must disabuse themselves of the idea that there is peace in Europe. There is no peace and the center or heart of Europe, as far as economic recovery is concerned, is still affecting the whole recovery program.

I visited Ambassador Murphy and General Clay twice, both answered my questions generously and helped me to find out things I wanted to know. I asked General Clay whether he thought that there was danger of a return of the Nazi regime and philosophy in Germany; he pointed out a most interesting historical fact, namely, that the Germans never go back to a discredited or beaten regime, they simply wipe it off the slate forever. They did this with the Hohenzollerns and have now done it with the Nazis. Some new form of government will emerge, but it will be different and a new group will take over. At the present time there are 6,000,000 more women in Germany than men and they are going to have a big influence in the future. The mayor of our zone of Berlin, when I was there, was a woman and she conducted herself with great courage and dignity during these very difficult times.

General Clay is doing a fine piece of work in Berlin. The German people have great respect and admiration for the military, and I am very sure that they will respond better and with less friction to military government than to any other.

General Clay is a man of great personal and mental courage. He is willing to take risks that he would not ask anyone under his command to take. He has the unbounded admiration and respect of the men and women serving under him, and that is something that cannot be bought and that is above price.

General Clay and Ambassador Murphy are both agreed that the German hatred of communism and therefore the Russians, that personify it, is unbounded and deep in their consciousness. They suffered too deeply at their hands ever to forget; this is especially true of the women. For proof of this the general and ambassador both pointed to the Berlin elections that had just been held in our zone. These elections were simply a protest against communism and Russia.

These people, half starved and cold, in a fog that made it impossible to see one's hand before one's face went out 88 percent of them and cast their votes and recorded themselves against communism and Russia.

They did this in the full knowledge that if the western Allies were to pull out of Berlin their punishment would be swift and terrible.

Most of our political leaders in the past have been taken in by the Russians. With our usual naive belief that everyone loves us and that we can charm the birds off the trees, Roosevelt, Winant, and to a certain extent General Eisenhower started to charm and make friends of Stalin, Grusev, and Marshal Zukov. Of course these friendships amounted to nothing and are now buried. They probably amused the Russian officials for the little while that they were supposed to be in effect. In vulgar parlance these Russians played our people for suckers and the Soviet Republic continued her war on the capitalist nations of the world.

Stalin and the Politburo are still as powerful as ever and they do not and never have allowed personal friendships with Americans to influence their thinking or their national policy.

I next interviewed our economic adviser, Mr. Hawkins. He feels that the picture of German recovery in the west is a bright one. This is almost entirely due to the currency reform that took place in June.

Production is now 73 percent of the 1936 level, the peak year of the Nazi regime, as compared with only 47 percent in May.

Coal is now being produced at the rate of 300,000 tons per day; this has been done by giving the miners extra rations, cigarettes, and other comforts if they achieve the targets set for them.

In 1936, coal production was 450,000 tons per day.

The miners' union at their last election voted to throw the four Communists, who held positions as union officers, out of the union entirely.

There are no more reparations due the United States. Our dismantling program has been completed. This is not true of the French and English and they are afraid we will take little or no interest in helping them now. The French are, of course, terrified of a revived Germany, the British fear them as competitors.

Our economic experts feel that our dismantling program was fair and reasonable. I do not think this is so true of the British and it is quite untrue of the French and the U. S. S. R.

According to the agreements the U. S. S. R. is entitled to 25 percent of the reparations in our zone. Forty percent of this is free and 60 percent is to be paid for in kind, mostly foodstuffs from the eastern zone.

When a plant is put up for dismantling, it goes to one of the 16 nations who are entitled to bid for it. It is then written off against their total reparation claims. One thousand five hundred and fifty plants were scheduled for dismantling in 1947 but only 682 actually have been. In bizonia 496 plants have gone to Great Britain and 186 to the United States. One hundred and seventeen are in category I. That is war plants and 69 are classified as peace plants. Out of our total, three were soap plants.

There has been much criticism in Congress and in our country generally over the dismantling of these soap plants, which on first thought would appear to be a harmless and necessary part of the German economy. The explanation given me was that the plants could not function because of the world shortage of fats, which is especially acute in Germany. For this reason these plants were removed, one actually as far as Pakistan.

The French are most jealous of their rights under the dismantling program. General de Gaulle has stated that if the United States intends to hamper the French program in any way, he would rather see France forego all Marshall-plan aid.

The British fear the competition of the German steel industry and are trying to keep the production down for that reason.

The bizonal steel production is now about half the prewar high.

Our economic experts believe that western Germany will have a balanced budget in 1952.

Bizonal exports this year will be $630,000,000 as against none in 1946, and $225,000,000 in 1947, so that Mr. Hawkins' optimism seems well founded.

ERP has contributed $414,000,000 to bizonia for the recovery program.

Mr. Panuch, General Clay's economic adviser, was very frank in stating that the real test of the new currency will occur in the spring. The new Reichsmark is based on the 1938 rates and should be worth 45 cents, this valuation is based on the cost of bread and fertilizer. After the currency reform most controls were removed but the new mark has already begun to slip and is now 20 to the dollar. This is dangerous.

When the mark was revalued in June, every German was given 40 new marks. This was a total of 3,000,000,000 marks for the whole western zone. All bank deposits were converted, wiping out all incomes of 10,000 and under completely.

It is now felt that the new currency must be upheld in order to maintain a sound economy.

Production is still too low for Germany to be self-supporting, but it's rise has already been phenomenal.

The only people in Germany today who have anything but a hand-to-mouth existence are the farmers and landowners. The middle class is wiped out and the wage earner lives on his daily wage and has nothing beyond it.

Now what is the answer to the situation in Germany and, incidentally, the European situation on which Germany must always have a paramount influence?

First, we know and our civilian and military authorities are committed to the fact that a bankrupt, starving, demoralized population of 66,000,000 people in the heart of Europe will be a burden to the American taxpayer and a constant menace to the peace of the world.

Secondly, we must realize that our politicians, both here and in England, who permitted the Russians to capture Berlin and push on to the Elbe are largely to blame for the necessity of having the air lift, which, though a magnificent gesture, can never be the answer to the problem.

Thirdly, we must face the fact that our Army has had to come in and try to clean up the mess made by our political leaders and State Department, that they are doing as good a job as possible, and that they are getting more respect and cooperation from the German population than the civilians can ever expect to obtain.

For these reasons I believe our Government would be well advised to consult with our commanding general in Germany, and others on his staff, as to what should be done to restore normal relations between east and west and to end the blockade of Berlin.

Until this is done we are at war, even if many of us at home do not recognize the fact.

I can assure you those boys on the air lift and their families know that this is war, and when they read of a lot of our high officials in Washington going to the Soviet Embassy to be entertained with vodka and the indelicacies of the season, they are deeply and quite properly resentful.

There is only one way of establishing lasting peace in Europe and that is for all of western Europe to weld itself into a United States for purposes of trade, defense, and currency. These states should, to be effective, include England, Germany, Spain, and the Scandinavian block.

This should be our goal, and we can also hope that by degrees various states from behind the iron curtain will break their chains and join this league.

The obstacles to this objective are tremendous. As a result of the two World Wars nationalism and pride of face are stronger than ever in Europe today.

We talk of isolationism and do not know the meaning of the word. In Europe today the nations are isolated by currency barriers that prevent the free interchange of goods, services, and ideas. The isolation of Russia and her satellites can only be compared to the isolation of China in the days of the great wall. It is impenetrable and complete.

We must overcome this nationalism and this isolationism in Europe if she is to emerge as a confederacy of coequal states, able to prosper and maintain peace in the years ahead.

For this we need understanding and patience. We must learn to understand these nations so that we can reconcile them one to another.

That should be our aim, and to attain it we must approach Europe, not trying to convert and change but in a spirit of understanding and humility.

Europe has a long way to go before this end is achieved, and we, too, have a long way to go and much to learn if we are to play our part in this great achievement.

After seeing the occupation of Germany, the outstanding achievement is the air lift. It is one of the few things that, as an American, one can feel deep and abiding pride in. Pride in those boys who are unsung heroes, pride in their modesty, their courage, and their efficiency.

As you go through the devastation of war, there is very little that is cheering or in which a thoughtful man or woman can take much pride.

But the air lift restores our faith in human nature and our pride in America. It is the one bright spot on a very dark canvas, a canvas on which are written the words that will always come to my mind when I think of Europe: "Vengeance is mine, saith the Lord. I will repay."

Harry S. Truman

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in the Daily Evening Item, Lynn, Mass., on January 20, 1949:

SMOOTH SAILING, MR. PRESIDENT

Harry S. Truman, the man who couldn't possibly be elected, today began his first full term as President of the United States, duly elected by the voters themselves.

The moment he repeated the solemn oath of office at noon today President Truman became Chief Executive of the greatest Nation on earth in his own right and not as a creature of circumstances. When he succeeded President Roosevelt upon the latter's death, he was totally unprepared, psychologically, for the task, and he was the first to confess that the immensity of the office so suddenly thrust upon him left him somewhat bewildered.

In addition, he felt that since he had been part and parcel of the Roosevelt administration, he was under some sort of moral and ethical compulsion to carry out F. D. R.'s policies.

Today, however, Harry Truman no longer need feel bound or restricted by those policies. He has won the approbation of his fellow citizens. He has grown in personal stature. He exudes a confidence and assurance in marked contrast to his attitude on the April afternoon Mr. Roosevelt died.

We did not support Mr. Truman in last year's campaign, for reasons we believed were sound. However, the people thought otherwise; and on his inauguration day we wish Mr. Truman strength, divine guidance, and the sincere cooperation of his countrymen in meeting the tremendous problems, both at home and on the international front, which the next 4 years are certain to bring.

We Must Learn To Live Together or Die Together

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. PHILBIN. Mr. Speaker, I am sure we all agree that one of the most important and fundamental problems in the world is peace. Recently, Mr. Fred Burdick, editor of the Capitol Gist, interviewed a large number of Washington ambassadors on the subject What Is Most Needed To Insure World Peace?

These interviews, featured in a recent issue of the Gist, are recommended as reading for Members of Congress. The ideas of these ambassadors are constructive and so soon as they are put into practice by world leaders everywhere will, without doubt, bring to this war-ravaged planet the tranquillity everybody seeks and usher in a new era of peace, progress, and plenty.

I commend Mr. Fred Burdick, whom I have known favorably for 6 years, for his foresight, sincerity, and diligence in getting interviews with more than 25 ambassadors on this all-important subject of world peace.

Under leave to extend my remarks in the RECORD, I am including some of these interviews with ambassadors and an editorial in the Gist entitled "We Must Learn To Live Together or Die Together":

"Since wars begin in the minds of men, it is in the minds of men that the defenses of peace must be constructed. (UNESCO.)

"WE MUST LEARN TO LIVE TOGETHER OR DIE TOGETHER"

(Editorial based on ideas obtained principally from United States Congressmen, Ambassadors to Washington, and research on new scientific warfare, etc.)

Analysis of chief addresses before the United Nations General Assembly and interviews with Washington Ambassadors and Congressmen featured in this Gist shows that the main cause of international tensions is fear and suspicion. Each side sees sinister motives in programs for training soldiers in occupied zones and building close air bases. Yet both sides declare they prepare solely for defense.

Certain it is that virtually all people in every land ardently want and pray for peace. Truman, Dewey, Bevin, Stalin, and other world leaders repeatedly declare they desire and strive for peace.

Warns General Eisenhower: "The stake in this (peace) campaign is civilization, and it rapidly is becoming humanity's existence." (New York Times, May 28, 1947.) Cautions Dr. G. Brock Chisholm, secretary general, World Health Organization: "Any number of millions—all the people on a continent—can be killed in a few hours by the aftermath of such (bacteriological warfare) methods now available."

With such dire warnings by top authorities, intelligent self-interest for all nations must dictate that peace is imperative.

As all want peace, it logically follows that the principal danger to peace is wrong thinking. Hence, the task ahead is to overcome wrong thinking with right thinking, to overcome fear with confidence, hatred with love, resentment with forgiveness. Right thinking will cause right acting.

Impractical? Who can deny that the Sermon on the Mount and the Golden Rule constitute the most practical peace program ever promulgated? Who can truthfully say, after practicing in personal affairs the Golden Rule of doing unto others as we would have them do unto us, that it does not work? For quarreling nations to put into practice the teachings of the Prince of Peace will assuredly save the people of the world from the catastrophe pictured by General Eisenhower and Dr. Chisholm.

Were world leaders to eliminate all thoughts of suspicion, fear, hatred, and resentment from their minds and hold thoughts of good will, tolerance, and forgiveness, and keep cognizant of the fatherhood of God and the brotherhood of man, the crucial problems that beset mankind would be solved expeditiously and satisfactorily.

With establishment of better general international relations, progress would be made toward solution of pressing economic and political difficulties. The United Nations possesses ample machinery established specifically to solve such problems amicably.

As the history of national legislation is one of reasonable and fair compromise, the same spirit of give and take should prevail in the United Nations. For any country to expect to have exactly its own way is contrary to the letter and spirit of the UN Charter. There must be genuine desire to reach agreement and a will for peace. Actions must conform with words.

An urgent need to save the world from the madness of scientific warfare is for man's moral and spiritual growth to catch up with the phenomenal development of physical science and invention. As Senator RICHARD RUSSELL, of Georgia, member of the Joint Committee on Atomic Energy, stated in a Gist interview, "We must learn to live together or die together."

Faith in the power of God and the prayers without ceasing of literally hundreds of millions of little children, women, and men of all lands for a world united in peace brightens the outlook for peace.

It is hoped that soon all United Nations sessions will open with a moment of silent prayer so that delegates of all faiths can join in humbly beseeching divine guidance for the task of ending war, woe, and want and substituting peace, progress, and plenty. (Fred Burdick.)

Views of Ambassadors on What Is Most Needed to Insure World Peace?

Henrik Kauffmann, Ambassador from Denmark: "A dangerous discrepancy has been growing steadily between the world's progress in the technical field and that of human and social relations, including the international. The rapid progress in science and our increasing ability to make use of mechanical power have perhaps deflected our thoughts from progress in the no less important field of the relations between human beings as such, whether between individuals or between nations.

"Never has this discrepancy been greater or more dangerous than today. In spite of the postwar difficulties and in spite of the political tension of the present moment, I feel that if clear thinking, vision and a feeling of comradeship for all our fellow human beings are strong enough to conquer our various narrow concepts, a bright future for humanity is ahead. Will we be clear-minded and warmhearted enough to conquer the ingrown old concepts, outmoded today in the year 3 of the atomic age? All I can say is that—for the sake of all of us—I hope for the best."

Don Augusto Dillon, Ambassador from Ecuador: "No one gets any good from war and it should be as outmoded as a means of solving international difficulties as dueling as a method of settling disputes and quarrels between individuals. Killing doesn't solve problems. Scientific warfare likely would bring the end of civilization.

"It would be a good investment for governments to make possible very cheap airplane travel of their citizens to foreign lands. Instead of carrying bombs the planes could convey people who would build goodwill and better international understanding—both important factors for world peace. The cost would be slight compared with the dollar cost of war. People of all countries should know each other better."

Wilhelm M. DeMorgenstierne, Ambassador from Norway: "A great need is for more international cooperation in a spirit of goodwill."

Mr. M. A. H. Ispahani, Ambassador from Pakistan: "As present atomic bombs would make the one that fell at Hiroshima seem like a damp firecracker, another world war would be catastrophic. No one can be expected to have very much faith in the United Nations unless its members prove by their acts and not merely by professions that right stands above might and that every question considered by them will be tested on the touchstone of justice and not of expediency."

Dr. K. T. Jutila, Ambassador from Finland: "The Berlin air lift has demonstrated that greatly increased, low-priced international travel by planes is possible and would enable people to spread good will.

"Vast progress is ahead when billions now spent for the purpose of destroying humanity and wealth are expended instead for construction—better homes, schools, recreation centers, roads, bridges, etc.

"So much food can be produced by bringing vast uncultivated areas under irrigation by construction of dams that all the needs of greatly increased world population can be met.

"The immediate task is to build better international understanding, good will, unity, and cooperation—important methods in creating world peace. In this task the radio, motion pictures, and press can help materially. We need peace propaganda, not war propaganda.

"Great patience is required right now in preserving peace. Rome was not built in a day; neither can the UN reach maturity overnight."

Mr. Joseph D. Charles, Minister from Haiti: "To insure world peace we need true application of the great law: 'Love your neighbor as yourself.' Hate cannot create anything but fear, suspicion, greed, tyranny—all sources of war. Love brings mutual understanding, confidence, tolerance, material support—conditions for real freedom and peace. We need to cure the heart of mankind."

Ras S. Imru, Minister from Ethiopia: "Many threats to world peace arise out of selfishness. Economic problems require solution. Timetables for evolutionary, not

revolutionary, changes are needed. It is essential to have sincere desire to obtain international cooperation."

Alfredo Ferreyros, Ambassador from Peru: "The most important thing to insure world peace is for members to stick to the United Nations. The UN should give more consideration to small nations, which have as much at stake as the big powers in preserving peace.

"Discussing international problems openly before the UN forum of world public opinion is helping maintain peace. It is a healthy situation. It helps to let off steam, as it does in national parliaments or congresses. The press, radio, and schools should be encouraged to get more vital UN facts and peace education to all peoples."

Our Socialistic Trend

EXTENSION OF REMARKS
OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. MARTIN of Iowa. Mr. Speaker, one of the best discussions of present trends appeared in the editorial columns of the Burlington (Iowa) Hawkeye Gazette for Saturday, January 8, 1949, in the form of a letter to the editor by Mr. Samuel M. Brooks, R. F. D. 2, Mediapolis, Iowa.

I have requested permission of Mr. Brooks and of Mr. Clarence Moody, editor of the Hawkeye Gazette, to place this letter in the CONGRESSIONAL RECORD so that the Members of Congress throughout the entire Nation can have the privilege of reading it.

The letter follows:

OPINIONS OF OTHERS

OUR SOCIALISTIC TREND

The Hawk-Eye Gazette: As most of us now know the content of President Truman's state of the Union message we can be certain that he and many of his colleagues intend socializing our country, even to a greater extent than it is at present. Mr. Truman has made a big hit with us in the past because most of us have been enjoying prosperity. It is taken for granted that the majority of voting farmers voted for Mr. Truman because of this and also due to his apparent sincere interest in the farmer. His talk of support prices sounds good to a great many of us. This is supposed to make our careers as farmers more secure. However, he does not want us to be too prosperous for in his scheme to raise an extra $4,000,000,000, he figures those with an income over $5,000 per year may have to pay more taxes.

In the first place, any prosperity we have enjoyed since the war has not been the making of the New Deal and Mr. Truman unless you want to give them credit for getting us into war. We as farmers have benefited from scarcities and the fact that the Government has been doing a lot of buying in our domestic market for overseas shipment.

The latter is one of the reasons we still continue to pay wartime taxes and will till the day we die. As this terrific demand tapers off, our prosperity will diminish to smaller proportions. Mr. Truman cannot alter this eventuality. The ability of the Government to pay us support prices is the ability of us and the rest of the American taxpayers to raise this money. It is not dug up from the ground or plucked from a tree. We and our neighbors pay this. Personally I subscribe to the survival-of-the-fittest philosophy. During the last depression many farmers went out of business. Other farmers came on to take their places. The farmers who were businessmen survived and pulled through. The less capable fell by the wayside. Farming is no longer merely a mode of life. It is a business and a big one. Those who are good at it will always be good at it. They don't worry about support prices and politics.

To tax the strong to carry the weak is socialistic. We live in a country that, when formed, was free. The weak were taken care of by charity, not by the Government. This gives the weak the incentive to be strong and the strong the incentive to rise to greater heights. When this incentive is destroyed or gradually whittled away, as is being done at this writing, our country will slide downward into mediocrity and will cease to be a land of plenty and also a land that can feed and help the world. Why should I take the financial risk to run 100 sows, work and sweat to raise their 500 or 600 offspring, if my earnings or the greater portion of them are to be taken from me and divided among those who don't care to take the risk, put out the labor, or assume that much responsibility? If this system persists or even grows worse, we will find ourselves merely raising enough to subsist on, for that will be sufficient.

We as farmers in America should be able to look forward and see what is coming. As active citizens who form the backbone of our capitalistic system, we should not let this socialistic trend run wild, though at the outset it may put a little extra change in our pockets. We must be far-sighted and recognize that it destroys initiative, the will to get ahead, and produce in large quantity. Although it may have some good points, it tends to try and make everyone share equally when people are not equal and never will be. Even though we have enjoyed prosperity and the best times in the history of American farming, let us not cease to be cognizant of the real reasons for this and allow the present administration to run wild in their lawmaking during the next 2 years. Be a good citizen and write your Congressman and tell him what you believe. That is his only way of finding out. Let's be certain we preserve our American way.

SAMUEL M. BROOKS,
R. F. D. 2, Mediapolis, Iowa.

(EDITOR'S NOTE.—Seldom have we read a more honest and forthright statement than this. We commend its reading not only to all farmers but also to all classes engaged in productive endeavor.)

Letter From Gen. H. L. Peckham, Commanding General, American Graves Registration Command, Paris

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include herein a portion of a letter which I have received under date of December 14, 1948, from Gen. H. L. Peckham, commanding general, American Graves Registration Command, of Paris. This letter was received shortly after a group of us comprising members of Committee on Armed Services visited Army installations throughout Europe. I quote as follows:

I am sure that you will be interested to know that we completed the disinterment of our 147,240 remains last Friday. We are already making permanent reinterments in 9 of the 10 cemeteries which are to be permanent and approximately 20,000 have been buried over here already while about 60,000 have thus far been sent back to the United States. I hope you will have a further opportunity to visit Paris while I am here.

I am certain that the above information is welcome to every Member of Congress, and that the splendid record which has been compiled by General Peckham, as well as the entire graves registration organization within the Department of the Army is known to the American people. I can state with authority that I know of no branch of our armed forces which has done a more commendable job than that of the Graves Registration Command. They have had to work in Europe particularly, under the hostile and uncooperative eye of Russia, and in other countries under the iron curtain where our soldiers have fallen. Despite this and other terrific handicaps and impediments this splendid organization has come forward in the tangent pursuit of its unpleasant task of rendering a service to the families of these fallen heroes. I congratulate General Peckham and others in a similar patriotic pursuit, and I know the Congress and the American people generally share this feeling of admiration for the American Graves Registration Command.

Local Government and World Affairs

EXTENSION OF REMARKS
OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mrs. BOLTON of Ohio. Mr. Speaker, these are days of grave moment when problems present themselves at all levels of government. Dorothy McCullough Lee, now mayor of Portland, Oreg., presented to the Herald Tribune Forum last fall some of the difficulties that face most of the cities of America. Under leave to extend by remarks in the Appendix of the RECORD, I include therein the following portion of her New York address:

LOCAL GOVERNMENT AND WORLD AFFAIRS

(By Dorothy McCullough Lee, mayor-elect, Portland, Oreg.)

Tonight I plead for faith, a faith which is a higher faculty than reason. I plead, in a period of crisis unparalleled in America's history.

Tonight I plead for faith because America faces her greatest turning point. Whether we like it or not, whether it was forced upon us, or we chose it—America has been designated for a new role of world leadership. It is our inevitable lot.

Not the least of our motives for accepting this assignment, is self-preservation, certainly, reason enough.

Tonight, I plead for faith—faith in our heritage of democracy—in order that we may

have the internal strength to lead the world in the paths of peace, and sanity, rather than to permit the world to be led in a path of destruction.

I say that our ability to meet the challenge of world leadership depends upon our internal strength. I do not underestimate the value of, nor the necessity for, diplomacy, intelligent foreign policy, and armament. But the strength of which I speak, transcends all of these. In the final analysis, our internal strength—the validity of our democracy—depends upon your faith and mine. That trust that you and I place in America's greatest resource—our form of government and the way it functions—that trust is the foundation of the strength upon which we can accept our new mandate.

This democracy we cherish is the sum total of all our government—national, State, and local. At any level a lack of faith can impair our world stature. America's confidence cannot be nurtured by hoax. Confidence springs from our belief in the integrity of our government and its adequacy to do the job.

Our country holds the promise of all the things the common men of the world have held dear—life, liberty, the pursuit of happiness. If we can fulfill these promises, in even greater measure, we can remain internally strong, and if we are internally strong we will be able to lead.

This involves acknowledging our weaknesses and doing the best we can to cure them. It has been often said that one of the weaknesses of American Government was the way our cities are run. In the minds of many Americans a large number of our cities are on trial. This is especially important, because an increasing number of Americans live in cities.

Critics say that our cities are not competent to cope with the staggering problems which arise when great numbers of people crowd together in a small area. They site the economic loss and personal inconvenience caused by traffic congestion and inadequate transportation. They point out that millions of Americans, many of them former GI's, have no homes worthy of the name. They sneer at the comparative ease with which many city governments have been dominated by those seeking special privilege and who profit by the violation of the law, rather than by its enforcement. * * *

For 15 years I was a member of the Legislature of the State of Oregon. From that experience, * * * I observed two factors, contributing to the difficulty of making our system of government work on the local level. And the remedies lie in hands other than those of city dwellers and their officials.

First. Our large communities are not adequately represented in most of our State legislatures. Numerically, these delegations fall far short of having proportional representation. This is a manifestation of failure on the part of our State lawmaking bodies, to reflect the transition from a rural to a largely urban country. The result is a lack of adequate knowledge and appreciation of the problems of our cities in our legislative halls. When we realize that cities are creatures of the State, which cannot move in directions other than those sanctioned by the State, their predicament is obvious.

The second factor contributing to the plight of our cities is the trend to take from local government both revenue and authority, which the cities once had, and to lodge them in some higher level of government. The result is that many of our cities are so inadequately financed that they might well be described as being on their uppers. When we take cognizance of the large increases in population, and the insistence on new and more efficient services, we begin to appreciate the difficulties encountered in a quest for solutions, when hampered by insufficient budgets. Certainly the time has come to reexamine the entire municipal picture. The picture, as it relates to proper representation of urban centers in State legislatures, and the preservation, by the State, of local authority, and enough sources of revenue to enable cities to get the wherewithal to do the staggering job with which they are charged. * * *

This is a time when we should scrutinize the machinery under which our local government operates. We must do this if we expect efficient administration. City business today is big business, and, consistent with our democratic concepts, our cities should have the benefit of every skill, every economy, and every efficiency that is available to private enterprise. Too many cities are still jogging along on some time-worn pattern of government which was inadequate even to meet its relatively simple problems in a previous generation.

We must make a bold and positive attack on those problems which threaten the very life of our cities. The fact that it is often difficult and discouraging to try to disturb the status quo is not an excuse for lack of action. Those charged with leadership must follow a constructive, progressive path, in spite of these deterrents. Calling for dynamic leadership are the daily problems of traffic congestion, mass transportation, inadequate housing and recreational facilities, and law enforcement. The proper protection of the lives and property of our people and the preservation of high standards of civic decency is a concept inherent in our way of life.

Actually, the protection of the individual is one of the basic reasons for the institution of government. But this may be assured only when law-enforcing agencies operate in the public interest, without obligation or protection for those who would violate the laws.

Most cities have actually stretched beyond their legal boundaries. Today thousands of their citizens live in the suburbs, but earn their living within the corporate limits of municipalities. This condition has increased the financial headache, since urban services must be enlarged and augmented to meet the needs of non-tax-paying suburbanites. Some communities are finding their revenue answers by the creation of "authorities" which transcend city boundaries in their ability to tax.

The proper protection of the liberties of our people is as much an obligation of local government as it is of government of any of the higher levels. Ordinances which abridge the right of free speech, through the written or spoken word, have no proper place in a free America. The protection and responsible exercise of liberty in our cities should always be preserved by city authorities. In every city minority groups exist and city leadership must seek to dispel any resulting tension, by fostering a better and more enlightened understanding, among all its people.

Good labor-management relations is an asset of the highest value to any community. It is an asset that can best be nurtured in cities where a dynamic leadership seeks to promote mutual appreciation of the problems of both capital and labor. * * *

In large part, the unraveling of our difficulties lies in a better and more realistic understanding of them on the part of all our people. Needed reforms will be accomplished only when instigated by an enlightened public opinion. The civic leader cannot put a sound, progressive program into effect, unless the people themselves understand the need for it, and give their support.

I have an abiding faith that every problem now facing the cities of the United States can ultimately be solved. They will all yield to bold, intelligent attack. Actually making our system of government work on the local level, in a way that effectively meets the problems of the contemporary world in which we live, will go far to give us the faith that will mold the destiny of our country. A virile faith in the integrity and adequacy of our democracy is America's greatest resource. Supported by this faith, America will lead the world to peace and sanity.

Why Taft-Hartley Must Be Repealed

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Why Taft-Hartley Must Be Repealed," by the Reverend Benjamin L. Masse, which appeared in the columns of America, national Catholic weekly, last December 11, as I believe it has special pertinence now that the Committee on Education and Labor has set a date for hearings:

WHY TAFT-HARTLEY MUST BE REPEALED

(By Benjamin L. Masse)

If the goal of labor legislation in this country is the encouragement of collective bargaining, and ultimately, through labor-management collaboration, industrial peace, the Taft-Hartley Act must be repealed. Any other conclusion is unrealistic.

So long as the act was thought to be acceptable to American workers, it was possible to ignore the fulminations of labor leaders and hope that with the passing of time the new law would become a part of the American way of life. That hope no longer exists. It lost a good deal of its substance when the workers, in one National Labor Relations Board poll after another, voted overwhelmingly for the union shop. It was utterly destroyed by the election results on November 2. After the heavy labor vote cast for President Truman, who ran on a platform pledged to Taft-Hartley repeal, one must conclude that the labor movement as a whole, as an organized economic interest, is bitterly and irreconcilably opposed to the act. It is not only the labor leaders who regard it as a slave-labor act; the rank and file dues payers look upon it, too, as a symbol of oppression and a threat to their survival.

Therefore the law must be repealed. So long as it remains on the books, it will continue to be what it is today, a prolific source of suspicion and discontent, a divisive factor in industrial relations and a goal to intensified political activity aimed at its destruction.

It is beside the point to argue that the act is intrinsically a good law, that it holds an even balance between labor and management and protects the general public, that it has not yet been fairly tested, that if time should disclose defects in it, these can be corrected by amendments. All this may be true. Some neutral experts would agree that it is true; though more, I believe, would disagree. Which group is right makes little difference, since in the framework of our political democracy the intrinsic goodness or badness of restrictive laws is not the only factor which lawmakers must always bear in mind in writing them, or even, perhaps, the chief one. An all-important consideration is whether or not the minority a law aims to check is willing to accept it. If a law passes this pragmatic test, it is a good—that is, a workable—law; if not, it is bad.

AMERICAN TRADITION OF COMPROMISE

This is not the same thing as saying that positive law need not be conformed to the natural law—the law which God has impressed on our natures and which the human mind can recognize as such. All positive law, if it be true law, explains or applies the natural law and is always in harmony with it. But in our political tradition a restrictive law, unless it deal with clearly criminal practices, must be acceptable to the groups it disciplines as well as just in itself. Otherwise it will not work. For this vast country of ours, with its great variety of peoples, its regional rivalries, its potential class and racial conflicts, was born of compromise. It has, with one tragic exception, lived by compromise. And it probably can only endure by compromise.

While insisting, then, that positive law must be related to a moral standard, we Americans do not take toward legislation a predominantly ideological approach. By an unwritten rule we agree that no significant sectional, or social, or economic interest will be forced to obey a law which is unacceptable to it. Each of these groups, in effect, has a veto power over legislation restricting it. The system works, and does not degenerate into anarchy, because each group tacitly agrees not to abuse its right to veto. If the activities of any group endanger the interests of other groups, or become a menace to the general welfare, it will agree to compromise: it will suffer restriction and bear with restraint. But the compromise must always be acceptable to it.

This is the reason why American elections are such relatively peaceful affairs. The winners, not being bound to some dogmatic ideology, make no effort to exterminate the losers. And the losers, confident that no matter what changes are introduced, their vital interests will be protected, send congratulatory telegrams to the victors instead of attempting a coup d'état.

The system, of course, has its weaknesses, and those who live under it stumble, not run, along the road which leads to social improvement. Especially to idealists and reformers the process of halting, step-by-step advance through compromise seems frustrating and exasperating. But over most other political systems contemporary with it, the American set-up has three enormous advantages: it works; it contributes to human happiness; it leaves the people who live under it relatively free.

Now if we approach the Tafty-Hartley Act in the spirit of this unwritten law of American political life, we see at once why it must be repealed. One of the groups at which it is aimed—organized labor—refuses absolutely to accept it. Rightly or wrongly, it is convinced that the law endangers interests it considers vital, and that in passing such legislation other groups did not play the American game. Therefore, it will submit to it only because coerced to do so; and it will submit only so long as it lacks the power to destroy it.

One might plausibly argue that the unions were at fault in 1947 in denying any need for restrictive legislation. They accordingly abused their veto power. If they were forced to take a totally unacceptable law, that happened solely because they refused to accept any law at all.

Even if this reasoning is correct, it can be used to justify retention of the Taft-Hartley Act only on the assumption that two wrongs do, after all, make a right. Similar logic broke down with respect to the Wagner Act, only in that case the shoe was on the other foot. Powerful employer interests opposed that law. In the hearings before the act was passed, some of them, with an astuteness Machiavelli might have admired, tried to have innocent-looking provisions inserted that would have made the law certainly unconstitutional. After the act became law, so many employers refused on constitutional grounds to obey it that it was 2 years before it was fully operative. The result was that those who supported the law and benefited from it refused to agree to any changes at all. They took the position that employers were getting only what they had coming to them.

Maybe they were, but most employers could not see it that way. For a decade, with every means at their disposal, they fought to amend the Wagner Act. In the Eightieth Congress they won their fight.

If the Congress should now deprive labor of the fruits of its victory, we can be certain at least of this: labor will continue and expand its political activity until the Taft-Hartley Act is abolished.

REASONS FOR PAST FAILURES

If legislative efforts to promote industrial peace through collective bargaining have so far led to no acceptable code of law, the chief reason for the failure lies in the neglect by both labor and management of the unwritten rule of American politics. They have not made prudent use of their veto power—they have stubbornly refused to compromise. The results are plain enough for anybody to see. First management was saddled with a law—the Wagner Act—which it could not accept; then labor was curbed by the Taft-Hartley Act, which is no less repugnant to labor than was the Wagner Act to employers. The country is right back where it was 15 years ago, before the Wagner Act was passed.

Granted the validity of this analysis, the course which labor and management ought to pursue in the Eighty-first Congress is obvious. Both sides must abandon their hitherto intransigent positions, concede one another's vital interests, and go on from there. For management this means agreeing that the Taft-Hartley Act must be repealed. For labor, this means admitting that the Wagner Act is not enough. Any other approach is certain to prolong a struggle which with every passing year becomes more dangerous to our political institutions. We might as well look this fact straight in the eye, no matter how unpalatable it may be. Organized labor and organized management have transferred their warfare from the marketplace to the seats of political power. They are fighting now, with scarcely any disguise, not for wages, hours, and working conditions, but for control of the Government of these United States. Should the one or the other be successful, the noble experiment begun in compromise a century and one-half ago will be over. It will have failed; and the reason for that failure wise men will trace to the leaders of labor and management who for the art of compromise substituted ideological intransigence. Refusing to give up anything, they lost all.

CHANCES FOR PEACE

What are the prospects that labor and management will quit the dead-end street they are traveling and strike off on another road? What are the chances that they will reach an agreement in the Eighty-first Congress which will take some of the edge off their struggle and keep it within the limits of our traditional political framework?

On the labor side there are encouraging indications that both the CIO and A. F. of L., once agreement is reached on repeal of the Taft-Hartley Act, are prepared to negotiate a compromise. The CIO, according to Philip Murray, would support the President's proposal for a Government conference of labor and management leaders to discuss improvements if the Taft-Hartley Act were first repealed and the Wagner Act reinstated. That the CIO would insist on this timetable—repeal of Taft-Hartley, reenactment of the Wagner Act, amendments to that act—to the point of jeopardizing a workable agreement is very unlikely. Delegates to the Portland convention were impressed by the able addresses of Secretary of Labor Maurice Tobin and Senator WAYNE MORSE. The fact that both men, though friendly to the legitimate aspirations of labor, stressed the need of readying an adequate substitute before the present law is repealed should have a sobering effect.

At its Cincinnati convention the A. F. of L. adopted a frankly conciliatory position. The resolution on labor legislation did demand, of course, Taft-Hartley repeal, but it also recognized that for every right labor enjoys there exists a corresponding responsibility, and that in labor-management relations the public welfare is paramount. Referring to a substitute for the Taft-Hartley Act, the resolution said:

"We realize that legislation recommended as a substitute for the unreasonable, destructive and offensive Taft-Hartley Act is necessary, and that such legislation, to be beneficial to the wage earner, to management and the general public, must be definitely designed to make collective bargaining between management and labor work effectively on a voluntary basis, and with due consideration for the necessities and the welfare of the general public."

From statements made by various influential delegates, it is clear that the A. F. of L. is prepared to accept amendments to the Wagner Act. "We believe," said Joseph D. Keenan, director of the League for Political Action, "that the Taft-Hartley law went too far against organized labor, but we might as well admit that the Wagner Act went too far in our favor." And the president of the boilermakers' union, Charles J. MacGowan, added: "Labor should use restraint in pressing substitute legislation to the Taft-Hartley Act and should be alert to the excesses committed by certain segments of labor that put all of labor in the public dog house."

That is not the language of intransigence.

Up till now employers have been understandably chary about committing themselves on labor legislation. Having supported the Taft-Hartley Act, as most of them did, they cannot be expected to shift their position until they have had time to recover from the shock of the election and assimilate its meaning. The annual convention of the National Association of Manufacturers, which will be in session in New York about the time this article goes to press, may give some clue to the attitude which industry may be expected to adopt.

Meanwhile one top-flight industrialist has taken what might fairly be called an extreme position. In an interview with the press on November 17, Henry Ford 2d vigorously defended the Taft-Hartley Act, arguing that in the automobile industry it had been both workable and sound. It should receive, he contended, a fair and lengthy trial before it is changed.

On the other hand, Business Week magazine, which is a good barometer of alert business thinking, has taken the stand that the Taft-Hartley Act will either be repealed or considerably watered down. Typical of its post-election thinking was this comment which appeared in its issue of November 13:

"The 1949 New Deal will mean the end of the Taft-Hartley Act. That will be labor's pay-off for playing a leading role in the Democratic victory. * * * Next year's labor law will be the Wagner Act—plus. The technique will be to add provisions from Taft-Hartley. It's easier that way; besides, it fulfills the letter of the Democratic platform."

The New York Times, reflecting on most domestic issues an enlightened conservative viewpoint, rejoiced editorially on November 24 because both the A. F. of L. and the CIO had adopted a cooperative attitude toward new labor legislation. Such an editorial stand is tantamount to accepting either the repeal or the modification of the Taft-Hartley Act as inevitable.

If these editorial comments, which in neither case reflect the opinion of the writers on the intrinsic merits of the Taft-Hartley Act, are indicative of management thinking generally, the possibility of a workable labor law becomes very real. Between now and the time the new Congress convenes, it is to be hoped that progressive businessmen will do some intense missionary work among their more stuffy brethren. With the business community still sobered by the election results, this is the best chance the liberal wing of industry has yet had to make its conciliatory viewpoint prevail.

The general public ought to exert some friendly pressure on both groups. These are dangerous days in which we are living, and if the United States is to play on the world stage the tremendous role in which history has cast it, there must be a reasonable degree of unity and collaboration between labor and management. What the public wants is a law that will dampen old feuds and rivalries, not one that will cast fresh fuel on the industrial bonfire.

"Strategic" Air Plan Called Dangerous

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of Sunday, January 23, 1949:

"STRATEGIC" AIR PLAN CALLED DANGEROUS

(By Marshall Andrews)

Since publication of the proposed 1950 budget, the Air Force has permitted to leak out a plan to use its funds to build up a strategic force at the expense of other elements of air power.

This scheme, as published, provides for doubling the number of B–36 bomber groups while curtailing fighter, troop-carrier, medium-bomber, reconnaissance, and service units. It is apparent that the Air Force has taken this action independently and without regard for the needs of the other services or of the national security as a whole.

There are two possible explanations of this move:

1. An effort to win the sympathy of the country and of Congress so as to obtain additional funds for other aircraft without sacrificing the strategic bombers it is determined to have.

2. A stubborn insistence on going ahead with its own private concepts of warfare and be damned to everyone else.

In either event, the Air Force has revealed a degree of irresponsibility toward its obligations to the other services which renders its motives suspect and calls for careful examination of all of its future proposals. One immediate countermeasure suggests itself to offset the threat of this irresponsibility to the combat effectiveness of the ground arm.

The Secretary of Defense should take advantage promptly of his authority under section 208 (e) of the National Security Act of 1947 to transfer to the Army all tactical combat, reconnaissance and transport aircraft, personnel and facilities, of the Air Force. The necessity for this move, in view of the Air Force's relegation to second place of air support of ground forces, should be obvious.

The National Security Act provides that the Army be "organized, trained, and equipped primarily for prompt and sustained combat incident to operations on land." Now, it is beyond question that no army can prosecute "prompt and sustained" combat on land without at least local air superiority and without the close support of combat aviation.

SECURITY ACT CITED

Furthermore, air transport and supply of ground troops has become an essential part of land operations and a major role of air power. The Air Force has clearly revealed its intention of discounting these vital obligations unless it is given what it wants as a "strategic" arm.

The National Security Act provides that the Army shall include whatever aviation "may be organic therein," which needs no stretching to apply to the aviation necessary for its survival and ultimate success. To afford it less would be to jeopardize not only the lives of the men in its ranks but the security of the Nation itself.

That the Air Force can bulldoze from Congress the funds it wants at the expense of the other services was demonstrated last year. The Air Force presents a romantic appeal to the popular imagination and has conducted a none-too-subtle propaganda of terror for a long time. Most important, it seems to fulfill the perfectly natural desire of the people to win a war without fighting.

Yet there is nothing in past experience or present circumstances to support the belief that it can do anything of the sort. In lives, resources, and time, strategic air power was costly out of all proportion to its achievements in the last war, while tactical air power was decisive in all theaters.

Even tactical air support actually retarded operations in the European theater as long as it was under the exclusive direction of air experts. Until ground commanders turned it into proper channels, tactical air was employed according to the strategic theory of wholesale obliteration. The result was that advancing troops were repeatedly and often fatally delayed by streets choked with impassable rubble, bomb-cratered roads, and bridges destroyed for the enemy by American aircraft.

Furthermore, German armament production rose under powerful and sustained strategic bombing until in mid-1944 it was more than three times what it was in 1942. This production began declining shortly after June 1944, when German rail and canal transport was disrupted by tactical bombing in support of the invasion of France and industrial essentials bogged down in shattered yards.

In the Pacific theater, troops which took the islands from which the Air Force flew its strategic bombing missions against Japan were supported almost entirely by Navy and Marine aircraft. The reason for this was twofold: the Air Force was so absorbed with its strategic theory that it had no more concern for tactical support than it now displays; and it had no means of conveying its fighters and fighter-bombers within range of land operations.

SEABORNE CONQUESTS

Thus, the very bases without which there could have been no strategic bombing of Japan were seized for the Air Force by land power conveyed to the scene of operations by sea and supported by carrier aircraft. Until these seaborne conquests by ground forces succeeded at the cost of bloody fighting, strategic air power was grounded, immobile and helpless.

Even so, before strategic air power was boosted within range of Japan by land and sea power, the economic and military strangulation of the enemy homeland was complete. This had been accomplished by destruction of the Japanese fleet, to which land-based aircraft contributed less than 1 percent, and destruction of its merchant shipping, to which the Air Force contributed 19.5 percent.

It is important to note that in neither Europe nor the Pacific did strategic bombing begin to return even meager dividends until air supremacy had been achieved. This, in turn, followed elimination of enemy air power, accomplished by the fighter aircraft which the Air Force wishes to curtail in favor of a theory against whose realization the preponderance of all evidence now rests.

In the broader view, the military effectiveness of the strategic air war theory is open to serious question and it should be questioned thoroughly before the Nation is fully committed to it.

War is an instrument of national policy, resorted to when the economic and diplomatic instruments have failed. If war succeeds in accomplishing the aims of policy, it has performed its function; if it does not accomplish those aims, it has failed, even though an ostensible military victory results.

Whatever the objectives of policy may be, they certainly are defeated when war results in the necessity for supporting an erstwhile enemy for a generation while he recovers from the effects of their attainment. And the aims of policy are lost altogether when the victorious nation itself suffers economic and spiritual damage from which it might never recover.

Yet the air war presupposes just such an outcome, as the physical and moral destruction of Germany and Japan bear witness. The air war is warfare of obliteration, with defeat of the policy for which it was undertaken assured from the beginning.

You can crack a nut with a 12-pound sledge just as surely as you can by tapping it with a light hammer with reasonable force at the proper point. But smashing it with a sledge results in its total destruction, so that the meat for which it was cracked in the first place must be discarded with the fragments of shell. Air warfare, by its very nature, is nut cracking with the sledge.

TROOPS HAVE TO BE DEFEATED

The great strength of the present putative enemy lies in ground troops supported by tactical aviation. It would be ingenuous to assume that this land army could be defeated by bombarding the cities of its homeland, especially since it would occupy territory outside those cities and draw its sustenance from outside industries. It must eventually be met on land under the most favorable conditions that seapower plus tactical air support can obtain for it.

The Air Force appears determined to commit the United States to a policy of mutual devastation, under which it and its enemy would trade incredibly destructive blows with victory going to the combatant which could longer endure them. In such a war cities rather than military installations would be the targets and civilians the victims.

There is nothing to indicate that, once this stupid destruction had gone its limit, it would not still be necessary to make a seaborne assault on the enemy's army. It should be seriously considered whether that would be possible after the prodigal expenditure of resources in obliteration of the enemy's cities and in sustaining obliteration of one's own.

Asia Is a Fact

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following

editorial from the New York Herald Tribune of January 23, 1949:

ASIA IS A FACT

During most of the last century the vast continent of Asia was important to the west merely as a kind of jeweled background against which its own rivalries and aspirations were projected. The millions of assorted peoples who inhabited the lands between the Bosporus and the outer islands of Japan were subjects for exploitation or uplift (usually both) in the occidental mode, and virtually the only recognition of Asia as an entity, with characteristic culture patterns and an individual destiny which already had been pursued through millennia, was in the crass form of the "yellow peril."

Yet today Asia has reemerged upon the world stage in its own right. Twenty-one nations of Asia and of the islands of the western Pacific, plus two from Africa, have met to consider the problem of Indonesia in a conference which may have momentous consequences in shaping the future of the world, consequences which would go far beyond the immediate question under discussion. This is not the "yellow peril" that troubled the dreams of race-conscious westerners; it is not organized on racial lines at all. Australians and New Zealanders, Malays, Hindus, Afghans, Ghurkas, Arabs—representatives of nearly all the multitudinous creeds and bloodlines that contest the vast Asiatic mainland and the islands that comprise its economic empire—have asserted their common interest in solving a problem which is common to them all.

The solutions they propose may not be the best solutions. The ferment in Asia contains a good deal of rampant nationalism of a kind which is intolerant and often irrational; which overlooks the practical values of orderly transition—when all are agreed on the need for transition and upon the goals toward which to work—and turns to root-and-branch revolution. Moreover, the complexity of the political, social, and economic systems represented in Asia today makes it easier for the conference to declare against something—colonialism, for example, which is a word which embraces a good many subtle distinctions—than to work constructively for something.

Nevertheless, Asia is an indubitable fact, and its pronouncements, its emotions, cannot be ignored. The task of the West is to come to terms with this fact and to adjust its actions and its thinking to a new situation. Communism, which already possesses great areas of northern Asia, and which is presently victorious in China, is bidding for the support of the rest of the continent. To meet the threat arms alone are not sufficient, nor, for that matter, is unarmed good will. Independent Asia has thus far rejected both communism and colonialism. It stands, as Communists have pointed out, as a new third force in the East. It must be accepted as such and dealt with as a sovereign power—liable to error, capable of being persuaded to correct mistakes, but impossible to coerce or to dismiss.

The Quagmire of Too Much Government

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the West Hollywood Tribune:

THE QUAGMIRE OF TOO MUCH GOVERNMENT

One of the most difficult things to do in today's world is to separate causes from effects—to find the roots of the terrible problems the nations have brought upon themselves. It is the old story of being unable to see the forest because of the trees. Ever since the war ended, we have lived through one crisis after another, domestic and international. We have been plagued by fear one day and picked up by new hope the next. The whole world might be likened to mercury in a tube, shifting violently at any disturbance, and never attaining stability.

A thousand books could be written about the difficulties we are in, without touching more than the surface of the material. But, looking at the world from the best perspective we can now find, it seems clear that the basic problem, which underlies in one way or another all other problems, is this: The trouble with the world is that it has too much government, too much absolute authority.

This is not a new situation, unique to our age. The whole history of civilization has been a conflict between the individual and those who wished to enslave him. That conflict has caused innumerable wars, revolutions, economic upheavals, all manner of disaster. But in the present world the technique of enslavement has been perfected. In some cases government maintains its power with the whip and the gun. In other cases it is far subtler—it increases and solidifies its authority through due process of law. But the end result is the same—a nation where all men have less and less freedom of action and decision, and where the political rulers determine more and more what we shall think and do.

Usually, we surrender rights to government for political promises of material gain. Government will give us wealth. Government will build us houses. Government will pay for our crops. Government will provide goods and services cheaper. Government will protect our health, and support us in old age. Government will deal with almost every obstacle that confronts us from the cradle to the grave. But before government can even attempt to give us these things, it must have the power to control the human and material resources of the Nation, and take the savings of the people through taxes. And that is how dictatorships are built.

It seems, however, that government never delivers promised material benefits. The standard of living of any people goes down in ration to the growth in power of those who rule. But, once government becomes strong enough, there is no recourse for the people short of revolution. The whole machinery of the state is used to keep the people in line, to destroy dissent, to make individuality a crime.

In today's world, the United States is in a position without precedent. The most obvious fact is that we are a mighty power from the material standpoint. We are making an effort which has no parallel in history to rehabilitate a score of devastated nations, and to save them from hunger and disease and despair.

This is vitally important, but it is not the end of the matter by a long shot. If American leadership proves to be purely material, it will be doomed to eventual failure—some of the police states are also rich in resources. What America must offer the world, along with her flood of goods, is the supreme example of the fact that a free people, with a free economic system and a representative government of their own choosing, can outdo the police states. Everything we have done or may do at home to weaken our tradition of individual freedom, to glorify government above the people who elect it, weakens our physical security and our chance for survival.

This is a matter of spiritual values. We have no statistics with which to measure them, no production figures to make other peoples gasp in envy. But it is spiritual values which will turn the scales, one way or the other, in the long run. The real meaning of America is in the hearts of her people, and in the freedom and the dignity of all men.

That, then, is what we have to offer at a time when the world is divided into two camps without a common meeting ground. We cannot offer more. We must not offer less. We must check our own drift toward the totalitarian state where the government becomes supreme and where individual thrift, opportunity, industry, saving, and freedom are lost.

An Appeal for Peace

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of January 21, 1949:

AN APPEAL FOR PEACE

The President of the United States spoke yesterday to an audience which reaches around the world.

It was a wholly admirable address. Harry S. Truman won the right to this term in the White House after a campaign which was geared primarily to national or sectional issues and which was designed to squeeze the last drop of partisan advantage from domestic discontents. But there was nothing of the partisan politician about the man who delivered his message of faith and hope to a waiting world yesterday afternoon.

President Truman spoke as one who has looked into the future and who is undismayed by what he sees there. "It may be our lot," he said, "to experience, and in large measure to bring about, a major turning point in the long history of the human race." In other words, the next 4 years will be decisive years. That brief span of time will determine whether mankind can move forward peacefully or whether the world must endure the incalculable disaster of another great war. This decision, however, must not be left to the coercive influence of drifting events. For that in all probability would lead first to chaos and then to war. If there is to be peace in the world it must come from a willingness on the part of the people of this country to exert in timely fashion the great influence which they and they alone are capable of bringing to bear. This is a responsibility which cannot be passed along to others. For we, and only we, have the power and the necessary means. We must understand that the decision for peace or war will turn very largely upon what we do or fail to do in the years that lie immediately ahead.

The President, to be sure, appealed for the support, moral as well as physical, of "the millions who hunger and thirst after righteousness." These potential allies are to be found in every country of the world, and as an inducement to them Mr. Truman put forward a program filled with promise of better times. This is important as a counter to the propaganda of communism, which promises much but delivers little.

We should not delude ourselves, however, with the notion that promises on our part, without substantial fulfillment, will be enough. Nor should we ever lose sight of the central fact that promises will remain promises unless and until we do the things that must be done to translate them into material benefits. As Mr. Truman said, we have slowly but surely been weaving a world fabric of international security and growing prosperity. At best this will continue to be a slow and costly process. For there is no quick or cheap or easy road to peace. But whatever the price which has to be paid, it will be incomparably less than the cost of another all-engulfing war.

No one should suppose that we will be able to sustain our political life at the high level reached in the inaugural address. Before many weeks have passed the inevitable conflicts inherent in domestic issues will be upon us, and men in both parties will be grabbing for political advantage. But this need not and must not divert us from the really important fact of life in our time. However may go the political battle on the domestic front, the overriding issue of peace or war will remain constantly with us. And, this being so, good Americans of both parties will refuse to let partisan recriminations drown out the message of faith and hope, the appeal and the program for a decent peace, which the President has put before a sorely troubled world.

Problems Facing the American People

EXTENSION OF REMARKS

OF

HON. WALTER F. GEORGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 27, 1949

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Problems Facing the American People, delivered by Hon. James A. Farley, before the twenty-fourth annual midwinter meeting of the New York State Bankers' Association on January 24, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PROBLEMS FACING THE AMERICAN PEOPLE

It is an old human habit to greet every new year as a milestone in human progress. We cast up our accounts and we make fundamental decisions. Sometimes we make resolutions, which most of us promptly forget.

But if we look back at the beginnings of other years and compare them with the present, we shall learn an essential truth—that in general our decisions follow similar lines from year to year. And each year we renew our decisions of other years. We merely stop on the highway of life for psychological gas and oil. Our general direction remains the same and our objective the same.

And we flatter ourselves to call this progress.

However, there are years when we not only want to take on new fuel but when we ought to get out our road maps and reconsider our course. For nothing in the political or in the economic world is so certain as change.

One of the most certain factors in life is the fact that while our thinking may follow the same lines, the facts all about us do change. And our habits, plans and ideas fall behind the world in which we live.

The hand is quicker than the eye. But the facts, especially the economic facts, are quicker than the mind. It is this big gap between the facts and what we do about the facts that makes for so many of our difficulties.

I am especially impressed by this thought as we enter the year 1949. It is, beyond any year since the end of the war, a year of changeable economic weather. In the political world a great decision has been made—a decision, I may add, that very few people anticipated.

In some years in the past, when I was more actively in politics, I occasionally made predictions, some of which were far from wrong. This year, I made no predictions—I perhaps have a certain advantage over some other people I might name. But all joking aside, the election of Harry S. Truman was evidence of a fundamental decision on the part of the American people—a decision which we all as believers in free government must consider with great care. In any event, the decision has been made, and circumstances will have to shape themselves in line with it.

In my judgment, that decision which reelected a Democratic administration after 16 years of continuous power meant that the country has determined that government must, to an ever-increasing extent, bring its services to all the people.

And that national decision was reflected in the votes of many States for governors and local officers. That mandate is now reflected in the messages and recommendations of many State governors. Everywhere there is a demand for more service by government. These demands will not all be granted. They cannot be granted. But the sum total of them all, in States and in the Nation, makes a gigantic total.

This faces us with a grave question. Can we afford all this? Can we set aside an increasing part of our incomes, profits, and in some cases our capital for taxes? Can we afford all we want in public service?

We may have differences of opinion among ourselves as to the forms and amounts of such service. We may believe that government should help the farmer and at the same time not believe that it should socialize medicine. We may believe that foreign commerce ought to be stimulated by government while domestic commerce should be left to natural economic laws. But in general this country has long since given up the notion that all that can be expected of government is the maintenance of an Army and Navy, a post office department, and a diplomatic service.

Undoubtedly there are many of you, and I think I share your views on this subject, who fear that in the multiplication of services we shall load down our Government and taxpayers with financial obligations that will ultimately destroy our way of life. There is a place, economists tell us, where taxation not only yields a diminishing return but also stifles the productive activities that in the long run support the Government. I do not know exactly where that point may be in this economy. I do not even know whether we have approached it at the present time. But I do know that there must be ever-increasing caution, lest we do reach that point without anticipating it. Therefore, we face, as a nation, the serious dilemma of a demand for increasing governmental services on the one hand and the danger of excessive taxation on the other. As a businessman I am keenly aware of the second of these circumstances and as a former member of the Government I am keenly aware of what the public expects. It is about this dilemma that I want to talk with you today.

When a man in his private affairs is faced by a necessity of supporting a large and expensive family and his income is barely able to meet increasing costs, he has to make one of three decisions: First, he has to consider whether he can eliminate some of his financial responsibilities; second, he has to consider the possibility of working harder and earning more; and third, and most important, he must consider whether without earning more and without dropping any of his responsibilities he can make his dollars serve their purpose with greater efficiency.

In our Federal Government we have reached the point where we must meet this problem by one of these three decisions. The first, which is the elimination of direct services to the people, will be difficult if not impossible to adopt. The November election largely settled that. The question of greater productivity is, of course, a concern of every American and every American business, and much can be done in that direction. But we cannot hope for anything except a steady but rather relatively small increase in what we produce as a nation. We must, I believe, in this situation come to the third of these decisions. We must get more public service for every dollar that Government collects from the taxpayer. And that means greater efficiency in government.

This is not a partisan issue. I know a great many Republicans and a great many Democrats. I am frank to say that I find no difference of opinion about the fundamental desire of both Republicans and Democrats to increase the efficiency of our Government.

This is well shown by the fact that a Republican Congress and a Democratic President created a Commission on the Organization of the Executive Branch of the Government, the purpose of which was to inquire into the efficiency of our Federal Government. It is a significant indication of the nonpartisan nature of this that a former Republican President and, I might add, a great American, Herbert Hoover, was chosen to head this study. It is also significant that he has had the wholehearted cooperation of a Democratic President—Harry S. Truman. The findings of this Commission are now beginning to appear, and every American owes it to himself and to his country to consider these findings and to join the effort to have the major recommendations of this report enacted into law and into administrative practice.

I served in government long enough to realize that neither Congress nor the President is solely responsible for waste and extravagance in the Federal Government. In some instances Congress is to blame; in some instances the Executive is to blame. But in more instances the fact is that neither is directly to blame. What has happened is that activities and services continue on from year to year without any periodic reconsideration of the need for them or for the adequacy of the ways they are carried on. We like to believe that government is a science, but I hardly think that is an adequate description. Government is more in the nature of a habit. People engaged in public office are in general able to see only the activities with which they are directly concerned. They are unable to appreciate their own particular part in the picture in its relation to the whole picture. For that reason they acquire a distorted view of the value of what they are doing.

And yet it is essential from time to time to consider the underlying conditions which have given rise to an institution and to ask whether it is still essential. A very good example of this is in a great institution created under the Hoover administration and carried on under succeeding Roosevelt administrations—the Reconstruction Finance Corporation. It was created in a time when credit was very tight indeed, at a time when millions of people were walking the streets looking for work and in a time when great businesses and financial institutions were desperately in need of help. It met this situation with wonderful success. During the war it had a new usefulness. Since the war, however, conditions have changed. None of the underlying economic circumstances are the same as they were in 1932. It is therefore appropriate to consider the

activities of such an institution in the light of these changed conditions—in short, should it not be made merely a stand-by agency held in readiness for a depression that we hope will never come?

I could multiply examples of institutions that were created under conditions which were essentially different from conditions that now exist.

The Federal Deposit Insurance Corporation was likewise created in a time of stress and strain. It has collected a great deal of money from the banks to provide insurance against failure and loss. I am not sufficiently expert in financial matters to say exactly how much this institution should hold as backing for its guaranties, but I do believe that it is appropriate from time to time to measure the probability of losses against the amounts set aside as a guaranty against those losses. And if the accumulated reserve is too large, ways should be considered to reduce our contributions to it. The situation might be handled by having the law amended so that assessments would temporarily cease until such time as the fund was reduced to let us say, $500,000,000—and then the assessments as now paid automatically restored by law.

I merely mention these two examples to illustrate my point. There are many more examples of the necessity of a careful reconsideration of our Federal structure.

We are all, of course, determined that this country will be sufficiently strong in a military way to meet any possible emergency in a dangerous world. We are not going to complain about the dollars properly spent to protect our Nation against the menace of foreign aggression. But in the section of the Hoover report recently issued on the subject of military expenditures some very arresting facts were presented. These facts point out that our methods of accounting and of budgeting in our Military Establishment are seriously in need of improvement. Neither Congress nor the administration is to blame for this. We simply have a great establishment that grew so rapidly in a war that had to be fought, without consideration of cost, that some of the habits of wartime have carried over into peace. I must confess that from all I know or have learned from my conversations and from careful reading of the newspapers I do not know whether we need fifteen billion or twenty billion or twenty-five billion. But I do know that our system of government ought to be sufficiently competent to make these essential needs more clear.

A former Secretary of War has said that, no doubt, if we could get greater efficiency, we could get for $12,500,000,000 the amount of defense for which we are now budgeting fifteen billion. If we should apply this rule to all Government expenditures we could see a way to make a real reduction in our outlay for government. Our task is to find ways to do that. The task will not be easy, but we can make a start. And we should make a start before our costs exceed our resources.

There is a side to our problem of government that I feel needs careful reconsideration. That is the question of recruiting personnel. I take it for granted that our Governments—Federal, State, and city—are committed to the principle of civil service. We have long since given up the idea that political considerations alone should dictate the appointment of public officials. It is perfectly clear that thousands of jobs require such essential technical skill, experience, and security of tenure that they cannot be used as the spoils of politics. And yet in our effort to protect employees of the Government through civil service we have actually gone so far as to impede the efficient administration of government.

I speak from experience when I say that due to excessive protections imposed by civil service, it has become almost impossible for a department head in Washington to get rid of incompetents and to replace them with competent people. The Federal service has grown so large that no one civil-service rule can be adequate to cover all employees. I understand that the Hoover Commission is giving serious consideration to this. I believe they will find that what is needed is a decentralization of civil-service authority, with greater opportunity on the part of department heads to conduct their own examinations, to make apppointments and to rid themselves of incompetent and wasteful employees. There is altogether too great a turn-over in the Federal service. I am told that this turn-over runs to almost half a million employees a year. That means vast sums expended in breaking in and training new people.

I am not competent to judge whether this is due to inadequate pay or unsatisfactory working conditions. I simply say that no private business with which I am familiar could afford to operate under the conditions that prevail in most Government departments. It is better to pay a little more and employ fewer people and keep these people on the job, not through artificial civil-service protections but through the assurance of support so long as efficient work is performed.

In another field of Federal activity there is an enormous need of improvement which, again, I assume the Hoover Commission will point up. The auditing and accounting functions in government have become so immensely complicated that millions and millions of dollars are spent on unnecessary paper shuffling and record keeping. Tons and tons of vouchers are hauled about from one department to another for purposes of accounting and auditing which might be done more expeditiously and just as safely under a more rationally decentralized system. It ought to be the function of each department and of the Treasury to be responsible for accounting. Auditing might then be the function of the Comptroller General, who is responsible to the Congress and holds office for a long term. He has, however, become so absorbed in accounting, as distinguished from auditing, that the original purpose of his office has been entirely obscured.

I could multiply examples of Government overlapping and waste almost without end. I merely want to point out that we are entitled to more service in every department of the Government from the money that is being spent.

I do not want to be an alarmist, but I merely want to point out that we cannot expect permanently and without interruption the volume of business that we have enjoyed in the years since the war. I do not anticipate a depression or even a serious recession in business. There are too many factors supporting our economic system that are sound which were not present back in the twenties, to justify pessimism. But we cannot expect that our national income can always continue at the rate established last year. We must remember that in part our income was the result of inflated prices in many lines and, with increased productions, inflation will gradually subside.

On the other side, there are certain inflationary forces which we may confidently expect will continue. There will probably be some increase in wages; there will certainly be greater expenditures for armament, and a continuation at a somewhat slower pace of grants in foreign aid. There will also be more imports not equalized by export surplus of gold or gold currency. These are inflationary forces.

On the other hand, there are deflationary elements. There may be a somewhat lower rate of exports. There may be, and there is now, somewhat less investment by business for new plant construction. There will certainly be an increase in production in many essential lines.

There will be a lower rate of expenditures by farmers. Agriculture has been blessed with a very high income since the war. Many farmers are now in the higher brackets upon which present and possibly future higher taxes will fall. The great storms in the past month in the middle and far West have meant severe losses in crops and domestic animals. Farmers enjoying high prosperity have already renewed much outworn equipment. There have been many new automobiles, tractors, and other equipment, building, household furnishings, and clothing. There will be a narrower farm market for such items. In short, the farmer will need less and have less to buy with.

All these are deflationary factors.

If we balance the billions involved in inflationary forces against the billions that are accounted for in these deflationary factors, the balance, according to good economists, is somewhat on the side of deflation. This brings us into a phase that may be called a restabilization.

Again I say this does not involve a serious reduction in employment, but it does involve a sufficient slowing down of our presently accelerated rate to produce a serious warning both to government and to business. This prospect for the coming year makes it all the more important that Congress and the President consider carefully the implications of our rate of spending.

On this point, I am told by economists, a definite rule operates. When the national income is rising by inflationary forces, as it has in the past few years, the return of tax receipts rises not only as fast as the national income but relatively faster. That is largely due to the movement of individual and business incomes into higher brackets. That is why the President's early estimates for receipts in the past 3 years have been shown later to be too low.

But when the trend of national income is reversed, even by a relatively small percentage, tax receipts fall at a considerably larger rate.

We must, therefore, be prepared for such a situation in the coming year. Raising tax rates will not help much to keep us in the black because the return will be falling. We cannot safely assume that our national income is stable. It never has been stable, and it will not be in the future.

It is time to look and listen, although it is, of course, no time to stop. Stopping is not an American habit. We are entering a period of readjustment. And stabilization should be the common purpose of all of us.

In foreign affairs we have put our hands to the plow. We cannot look back to the old, seductive days of isolation. We have raised the expectations of the world, and we cannot be false to our promises.

But we can expect and we should demand that our Marshall plan expenditures decline. Western Europe is recovering. It can with wise administration of our aid and with the help of the countries themselves attain a higher and higher rate of recovery. We must forever put away the foolish idea of destroying Germany's capacity to sustain itself. We must seek to push back the tide of communism by winning border countries to our way of life and recovery. We must strengthen the elements of democracy—real democracy—in all European countries. But we must not destroy that self-reliance—which is the heart of democracy—by too lavish lending and giving. Our patients must be induced to throw away their crutches at the earliest possible moment.

Wherever I have gone in my travels through the world—and I do a lot of traveling in my business—I have found one great asset to America and two great fears about America.

The asset is good will, the gratitude and the admiration of people everywhere for what we are and what we have done. That

good will has its future material value as well as its spiritual value. We must preserve it as a cherished asset.

The two fears about America we must, with all our will and intelligence, defeat and dissipate.

The first of these fears is that this time, as in the years after the First World War, we shall lose ourselves in our own concerns and forget our responsibility for world leadership. We must, as good Americans and good neighbors, carry high that banner of leadership. We have no other choice if the democratic world is to survive.

The other fear is that history might repeat itself and that by our own mistakes and excuses we shall fall into another depression. That is what every follower of Marx everywhere hopes and believes. Such a disaster here would set the forces of communism on the march everywhere. We must frustrate that hope of our enemies.

To fulfill our own hopes and to fight those fears we must be strong and stable at home. Our Government must be efficiently organized and less repressive on the spirit of enterprise. Our relations between business and government must be friendly and mutually helpful. Our business community must be prudent but progressive. Our people must not expect unending miracles of generosity from government. We must in industrial relations seek mutual respect and cooperation.

A strong America is the hope of the world. Providence has given us the tools. We must use them well.

Tribute to the Late Senator John H. Overton

EXTENSION OF REMARKS

OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 27, 1949

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a tribute paid to the memory of the late Senator John H. Overton, of Louisiana, on October 4, 1948, by Judge Gaston L. Porterie, of the United States District Court for the Western District of Louisiana, before the Supreme Court of Louisiana, under the auspices of the Louisiana State Bar Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

JOHN HOLMES OVERTON, THE STATESMAN

John Holmes Overton had the mind of a logician and the heart of the lover of humanity. He was greatly gifted and endowed.

"If a man can play the true logician, and have judgment as well as invention, he may do great matters."—Bacon.

He had the good fortune of coming from distinguished ancestry. On his maternal side, he was a Waddill; they were exceedingly bright and witty. On the paternal side, he was an Overton; they were serious and ambitious.

The town of Marksville, his birthplace, had very fine people of both French and English extraction. He was English in blood; but he seemed to have absorbed some of the subtle and charming qualities of the French. The town was a small place and it was an asset to him that all of his childhood and early youth were spent there in the close union that life gives in small communities.

His parents were greatly interested in him and he was trained and tutored at home from the very earliest in the English classics. He would practice and recite them with ease in private and in public and soon there was no function, public or private, but that young John Overton was sought to adorn it.

Of fine physical appearance, with a voice of melody and charm, yet vibrant of masculine force, he always delivered what would be termed the formal classical address—the Roman ideal, with points in logical sequence leading to the build-up of masterful emotion in a moving climax. He ever remained the trained orator—his evident restraint from total abandonment to the emotions was the proof of the real depths of his feeling.

It was at the relatively late age of 56, after he had moved from his birthplace at the age of 23 to the city of Alexandria where he had actively and profitably, and with particular distinction, practiced law for a period of 33 years, that his real great trait—his love for humanity—had occasion to come into public play.

Huey Long, the great and unrivaled liberal, was in trouble. He was facing the Senate of the State of Louisiana under charges of impeachment. The logician lost no time in evaluating the points of the charges pro and con, and in arriving to the definite conclusion of Long's innocence. Then the lover of humanity took control and Overton gave his services in the successful defense of Huey Long.

He returned to his law practice in Alexandria. He was a marked man, however, for soon thereafter the seat in the House of Representatives in Overton's district became vacant through death. A mass impulse immediately arose over the congressional district to make use of this fine mind which had come, moved by love of all, to defend a great liberal for the public good. Overton could do nothing else but respond and he went to the lower House of the Congress.

At the very next election the people promptly promoted him to the Senate, where he remained until his untimely death. At the end of his second term in the Senate, he announced that he did not desire reelection. Whereupon a petition of 52 of his Democratic colleagues—the whole party membership except for a few being out of town—and with numerous Republicans offering to sign, urged the people of Louisiana to compel his return—a unique gesture. The Shreveport Times, owned and managed by Mr. John D. Ewing, one of the leading newspapers of the State, immediately and successfully sponsored a crusade to return Overton for the good of the State and Nation.

His heart told him at once which phase of legislation he should particularly study and improve. The section in which he was born and the section to which he had moved and where he had so well achieved in his profession were both subject to overflow from the floodwaters of the internal rivers of the United States of America. He had seen the keen sufferings of his people during the great 1927 flood. And so, to the protection of the Nation from floods he immediately devoted himself.

"More helpful than all wisdom is one draught of simple human pity that will not forsake us."—George Eliot.

And, after 15 years of attention given the subject, here are the thoughts of no less an expert on the subject than Lt. Gen. R. A. Wheeler, Chief of Engineers, USA, expressed as late as in the year 1947:

"It was natural that, in addition to serving the national interests in numerous fields, John Overton, as a Representative of his State in the National Congress, should become particularly active in working for those Federal projects which expand the usefulness of our great rivers and other waterways, and at the same time, tame their natural tendencies to destroy our wealth and our lives through recurring floods. Our country has been the gainer for his knowledge and his activities.

"A stanch believer in the homely virtues that have made this Nation great—and in the democratic processes wisely prescribed by the Congress for achieving Federal waterway and flood-control projects—Senator Overton has kept his sights focused steadily on the realization of sound measures. His objectives have not been preconceived solutions. He has kept his mind and his opinions open to progressive changes in plans and programs to meet the existing needs, whether these plans called for dams, reservoirs, levees, flood walls, diversion channels, canals, dredging, regulating works, or some other construction found to be the most practicable. He has been at the forefront of those who have fought for flood control and navigation improvements in the Red River Valley. He has been a warm and active supporter of Federal projects for the proper development and control of the Mississippi.

"In a real sense, John Overton has been the worthy and honored ambassador of the whole Mississippi Valley.

"He has been a tower of strength to the forces that have sought improved waterway facilities for the greate gateway of the valley—the port of New Orleans. He has been the friend of all our great river cities, ever striving to induce the growth and prosperity of their regions through better inland waterway terminal facilities. He has worked indefatigably for the Gulf Intracoastal Waterway, which provides a protected water route along the Gulf of Mexico from Florida to Corpus Christi, Tex. He was one of the prime movers behind the progressive—and sorely needed—legislation which established flood control as a responsibility of the Federal Government. In the broad influences of his busy life, he has been a part of all sound actions directed toward making our extensive waterways at all times the servants of the American people, and at no time their masters.

"If our rivers could talk, they would tell many stories—stories of Indians and explorers; of brave settlers, and of courageous planters and industrialists who established farms and homes and great enterprises on their banks; stores of husky river boatmen who matched their muscles against the strong currents, and of shipbuilders who devised constantly improved means of traversing the flowing streams; stores of civilian and Army engineers whose genius helped to harness and bridge and control the waters.

"But I venture that they would speak of no one more affectionately than of John Overton, whose voice has risen from this valley to express the needs and desires of the people—not of his own locality alone, but of all the land—and who has worked unceasingly for those projects that are now being woven into the history of our growth as a Nation.

"Wherever vessels are better enabled to navigate our numerous rivers and linking waterways; wherever homes and lives are protected from potential floods; wherever farmers give thanks for the rapid drainage of unwanted water from their lands, and conversely, give thanks for water brought to their arid acres; wherever the varied other Federal benefits from our water resources are being enjoyed by American people and American enterprise, there will be found the rich harvest of results sown by such public-spirited citizens as John Overton."

He took interest in naval affairs and soon he was the head of the subcommittee of the Appropriations Committee in charge of naval appropriations. Listen to him as he speaks to the American people as a patriotic prophet for the benefit of the generations to come, at the time that he presented

for adoption the largest naval appropriation bill in the history of our Nation:

"Mr. President, I should like in conclusion to make several concisely phrased observations.

"It would, in my humble judgment, be an egregious blunder on the part of our Nation if after the conclusion of hostilities we did not retain the combatant force of the mighty Navy that will have accomplished so much, starting with so little, in bringing, under divine guidance, victory to American arms in the west and the east. I fervently hope that international arrangements that will insure the peace and tranquillity of the world will be agreed to and lived up to. But, Mr. President, if they are not, or if they fail to their sublime purpose, we shall have to rely in the future upon the strength of our naval and air forces, as well as upon a mighty reserve force trained and equipped to spring to arms upon the sounding of the tocsin of war. To the consummation of this cardinal prerequisite to national safety we should embark upon a program of compulsory military service.

"Mr. President, we shall have largely wrought, fought, and won in vain, if we do not retain under our own control and ownership the strategic islands in the Pacific and Southwest Pacific which we have captured from the Japanese Empire through the blood and sacrifice of thousands upon thousands of young Americans, and which are ours by the right of conquest and of occupancy."

"Hail, Columbia! happy land!
Hail, ye heroes! heaven born band!
Who fought and bled in freedom's cause.
* * * * * *
"And when the storm of war was gone,
Enjoyed the peace your valor won.
Let independence be our boast,
Even mindful what it cost;
Even grateful for the prize,
Let its altar reach the skies!"

—*Joseph Hopkinson.*

So, in debate, on the floor of the Senate, he was the master of the discussion—first the logician who meticulously developed the details of the measure, the necessity of its many provisions; then the lover of humanity who generalized it all together, in a wide compass, adjusted to the needs of a great Nation.

Besides the subjects in which he was generally accepted as a national authority, his labors in the Senate were vast and varied. He took a leading part in the discussions of the following subjects: Appropriations, lend-lease, rivers and harbors, antilynching, FEPC, farm relief, St. Lawrence waterway, manufacturers' sales tax, labor strikes, soldiers bonus, sugar tariff, allotment to schools, rice tariff, Natural Gas Act, poll tax, war profiteers. In all these subjects he gave much of his rare genius.

Two of his prominent colleagues, one from each major party, said of him this:

Senator ROBERT TAFT, of Ohio, said:

"John Overton's death comes as a shock to all of those who have served with him in the Senate. He was able, and had a complete grasp of the problems with which we have dealt during the past 10 years. He had good judgment, and was untiring in this work. The Senate and the State of Louisiana have lost an outstanding public servant."

Senator MILLARD TYDINGS, of Maryland, said:

"John Overton was a rugged adversary and a rugged advocate. He asked no quarter and gave no quarter. He was always fair. There was always that charm and affection that made you love him even though he was fighting you. Such men are rare. * * * The name of John Overton will live long in the United States Senate. Louisiana is in sorrow and a large part of this Nation is in sorrow."

Kind and gentle to all, devoid of even the slightest shade of arrogance, patient and attentive to every worthy plea, innately urbane and ever courteous, Overton was the ideal American gentleman.

His friends and relatives are assembled here in this courtroom where his voice has been heard before. His spirit is here with us. We should conclude with the words he chose in delivering at this very place the general eulogy at the memorial exercises, held on Monday, October 5, 1925, under the auspices of the Louisiana Bar Association:

"Washington Irving has truly said that 'pathos expires beneath the slow labor of the chisel' and 'that there is something more affecting in the spontaneous offerings of nature than in the most costly monuments of art.'

'Can storied urn or animated bust
Back to its mansion call the fleeting breath?
Can honor's voice provoke the silent dust
Or flattery soothe the dull cold ear of death?'

"And it seems to me, your honors, that when our souls will have winged their flight to the heaven of our faith, if, by some divine favor we might look back through the portals of eternity upon this goodly earth spreading below, we would rather witness a scene like this where true friends gather bearing their offerings of memories sweet and dear; we would rather observe some flower that the hand of love has rested upon the green sod that covers our last earthly abode though that flower should wither and die on the morrow; we would rather note some tear softly stealing from the eye of true affection though it vanish in the moment; we would rather catch the passing tribute of a sigh from the breast of some fond friend though it be blown away in the instant by the vagrant zephyrs of the air—than to behold towering above our lifeless clay some costly monument that the cold art of man has devised."

His honesty, public or private, was never questioned; his family life was exemplary; in this man we find none of the discounting shortcomings.

Overton in our public life is without peer or superior. He was of great and lasting benefit to the Nation. Indeed, he was a statesman.

And with Shakespeare we shall say:

"Praising what is lost,
Makes the remembrance dear."

The American Forum of the Air

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Thursday, January 27, 1949

Mr. JOHNSON of Colorado. Mr. President, on January 18 it was my privilege to participate in the weekly program of the American Forum of the Air. January 18 was the twenty-first anniversary of this the oldest forum of the air.

I ask unanimous consent to insert in the Appendix of the RECORD some brief remarks which I made on that historic occasion.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Senator JOHNSON. I am delighted, ladies and gentlemen, to see the oldest forum of the air on this, its twenty-first anniversary, using the new medium of television. My heartiest congratulations and good wishes to the American Forum of the Air and to Theodore Granik, its founder and moderator. And I know the public is grateful to Morris Forgash, president of the Universal Carloading and Distributing Co., the far-sighted sponsors of this program over many of these Mutual stations.

The American Forum provides a unique stimulation to the people of the Nation, bringing as it does the opinion and views of men in Government to every corner of the land. It is one of the best examples of democracy at work that we have. The millions of Americans who listen each week keep better informed and thereby become better citizens. In no other country and under no other system can both sides of vital issues be debated so freely and so fearlessly as here. Many of my congressional colleagues think of the American Forum of the Air as practically a quasi-congressional activity. Scores of distinguished Members of the House and the Senate join with me in paying tribute to the fairness, the impartiality, and the importance of the forum, which is founded on the principle of free and open discussion of all sides of all issues.

President Truman himself has paid tribute in these words: "For his splendid public service in conducting these programs, the American people and the many Members of Congress who have participated on the forum owe Mr. Granik a debt of gratitude. The radio industry can be proud of this pioneer in the field of public-service programs."

A happy birthday to you, Teddy, and to your American Forum of the Air.

Chairman GRANIK. Thank you, Senator JOHNSON; thank you ever so much. On behalf of my patient and hard-working staff, we are deeply grateful to you.

And now to the subject of the evening. We are going to handle a red-hot issue. Should the House Un-American Activities Committee be abolished? Here to discuss it are two old friends of the American Forum of the Air, Senator KARL E. MUNDT, on my left, Republican, of South Dakota, who was recently elected to the United States Senate after years of service in the House of Representatives, where he was acting chairman of the House Un-American Activities Committee, and Congressman EMANUEL CELLER, Democrat, of New York, chairman of the all-powerful House Judiciary Committee, who was a speaker on our very first forum 21 years ago. It originated over WOR, Mutual's affiliate in New York, in 1928, and now in 1949 we are having our television debut over WOR's subsidiary here in Washington, WOIC.

And now, gentlemen, on with our discussion. Someone very kindly has provided us with a pumpkin. I don't find any microfilm in it, but here is a leading question for you, Senator MUNDT. What is un-American?

Federal Aid to Housing

EXTENSION OF REMARKS
OF
HON. RAYMOND E. BALDWIN
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, January 27, 1949

Mr. BALDWIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Federal Aid to Housing," delivered by the Senator from Ohio [Mr. TAFT] before the Mortgage Bankers Association of America and the Graduate School of Business Administration of

New York University, at New York City, on January 25, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FEDERAL AID TO HOUSING

I appreciate very much the invitation of the Graduate School of Business Administration of New York University and the Mortgage Bankers Association of America to speak to your conference on the subject of Federal aid to housing. The Mortgage Bankers Association, of course, is deeply interested in the subject from the point of view of financing and investment in housing. Millions of families are concerned because of the difficulty they find in securing satisfactory housing accommodations. It is a burning issue in politics.

I have been interested in the subject since long before I came to the Senate. In 1943 I was chairman of a subcommittee of a Senate Committee on Postwar Economic Policy and Planning to consider the housing problem. I have participated in the drafting of most of the bills that have been passed, and in the public-housing bills which have twice passed the Senate but failed in the House. Unfortunately, the housing problem is so complicated in itself, it has been approached from so many angles and with so many panaceas for solution, it has created such violent prejudices, that it is hard for anyone to feel confident of the wisdom of his views.

THE EMERGENCY SITUATION

Regardless of all the measures taken, one thing is certain: we have not solved the housing problem. On top of the permanent problem, we have now an emergency situation arising out of the very low construction in the thirties, and the inadequate construction during the war. Undoubtedly, this temporary situation will cure itself in a few years. It takes nearly half a million units a year to provide for new families. Last year we provided 800,000 units and this year about a million units, all through private industry and with little slum elimination, so there has been a net gain of some 700,000 units. In many locations we seem to have caught up; in others, there is a shortage.

But we ought not to be led into unsound permanent remedies simply because of the emergency situation. I believe private industry, with the assistance of the FHA and Federal home-loan banks, can get us back to the normal situation which existed before the war. During the past 2 years we have supplemented the powers of the FHA and the Federal home-loan banks, so that I believe there is every facility for the construction of new homes and the rehabilitation of old homes for every family which is able to pay a rental commensurate with present costs. We should do something further in the field of providing a secondary market for GI loans, since the legal restrictions today are hard to meet, but I believe that the stringency is due to the unwillingness to raise the rate of interest rather than to any lack of available funds.

I believe very strongly that families able to pay their rent should not be subsidized, and that they should pay for the capital investment at current rates of interest. The FHA has done a good job in bringing about a large reduction in the cost of financing homes. If industry and labor had done the same job, we would be a long way on the solution to our difficulties.

DIRECT GOVERNMENT LOANS UNNECESSARY

There are some rather dangerous proposals today that the Government lend anybody the money to build reasonably cheap houses at a very low rate of interest and a long term of amortization. That would be subsidy in a field where no subsidy is justified. It would put the Government into the mortgage business with all the expense and collections of a mortgage service organization. This is a field where our problem ought to be solved within the principles of free enterprise. Your association, perhaps, can join with others to insist on such a solution.

RENTAL HOUSING

There is one field in which Government programs have largely failed, apart from the low-income family, that of encouraging rental housing for middle-income groups. Nearly everyone who wants a home is forced to buy it, although many would prefer to rent. We have gone about as far as we can with FHA financing for rental housing of this character, although no doubt experience with the laws recently passed will show how they can be improved. I believe, however, that the difficulty is not so much with housing as it is a fundamental failure in securing investment in enterprises involving a degree of risk. Manufacturers and utilities find difficulty in getting people to invest their money in stocks and equities. Tax rates are so high that wealthier people have little interest in putting their money into a risk enterprise, and would rather buy Government bonds and get 2½ percent for certain. One of the things which Congress is studying today is some change in the tax laws or other laws which will make it more attractive to invest money in productive enterprise.

THE SLUM PROBLEM

But the good work done by FHA and the Federal home loan banks has not solved the slum problem, or the problem of the lowest income families. When we have solved the emergency problem, I see no reason to think that we will have any better situation than was normal before the war, and that normal situation was wholly unsatisfactory. It was a problem of high cost and low income. Incomes today are permanently higher than they were, but the cost of homes is also permanently higher. The relative position of cost and income probably will not be greatly different, and so we face the same problem as in 1940.

In 1940, according to the census, there were 29,000,000 urban and rural nonfarm-residential units. Of these, nearly 4,000,000 are listed as needing major repairs and are, therefore, in bad physical condition. Of those in good repair, over 3,000,000, have no running water of any kind. Two million four hundred thousand more have no private toilets or baths. Perhaps a majority of the homes without water are in rural areas where they are entirely satisfactory, but many of them are in cities where the failure to have running water certainly indicates a very low standard of sanitary living conditions. Many of the homes which do not meet a minimum standard of decency are in city slums where the bad quality of the residence is accentuated by the bad surroundings. It is possible that improvements have been made during the war which reduced the defects in plumbing and other conditions, but we have no direct evidence of this and our Committee concluded that about 6,000,000 homes in 1940 were below a proper minimum standard. Many can be improved. For others there is no solution, except their destruction and replacement.

The difficulty with the housing problem as compared to food, clothing, medicine, and the like is that shelter is absolutely essential for every family, and yet the cost is out of line with the income of most of the population. Only about half the families in the United States can afford to buy a new house, even of the simplest type. The other half can only buy or live in second-hand houses. Of course, many of these houses are just as good as the new ones, but on the other hand the reduction in rent is not much unless the house or the surroundings have deteriorated. But as these houses are handed down to families with still less income, they get older and older and finally reach families which can only pay a minimum rent. In 1940, the 6,000,000 substandard homes were rented by 6,000,000 low-income families at rent averaging less than $15 a month. The rent paid is not sufficient to keep the houses in good condition, and they deteriorate further.

It is quite true that some kind of shelter is provided at our present system at rents which can be paid, but the lowest income group has necessarily gravitated to the substandard housing, for the most part in city slums. No one is saying that the private builders are to blame for the present situation, but it seems to be the inevitable result of present conditions. While I am a great believer in the system of free enterprise, this happens to be a field where it has failed to find a solution.

Even if a city tears down the slum dwellings and a private industry builds a similar number of new houses, other slums will appear because of the low rents which can be obtained from the lowest income groups. In other words, the so-called hand-me-down theory works, but it works to provide highly undesirable housing for those who get it on the last hand down. Of course, many of the houses renting for low rents are satisfactory. Some owners and tenants will keep any kind of a house in good condition. Other houses are saved by their location, even though the condition is poor. But under private industry left to itself, the slum condition has continued without improvement. If we could reduce the cost of housing so that perhaps 75 percent of all the families could afford a new home, we could eliminate slums much more quickly at the bottom. All of the second- and third-hand houses would be newer and probably in better condition, even if there remain the same proportion of lower income families. So perhaps the basic remedy is a reduction in cost.

Through the FHA we have, in effect, reduced the cost of housing by reducing the rate of interest and lengthening the term. But neither contractors nor material men have made any similar reductions. The current bills all provide for research to stimulate new methods and new materials. That, of course, cannot be neglected, but we cannot be certain of its success. We do know that in 1926 we reached the height of home building in the construction of 900,000 houses, but that long before the depression this number had declined rapidly because the market for new homes was exhausted. It is almost certain that the same condition is likely to recur in a very short time. Houses again are pricing themselves out of the market.

PUBLIC HOUSING THE ONLY SOLUTION

Until the cost is reduced, therefore, I see no way in which to cure the situation, except by some direct Government action at the lowest income levels to replace slum dwellings with public housing, thereby supplementing efforts to get more new houses built by private builders for those with adequate income.

(a) Not socialism

Many have denounced public housing as a communistic or socialistic enterprise. Of course, to a certain extent it is true that it is socialistic in nature. But this question of socialism is a relative matter. We have long socialized our public education in the primary and secondary schools. We have socialized medical care to the extent that we provide medical care to the poor through public hospitals. But this does not mean that we have socialized medical care as a whole, or the medical profession. The public-housing program is in no sense a socialization of the building industry, or of the housing industry. It is intended to reach only those whose income is so low as to prevent

their renting the minimum of decent housing. We have long recognized government's obligation to give food and clothing relief to families unable to pay for them. We have long recognized government's obligation to give free medical care and hospital service to those unable to pay for it. We have long recognized the obligation to educate children, no matter how poor their parents. Shelter is one of the necessities of life, perhaps the greatest after food. It is quite true that local government has not often undertaken the job of providing minimum shelter as it has that of clothing, food, and medicine, but the reasons are just as strong in favor of providing this necessity of life as the others.

(b) *Justification for Federal action*

Of course, in Congress we are faced with the further question whether the Federal Government has any function in this program. Housing, like food, relief, medicine, is primarily the obligation of the States and local governments. Even if these programs are the proper function of government, it is said that under our Constitution they do not fall primarily within the duties or powers of the Federal Government. It is a little late, however, for us to argue the place of the Federal Government in the picture. Under President Hoover we set up the Federal Home Loan Bank System to assist building-and-loan associations to finance housing more adequately. Under President Roosevelt we established the Federal Housing Administration which, by mortgage insurance, has revolutionized the financing of homes. The public-housing program has been in force for more than 8 years. As part of the Federal Government, we in Congress cannot avoid the responsibility of considering the whole problem.

(c) *Minimum floor for essential services*

Furthermore, I believe that the Federal Government does have a responsibility for preventing the suffering and hardship resulting from extreme poverty at any point in the United States. I believe the Federal Government has an interest in seeing that every child in every State has substantially equal opportunity, regardless how poor his parents may be. Under American principles of freedom, we have built up the highest standard of living in the history of the world—on the average. But its success is based on adequate reward for those who are more intelligent, better workmen, more diligent, or superior in other ways. Some must necessarily fall behind, either from misfortune or lack of ability or their own fault.

The philosophy of socialism is to raise all to the average, which necessarily will bring all others down to the same dead level and take all life and progress out of the system. There might be more equality under socialism, but I am certain there would be much lower standards of living for the great majority of workmen.

The extreme philosophy the other way is to "let the devil take the hindmost" and let those who are unable to keep up suffer poverty and hardship on the theory that in the end general progress will be faster. Without arguing the economics of this theory, it is enough to say that it offends every humane sense, and that Americans are humane people.

I believe that the American people feel that with the high production of which we are now capable there is enough left over to prevent extreme hardship and maintain a minimum standard floor under subsistence, education, medical care, and housing to give to all a minimum standard of decent living and to all children a fair opportunity to get a start in life. But if we accept this theory it is obvious that a large number of the States do not enjoy the high production or the high resulting income which will enable them to maintain such a standard. The Federal Government comes into the picture, because there is a great difference of financial ability among our various States. The average income in Connecticut is more than twice the average income in Mississippi. We saw how in extreme cases, like the unemployment crisis of 1934, the cost of an adequate and necessary program was far beyond the resources even of the wealthier States. It is beyond the resources of many other States today. States do not have the taxing power which the Federal Government has, because they cannot reach the most lucrative sources of income or maintain tax rates materially higher than the surrounding States without driving wealth away from the State.

(d) *Necessary conditions of Federal aid*

If we adopt this theory, however, and wish to avoid a complete centralization of authority in Washington, there must be certain definite limitations, and we must adhere to the basic doctrine that the role of the Federal Government is only one of financial assistance.

First, the Federal Government must not take over the administration of these various welfare services, but must leave it with the States and localities so that the communities themselves may work out their own solutions. Second, the minimum floor which we provide must not be so high as to destroy the incentive to improve one's conditions through one's own efforts. The man who is aided must not be better off than the man who earns his own way. Third, the cost must not be so great as to bear too heavily on the other four-fifths who have to work harder to pay the bill. Fourth, of course aid should be extended only to those who need it.

It is said that once we establish a minimum standard, and once the Federal Government gives aid, the standard will be steadily raised and the cost to the Federal Government will rapidly increase. Of course, that is a danger, but it is a danger I would rather face than refuse all assistance and leave the entire matter to the States. I feel quite certain that the suffering and hardship in many sections would lead to a general distrust in our whole economic system, certainly a demand that the Federal Government take over completely the administration of these activities.

Of course, the program does deprive the lowest income group of incentive and freedom, but most of the incentive and leadership in the Nation will be found in any event in the other four-fifths. Allowing for all this, I believe the Federal Government must assist the States to meet these social problems.

(e) *Objections to public housing*

The public housing program is intended to deal only with those who cannot reasonably be expected to pay the rentals in decent private housing. It is not intended to deal with transients or helpless individuals, but with those families receiving some steady income at the lowest range of the income scale. The most helpless group will have to be taken care of in public institutions or through rent certificates. One of the objections to public housing is the claim that it competes with private renters by admitting families able to live in privately owned homes. This condition arose out of the war when it was impossible to move the families of war workers, no matter how much they earned. The present bill requires a constant survey to see that families remotely able to rent good private housing shall not remain in the public housing projects.

It is objected that the whole program is socialistic and contemplates a socialistic community. The cause of public housing has been injured by some of its vociferous supporters, because unquestionably there are among those supporters many who want all housing to be socialized, and want all workers housed at government expense. The radical character of some of the personnel of the Public Housing Authority has also justified criticism. But after all, this support does not to my mind give any argument against public housing if there are sound arguments for it.

Public housing is criticized as being too expensive. It does seem to me that the limits in the Ellender bill which would permit the expenditure of about $12,500 per housing unit are very high indeed. Four room homes can be built for $7,500, perhaps $6,500. Some public housing projects perhaps have to be fireproof and involve greater expense. But if this program is to avoid public criticism, it must be carried out in most places at far below the Ellender bill limits. We ought not to give a man who is admittedly unable to earn anything like an average wage, better housing than the man who works hard and builds his own home.

It is contended that the financial participation required from the State and local authorities is too small a percentage. Again, I think the criticism is justified, but we must remember that housing is a new Government activity, and that State and local authorities have found little place in their budget for housing subsidy, and that their tax revenues are very difficult to increase. If we are to maintain the local interest and effective control essential to a Federal-aid system, the community ought to provide some part of the necessary funds.

The bill provides that no housing can be done, except upon the express request of the local governing body. If that body believes that its city requires public housing, it ought to be prepared to put up some contribution, either in the way of tax exemption or direct cash subsidy. On reason that the public housing program was so unpopular in so many sections of the country was that it was imposed by the Federal Government officials without any real interest or decision from the people of the community. Its success has been greatest in a city like New York where public housing was undertaken before the Federal Government came into the picture.

(f) *Scope of the program*

Our original report recommend 125,000 units a year for 4 years, and that was the provision of the Taft-Ellender-Wagner bill. The Administration this year substantially raised the ante to a total of 1,050,000 units at the rate of 250,000 a year. To my mind, this changed the whole character of the program. Two hundred fifty thousand units would be 25 percent of the 1948 construction. Some materials and labor are still short, and the materials and labor to construct this amount of public housing would cut down the number of private housing units which could be built. I have always said that the program should not exceed 10 percent of available housing. As a matter of fact, I doubt if more than 125,000 units could be efficiently built for several years to come. This is no time to force up the price of materials by excessive building. In short, I believe that many of the objections of the private builders are completely unsound as to a reasonable program clearly within the necessities of the situation; but they would be sound against a program which seems to look toward the socialization of all housing.

It is said that if we once admit the principle of public housing, we will have to build a total of from three to six million homes. This I certainly do not admit. As I have said, the reduction of costs might make all public housing unnecessary. Other methods of dealing with the housing situation may be developed. Many low-income families have found homes at low cost or low rental which are satisfactory for their children, particularly in the environs of cities since the automobile has spread the population over a wide area.

My belief is that if we take the edge off the problem at the bottom, destroy many of the existing slums and set an example in many neighborhoods, it will not be necessary to extend the public housing program beyond a total of perhaps a million homes in the course of the next 10 years. I have seen public housing projects in Cleveland, and elsewhere, which have changed the whole character of the neighborhood. Private owners have come in and improved all the homes in the neighboring section, new stores have been built and a standard established extending far beyond the number of homes covered by public housing.

(g) No practical alternatives

The opposition to public housing has proposed from time to time a number of alternative remedies. A great many suggestions try to reduce the interest rate and cost of financing, usually through an indirect subsidy from the Government. When these plans are analyzed, they never get the rent down to the point where they will take care of really low income families.

Many other plans recognize that a direct subsidy of some kind is necessary. Some have proposed that the low-income problem be dealt with by the issuance of rent certificates to be used by the holders to pay all or part of their rents. As an emergency method of dealing with a few relief cases, this is satisfactory, but rent certificates will not eliminate slums. No man will invest his money in new buildings on the chance that rent certificates will continue to be issued for the next 20 years. Rent certificates will not stimulate private building, and the most we could hope is that they might lead private owners of slums to spend somewhat more on maintenance.

Our committees have considered many other forms of subsidy. There might be a direct subsidy for every home built to reduce its cost, but even a $500 subsidy would have cost at least $500,000,000 in 1948, and I doubt if it would have accomplished any real purpose. It is hard to see how you could prevent the builder or the owner from adding this amount to his profits by reselling the house unless we have a complete system of fixing prices on homes.

We considered various methods of subsidy to private apartment owners and builders and, of course, something of this sort has been done in the way of tax exemption in several States to provide for middle-income families. None of these subsidies, however, has been big enough to secure really low rents such as are furnished by public housing.

To accomplish that they would have to be larger than direct Federal subsidies, because the money borrowed is necessarily taxable and it is not always possible to get tax exemption for the property itself. In general, few people are interested in building apartment projects under a subsidy agreement, because they have to submit to complete regulation by the Government of the rentals which they charge, the accommodations which they provide, and the character of tenants whom they accept. Practically only institutions of a charitable nature could be led to build under such an arrangement.

I have found no alternative to public housing as a method of providing low income rentals to those at the bottom of the income scale. Public housing is still experimental and the experiment has been very much confused by the intervening of the Second World War and the large amount of war housing constructed directly or indirectly by the Government. Many of the complaints against the public-housing system relate to this war housing. Few cities have been able to give the public-housing program a proper trial, and many cities require the urban redevelopment assistance provided in the Ellender bill in order to handle the slum question properly.

CONCLUSION

Those of you who are at this meeting are largely interested in private housing. There is no reason why the public-housing program should compete with or interfere in any way with the private-housing industry, any more than general hospitals interfere with the practice of the private physician. I know of no one who does not feel that the major problem of providing shelter can only be solved by private industry.

I believe that those who are opposed to public housing have done their own industry a disservice by their indiscriminate and unreasoning opposition. They should promote the plan and spend their energy and their funds in confining it to its proper scope in making it more of a local enterprise clearly devoted to the lower-income problem. They have invited more radical housing measures and have assisted the critics of free enterprise in the United States. The American people, in my opinion, are determined to adopt a housing plan which will substantially provide for every child who is born in the United States decent home surroundings, so that he may actually enjoy the freedom and equality of opportunity to secure which our forefathers came to America.

Does the Republican Party Have a Future?

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, January 27, 1949

Mr. IVES. Mr. President, there appears in the current issue of the Saturday Evening Post an excellent article entitled "Does the Republican Party Have a Future?" written by our distinguished colleague, the Senator from Massachusetts [Mr. LODGE]. I am sure that Democratic Members of the Senate will want to peruse this fine article, and I know that Republican Members should peruse it. I therefore ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOES THE REPUBLICAN PARTY HAVE A FUTURE?

(By HENRY CABOT LODGE, JR., United States Senator from Massachusetts)

The present feeling of despair in the ranks of the Republican Party emphasizes the immediate need for a sound understanding of our two-party system and a confidence in that system. I, for one, have that confidence and believe that by realizing our shortcomings, by developing an understanding of the trends of the world in which we live, and by a wholehearted acceptance of new ideas, the Republican Party can become once more a party of leadership in America.

I recall with vividness my initiation to the United States Senate in 1937 in the wake of a Roosevelt tidal wave that engulfed the entire country with the exception of Maine and Vermont. There were then but 17 Senators sitting on the Republican side of the aisle. Contrast this with the 42 Republican Senators now sitting in Washington, and you are impelled to the conclusion that the Republicans still have intrinsic strength, vitality, and a sound basis for hope. In the last election we got 2,000,000 fewer votes than the other fellow, out of some 47,000,000 votes. That is not a result which calls for coroners.

But it does call for soul searching and for a realization that success can be achieved only if the party will root out its shortcomings. The epic set-back of November may well be a blessing in disguise to Republicans. They now have an opportunity to clean house, to discard archaic concepts, and to mold the party to greater conformity with the will and aspirations of the American people. As Henry Ward Beecher once said, "It is in defeat that bone turns to flint; it is in defeat that gristle turns to muscle." It is in defeat that the Republican Party will become a modern party and take its proper place in our political system.

We must recognize that those policy considerations which are no more than survivals of the Paleozoic era of American politics have no place in the Republican Party of tomorrow. The party must build its future on the proud traditions which it has built up in the field of human values and on the inspiring qualities of its enlightened leaders.

The GOP has been presented to the public as a rich man's club and as a haven for reactionaries. This is only true in that there have been some Republicans—and, for that matter, many Democrats as well—who have fought every piece of New Deal reform legislation with uncompromising and myopic fury. But to say that these Republicans represent the rank and file of the party is, in my view, a gross untruth. Certain it is however, that the Republican Party must broaden the scope of its appeal so that there can be no doubt that it is a party for all elements of the people, young and old, rich and poor.

It is little short of astounding to find the Democrats, with so large a segment of their membership composed of avowed opponents of civil rights, making their claims to the title of being the sole party of progress. The temporary glow from the victory of the Democratic Party cannot obscure the fact that it still suffers from many serious ailments. Its irreconcilable sectionalism, its burden of unwieldy and top-heavy bureaucracy that has grown helter-skelter through the years, its feudal dictatorships in the South, and its city patronage machines elsewhere are not the foundation that will support an enduring edifice of constructive liberalism.

The American people are fortunate in having a two-party system which is sufficiently flexible to permit resolution of their problems without resort to violence and to enable them to remain united in a troubled world. We need a strong Republican Party. We need a strong Democratic Party. We will have both.

The political words "left," "right," and "center," however applicable they may be to the politics of the old class-cursed nations of Europe, apply only very infrequently to modern American politics. Our two major political parties more nearly resemble political service stations which aim to give the people the service which they demand from their Government. They vie with each other as to which can translate the aspirations of the people more effectively into action, and there certainly need not be much argument or mystery nowadays as to what these aims are.

The two-party system exists in America in order to perform the following functions: To give the people the kind of government the people want; to enable the people to fix the responsibility for the way their government is conducted; to enable the voter, whether he be Democrat, Republican, or independent, to exercise maximum influence on the conduct of the Government; to enable the minority party to serve as an effective check on the party in control; and to hold together the wide variety of climates, occupations, races, and creeds which make up America—and make up the so-called blocs which cut

across both parties' lines. Insofar as unity is concerned, let it be said that unity emphatically does not mean reaction or resistance to change. The successful American party unites and goes ahead. It is in this respect the very reverse of European parties, whose purpose is constantly to separate the sheep from the goats and to sharpen class warfare—even to the point of Communist or Fascist violence.

These, then, are the functions of our two-party system—which never have been those of the usual European cluster of ideological parties. So much are these things taken for granted that we not only never praise our parties for doing them; many Americans are quite unaware of the function which our parties perform.

It is hard to understand those who see something shameful or mysterious or, at the very least, faintly roguish in this desire of our two major parties to get everyone in under one tent. Actually to build such a tent is one sure mark of statesmanship. It also insures protection to minorities from selfish majorities.

The Wall Street Journal recently printed a letter expressing a point of view with which I cannot agree. It said: "As matters stand today, we have in this country two major political parties whose philosophies of government are becoming more and more identical with each succeeding campaign, which strive to outdo each other. * * * If the two-party system is to remain virile and effective, the Republican Party must abandon its present chameleonlike attitude and return to a position of unmistakable conservatism, dedicating itself to a determination not to compromise with New Dealism."

This opinion, in my view, is tenaciously anchored to a dead past; it expresses a philosophy with which the overwhelming mass of everyday registered Republicans violently disagree; it conflicts flagrantly with the spirit which gave birth to the Republican Party; and adoption of this policy would condemn the party to certain defeat. There is far more hope for America and a basis for rejuvenating the party, if the words of Abraham Lincoln are heeded: "The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty and we must rise with the occasion. As our case is new, so we must think anew and act anew."

It is certainly valueless to have a party in America which stands for an abstract philosophy or dogma—be it conservatism, liberalism, socialism, or radicalism. There is no useful place for it in our system. What is wanted is a party which, by finding a common meeting ground among our myriad separatist influences, develops a practical and imaginative program; a party which enables the two-party system to work, and thereby enables the citizen to get the kind of government he wants, fix the responsibility for political action and exert his greatest possible amount of influence on the conduct of government.

Both parties have a constant tug of war between their conservative and radical wings, which has the effect of prodding the do-nothing and moderating the extremist. Now that the Republicans are suffering from the reputation of being the party of the big shots, let us recall the Republican Party's beginnings in the freeing of the slaves, and let us remember the inspired radicalism of Lincoln. History is also studded with the results of later Republican action. The anti-trust laws, the regulatory and rate-making bodies, such as the Interstate Commerce Commission, and the conservation laws were all largely the result of Republican action and inspiration. It was Senator VANDENBERG who, almost singlehanded, achieved the passage of the law for Federal insurance of bank deposits—surely a useful governmental prop to what is in so many respects misnamed as our free-enterprise system.

If the Republican Party is to return to a position of greatest national usefulness, it must take inspiration from this progressive past. Also, it must certainly make a vigorous, sincere, and successful effort to win the confidence of labor. The fate of the Whig Party in 1852 shows what can happen when a major element in the country utterly refuses even to consider a political party. The Whig Party completely lost the confidence of practically everyone who was interested in the slavery question. Its intellectual bankruptcy with regard to this issue is revealed by the extraordinary spectacle in 1852 of this major political party giving, in its convention, to the northern Whigs the naming of the Presidential candidate and to the southern Whigs the writing of the party platform. The inability of the Whigs to deal with the slavery issue must not be matched by the inability of the Republicans to deal with labor problems. There is no place in the Republican Party—or in any American political organization—for reactionaries—as distinguished from conservatives—who, like royalists in European republics or like the Whigs in America in 1852, refuse to accept changes which are here to stay.

The Republicans have made very considerable progress in some States and have also advanced nationally. If you study the figures of the 1948 election and compare them with the past four Presidential contests, you come to the conclusion that the American people, in effect, said to the Republicans last November 2:

"You have made some real progress in liberalizing yourselves and in making yourselves a forward-looking instrument of the popular will, but you have not yet progressed far enough. We are still afraid that you may backslide. We are still not sure that you are aware of the trends of modern life. Go out and try again."

I have faith that we will make a liberal record, that we will try again and that the people will again use us as their servants. But we must make the decision that we want to be a popular party. On that basis only can the Republican Party have a future.

Once we have made this decision, we can, at the right time, offer a program of legislation and a promise of competent, unselfish, imaginative, and courageous administration which will receive public support. This emphatically does not mean "me too." We are not at all on the triple horns of a dilemma which compels us either to imitate the Democrats, or to indulge in the Mother Hubbard type of appeal which covers everything and touches nothing, or to attack everything the Democrats have ever done. There is a fourth way; to propose a program of our own—better and more effective measures to lead the country toward some real measure of prosperity and toward that peace without which no form of prosperity is possible. The American people are definitely not interested in self-adulation or in recriminations against the rival party. That is as out of date as the horse and buggy. They want to get the answer to the question: "Where do we go from here?" The new Republicans should be able to give the answer.

This is obviously not the time—immediately after an election in which we have been defeated—to propose a program. Both parties have initially the same job—to unite and to go ahead, and then to watch and vie with each other for better service to the public. Our first challenge as Republicans is to convince the people that we can do the job best—that the gas, oil, water, and windshield cleaning which we offer at our service station is better than the other party's. We are, of course, not at present in a position to propose a program and put it into effect. The specific challenge of forthcoming legislation and of actual events will develop the new program of the future. But the new Congress does give us the chance to show that we are definitely forward-looking and affirmative; that we have corrected our mistakes. For the immediate future, therefore, we Republicans must show by our acts in Congress that we thoroughly desire to be a popular and a useful "vital organ" of our two-party system. So great is the need for a living two-party system, so priceless are its benefits, and so tragic are the consequences of not having it, that I have both faith and hope that we shall, in Lincoln's words, "rise with the occasion."

The Rules Committee Controversy

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. MASON. Mr. Speaker, the powers of the House Rules Committee have been clipped, and the responsibilities of that committee have been greatly reduced. Is this good or bad, a step forward or a step backward?

The House Rules Committee, with its powers and its responsibilities, is the product of 160 years of legislative experience. The committee is indispensable for the expeditious and orderly transaction of the business of the House. It acts as a traffic policeman who operates a stop and go sign. The committee takes its instructions from the majority leadership of the House, who are responsible for all legislation that is given clearance by the Rules Committee. Not once that I know of has the Rules Comittee failed to clear legislation that the majority leaders wanted cleared.

Mr. Speaker, the Rules Committee during the last two years, under the chairmanship of Congressman LEO ALLEN, bottled up legislation that would have authorized over $21,000,000,000 of expenditures, because the majority leaders in the House wanted them bottled up. The following are some of the legislative authorizations that were bottled up by the Rules Committee:

First. Universal military training, costing between two and three billion dollars per year.

Second. Miscellaneous veteran's benefits, costing $11,000,000,000.

Third. Public housing (T-E-W bill), costing $8,750,000,000. Authorizations amounting to over $21,000,000,000 were prevented from becoming law. Was that good or bad for the taxpayers of the nation?

Mr. Speaker, the so-called liberals of today, in order to speed up the process of socialization, have quite successfully sold the general public on the idea that the Rules Committee stood in the way of progress and therefore had to be shackled. Instead of the stop and go sign being operated by 12 men, it will from now on be operated by the Speaker of the House—1 man instead of 12 men. Is that progress or reaction, more democracy or more dictatorship?

Mr. Speaker, under leave to extend my remarks, I include a letter directed to the Editor, New York Times, on the Rules Committee by the Honorable John J. O'Connor, a former Member of this

House and a former chairman of the House Rules Committee.

THE RULES COMMITTEE

JANUARY 5, 1949.

EDITOR, NEW YORK TIMES:

In his column, appearing in the Times, of January 4, your Mr. Arthur Krock, in discussing the Rules Committee of the United States House of Representatives, made reference to me, as follows:

"What happened was that the cozy House dictatorship was broken up by a combination on the Rules Committee that got out of hand, from the viewpoint of a strictly administration speaker. The resistance began when John J. O'Connor of New York City became chairman by seniority and opposed certain legislative plans which were favored by the late President Roosevelt. This obstacle was cleared by purging Mr. O'Connor, the only victim of Mr. Roosevelt's efforts to this end in 1938."

The ascription is exact, only as to the purging and the date.

More important, however, once again the Rules Committee—indispensable to the expeditious transaction of the country's legislative business—becomes the whipping boy of the so-called liberal of yesterday, who becomes the totalitarian of today.

In substitution for the deliberate consideration of 12 or more (it was 14 in my term, as chairman) duly elected representatives of the people, autocratic power is now, substantially, lodged in the hands of one Representative, the Speaker.

Shades of Tom Reed and Joe Cannon! History not only repeats itself, but the hands of the clock, called progress, are once more turned back, and again by the self-labeled progressive, rather than by the untouchable conservative.

As to the factual statements, however, in Mr. Krock's nostalgic reference to me, history, when, and if, ever impartially recorded—some day when our country gets its heads out of the fabricated clouds of fuzzy-wuzzy liberalism—a familiar term on the Volga—and back to good, old-fashioned Americanism, which today is interpreted as intolerance, that record will disclose that the Rules Committee—of which I was a member for 16 years—under the 4 years of my chairmanship, or under its last chairman, Mr. LEO E. ALLEN, of Illinois, and very rarely otherwise, ever refused to cooperate with the other leadership of the House, in carrying out the will of the majority party, which is another way of saying the people. Contrary to deliberately confounded popular confusion, neither that committee, or any part of the legislative body, is an instrumentality of the President. The duly elected representatives, even of the President's party, owe their allegiance to the electors, in their respective districts, and to the country, generally. Our people will need considerable time to recuperate from this concocted confusion of the past 15 years, relating to the fundamentals of our Government.

Until this January 3, 1949, reversion to cannonism, the chairman of the Rules Committee was one of the recognized three leaders of the House. The only remaining step to a complete return to the good old days of boss, Uncle Joe, would be to again permit the Speaker to name the members of the Rules Committee, and to designate himself as chairman. It could happen, in the present day smoky thinking of the still extant New Deal set, and the apathy of the public, generally, when a President claims a mandate from the people when he is elected by less than a majority of the people voting, which sum total is less than a majority of all the citizens eligible to vote, which net vote, so received, by the winner, is about 14 percent of our entire population. It is only here that such an infinitesimal minority could be said to receive a mandate from "all the peepul" and go rampant, from there on.

As to Mr. Krock's factual statements, in reference to me, it is true that the then President, and, betimes, his First Lady, were refused—usually politely—some of the unique legislation they fathered and mothered. Moreoften, however, what the then President loudly proclaimed as legislation, denied by the autocratic Rules Committee, were the particular bills, which he praised publicly, but damned privately, and which he begged the leadership of the House not to let the damn things come to me. Exhibits—the Frazier-Lemke farm mortgage inflation bill, championed by Father Coughlin, the amendments to the Walsh-Healey bill, and other labor proposals, such as minimum-wage bill, which he likewise beseeched the Rules Committee to block, steadfast, behind the closed doors of its star chamber.

Now the Chief Executive will have to do this doubling on the Speaker.

As to the purging, the same tomes of reliable documentation of that event will divulge that that high compliment, which was paid me, resulted, in fact, from my open opposition to the President's Supreme Court packing bill, and his dictatorial reorganization bill, under which, among other ambitions of a czar, he even demanded the right to change the title of his office, as Caesar did thrice. Add, my bringing into the House the resolution creating the committee to investigate Un-American activities. Mr. Krock could have added another compliment to me, that in its annual convention, assembled in Madison Square Garden, in June 1938, the Communist National Party branded me as its No. 1 enemy.

Nor will exact history credit the then President with having accomplished that purging single-handed. That would be a denial of proper recognition to his legion of Communists and nondescripts, under the command of such engineers as Hopkins, Niles, Corcoran, John L. Lewis, Earl Browder, Ickes, and, in addition, substantially each and every individual who has just recently been exposed as a Russian spy and their fellow travelers. Hardley a name has appeared in the current press, of those belonging to this cell, who were not openly named by me, and others, more than 10 years ago, as enemies of our country, and its way of life. They all participated, at the behest of the President, in the purge of 1938. And, moreover, under the aegis of the then President, and with his full knowledge, these subversives were permitted to continue, thereafter, to keep boring from within. They have not all been flitted out, either. Weakening the prerogatives of the Rules Committee is another obeisance to their kind.

Yours truly,

JOHN J. O'CONNOR.

WASHINGTON, D. C.

Republican Know-How?

EXTENSION OF REMARKS

OF

HON. EDGAR A. JONAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. JONAS. Mr. Speaker, to admit a weakness is to evidence strength only if the admission is followed by constructive action.

At this particular time the opportunity is right for the Republican Party to take steps in rendering to the Nation an obligation that is essential to national strength and welfare. And I would admonish the gentlemen on the other side of the aisle not to revel in the state of the Republican Party at this time, but to consider seriously the fact that at the turn of the century the situation was reversed and the Democratic Party was in a similar condition.

The important point is not that one party is in power, and the other suffering from the effects of numerous defeats, but that something greater, and far more important and essential to the welfare of our country, is at stake. It is the continued existence of the two-party system on which our Nation has grown to its position of world and power prominence.

We cannot, and should not, hide the fact that the Republican Party, in the wallow of defeat, is torn with internal strife. We should openly admit it, and herald from the roof tops that we intend to work out our difficulties, not for the sole purpose of becoming the party in power but with the primary goal of offering to the American people a program to which they can anchor a faith in the continuation of a healthy and proven political ideology—the American two-party system.

In this connection, and under leave to extend my remarks in the RECORD, I recommend to the gentlemen on both sides of the aisle a reading of the following editorial from the Washington Times-Herald of Tuesday, January 25, 1949:

REPUBLICAN KNOW-HOW?

The current squabble over the chairmanship of the Republican National Committee is a fair example of the weakness of the Republican Party that has now for the better part of 20 years kept it from success.

Faced with the job of performing its duty as the opposition party to a strongly entrenched Democratc administration, it is still aimlessly flopping around with the idea of sticking up for its twice-defeated candidate, Tom Dewey, and ruining thereby any chance for a come-back.

Such a come-back is possible—but only if the Republicans can draw up a solid national and international policy the people of the country can understand when they are called upon to vote.

The aimless state of the GOP right now reminds us of the plight the Democrats were in back at the turn of the century. They had one candidate and not much else.

His name was William Jennings Bryan. He ran for the Presidency three times. And he was defeated each time.

As a delegate to the Democratic Convention in Chicago in 1896, Bryan made the famous cross-of-gold address and won himself the Presidential nomination.

He campaigned like mad, making 600 speeches in 27 States. His Republican opponent, William McKinley, won the election. Four years later, the Democrats nominated Bryan again. McKinley gave him another trouncing.

Not to be downhearted, his party put him up against William Howard Taft in 1908 and again he was defeated.

The present troubles of the Republican Party date back to 1940 when Wendell Willkie was selected to run against Franklin D. Roosevelt. Willkie made a perfect sparring partner for F. D. R., and was knocked cold in the election ring.

Willkie's idiotic performance of "me too" and "we can do it better" generated the confusion among Republicans that prevails today. Nobody has ever been able to find out what the Republicans stand for in either foreign or domestic affairs, since Willkie.

In 1944, the Republicans changed candidates but not tactics and Dewey shadowboxed with the New Deal without landing a real blow. He had the pants beaten off him.

And in the 1948 election it happened again.

Without bringing out one clear-cut issue which the voters could fasten on as a basis for decision, the Republican Party slid into another defeat and one from which it will be a long, hard time recovering.

It will get the Republicans nothing to tab Mr. Truman as a "minority" President. First of all he won and, second, in a number of States he ran behind the Democratic candidates for Congress and State offices.

Undoubtedly the record shows the Democrats, as a party, have more energy and vitality than the Republicans. The Republicans haven't come up with a new idea in many years and they have been afraid to stand up for the ones they inherited from the more vigorous leaders of bygone days.

In the June convention in Philadelphia last year, their only hope for a candidate who would make the campaign a battle was Senator TAFT. He was the only one to offer a clear-cut platform on both the domestic and foreign front. Among the leaders in his party who are now crying the loudest over their defeat are many who ran out on TAFT at that convention.

And now there are rumblings that Dewey is girding himself to run again in 1952. Our Mr. Tris Coffin reports in his column on this page today that Dewey plans to grab Senator WAGNER'S seat in the Senate and try a comeback from that vantage point. The action of Representative HUGH SCOTT, Republican, of Pennsylvania, national committee chairman, in naming a new executive committee packed with Dewey supporters seems to bear this out.

Instead of tolerating any more such palace politics among the defeated and discredited, the Republican Party ought to go out and find from the voters what kind of a popular party policy should be drawn up. Get it clearly set and then bang away.

We aren't making any suggestions to the Republicans as to just what this program should be, for right now we don't know what the party could offer that would do any particular good. But regardless of what they come up with we hope they get to work. The two-party system is essential to the welfare and the growth of this country. And a strong opposition is a necessary safeguard today with the majority party armed to the teeth with what it takes to ride high, wide, and handsome.

Thirty-second President

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in the Boston Herald, Wednesday, January 19, 1949:

TRUMAN, WITH JACKSON AS MODEL, MAY YET BE LISTED AMONG "GREAT"

(By Duke Shoop)

WASHINGTON, January 18.—What will the historians of the future say about President Truman? Into what category will the Missourian be placed? Will he be included in the bracket of great Presidents, or will the one-time farm boy be listed as "near great," "average," "below average," or as a failure?

The approaching inauguration of Harry Truman as President in his own right and his succeeding years will be watched closely by the historians. Last fall 55 outstanding historians were invited by Harvard's Arthur M. Schlesinger to rate the Presidents of the United States in five categories.

Three men were omitted from consideration: William Henry Harrison, who died within a month of taking office; Garfield, shot 4 months after his inauguration, and Truman, whose record is not yet complete.

ANALYZED RESULTS

Schlesinger himself then analyzed the results of this provocative rating, which placed the Chief Executives in the following brackets:

Great: Lincoln, Washington, F. D. Roosevelt, Wilson, Jefferson, and Jackson.

Near great: T. Roosevelt, Cleveland, John Adams, and Polk.

Average: John Quincy Adams, Monroe, Hayes, Madison, Van Buren, Taft, Arthur, McKinley, Johnson, Hoover, and Benjamin Harrison.

Below average: Tyler, Coolidge, Fillmore, Taylor, Buchanan, and Pierce.

Failures: Grant and Harding.

Andrew Jackson is believed Harry Truman's patron saint and the man the Missourian would like most to emulate in his conduct of the presidency. There is no question that the appeal of President Truman to the rank and file more nearly parallels the appeal of Jackson than any other former Chief Executive.

In his inaugural address from the front steps of the stately Capitol Building Thursday President Truman will chart a course which he will attempt to follow during the next 4 years. Andy Jackson finally won the Presidency after stirring public imagination. He had helped defeat the British and was quick to capitalize on the new nationalistic spirit. Jackson dedicated himself to expanding America and opening new frontiers. Then, too, he brought popular suffrage into being.

Those who know Truman best and scan the pages of history to find a new niche for the Missourian believe his best chance for a high place in history would be for him to carry on for American territorial expansion and for a new concept of American nationalism.

BOLD STEP POSSIBLE

He already has proposed statehood for Hawaii and Alaska. Thursday he might declare his wholehearted support for measures first conceived by Jackson more than a hundred years ago, and list on his legislative calendar, statehood for Hawaii and Alaska as must measures.

Harry Truman's surprising election already places the Missourian in a class by himself among Presidents in at least one fashion—the average-man, common touch he gives to his way of life. This sincere, homespun manner may be the trait that will attract historians and mark Harry Truman for the hall of fame.

Early Presidents were for the most patricians. Army officers who succeeded to the Presidency were used to rank, held themselves aloof and reserved. Teddy Roosevelt was an exception. Woodrow Wilson's appeal was that of a cold intellectual.

While Franklin D. Roosevelt, a great President in any historian's list, was the first to appeal directly to the "forgotten man," labor, and the many minority groups, no one would classify the late F. D. R. as having much in common with Andy Jackson or Harry Truman. Roosevelt was a synthetic commoner, born to the purple, educated at Groton and Harvard and in a traveling language school in Europe when Harry Truman was attending grade school in Independence.

Mr. Truman enjoys rare equipment for the camaraderie he feels for the man on the street. He came up the hard way and there are many Republicans today who now realize this rare appeal of the man from Missouri had much to do with his victory over Gov. Thomas E. Dewey. Already he has overcome obstacles his critics said couldn't be done—remain loyal to the end to the corrupt boss who gave him his political start and stand firm in the face of ridicule and leaders of his own party saying publicly he had no chance of victory.

Practical observers of the Washington scene know without suggestions from professional historians that President Truman takes office in his own right at one of the most critical times in American history.

The peace of the world for which we fought Germany and Japan is far from a reality. Half of our total Federal appropriations go for defense and to keep communism from spreading among the free nations of the world. The issues on the home front, with the voters asking more and more of a paternalistic government, are enough to keep the man in the White House busy if everything was peaceful and harmonious in the outside world.

To one who has known him and watched him since he first came to Washington 14 years ago, the remarkable thing is not how much Harry Truman has changed, but how little. The modest freshman Senator who sat in the back row of the Senate and in his good-humored way made friends with other freshmen is the same Harry Truman.

Critics of the Missourian say he is too easily swayed by friendships and this loyalty should be held in check for a cold, calculated approach to important decisions. Yet it is Truman's loyalty that has always characterized his life and may yet high light his political career.

The man who raises his hand Thursday and takes the oath of President is innately American. The man he succeeded never took his eye off what history might say about him. By being himself, Harry Truman's name may someday be alongside Andy Jackson's in the list of great Presidents.

It's Time for Serious Business at the Nation's Capital

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. MICHENER. Mr. Speaker, pursuant to permission granted me to extend my remarks, I include an editorial from the Ann Arbor (Mich.) News. This short editorial expresses the views of a majority of the people of the district which I have the honor to represent in Congress. It reads as follows:

IT'S TIME FOR SERIOUS BUSINESS AT THE NATION'S CAPITAL

Now to business, in Washington.

The victory celebrations are over. The excitement and glamor of the inaugural hoopla are dying. The speech making, so far as the Chief Executive is concerned, can be dispensed with for a while.

There is a lot of work to be done.

President Truman has made numerous promises to the people, in groups and in general. He has made threats, too, though they were not intended as such. He has asked for

so many billions of dollars to be expended hither and yon, for such a variety of purposes, that he must have additional sources of revenue; so he proposes new taxes.

The groups to be benefited by the spending may be expected to approve the proposed outlays. The men and women who must dig down to provide the funds feel less cheerful about the prospect.

The people do not want more taxes. They are paying at wartime emergency rates already. Not only are they threatened with more taxation coming from Washington, but there are also plans underway for additional levies in various commonwealths, including Michigan.

It is not fun, for a great many people, to try to fill the outstretched hands of governments for more funds and at the same time to try to meet personal financial obligations including acquiring sufficient food for their families at high prices.

Surely, no government, or no President or governor, intends deliberately to force large numbers of Americans into bankruptcy by such heavy demands on their incomes.

Social legislation, including socialized medicine, is on the tentative program for congressional action in Washington. New levies on pay rolls are proposed to finance the so-called reforms.

It is serious business that the President and Congress must take up.

Regardless of Democratic control of both Houses, opposition to many details of the Truman program seems almost inevitable.

Members of the Houses may line up according to partisan affiliation on some issues, but possibly not on others. Together, the Dixiecrats and Republicans can exert tremendous power. They should not do this merely for the sake of displaying it. But all legislators owe it to the people to scrutinize carefully and debate all executive proposals extensively and earnestly before getting down to a vote. This is true especially of all social legislation and all demands for more taxes.

The citizens of the Republic have a right to expect that their interests will be safeguarded that they really get justice for themselves instead of being required to pay the shot for favors to special groups.

It's a business proposition now—without music, without flag waving, without ostentation. A lot of brains and sincerity will be needed.

Columbia Valley Authority Legislative Program

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. MITCHELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I sent to President Truman Monday and a subsequent news article and editorial in the Washington Post relative to the legislative program for a Columbia Valley Authority:

JANUARY 24, 1949.

The PRESIDENT,
The White House.

DEAR MR. PRESIDENT: Your instruction to the several interested agencies of government to submit specific legislative recommendations for a Columbia Valley Authority is indeed welcome news for the Pacific Northwest. We, who have labored long for this vital legislation, are greatly pleased that such prompt action followed your messages to the Eighty-first Congress in which you stressed the importance of extending without delay the valley authority principle for the maximum and unified development of regional resources.

You know from first hand observation that devastating floods and acute shortages of electrical power have, more than ever, impressed upon our people in the Northwest the need for a more efficient and greatly enlarged program of Columbia River development. Logic and experience both point to the CVA as the means of realizing the required program.

As indicated in our pleasant meetings, I have been reviewing the CVA bill which I sponsored previously in the Senate, and will be most happy to assist in every way possible the attainment of this great legislative objective for the Pacific Northwest.

With warmest personal regards, I remain,

Very sincerely yours,

HUGH B. MITCHELL,
Member of Congress.

[From the Washington Post of January 25, 1949]

TRUMAN CALLS FOR COLUMBIA VALLEY PROJECT

President Truman yesterday announced that Government agencies have been directed to prepare legislation immediately for a Columbia Valley Authority, patterned after, but probably differing considerably from, the Tennessee Valley Authority.

The agencies concerned are the Army engineers, Interior Department, Agriculture Department, Commerce Department, Budget Bureau, Federal Power Commission, and the Council of Economic Advisers.

Although experts in all these agencies have given considerable attention to this study in recent years, White House Press Secretary Charles G. Ross predicted it might be several weeks before any legislation will be ready.

VARIED REACTION

The White House announcement was greeted in the Pacific Northwest in varied ways. Business leaders, generally opposed to a valley development program, cautiously withheld comment pending presentation of legislation. Labor leaders unanimously approved it, and a bitter fight is promised.

Kennard Jones, president of the Spokane Pacific Northwest Development Association, called a CVA socialistic and said the plan would give political appointees dictatorial powers.

Albert Leslie, secretary of the Spokane Central Labor Council, said: "You can expect to hear cries of socialism from the people who will be against a CVA. You always hear such cries when anything for the people is proposed."

Oregon's Republican Governor, Douglas McKay, asked: "What's the matter with the way we're doing it now? We don't need to delegate authority to a board or a commission to regulate the economy of the Northwest."

J. D. McDonald, of the Oregon State Federation of Labor, expressed pleasure with Mr. Truman's action, as did Stanley Earl, of the CIO. The Oregon State Grange, which urged such action only 2 days ago, echoed the labor-union's praise.

The Interior Department prepared a voluminous report on the Columbia River Basin about a year ago. Copies were sent to Agriculture and Commerce for comment. Recently the Army engineers prepared another long report, known as the 308 report, which reached the other offices a short time ago.

The agencies addressed by President Truman on the subject make up an interagency group known as the National Resources Development Committee, which has been carrying on a continuing study of valley resources development for several years. Another regional group, the Columbia Basin Development, has been making a study restricted to the Columbia Basin in the Northwest.

DIVISION OF WORK

The division of work on the program will be:

Interior Department: Reclamation, power, administration.

Army: Engineering plans, flood control, navigation, and power.

Agriculture Department: Agriculture, forestry, soil conservation, etc.

Another agency called in for advice and aid in matters concerning water pollution is the Public Health Service.

When the agencies have prepared the bill, Mr. Truman will send it to the Capitol backed by a special message, White House officials said.

One of the problems that must be settled by the planners is the extent of the area of the authority. Some plans have limited the basin to the political boundaries of Oregon, Washington, Idaho, and a part of Wyoming. Other plans have taken in all the natural basin, which would add a small part of Nevada, Utah, and Montana. The source of the Columbia is in Canada.

The Authority may include several basins in the Northwest. Among these are the Puget Sound Basin, the Snake and the Klamath Rivers, as well as many smaller streams.

Representative HUGH B. MITCHELL (Democrat, Washington) would add a twist to the CVA not included in the TVA. That would provide for an advisory council, appointed by the governors of the States involved in the Authority, which would make periodic reports on the progress.

In his letter to the agencies, Mr. Truman said, "it is most important that concrete legislative proposals for such an Authority in the Columbia Basin be developed on a sound basis, taking into account characteristics and needs of the region, the interests of all parts of the executive branch, and the lessons of our prior experience with the kinds of operations which will be involved."

LONG-TIME ADVOCATE

Mr. Truman long has been an advocate of authority development for great river basins. He reaffirmed that stand in his opening message to the new Congress. He long ago endorsed a Missouri Valley Authority, which has encountered opposition from all 10 States in the region.

After a recent White House visit, Senator JAMES E. MURRAY (Democrat, Montana) reported Mr. Truman is still strong for an MVA. MURRAY is the chief proponent of the huge Missouri River project in Congress.

President Truman named Charles F. Murphy, administrative assistant, as coordinator of the work of the various agencies. Interior Secretary Krug appointed Assistant Secretary C. Girard Davidson, former counsel for the Bonneville Power Administration, to work with Murphy. The Bonneville project would be a part of any CVA. Davidson also formerly was an attorney for TVA.

[From the Washington Post of January 27, 1949]

COLUMBIA VALLEY

President Truman feels that the election gave him a green light to go ahead with the development of the Columbia River Valley on a broad regional basis. Aside from the diehard opponents of public power in the Pacific Northwest, there seems to be considerable agreement on the general objective of regional development. There is a great deal of dispute, however, over techniques. Any Federal program must contrive to reconcile two fundamentally conflicting factors; the pronounced distrust of Federal control, and the compelling need for some sort of top-level integration to eliminate duplications among the various agencies participating in the project.

It is fortunate, respecting the first point, that the President has avoided calling for a

mere repetition of the Tennessee Valley Authority. TVA is a unique achievement which, despite certain defects in such matters as soil conservation, has contributed materially to the welfare of the people. There is a wealth of experience in TVA to guide similar developments elsewhere. But to advocate a Columbia project in the TVA image, as some planners have done, would be to say that all regions of the United States are the same, which is a patent absurdity.

Nowhere, are individual and regional traits more pronounced than in the Pacific Northwest. This stems in part from the pioneering tradition of self-reliance. In some ways the ingrained fears of Government domination are irrational; for example, there seems to be little hesitation in the Northwest over accepting the benefits of federally directed reclamation and flood control. At the same time there is no denying that to allow these fears to predominate would be to thwart any effective unified plan to make use of all the valley's resources.

Lack of coordination is reflected in the disparate and often wasteful efforts of the Federal agencies now in the field—the Army Engineers, the Bureau of Reclamation, and the Bonneville Power Administration. There is a very real danger that any program that does not include integration of these projects will result in a mere superficial alliance such as the boondoggle now going on in the Missouri Valley under the Pick-Sloan plan.

The same may be said for the various efforts now under way within the region itself. These contemplate local direction of the development through compact between the four principal States involved—Oregon, Washington, Idaho, and Montana. Local direction has a great deal to commend it, but the question is whether any such program could be sufficiently insulated from political pressure groups to assure the extension of the project to all sections of the Columbia Valley. Moreover, Federal funds would still be required. It seems to us highly debatable whether the Federal Government should enter any such operation in which it did not have control over the objectives and efficiency of the operation on which money was to be spent.

What is necessary, in our opinion, is a reasonable compromise between the two extremes, retaining the principle of Federal responsibility for integration of the broad plan, but recognizing the importance of local representation and decentralized authority. Such a compromise could well make use of the device suggested by Representative HUGH MITCHELL of an advisory council to be appointed by State governors, as well as other means of bringing in the maximum of participation by residents of the valley. No sensible program can be evolved by yielding to the hyperthyroid cries of "socialism" that have already started. Neither can it come about through mere desk planning in Washington. This neglects the essential fact that for any project to succeed it must be solidly grounded in support of the people it encompasses.

Democracy at Work

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an editorial which appeared in the Jersey Journal on Monday, January 10, 1949.

This editorial, entitled "Boys' Town in Italy Shows Democracy at Work," is a clear indication of the spirit of democracy which moves Italy. Despite the many handicaps and despite the adversities, the people of Italy are democratic to the core. Its people have successfully resisted and beaten back the craftiest and most lavishly financed Communist assaults.

Italy has shown its willingness and its great desire to discharge its responsibility to the democratic nations of the world.

The following article speaks for itself:

BOYS' TOWN IN ITALY SHOWS DEMOCRACY AT WORK

Among criticisms which have been voiced of American relief efforts in Europe, one has been an apparent failure to sell democracy and democratic methods to people who have been left cynical and mistrustful, as well as homeless and hungry, by the ravages of war.

One of the encouraging signs of success comes from Italy, which, significantly, handed the Communists a sound trouncing in their bid for control of the government last year.

That success has been achieved in the establishment of Boys' Town (modeled largely after the famous Nebraska community founded by the late Monsignor Edward Flanagan), which is helping to provide for the thousands of street urchins left to make their own way, all too often by criminal endeavors, when the war deprived them of parents and homes.

Seven such Boys' Towns already have been built with American aid, and moves are under way to set up still others. The projects are sponsored by American Relief for Italy, which not only sets up the communities, but supplies them with food, clothing, medicine, and maintenance funds.

These towns take the boys off the streets, teach them to run their own communities in democratic fashion, and provide trade training which will enable them to carry out their part in the reconstruction of their country.

Conceived by Father Don Rivolta, a Milanese priest, the first such community was founded in 1944 at Santa Marinella, north of Rome, and has grown into five towns, combined into a republic. It is to serve as a model for others, with the ultimate goal of ARI a town in each of the 96 provinces in Italy.

A movement now is under way in various parts of the United States to raise funds for the establishment of such boys' towns. It costs about $150,000 to establish one. This sum, contributed here, is matched by the Italians through contributions of land, labor, and materials.

Such campaigns are to begin shortly in Philadelphia and in Vineland, N. J., in addition to a national campaign for $1,000,000 by the American food industry. Later a drive will be launched in Chicago to provide for a Chicago Boys' Town.

Whatever the results elsewhere, it would seem that American money is going toward an eminently worth-while cause in serving the orphaned children of Italy. Judge Juvenal Marchisio, of New York, director of ARI, sums up the significance of the youth communities thus:

"These towns, bearing American names, will be permanent memorials to our ideals and our way of life. The boys who grow up in them will always remember that America is a friend of Italy."

This country could find no better way of selling democracy where it will really count.

A Ship Without a Compass or a Rudder

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, some Members of Congress, who have been called reactionaries by some self-styled liberals, for the past 10 years have been endeavoring to get the Republican Party to adopt and aggressively follow a policy designed to promote the welfare of the Nation—protect the citizen's liberty.

We have gotten nowhere because the "me-tooers," who could only hear the acclaims of their political enemies and the pleas of representatives of foreign governments, seem to feel someone anointed them to sit on the lid whenever an aggressive move looking toward the retention of the people's freedom and the security of the Republic, but with which they did not agree, was made.

Some of us have been trying over the years to say what the editor of the Omaha World Herald, last night quoted by Fulton Lewis, Jr., so effectively wrote. Here it is:

God hates a coward.

That's gospel truth. If any witness were needed to attest it the Republican Party of 1936–48 would more than suffice.

For 12 years the Republican Party has been a coward: The worst kind of coward—a moral coward. In consequence it begins to take on the appearance of something the cat dragged in.

It is hard to define as an entity the Republican Party or any other large group of people, since however closely banded together, all cannot think alike in all respects. But, speaking broadly, the Republican Party consists of men and women who in firm conviction are opposed to the swift trend toward the omnipotent state that is sweeping over every section of the earth. Whether it be defined as communism, fascism, socialism, totalitarianism, statism, the New Deal, the insurance state, these men and women regard it as a thing of infinite menace, however cunningly disguised, and however ardently supported by good but misguided people.

But the Republican Party has lacked the courage to say what its rank and file believe. Out of hunger for the flesh pots it has lacked the patriotism, the loyalty to stand up for the free republic of the founding fathers and to fight for it. Due to that lack of moral courage, of loyalty to the American creed, the United States, almost the sole remaining bulwark against the advancing tide, finds itself without a spokesman, without a champion to proclaim and battle for its traditional glorious creed. And it finds the once-so-firm foundations of its temple crumbling.

The fact is known of all men.

Here, too, in our own America, the state is taking control and ownership of the people. It is using the power to tax to destroy their independence and self-reliance. It is converting freemen into vassals and dependents. It is devouring the substance of self-supporting people to render them self-supporting no longer, and to establish a condition of universal reliance upon the biased paternalism of a great white father—a father corrupted and corrupting, since

great power does corrupt and absolute power corrupts absolutely.

And the Republican Party has not dared resist the tide; it has gone along with it. Not out of conviction, but out of cowardice.

It has not dared to be a Daniel; to have a purpose and to make it known. Its plea for votes has been the shameful one; give us the offices, the power, and we'll give you as much of what we believe to be wrong as will the Democrats themselves.

Americans do not respond to any such appeal. They, too, hate a coward. They despise hypocrisy. They hunger for a leadership of good faith. They will accept a brave and fighting leadership tainted even with Pendergastism and absolutism rather than a leadership that crawls and trails its flag.

What a wonderful thing it would be if the Republican National Committee meeting here in Omaha, if other constituted Republican leaders, could realize how desperately these United States need an honest and brave Republican Party—how true Republicans above all others hunger and thirst for it. A Republican Party to raise high the flag of a loyal opposition. Opposition not alone to a misguided and recreant Democratic Party here at home, but opposition tenacious and resolute, brave and unyielding, to all the monstrous wrong and error that today menaces freedom, self-reliance, the courage to adventure, human dignity, in every land and every clime.

How joyously, with what reborn hope, men and women of the ancient faith of this Republic would rally about such a standard. Proud of it they would be in victory, no less proud in defeat.

Surely, surely, it shall not be recorded by amazed historians of a later day, that when the black flag of absolutism was raised back in the twentieth century, when the fate of all mankind was involved, there was nowhere, in any land, not even our own, an organized body of men and women who had the courage, the devotion, the wisdom, the loyalty to God who made men free, to challenge that foul intruder and to dedicate their lives, their fortunes, their sacred honor, to driving him back into the Dark Ages whence he emerged.

Never has there been sounded such a call to service as rings today in the ears of the Republican Party. Never, for men and women of courage, of character, of conviction, has there been afforded such an occasion for rising to the heights of human devotion to imperishable ideals.

The Republican Party can keep on crawling ignominiously along the dusty trail of an order it abhors but shrinks from challenging, or it can rise out of the dust of four merited defeats, stand erect and unafraid, proudly to take up the battle for all that free men prize.

Courage or cowardice? Loyalty or recreancy? Conviction or time serving? It is as simple as that, ladies and gentlemen of the Republican National Committee.

An Immigration Quota for the State of Israel

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. KEATING. Mr. Speaker, yesterday a free election was held in the newborn state of Israel. France has this week indicated her intention to recognize the existing government. Great Britain gives evidence of some modification of her hitherto intransigent attitude.

It is to be hoped that de jure recognition by our own country will shortly follow, now that the new state has clearly demonstrated her capabilities of self-government.

As a step along the path of world-wide recognition of the dignity and significance of this courageously founded nation, our Government should establish an immigration quota for the state of Israel.

There is now a token quota for the British mandate of Palestine with Transjordan, established by Presidential proclamation in 1938. Now that the mandate has been abandoned, this designation of the area becomes meaningless.

Today I have introduced a bill to provide that this quota shall be made available to natives of the State of Israel and that it shall be known as the quota for Israel.

It may be said that there is no need for such a quota, since the flow of population is entirely in the other direction. Naturally, indeed, that movement will now be accelerated, in view of the most recent demonstration of democratic inclinations on the part of the new nation. Nevertheless, even though there is not a single application for a visa under the terms of this measure, its passage will furnish concrete and continuing evidence that our country is accepting this brave young democracy as a full partner in the family of nations.

This legislation in no way increases the actual number of immigrants to this country, but simply alters existing law in the interests of realism and the betterment of international relations with a sister state whose beginnings are closely akin to the struggle of our forefathers to establish our own great Nation.

The Crisis in the Production of Strategic and Critical Metals

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. MEYER. Mr. Speaker, last year I supported the Russell bill designed to stimulate production and exploration of critical and strategic metals and minerals. Due to the then opposition of the Interior Department and the veto by the President the year before of a measure for the same purpose, that bill did not reach the floor of the House and was not voted on.

This year I have introduced a new bill similar to the Russell bill to provide substantially the same thing. A considerable amount of work was done on the redrafting of this bill which has resulted in marked improvement. The principal new features are that payments must be based upon efficiency, and that the provisions for covering exploration payments are written in some detail, including special features for small mines.

In the President's budget message he requested an appropriation to provide for exploration subsidies. I am now reliably informed that the President is favorably disposed to production subsidies and considers that his budget message leaves open to Congress the desirability of providing production subsidies on critical and strategic materials. Within the past week there has been much talk in official circles regarding the Russian refusal to ship any more manganese to the United States. Such an embargo on manganese shipments will seriously cripple our steel industry as approximately 45 percent of our present manganese requirements recently has been coming from Russia. Every ton of steel requires approximately 12 pounds of manganese, and there is no other source immediately available. Steel production would have to be cut back as manganese proportionately is lacking and domestic production of this material must be expanded.

Mr. Speaker, the enactment of this measure is most important for two reasons. First, for national defense. With the improvement in submarine warfare which has been given so much publicity recently, we cannot afford to rely upon water-borne materials in our essential needs. Secondly, in our broad view of economic and foreign policy, we cannot afford to rely too heavily upon foreign sources for materials absolutely necessary to keep our industrial machine functioning. Our basic wealth, meaning our factories and our productive capacity, has rested upon the development of domestic national resources. If we cease to keep our industrial machine in smooth operation—which, in turn, means avoiding a depression—we must have available a satisfactory, unceasing flow of raw minerals and metals. If we cease to obtain these materials domestically, then we shall become a processing nation as distinguished from a producing nation. We shall become another England compelled to be the policeman of the world, to enter into every armed conflict to force, if necessary, other countries to furnish us raw materials and force their purchasing our fabricated goods. Such a course will compel us to have the biggest armed forces in the world and inevitably lead to a quicker clash with Russia.

I therefore think it is vital to the future of America that we do everything to find new domestic sources of strategic and critical metals and minerals so that we may be independent and may continue our present American way. The best way to find new mines is to foster an active, healthy mining industry. By putting a large number of small mines into operation, it is inevitable that some should yield new rich ore bodies, and in such discovery lies our future prosperity and peace.

Interest in Statehood for Hawaii Widespread

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks, I include the following editorials.

The Dallas (Tex.) Times-Herald on January 12 said:

HAWAII'S STATEHOOD AMBITIONS

As the new Congress begins work the Hawaiians are making a strong bid for statehood, and it may prove successful. They are in a race with the Alaskans for the honor of having the forty-ninth star in the flag.

* * * * *

President Truman has long been in favor of bringing in Hawaii and the current Democratic platform has a statehood plank in it. More than a score of national and more than 60 local organizations have endorsed statehood for the Territory. In view of this, the present Congress would be justified in acting favorably, but some Members have not visited Hawaii and they may wish to postpone action until they can be sent there at Government expense to look it over.

The Territory will not become a full-fledged State overnight if Congress acts. It will have to draw up and adopt a constitution and elect State officials. More than a year can be expended in this process.

The McKeesport (Pa.) News on January 10 said:

THE FORTY-NINTH STATE?

Two fears so far have kept Hawaii from the realization of its great ambition to become the forty-ninth State in the American Union.

The first was its large number of Japanese residents who, despite all professions of loyalty, were considered dangerous in the years when we saw the possibilities of a Pacific war.

Now the fear is of the Communists, who have infiltrated Hawaiian trade unions and come, at times, to play a heavy hand in the affairs of the islands since VJ-day.

Despite the Reds, the request of Hawaii for statehood appears high on the agenda of the Eighty-first Congress with chances good for its fulfillment because the Congressmen are being advised that Hawaii has met and bested its communistic problem.

It has done so with the same technique by which the House Committee on un-American Activities sought to break the back of the Red movement here—the technique of exposure. The Hawaiian Government, by public hearings, has made clear to its people the nature of the Red plot, its machinations and its purposes.

Because the geographical limits of Hawaii make possible a pin-pointing of public attention, there are few, if any, literate people in the islands who do not understand the menace, perhaps better than we do generally. So, on the principle that an enlightened public is the first requisite for statehood, Hawaii qualifies in this age of crisis and should be admitted, graciously.

The East St. Louis (Ill.) Journal on January 3 said:

HAWAII STILL WAITING

Statehood for Alaska and Hawaii are issues certain to come before the Eighty-first Congress. Hawaii was almost admitted in the Eightieth Congress only to be halted for another congressional inquiry as to fitness. This sixth investigation was carried out with hearings in Honolulu by Senator HUGH BUTLER.

It would seem that after six investigations there would be little left to determine whether Hawaii should be one of the United States. Yet there is the fact that Senator BUTLER (Republican, Nebraska) conducted the last hearing as chairman of the Senate Committee on Interior and Insular Affairs and the November election removes him from that position in a Senate controlled by Democrats. The Democrats may want to make an investigating trip to Hawaii.

The Senate committee voted 7 to 5 to delay consideration of the statehood bill after the House had passed it. The reported reason for the committee decision for delay was a threat of a Communist movement in the islands.

What Senator BUTLER will report to the committee has not been announced. In Honolulu he heard witnesses pro and con on the situation. It will be up to the committee to decide Hawaii's immediate future. There apparently is no racial issue to delay statehood. If Senator BUTLER did not find evidence that communism is in control, and apparently he did not, there should be little delay in making Hawaii the forty-ninth State.

The Messenger of Fort Dodge, Iowa, on January 12 said:

HAWAII'S FIGHT FOR STATEHOOD

Hawaii will determinedly renew its efforts for statehood in the new Congress and with great hopes for success.

The Territory's optimism stems from the following developments:

1. The Democratic Party, now in control of both houses of Congress, carried a plank in its national platform calling for "immediate statehood" for the territory.

2. President Truman has twice recommended its immediate admittance in messages to Congress and has frequently reiterated his support of Hawaii's statehood efforts.

3. Recommendation that Hawaii be granted statehood and active support of the cause by the Department of the Interior which has jurisdiction over territories.

4. Strong public support of Hawaii's statehood bill by the Nation's press, national organizations, veterans' groups, educational bodies and State governors.

5. Progress of Hawaii statehood legislation during the last Congress. The House overwhelmingly passed the bill and sent it to the Senate. There a subcommittee of the Senate Committee of the Interior and Insular Affairs after an investigation in Hawaii recommended immediate favorable action by the Senate. However, the full committee by a 7–5 vote, deferred action until more of its Members could make a trip or trips to Hawaii. The legislation expired with the last Congress.

Along with this fight in Congress, Hawaii is planning a 1949 battle for statehood on another front, which might prove more effective than present legislative action in Washington.

Plans are under way in Honolulu to have the Territorial legislature call a constitutional convention sometime this year regardless of what happens to the Hawaii statehood bill in Congress.

Under the plan the Territory would elect delegates to the convention and draw up a state constitution. The constitution would then be presented to Congress for ratification and if ratified Hawaii would enter the Union as a State.

The procedure would eliminate expensive and time-taking congressional investigations which have been held in the Territory year after year. The history of Hawaii's statehood fight shows that congressional committee after committee has visited the Territory and reported Hawaii ready for statehood. None has ever recommended against it.

Because the political complexion of Congress changes, and new Members named to committees to study the legislation have deemed trips to the islands necessary for further study, Hawaii has experienced delay after delay in its quest.

The University of Hawaii's legislative reference bureau reports that there is plenty of precedent for the new approach.

Their studies show that 14 of the 48 States drafted constitutions before any statehood enabling act passed Congress.

The States so listed are Arkansas, California, Florida, Idaho, Iowa, Kansas, Kentucky, Maine, Oregon, Tennessee, Vermont, Texas, West Virginia, and Wyoming.

They also point out that California, a republic for a short time, petitioned Congress to be organized as a Territory and when Congress adjourned without taking action, California went ahead and adopted a State constitution and elected representatives to Congress.

When Congress met again it ratified the action and admitted California to statehood.

Socialized Medicine's Record

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a recent editorial from the Everett (Mass.) Evening News-Gazette:

SOCIALIZED MEDICINE'S RECORD

Dr. A. Lexington Jones, of Christ Church, New Zealand, recently spoke at length on the experience with government medicine in that country. In the course of it, he posed and answered three practical questions which provide a test of the kind of service socialized medicine provides.

First, are the people getting their money's worth? His answer was an emphatic "No"—largely for the reason a cumbersome and costly bureaucracy administers the plan.

Second, has the system improved medical service? Again the answer is "No." Too many people are consulting doctors unnecessarily, on the grounds that they must pay a tax for medical attention and so may as well get it whether they need or not. As a result, overworked doctors simply don't have the time to give each patient the consideration he should have.

Third, has the system reduced the incidence of disease? Once more the answer is "No." Little of the money collected by the Government for the medical scheme is used for reseach work. And individual physicians have little time or incentive for reading, investigation, and advanced study.

There are many other arguments against Government domination of medicine. These are simply three of the most important from the people's point of view. Wherever tried, it has resulted in a deterioration of standards—and a sharp upsurge in Government costs. Exactly the same thing would happen if we were so foolish as to adopt compulsory Government health insurance here.

Six Fatal Blunders

EXTENSION OF REMARKS
OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, January 27, 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Six Fatal Blunders," published in Human Events of the issue of January 19, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SIX FATAL BLUNDERS

(By William Henry Chamberlin)

The First World War produced a peace settlement, although one that was full of seeds of future wars. World War II has produced no settlement at all. The appointment of Dean Acheson, as the third Secretary of State to hold that office since the last war, makes it appropriate to examine the net accomplishment of our bipartisan foreign policy.

A person who had gone into a Rip Van Winkle sleep on January 19, 1939, waking up today, would have a curious feeling of: "This is where I came in." He would again sense a mood of nervous waiting for the next move of an aggressive dictatorship. Only the location of the dictatorship, not the nature of the moves, would have changed.

The expansionist initiative that formerly belonged to Berlin and Tokyo is now concentrated in Moscow. The constant threat to world peace and stability is at least as serious. Admittedly, the Soviet Union is less efficient technically than Germany was. The many peoples who live under Soviet rule are less united in devotion to their system than were the Japanese. There was no equivalent either in Germany or in Japan for the mass surrenders of millions of troops which took place at the very beginning of the war in Russia, nor for the voluntary enlistment of hundreds of thousands of bitterly discontented Soviet subjects in the German armed forces.

On the other hand, Stalin possesses the advantages of a vast territorial base, the Heartland of which the British geo-politician Mackinder wrote. Stalin also commands a huge population and a much larger international fifth column than Hitler, Mussolini, or the Japanese militarists ever controlled. Winston Churchill, who bears no small share of the responsibility for "bringing Asia to the Elbe," to use his own vivid phrase, recently admitted that the policy of appeasing Stalin had failed even before the end of the war. To quote Mr. Churchill:

"The gulf which was opening between Asiatic Communist Russia and the western democracies, large and small, was already brutally obvious to the victorious war cabinet of the national coalition even before Hitler was destroyed and the Germans laid down their arms."

Churchill suggests that the United States and Britain should not have dispersed their armies so quickly, that British troops should have entered Berlin and American troops should have occupied Prague. But the blunders that lost the peace go farther back than these missed opportunities. One can recognize six conspicuous errors which in the aggregate produced a condition that is neither war nor peace.

II

These blunders, listed chronologically, were as follows:

(1) The guaranty of "all support in their power" which the British Government gave to Poland "in the event of any action which clearly threatened Polish independence." This guaranty proved impossible to implement. It was of no practical aid to the Poles in their unequal struggle against the German invasion. It was not even regarded as applicable against Russia in the case of the Soviet invasion of Poland which was launched in full understanding and complicity with Hitler.

What the guaranty accomplished was to put Britain and France into war with Germany on an issue in which the Western Powers could not win. Even after the United States and the Soviet Union entered the war and Hitler was crushed, Poland was not liberated, but was subjected to totalitarian tyranny directed from Moscow. There is no proof and little probability that Hitler would have attacked the west if he had not been challenged on the Polish issue. The course of history would have been different, and much less favorable to communism, if the first shock of Hitler's attack had fallen not on the west but on the Soviet Union; if the Western Powers, not the Soviet Union, had played the role of spectators during the first two years of the war.

How far American pressure was responsible for the British guaranty to Poland is hard to determine. There is fragmentary but interesting information in a German white paper, based on material captured in Warsaw, indicating that American diplomacy was playing an active role behind the scenes, urging the British and French to assume a burden that was beyond their strength.

(2) The second major blunder was the unconditional surrender slogan tossed off by Roosevelt in a moment of casual improvisation at Casablanca, in January 1942. This slogan was a godsend to Goebbels and was used over and over again in Nazi propaganda. As we know from the diary of Capt. Harry C. Butcher, General Eisenhower's naval aide, Eisenhower and his military associates felt that this blankly negative slogan increased the human losses and intensified their difficulties.

"Unconditional surrender" was a tremendous damper on the German underground groups which were working against Hitler. As Allen W. Dulles comments in his book, The German Underground:

"It sometimes seemed that those who determined policy in America and England were making the military task as difficult as possible by uniting all Germans to resist to the bitter end."

III

(3) We find the third blunder in the policy of getting along with Stalin on a basis of all-out appeasement, giving everything that was asked and asking nothing in return, not even an honest implementation of the Atlantic Charter, to the terms of which Stalin was a cosignatory, in regard to Poland and the Baltic States. This appeasement was a continuous, undeviating process, from the time when Hopkins first went to Moscow in the summer of 1941 until the same Presidential emissary made his last trip to the Soviet capital in June 1945, and meekly swallowed the final insult: the treacherous arrest of 15 Polish underground leaders.

As a result of this appeasement, which reached its high point at the Yalta Conference in February 1945, our professed war aims, the Atlantic Charter and the Four Freedoms, became a laughingstock. One wartime ally, Poland, was reduced to the status of an outlying Soviet province. Chinese vital interests in Manchuria were sacrificed, without any consultation with China. The result there is now apparent to everyone, as the Soviet moves to take over all that Japan lost.

We were the givers, the Russians the recipients of lend-lease aid. Yet the following candid excerpts from a report by Gen. John R. Deane, head of the American military mission to Moscow, to General Marshall, might almost suggest that the reverse was the case:

"After the banquets we send the Soviets another 1,000 airplanes, and they approve a visa that has been hanging fire for months. We then scratch our heads to see what other gifts we can send, and they scratch theirs to see what else they can ask for. * * * In short we are in the position of being at the same time the givers and the supplicants. This is neither dignified nor healthy for United States prestige."

(4) The fourth egregious blunder was adoption by the United States and British Governments of the incredible Morgenthau plan for the economic destruction of Germany. This was officially announced at the second Quebec Conference in September 1944, where a communiqué was issued calling for the destruction of industries in the Ruhr and the Saar and the conversion of Germany, one of the most densely populated areas in Europe into "a country primarily agricultural and pastoral in character."

While the full insanity of the Morgenthau plan (which called for the destruction of all mines in Germany) was never put into effect, enough of its vindictive spirit got into the Potsdam Agreement and the general functioning of American Military Government to work incalculable harm to American national interests and to European recovery. A belated effort to redeem something from this disaster is now under way.

IV

(5) The curious miscalculation of the situation in the Far East was the fifth major blunder. In 1945 this found expression in overestimation of Japan's continued power of resistance and underestimation of the political undesirability of Soviet entrance into Manchuria and Korea. Captain E. M. Zacharias, naval language expert on Japan, who made effective broadcasts to that country in the last months of the war, expresses this opinion in his book Secret Missions:

"If the detailed interpretations of the unconditional surrender formula had been forthcoming in June rather than the end of July, the war would have ended without Soviet participation and before the dropping of the atomic bombs on Hiroshima and Nagasaki."

(6) Last, but perhaps not least, was the hasty improvisation, amid much exaggerated ballyhoo, of the United Nations, without giving that organization either effective power to mediate and adjudicate in disputes between the major powers, or a definite peace settlement to sustain. The result has been much like what would be expected if an architect should create an elaborate second story of a building, complete with balconies, while neglecting to construct a firm foundation.

These, I think, are proved blunders which no subsequent historical revelations and discoveries can explain away. No doubt there will be such revelations and discoveries, which may lead to a shifting judgment about some individual responsibilities. And it is easy to think of subsidiary causes which help to account for a political and diplomatic defeat of unexampled proportions, in spite of complete military victory.

President Roosevelt's mental and physical debility in the last year of his life was a far

more serious handicap than is as yet generally realized. A strong, independent Secretary of State might have remedied this weakness. But in the last months of 1944 and the first months of 1945 the occupants of this office were the invalid Hull and the amateur Stettinius.

News and radio commentators during the war also bear a heavy responsibility for feeding the American people misleading information. The full story of Communist infiltration into policy-making and opinion-forming agencies of the Government has not yet been told. But the roots of our "defeat in victory", to use the apt phrase of Polish Ambassador Ciechanowski, are to be found in the blunders summarized above.

Correspondence Relating to the Special Small Business Committee

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, January 27, 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD some correspondence which has recently passed between Mr. George J. Burger, director in charge, Washington Office, National Federation of Small Business, Inc., and the junior Senator from Washington. Each member of the Banking and Currency Committee received a similar telegram from Mr. Burger. In his telegram Mr. Burger challenges, unintentionally I think, the sincerity and good faith of the action which the Banking and Currency Committee recently took in creating a Small Business Subcommittee. For the reason that the Senate Special Small Business Committee is scheduled to expire on January 31, 1949, and because I believe that my response to Mr. Burger reasonably represents the views of Chairman MAYBANK and other members of the Banking Committee, the telegram and letter in question may be of substantial interest to other Senators and to those concerned with the affairs and problems of small business throughout the Nation.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., *January 18, 1949.*
Hon. HARRY P. CAIN,
Senate Office Building:

The action of your committee, Banking and Currency, in voting "No" to continuing the Senate Small Business Committee in the Eighty-first Congress reaches us with considerable alarm. In fact, it is very serious. We have personally appeared before both Democratic and Republican platform committees at their annual conventions recommending two major actions to protect small business at the local level:

1. Vigorous antitrust law enforcement.
2. Continuance of small business committees.

The Senate Small Business Committee exclusively handling the problems of small business has done a commendable job for the past 8 years. We believe it is as important for the problems of small business to be handled through it's own committee as well as the problems of agriculture, finance, education, and labor, etc., are handled in their own committees. The interest of the Federation is exclusively devoted to the basic problems of small business. How are we going to explain your committee's action to our 100,000 or more membership throughout the Nation in our official publication The Mandate, which goes to press within a few days? Please, it is urgent, that we receive a message from you as to your vote so that we may correctly inform our Nation-wide membership. We are holding release of The Mandate awaiting your answer.

GEORGE J. BURGER,
Director in Charge, Washington Office, National Federation of Small Business, Inc.

JANUARY 19, 1949

Mr. GEORGE J. BURGER,
Director in Charge, Washington Office, National Federation of Small Business, Inc., Washington, D. C.

MY DEAR MR. BERGER: Your telegram of yesterday is entitled to a full and prompt response and I am anxious to give it both. I told you this during our telephone conversation of yesterday afternoon.

What puzzled me about your telegram was its evidence that in your official capacity you are seemingly unaware of what you ought to be rather familiar with. I say this in friendly fashion and in hope that I shall be given an opportunity to know more of you and the fine organization which you represent.

Let me discuss and answer your telegram in some detail.

You ought to have known that the Senate Banking and Currency Committee didn't vote "No" to continuing the Special Senate Small Business Committee in the Eighty-first Congress. What the committee did, and its action was given wide publicity in the press, was to vote unanimously to create a small business subcommittee within the standing committee. This subcommittee is to consist of nine members, five Democrats and four Republicans. Because of the recognized importance of the small business subcommittee it will have as its chairman the chairman of the Banking and Currency Committee, Mr. MAYBANK of South Carolina.

Over the telephone you told me that you had been following small business considerations within the Congress for years. This can only mean to me that you are a close student of the CONGRESSIONAL RECORD, that you attend most public hearings on small business committees, and that you are in rather constant attendance during the small business debates which take place on the floors of both Houses. If these assumptions are correct it means that you ought to understand every reason which encouraged and even required the Senate Banking and Currency Committee to take its recent action.

You know full well that the Reorganization Act intended to make the continuance of special committees both unnecessary and undesirable. You must remember that when the Special Senate Small Business Committee was authorized by the Eightieth Congress the understanding on both sides of the aisle was that the work of the committee would be assumed at the earliest practicable date by the Banking and Currency Committee and that the expiration date of the special committee was to be January 31, 1949. During the debates on the subject in both Sessions of the Eightieth Congress these understandings were made clear and agreed to by almost every Senator.

By way of concrete compliment to the Senate Banking and Currency Committee it has undertaken to anticipate an important requirement. There is no intelligent reason to assume that the Senate will authorize the Special Small Business Committee to continue beyond its coming expiration date. There is every logical reason to assume that it won't be continued. In recognition of this perfectly reasonable assumption the Banking and Currency Committee has signified its willingness and desire to undertake a large and imperatively important responsibility. The committee has not only created a subcommittee but it has introduced a Senate resolution which applies for funds adequate to the intended work. It has further made clear in the resolution that it is prepared to accept, on January 31, the files of the Special Small Business Committee.

I have been a member of the Special Committee on Small Business for 2 years. In my opinion that committee has been of considerable and material assistance to the needs of small business. Against this background of approval and support for what the special committee has accomplished I am firmly of the considered opinion that the needs of small business will receive an even greater consideration from the recently created Small Business Subcommittee of the Banking and Currency Committee. This latter committee can take legislative action on those recommendations which are to be made by the subcommittee. The outstanding weakness of the Special Small Business Committee was that it had, as you well know, no legislative authority of any character. It seems to me that small-business men everywhere ought to be encouraged by that action which has recently been taken by the Banking and Currency Committee. It ought to suggest to them that the Senate is determined to give continuing and permanent consideration to the problems of small business throughout our Nation.

I hope the substance of my reply has cleared away your uncertainty and that it, together with assurances you will surely receive from other committee members, will be made available to your membership.

Perhaps an attempt will be made to continue the Special Senate Small Business Committee. Should the Senate decide to continue the special committee there will be no need for a standing committee's subcommittee on small business. If the special committee is not continued the Banking and Currency Committee will be prepared to render good service.

This has been a frank letter and it has constructively criticized your lack of understanding concerning the action which has recently been approved by the banking committee. I hope to work closely in the future with you and your associates but I shall continue to insist that you understand what we mean to undertake and do. When you have questions in the future I would encourage you to visit with me personally or to call me by phone. This relationship will make it unnecessary for you to send me telegrams which are obviously subject to various interpretations.

With kind personal regards, I beg to remain
Very sincerely yours,

HARRY P. CAIN

Britain's Social Experiment

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. HARVEY. Mr. Speaker, with consent of the House, under the privilege of extending my remarks, I insert an edi-

torial from the New Castle (Ind.) Courier-Times, issue of January 24, 1949:

BRITAIN'S SOCIAL EXPERIMENT

A recent Associated Press dispatch from London said "Britain's national health service—the world's largest experiment in socialized medicine—is undergoing a strain." That strain, in the view of Health Minister Bevin, results from the fact that "too many are demanding too much." In other words, people are working on the theory that they may as well visit the doctor whether they are sick or not, because free medical service is coming to them. This situation has reached so extreme a point that Mr. Bevin issued a public statement in which he said: "Don't let us become a nation of hypochondriacs. I ask the public to use their doctors wisely and only when they really need them."

It is also evident that the cost of providing free health service for all is approaching a critical point. The Government's original forecast was that the bill would run to £150,000,000 a year. But the actual cost will exceed £200,000,000.

The most important thing, of course, is just what Britain's socialistic experiment is doing to the standards of medical care. Lord Horder, physician ordinary to the royal family, has this to say: "Medicine in Britain has become a branch of the civil service. We are no longer medical experts; we sit and sign forms. We have no time to diagnose our patients' diseases; but pass them on to other persons and institutions, knowing full well that they cannot dispense the health benefits which may or may not be needed." The socialized medicine seems to have resulted in overworked doctors, soaring costs, poorer treatment, with bureaucracy rampant. We had better take stock before we go all out like Britain has done.

Message of Pius XII to Spanish People

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Thursday, January 27, 1949

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the RECORD a dispatch by Arnaldo Cortesi, published in the New York Times on December 13, 1948. The dispatch has reference to a message addressed to the Spanish people by His Holiness, Pope Pius XII.

In drawing the attention of my colleagues and of my fellow countrymen to this splendid statement of His Holiness, Pius XII, I wish to emphasize that the Pope's view coincides exactly with the principles and the facts and the judgments that have been upheld throughout the world by my friend, Dr. Joseph F. Thorning, associate editor of The Americas and World Affairs. During the past 12 years, when few voices were raised on behalf of the peoples of the Iberian Peninsula, Dr. Thorning, with intelligence and valor, has presented the truth about the victory which Spain and her Government scored over the Soviet Union. Fortunately, his efforts and his patriotic services in the other American Republics are bearing fruit. An exchange of Ambassadors between Washington and Madrid is a measure essential to our own security.

There being no objection, the dispatch was ordered to be printed in the RECORD, as follows:

His Holiness, Pope Pius XII, sent his affectionate blessing to Generalissimo Francisco Franco and to the Spanish Government at the same time that he sent it to the Spanish people today upon receiving the new Spanish Ambassador to the Holy See, Joaquin Ruiz Jimenez Cortes.

His Holiness expressed the hope that the world might concede to the Spanish people "that esteem which the many services rendered to the cause of religion and civilization give them the right to expect."

Amid the many troubles that disturb him, said the Pope, one of his greatest consolations is to know that he is at all times supported and assisted by the love and prayers of his beloved sons throughout the world, among whom are the Spanish people.

"How could we, therefore," he added, "withhold our affectionate blessing from them and from the head of the Spanish state and his Government? May the God of mercy and truth always protect the Spanish Nation—a land fecund of saints—so that above all dangers and thanks to the heroic zeal of its worthiest sons, it may always remain faithful to its noble Christian vocation."

Speaking of the world situation, His Holiness said:

"There is no lack today of upright spirits who, with sincerity, seek light for themselves, fraternity for those who live side by side within the same frontier, and understanding and peace in relations between nations.

"But it has happened more than once that their efforts have lost themselves between the mirages of apparent truths behind the preconceived dogmatisms of false conceptions or in an intricate maze of desires of the exigencies of the moment. Sometimes they seemed to consider only their own advantage or to be content to reach temporary compromises.

"It looks as though the great ethical rules, the eternal principles, do not exist for them and that their efforts, therefore, are doomed to sterility."

Compensation of American Prisoners of War

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 27, 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial which appeared in the San Francisco Examiner of December 1, 1948, entitled "An Unjust Delay."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN UNJUST DELAY

There has been an inexcusable and utterly cruel delay in the fulfillment of the intention of the last Congress for the payment of compensation to American citizens who were prisoners of enemy nations during the last war.

Although Congress passed a measure acknowledging such compensation to be an obligation upon the country, and President Truman signed the bill, nothing has been done to carry out the laudable purpose.

The explanation is to be found in the bitter conflict of political interests that prevailed between Congress and the President during last session.

While the Congress authorized the appointment of a war claims commission by the President and proposed that funds for its activities be provided by existing Federal agencies, Mr. Truman insisted that the failure to provide a specific appropriation for the commission nullified the measure.

So he refused to appoint the commission, and the Congress adjourned without meeting his conditions.

In the meantime, the more than 115,000 former prisoners and dependents, including both civilians and military personnel incarcerated during the war, many of them for as long as 3 years and all of them under unspeakable conditions of hardship and suffering, have been neglected.

A considerable number of the former prisoners have died during this interval of their neglect, the great majority of the survivors are in ill health in consequence of their ordeal, and their physical and mental as well as economic rehabilitation has been impossible.

Whatever the merits of the conflicting positions of Congress and the President on the implementation of the War Claims Act, it is a great shame and a grim tragedy that the most unfortunate victims of the war should be made to suffer while these cross purposes are pursued.

The American Government has been prompt and generous and even profligate in providing for the rehabilitation of the war victims of other nations, including many who were our enemies.

Why is it that only the American victims of the war, permanently impaired in health in many cases and frankly destitute in some cases, are pilloried upon the insistence of Congress that their rehabilitation be accomplished one way and that of the President that it be done another way?

It is not to the credit of either Congress or the President that a mere difference of opinion has exacted the grim penalty of continued suffering from so many Americans.

It will continue to be a matter of national discredit as long as a paramount and acknowledged obligation of the Government of the United States has scant attention, with an outpouring of the limited and dwindling resources of the country into the international ratholes which are reducing America to the economic levels of mendicant nations and may eventually pauperize the American people.

The Congress and the President were in agreement upon the principle of compensation for American war prisoners at a time when they were able to find agreement on very little else.

Now that the Congress and the President are of the same political party, it is to be hoped they will make it one of their first objectives to bring an end to the interval of unjust and cruel discrimination against the thousands of Americans who gave and suffered so much for their country in time of war and have found no surcease from their anguish in more than 3 years of peace.

Count of Electoral Votes

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, January 27, 1949

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the

Appendix of the RECORD certain newspaper editorials and articles dealing with the constitutional amendment proposed by Senate Joint Resolution 2.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post of October 5, 1948]

ELECTORAL SHENANIGANS

Georgia's response to the demand for a free expression of the public will in the Presidential election ought to set many citizens to thinking seriously about our outmoded electoral machinery. Called into special session by Governor Thompson, the Georgia Legislature refused to require that the candidates for elector in that State be pledged to any Presidential candidate. It is said that the Democratic executive committee will name electors favorable to President Truman. But the situation is such that many voters will doubtless have to cast their ballots without knowing for whom they are likely to be counted.

Over in Louisiana the legislature voted to permit the names of President Truman and his running mate on the ballot, but they cannot be officially identified as Democrats. It is true, of course, that they are not the choice of the Democratic organization in Louisiana but thousands of voters will regard them as the regular Democratic candidates. The fact that they cannot be so listed is certain to lead to confusion and might result in frustration of the public will. The only favorable aspect of the situation is that it brings starkly to public attention the obsolescence of our century-and-a-half-old electoral system.

Senator LODGE is sponsoring an admirable amendment to the Constitution that would have the effect of abolishing the office of elector and dividing the electoral votes of the States among the Presidential candidates in proportion to the popular vote cast for each candidate. That reform is long overdue. The shenanigans of some of the Southern States this year raise a question, however, as to whether it goes far enough. The electoral system we now have is based on the eighteenth-century idea that each of the States would name its outstanding statesmen to join with similar statesmen from other States in selecting the President. Actually the President has been chosen by the people since the days of Andrew Jackson, but the machinery that we continue to use is that left over from the era when the people were not trusted to choose their own President.

By eliminating the dummy electors who stand between the people and the Presidency Senator LODGE'S amendment would go a long way toward preventing political manipulations in Presidential elections. Still, it would leave the electoral machinery entirely in the hands of the States. Presumably a disgruntled State legislature could continue to vote the candidates of either of the national parties off the ballot. The operation of our national election machinery would still be at the mercy of 48 different law-making bodies having no national responsibility. We do not think the filling of the great office of President should hang by such slender threads.

The present issue is not, of course, whether Democratic votes in the South shall be cast for Mr. Truman. Rather, it is whether the people shall have a chance to make their wishes known through the ballot box. Perhaps it will be necessary to give Congress authority to require that the names of the candidates of the major parties be printed on the ballots of every State, under the party designation. That would not prevent the rise of splinter parties. But it would prevent local politicians in control of State machinery from denying a free expression of the public will.

The real question is whether the Nation should control its own electoral machinery in this vital operation of choosing a President. This country is no longer a mere aggregation of States held together by tenuous bonds. Having become a great Federal Nation, which is now playing a leading role in world affairs, the United States ought to leave open no chance that the fair election of its Chief Executive might be fouled up by a State legislature playing politics with election statutes.

[From the New York Times of November 21, 1948]

LODGE ELECTORAL PLAN PROTECTS SMALL STATES

(By Arthur Krock)

WASHINGTON, November 20—The move for reform of the system by which Presidents and Vice Presidents are chosen through the agency of the electoral college will doubtless be strengthened by the analyses of the returns of November 2 which emphasize that the Nation had a narrow escape from the projection of the contest into the House of Representatives for decision.

That would have been solely the consequence of the constitutional provision whereby all the electors of a State are awarded to the candidates for President and Vice President who have in that State a plurality of the popular vote, however small; and it would have blocked the national choice. The amendment proposed by Senator HENRY CABOT LODGE, Jr., of Massachusetts, would alter this method by dividing a State electoral bloc in proportion to the votes received by the several candidates, and this is the proposal which is expected to receive the bulk of whatever consideration Congress may give to the subject. The chief effects of this amendment, if submitted to the States and approved by three-fourths of them, would be to assure that (1) the party ticket getting the largest popular vote would be certified as elected; (2) a plurality instead of a majority of the electors would suffice, and (3) the choice would never devolve on the House of Representatives.

WOULD END COLLEGE ITSELF

Senator LODGE would do away with the electoral college as such but retain the electoral units of each State as provided in the Constitution—one for each Senator and Representative in Congress to which the State is entitled. Since these electors would always reflect the plurality choice of the voters, however, this question is being asked:

"What's the need of all this machinery?"

The effective answer is that most of the 20 small States, perhaps all of them, would never approve a constitutional amendment that deprives them of the two electors which they are allotted for their two Senators on an equality with the large States. And before an amendment can be adopted 36 of the 48 States of the Union must give their approval. These concessions to the small States by and large were the price of the Constitution itself; it would not otherwise have been adopted. The smaller Colonies served notice that, if they were not given equal representation in the Senate and the same number of electors per Senator, they would not join the Union.

THE CASE FOR UNIT SYSTEM

But it may be asked, granting all this, since the election under the Lodge proposal would go to the ticket with a national plurality of the popular vote, and the division of each State's electors would be in proportion to the votes received therein, what part of this concession in the Constitution would the small States lose? The clearest and most definite answer was made some years ago to a House committee by Representative Clarence F. Lea, of California. He gave these principal reasons for the retaining of the units of electors and his statistics still generally apply:

1. Nine States have over half the population of the country. These have 18 Senators and 18 electoral votes for those Senators. Thirty-nine States have the other half of the population, with 78 Senators and 78 electoral votes for those Senators. This represents the compromise by which the Constitution was adopted.

2. In the election of 1932 each elector chosen represented a national average of 231,000 voters. In 20 States, however, the electors were chosen by a local voting average 10 percent and more below the national average. If their votes were made part of a national pool and so counted, without first translating them into electors, these States would lose 10 percent and more of their power to determine the national result. So they would not vote for direct popular choice.

HOW "EVIL" IS MINIMIZED

3. But this "evil," implicit in the Constitution, is minimized by the fact that the 20 States are scattered over the map of the Union. They are in every section. Since most bitter political controversies in this country have been sectional, this distribution forecloses the probability that all would support one candidate.

4. Under the Constitution there is no universal law of suffrage. Each State has the power to determine the qualifications of its voters, and no amendment withdrawing that power could be approved. The result is that a much larger percentage of voting eligibles exists in one State than another. Hence the influence on a national election of States with stronger limits on the privilege of suffrage would be greatly reduced if the units of electors are done away with and choice made directly by an over-all popular plurality. This is another reason why more than 12 States would decline to approve such an amendment.

For example, in 1932 in Indiana 43 voted of every 100 qualified, but in other States only 6 in 100 went to the polls. In 1920—when Indiana and California were almost equal in population—43 of every 100 voted in Indiana, but in California only 27. In a direct popular voting pool this would have given Indiana 50 percent more influence proportionately than California. But by retaining the units of electors this is prevented.

LODGE'S PRACTICAL FACTORS

It was with these practical factors in mind that Senator LODGE, while providing for abolition of the electoral college and the requirement of Presidential choice by its majority, retained the State units of electors and the constitutional formula by which the number for each State is fixed. But under this plan no longer could a small pressure group, in a State closely divided between the major parties, have the power to swing all its electors to the party that promised it the most. They would be divided according to the number of votes each party ticket received out of the total cast.

Thus, in Ohio this year, which Mr. Truman carried by something less than 7,000, instead of getting all its 25 electors he would get a little more than half of them. And so forth.

The belief that reform in the system of Presidential choice is needed, as much as three-fourths of the States are willing to accept, is supported by one group of voting statistics in particular. This shows that the effect of awarding an entire State bloc for a plurality is to disfranchise millions of voters.

In 1912 Wilson got 1 elector for every 14,500 votes, and Taft got 1 for every 435,000. In 1928 a Hoover elector represented 48,180 popular votes; a Smith elector, 172,602. In 1932 a Hoover elector came with every 267,149 votes, a Roosevelt elector with every 48,351. And in 1948, on the basis of the present re-

turns, the score was—1 Truman elector, 78,123 votes; 1 Dewey elector, 113,990.

[From the Haverhill (Mass.) Gazette of October 23, 1948]

IF YOU ASK ME

The inquiring reporter asks 10 men and women this question: "Are you in favor of revising the Presidential election system by constitutional amendment as proposed by Senator LODGE?"

Richard E. McGlew, Prospect Street, West Newbury; bookkeeper in Haverhill: "I should think LODGE's proposal would bring about a more fair system. I'd rather see it that way than the way it is now. The new way would be more democratic."

Miss Katherine Gramenelles, 97 Auburn Street; cashier: "I think it would be a good idea, but it's a thing I don't know too much about. It seems it would be more fair to change the system. A man who gets the highest popular vote should certainly be elected."

Haig Shalvarian, 68 Cedar Street; Western Electric technician: "I like the idea. It would be a more fair way of electing a President certainly. It would be more representative of what the people want. I think if LODGE's proposal was on the ballot, the people would approve it."

John Magras, 2 Orchard Street; engineer: "I should think it would be a good idea. It doesn't sound as if it would call for a great change, just some small revision. That's all that's needed."

Raymond LeBlond, 9 Beacon Street; shoe worker: "I think it would be good for the Nation. I'm for anything that's fair and for the improvement of the country. The idea sounds as if it would be more democratic."

Joseph Gouthier, 80 Blossom Street; truck driver: "The actual electing of the President should be done by the public. After all, the people put him there. If 60 percent of the voters in Haverhill favor Truman, that's the way the votes should go."

Anthony Palermo, 161 How Street, Methuen; auto glass installer: "LODGE's way would be more fair. It sounds more democratic. I think a man should get electoral votes in proportion to the popular vote. That seems the only right way to do it."

William Friend, Kingston, N. H.; plumber and electrician: "Yes, I think the electoral college is a waste of time and money and effort anyway. I think the whole thing could be done by popular vote, for that matter. Why not?"

Miss Lorraine Hamel, 16 Powow Street, Amesbury; senior, St. James High School: "I like the idea very much. It would place the vote more in the hands of the people. The electoral system may be all right, but the people should have a more direct say."

Edward Caron, 86 Pecker Street; shoe worker: "Yes; each individual should be permitted to make his own choice in voting and have it count. If it's possible for a man who gets the highest vote to lose out, the system should be changed."

[From the San Francisco Chronicle of October 11, 1948]

A NEW ELECTION LAW?

A long-overdue piece of legislation got lost in the shuffle attending the end of the last session of Congress, but it is to be hoped that another try will win.

It is the bill by Republican Senator LODGE, of Massachusetts, and Democratic Representative GOSSETT, of Texas, and it would amend our national-election laws so that every candidate would be credited with electoral votes in exactly the percentage he scored in the popular vote. Should a candidate carry New York by only 1,000 votes, he would not be credited with New York's 47 electoral votes, but only with a small fraction more than half. The final total would be carried out to three decimal points.

The most striking result of the amendment, of course, would be to eliminate the possibility of a candidate being named President though he may have got fewer popular votes than an opponent, something which has happened three times in our Presidential history. But there would be other important effects.

Presidential candidates could show more independence in their preelection dealings with influential men in key States. The new relationship would not become utopian, as long as populous States breed local machines, but there could evolve a considerable change in degree; there obviously could be a substantial difference in the attitude of a candidate who might win 40 percent of a large State without conceding everything to the State boss, as against losing the whole electoral vote should he fail to carry the State, as the law is now.

The amended law would make it very much worth while for Republicans to campaign in the South and Democrats to campaign in rock-ribbed Republican States, since all the fractional vote would count. By the same token, it should bring out more voters who now do not bother if they feel sure to be outvoted in their State.

The amendment should tend to diminish the nuisance value of small parties, which exists now out of all proportion. It would no longer be possible for a small party holding a key position in a key State to swing the national election.

It should tend to lessen the present necessity of choosing candidates from key States, and thus broaden the field of eligibles for the most important post in the world.

The innovation will be resisted by State bosses and many professional politicians who find the present system more manageable. But a Congress sincerely desirous of perfecting our democracy will some day pass this measure, which political scientists have unanimously recommended for years.

Comprehensive Housing Bill Introduced by Republican Members

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. JAVITS. Mr. Speaker, the following is a summary of the comprehensive housing bill containing titles for urban development, redevelopment, and slum clearance, low-rent public housing, housing research, farm housing, privately owned housing for families of lower income, and amendments to existing aids to privately finance housing, introduced by the following Republican Members today: Representatives FRANCES P. BOLTON, Ohio; CLIFFORD P. CASE, New Jersey; GORDON CANFIELD, New Jersey; T. MILLET HAND, New Jersey; JACOB K. JAVITS, New York; KENNETH B. KEATING, New York; JOHN DAVIS LODGE, Connecticut; WILLIAM L. PFEIFFER, New York; R. WALTER RIEHLMAN, New York; and THOR TOLLEFSON, Washington. A summary of the bill follows:

DECLARATION OF POLICY

Establishes a national housing policy with the ultimate goal of a decent home for every American family.

TITLE I. URBAN DEVELOPMENT, REDEVELOPMENT, AND SLUM CLEARANCE

Loans are provided communities to assist them in clearing blighted areas by assembly, clearance, preparation, and sale or lease of land for redevelopment. A total of loans of $1,000,000,000 is authorized over 5 years. Capital grants totaling $500,000,000 over 5 years are also authorized to enable the communities to make redeveloped land available at its fair value by absorbing some of the costs of redevelopment. The Federal grant can amount to a maximum of two-thirds of the project's cost to the community; the community supplying at least one-third of the cost. In order to participate in this program communities must demonstrate that they have made an active effort to modernize building codes.

TITLE II. LOW-RENT PUBLIC HOUSING

Provision is made for the construction by State, county, or local housing authorities of a total of 800,000 public low-rent housing units to be built over 6 years. The annual construction rate of 135,000 units may be increased to 200,000 or decreased to 0, upon a determination by the President with the advice of the Council of Economic Advisers that conditions in the building industry justify such an increase or decrease.

Occupancy is restricted to families whose incomes are at least 20 percent below the minimum necessary to live in private housing. The bonds issued by the local authorities participating in the program remain tax exempt. Contributions of $80,000,000 are authorized for the first year and increased by $80,000,000 for 3 years to the annual rate of $320,000,000 maximum annual contributions for 40 years.

TITLE III. HOUSING RESEARCH

Directs the Housing and Home Finance Administration to undertake a program of research to develop and promote the use of new techniques and materials to achieve lower building costs. Authorizes grants to educational institutions and other nonprofit organizations for research.

TITLE IV. FARM HOUSING

Permits loans to adequate farms with earning capacity to carry interest and amortization charges but unable to get private financing to construct, improve, or repair housing. For farms which through improvement are potentially self-sustaining, a program of loans and grants is provided. This title is administered by the Secretary of Agriculture.

TITLE V. PRIVATELY OWNED HOUSING FOR FAMILIES OF LOWER INCOME

Provides a program of direct Government loans to cooperatives, limited dividend and redevelopment companies and nonprofit corporations for constructing low-rent housing units for families with incomes too low to afford private housing and too high to occupy public housing. Lower rents would be achieved through use of the going Federal interest rate and an extended period of amortization. Five hundred million dollars of loan funds are authorized for each of 6 years to build an estimated total of 360,000 units.

TITLE VI. AMENDMENTS TO EXISTING AIDS TO PRIVATELY FINANCED HOUSING

Liberalizes the provisions of title II and title VI of the National Housing Act by permitting increased maximum mortgage limits, increased percentage guaranty, and extended amortization period. Title VI is extended until March 31, 1950.

A comparison between the administration bill, the Senate bill and the House bill introduced today follows:

	Administration bill	Senate bill	House bill
Number of public housing units	1,050,000	600,000	810,000
Rate of construction..per year	150,000	100,000	135,000
Maximum accelerated construction..per year	250,000	150,000	200,000
Length of program....years	7	6	6
Cost (maximum contribution after 4 years)	$445,000,000	$240,000,000	$320,000,000
Amortization years	40	45	45
Tax exemption for local housing bonds	Taxable	Exempt	Exempt
Slum clearance	Identical	Identical	Identical
Farm housing	(1)	(1)	(1)
Housing research	(2)	(2)	(2)
Direct loans for lower middle-income family housing	(3)	(3)	(4)
Changes to FHA	None	None	(5)

[1] Loans to adequate farms are provided for all bills. Loans to potentially adequate farms are provided for all bills. Loans to farms of no economic value are provided in administration bill.
[2] Largely identical for all bills.
[3] No provision.
[4] Provision for 60,000 units a year over 6 years.
[5] Substantial improvements to aid private financing of housing construction.

The Servicemen's Readjustment Act is also amended to permit loans for 30 years. The 50 percent limit on sale of mortgages on the secondary market imposed by the Housing Act of 1948 is lifted. New limitations are to be set by regulation of the RFC.

TITLE VII. MISCELLANEOUS PROVISIONS

This title provides for a census of housing in conjunction with the regular decennial censuses. It also permits conversion of State low-rent or veterans' housing projects to assistance provided by title II. In addition, there are the regular provisions, on separability.

The American Ambassador to Argentina

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, January 27, 1949

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Dr. Lovelace Acclaims United States Argentine Emissary," written by Wayne L. Scott and published in the December 28, 1948, issue of the Albuquerque (N. Mex.) Journal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. LOVELACE ACCLAIMS UNITED STATES ARGENTINE EMISSARY

(By Wayne L. Scott)

The United States could do much toward solving its problems with Latin-American countries by turning the job over to James Bruce, United States Ambassador to Argentina, and United States Senator DENNIS CHAVEZ, in the opinion of Dr. W. R. Lovelace.

Dr. Lovelace returned Sunday night from South America, where he spent more than 2 weeks visiting several countries with Senator and Mrs. Chavez. He was the guest while in Argentina of Ambassador Bruce. He went to South America to aid in arranging for the meeting of the International College of Surgeons to be held in Buenos Aires, probably in April. He is first vice president of the United States chapter of the organization.

CHAVEZ WELCOMED

Senator CHAVEZ, the doctor reported, "was given a most hearty welcome at every stop we made, and made a big impression with the people, particularly the high Government officials. He can speak their language."

Ambassador Bruce, Dr. Lovelace said, "has done a remarkable job," and has done much to end the bad feeling which has prevailed between this country and Latin-American countries. He said all Argentina officials with whom he talked, including President Juan Peron, complimented Bruce highly.

"I am convinced we could solve our problems with South America by turning the job over to Bruce and Senator CHAVEZ, or men like them," Dr. Lovelace said.

Dr. Lovelace also returned with a different impression of Eva Peron, wife of President Peron, than that presented by some of this Nation's magazines. Mrs. Peron, he said, is tremendously popular with Argentina citizens and personally distributes much of the welfare aid given needy residents of Buenos Aires. After a recent tragedy which killed 43 persons, Mrs. Peron personally ordered the best of medical care for survivors and directed names of dependents of those killed be furnished her so she could arrange for them to receive aid.

NEEDS UNITED STATES DOLLARS

Argentina, which had a gold stock equal to $1,176,000,000 only 3 years ago has spent it so rapidly it now badly needs American dollars, Dr. Lovelace said. Argentina pesos have a normal rate of 5 for 1 American dollar, but are being exchanged on the black market at the rate of 8½ to 1, he said. That country is still better off than Chile, however, whose peso, normally valued at 30 to 1 American dollar, is now exchanged on the black market at the rate of 60 to 1, Dr. Lovelace said.

Dr. Lovelace said he favored adjustment of this country's import and export taxes to enable other countries to sell us more goods so they can replenish their stocks of dollars. "The sooner world trade becomes normal, the sooner the United States will be relieved of being a Santa Claus," he declared.

Dr. Lovelace termed Buenos Aires "The Paris of South America," and said it is "one of the cleanest cities I have ever seen."

"The subways are as clean as the average public building here, and much cleaner than the subways of New York," he declared.

The city has made unusual plans for well-being of its children and there are parks, playgrounds, lakes, golf and tennis courts everywhere, he said.

CLEAN CHILDREN

"In all our travels over the city we didn't see a single dirty-faced child," Dr. Lovelace said. "The children were all clean, well clothed, and well nourished. There was none who gave any sign of tuberculosis or malnutrition."

Dr. Lovelace traveled 15,000 miles on his trip—all of it by air. He joined Senator and Mrs. Chavez, who had gone there by boat, in Buenos Aires. They were guests at the American Embasy there, and were given use of the Ambassador's plane in flying to Ascension, Paraguay. Here they spent 24 hours, and Dr. Lovelace visited hospitals and the leper colony. He was impressed with the way spreading of the disease has been slowed by segregation of those afflicted. Children of patients are housed separately.

From Paraguay, the Chavezes and Dr. Lovelace went to Santiago, Chile, where they were guests of the Chilean Government. They were honored there by a banquet attended by President Gonzales Videra and his staff.

FLY IN PERON'S PLANE

The party then flew to Mendoza, Argentina, where the group left the Ambassador's plane and flew to Cordova, in the private plane of President Peron. At Cordova, Senator CHAVEZ laid a wreath before the statue of San Martin, who led the country in its fight for independence. The party then returned to Buenos Aires, where President and Mrs. Peron honored them with a dinner.

Dr. Lovelace flew back, but Senator and Mrs. Chavez are returning by boat and should arrive in New York about January 12.

Dr. Lovelace, the Senator's personal physician, said CHAVEZ' condition is "greatly improved." The Senator underwent a serious abdominal operation here several months ago.

Dutch Aggression in Indonesia

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. KLEIN. Mr. Speaker, Americans, and the peoples of Europe and Asia, were shocked at Dutch aggression against the Indonesian Republic this past December. This attack violated previous Security Council recommendations; it flouted the United Nations Committee of Good Offices, of which the United States is a member.

Since the establishment of the Indonesian Republic in 1945, the 70,000,000 people of Indonesia have tried to work out a peaceful settlement with the Netherlands. Holland has ignored democratic expression of the aspirations of Indonesia, twice broken its international commitments to the Indonesian Republic, and has resorted to armed intervention and economic blockade to crush Indonesian independence. The Security Council has been discussing the Indonesian crisis actively since July 1947 as a threat to world peace.

This aggressor nation, the Netherlands, dares defy the world because it has funds, arms, and powerful defenders in the Security Council. American lend-lease material is the foundation of Dutch military power. American loans and grants, totaling almost a billion dollars, have been used by the Dutch, not for re-

construction of their war-devastated nation, but for a war of conquest in Indonesia. At the very moment that the American Delegation to the Security Council criticized Holland's invasion of the Indonesian Republic, $270,000,000 of Economic Cooperation Administration funds were released to the Netherlands. To denounce Dutch aggression while providing funds which are used for that aggression is hypocrisy.

EFFECTIVE PROGRAM OUTLINED

The recent 19-nation Asian conference which denounced Dutch aggression and called upon the Security Council to take prompt action to remove Dutch troops from Indonesia, demonstrates growing international concern over this vital issue. The American delegation's position in Security Council discussions of this issue has been to criticize the Dutch action in words while refusing to advocate or support effective measures against it. The present so-called compromise resolution, initiated by the United States, meets the demands of the colonial-minded British and French delegations which are determined to prevent Malaya and Indochina from achieving independence. Can the Asian countries and other peoples interpret the American position as other than support of the aggressor and abandonment of the victim? Such a policy will not bring peace to Indonesia, it will not restore American prestige in Asia, nor strengthen the United Nations.

Many prominent Americans in public life—the clergy, business, and labor—have urged that the United States disassociate itself from the Dutch policy of aggression by cutting off all loans and grants to Holland until the Dutch stop their war in Indonesia. The world will weigh American words against American guns and funds in the Indonesian crisis. I wish respectfully to urge that consideration be given to the following recommendations as being essential steps in facilitating peace in Indonesia, and building American-Indonesian amity:

First. To condemn the Netherlands as an aggressor nation.

Second. To stop all financial aid to Holland.

Third. To press for immediate United Nations diplomatic and economic sanctions against the Netherlands.

Fourth. To call for an 11-nation United Nations Security Council commission to supervise immediate withdrawal of Dutch troops from Indonesia.

Fifth. To support the Indonesian people's fight for independence.

LETTER TO PRESIDENT

Mr. Speaker, I am embodying the main thesis of these remarks in letters to the Secretary of State and to the President; but I do want to say that I have been pleased and heartened by the attitude of disapprobation of the Dutch which has been expressed by the administration and by the American delegation to the United Nations, even if it has been less than I advocate here.

To make our ideals effective, to make the "four freedoms" meaningful, the United States must take the lead in resisting aggression and international bad faith. It is especially appropriate now that we should bear in mind the late President Roosevelt's effective hatred of tyranny.

I hope, Mr. Speaker, that other Members will feel moved to express their views to the administration in similar vein.

Situation in Indonesia

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

DEPARTMENT OF STATE,
December 22, 1948.

Following is the text of a statement by the Honorable Philip C. Jessup, United States representative before the Security Council at Paris today:

"My Government took the initiative in requesting an emergency meeting of the Security Council so the Council might take prompt and forthright action in dealing with the dangerous situation which has developed in Indonesia.

"At the outset, Mr. President, I consider it necessary to state that my Government's position in this matter is basically what it was in July and August of 1947 when the Council was previously confronted with an outbreak of hostilities in Indonesia.

"After the outbreak of hostilities in July 1947, the Security Council adopted on August 1, 1947, the following resolution:

" 'The Security Council, noting with concern the hostilities in progress between the armed forces of the Netherlands and the Republic of Indonesia, calls upon the parties (A) to cease hostilities forthwith; and (B) to settle their disputes by arbitration or by other peaceful means and keep the Security Council informed about the progress of the settlement.'

"At the one hundred and ninety-third meeting of the Security Council on August 22, 1947, the United States representative stated, and I quote:

" 'My Government believes that the Security Council acted properly and in entire conformity with the Charter in calling upon the parties to cease hostilities. We consider that paragraph (A) of the Council's resolution of August 1, 1947, so far as the Charter is concerned, is a provisional measure under article 40. This decision, in our view, was properly taken, without prejudice to the contentions of the parties, in respect to whether the Indonesian Republic is an independent state under international law.

" 'In our view, the Council's jurisdiction rested in the fact that large-scale hostilities were being carried on in Indonesia, the repercussions of which were so serious that they amounted to a threat to international peace and security.

" 'In the view of the United States, the Security Council has ample power to observe, if necessary, its own cease-fire order and to make certain that new hostilities do not break out which would threaten international peace and security.

" 'It is hardly necessary for me to emphasize the seriousness with which my Government would view a failure by the parties to comply with the Council's cease-fire order. Of course, in such an event, the Council would, under article 40, have to take such failure into account in considering further action.'

"The United States Government considers that the Council today is faced with at least as grave a situation as that of August 1947 and we believe that the Council must act accordingly.

"This is not a situation, Mr. President, where there can be any uncertainty as to whether there has been a break-down of a truce agreement. Indeed, the Government of the Netherlands has quite formally and officially announced that it has renounced the truce agreement it signed with the Government of the Republic of Indonesia on January 17, 1948. The armed forces of the Netherlands have in fact crossed the status quo line established under the truce agreement and are at this very moment carrying out military operations within republican controlled territory. It follows from this that the Council need not and should not await a further report from its agency on the spot, the Good Offices Committee, before deciding to order both parties to cease hostilities immediately.

"In the above connection I invite the attention of the members of the Security Council to the telegram, dated December 19, 1948, from members of the Good Offices Committee in Batavia. Paragraph 10 of the telegram reads as follows: 'The Good Offices Committee calls upon the Security Council to consider, on a basis of the utmost urgency, the outbreak of hostilities in Indonesia in violation of the Renville truce agreement signed by the Governments of the Netherlands and the Republic of Indonesia on the 17th of January 1948.'

"The outbreak of hostilities in Indonesia follows more than a year's attempt on the part of the Council's agency, the Good Offices Committee, to assist the Netherlands and the Republic of Indonesia to reach a negotiated settlement of their dispute.

"It is clear from the Committee's fourth interim report and its subsequent telegraphic reports, that the Committee has tried again and again to bring the parties together. Indeed, the efforts of the representatives on the Committee, acting both singly and collectively, even in the face of what has recently appeared to be an almost hopeless task, are, I am sure, fully appreciated by all the members of the Security Council.

"Following the adoption of the Council's cease-fire resolution of the 1st of August 1947, the efforts of the parties to settle their dispute between themselves met with no success. Accordingly, on August 25, 1947, the Council tendered its own good offices to the parties through the Committee of three members of the Council. Each party selected one, the third member was designated by the two so selected.

"The Council's Committee went to Indonesia in October 1947 to assist the parties directly and on the spot to reach a formal truce agreement, and also to assist them in reaching a settlement of their political differences.

"On January 17, 1948, the Governments of the Netherlands and of the Republic of Indonesia signed the Renville agreements, which established a formal truce and which laid down 18 principles as a basis for the negotiation of a final settlement of their political dispute under the auspices of the Good Offices Committee.

"After various delays, negotiations for a political settlement were finally begun under the Committee's auspices in March of this year.

"The Council will recall that these negotiations were suspended last June by the Netherlands, following the presentation of a plan for settling the dispute suggested by the representatives of Australia and the United States on the Committee. Later that month the Netherlands indicated its willingness to resume negotiations. However, as the Committee made clear in its fourth interim report to the Council, there have been no political negotiations under the auspices of the Committee since the end of May 1948. The introduction of that report emphasized that the long-continued delay in achieving a political settlement had had serious economic effects, had intensified both political difficulties within the Republic and political tension between the parties and had resulted in an increasing strain on the truce with the ever-present possibility of a general breakdown.

"That break-down has now occurred. In a telegram dated December 12, the Committee reported to the Council in part as follows:

" 'The setting up of an interim federal government by decree of the Government of the Netherlands, which is apparently to occur before January 1, 1949, will contribute further to the opinion of the Republic that the Netherlands Government has been proceeding unilaterally to establish ultimately a United States of Indonesia on its own terms and without the Republic. The formation of an interim federal government now without the Republic will greatly complicate a negotiated settlement of the Indonesian dispute and could create serious unrest in Indonesia.

" 'In the light of the statements made by the Netherlands delgation that "negotiations under the auspices of the Committee at this stage are futile," and that there are "irreconcilable" positions of the parties on certain issues, the Committee does not foresee the possibility of its bringing the parties together in bona fide negotiations.

" 'The Committee has no confidence that even the presently unsatisfactory level of truce enforcement can be maintained as the possibility of political agreement becomes more remote. The Committee can see in the present situation only intensification of the factors already making for further economic deterioration, general unrest, and social upheaval. Widespread hostilities involving the conflict of organized armed groups on a large scale might be the outcome.'

"In a telegram dated December 18, the Committee forwarded a letter from the United States representative on the Committee to the Acting Chairman of the Netherlands delegation which read in part as follows:

" 'In the 4½ months that I have been present in Indonesia as the United States representative on the Committee of Good Offices, neither I nor any other members of the Committee have had an opportunity to participate in, or to observe a discussion of any of these issues in the Committee of Good Offices or in the conference of the parties. Nor have we been given an opportunity to examine in any detail or in full context the opposing positions of the parties in the recent direct talks except as presented sketchily in the statements made by the two parties which are appended to the special report of the Committee of Good Offices to the Security Council of December 12.'

"In the light of the above record and in view of the recent events in Indonesia, my Government is unable to conclude that the Netherlands has either consistently or conscientiously endeavored to exhaust all possibilities of resuming negotiations under the Committee's auspices. This appears to us to be particularly true in the light of the fact that the truce agreement itself was, from all objective accounts, satisfactorily implemented in the beginning. As the Committee pointed out on November 26 in the introduction to its fourth interim report, however, 'at the time of the signing of the truce agreement, it was expected that a political settlement would follow within a short time. The truce has now been in force for 10 months. This is an extremely long period for any truce to remain effective and, in this case, the regrettable lack of progress toward a political settlement and the deterioration in the economic conditions within the republic have subjected the truce to an ever-increasing strain. The rising number of infringements of the truce agreement during this period is testimony to the relationship between the maintenance of the truce and successful progress in political negotiations.'

"After carefully studying the material thus far made available by the Committee, my Government fails to find any justification for renewal of military operations in Indonesia. This is particularly true in light of the fact that there has been a resort to force following a period of 7 months in which the resources of the Committee of Good Offices have not been utilized. If, as is alleged, violations of the truce agreement by the republic have been so extensive and so persistent over a period of time, then it seems to me that the Netherlands Government should have reported these violations directly to the Security Council before renouncing the truce agreement and resorting to military action by land, sea and air against the republic. This is especially noteworthy in view of the assurances offered the Council by the Netherlands representative the last time the Indonesian question was before the Council, and in view of more recent assurances offered the governments represented on the Committee of Good Offices.

"On the other hand, let us examine the circumstances under which the Netherlands Government has seen fit to abandon the truce. These are reported to you, Mr. President, in document S/1129/Add:1, dated December 20, 1948. The Good Offices Committee was physically separated on December 18. The chairman of the week, the Australian representative, and the Belgian representative were at Kallurang, the republican capital, and the United States representative was at Batavia some 3 hours distant by air. In the middle of the night on December 18, the Netherlands delegation handed a letter to the United States representative addressed to the chairman of the Committee. The letter stated that the truce agreement would be terminated in less than an hour's time. It went on to say that the republican government had been notified accordingly. But in the course of the night on which this letter was delivered to the United States representative in Batavia, telegraphic communications were cut off and permission for the Good Offices Committee aircraft to fly to the republican capital was denied. Thus no notice of the repudiation reached the Committee as a whole and as far as known, according to this document none reached the republic in Jogjakarta.

"Article 10 of the truce agreement reads: 'This agreement shall be considered binding unless one party notifies the Good Offices Committee and the other party that it considers the truce regulations are not being observed by the other party and that this agreement should therefore be terminated.'

"The Netherlands Government by the letter handed to the United States representative on the Committee purported thus to notify the Committee of its abandonment of the truce a matter of minutes later with no communications available. Similarly, the republican authorities in Batavia could not communicate with their capital and according to this report they were arrested less than 2 hours after receiving the notification.

"This then is the notification which the Netherlands asserts it gave the Good Offices Committee and Republic of termination of the truce. The United States representative and the Australian deputy thus concluded in their message to you, Mr. President, that 'the Netherlands have not fulfilled the requirements of article 10.'

"It is my understanding that the president of the Council has telegraphed the Committee to report to us fully on the most recent developments in Java and Sumatra. That report, together with the reports already received from the Committee will be of considerable value to the Council in estimating the causes of the present situation in Indonesia. I believe, however, that we should expressly instruct the Committee to prepare a report for us which will enable us to assess ultimate responsibility for the failure of the Committee's efforts to effect a peaceful solution. I think the members of the Council have a right to know, fully and in detail, why it is that from May until December the Netherlands and the Republic did not resume negotiations under the Committee's auspices. I think we should call on the Committee expressly to assess responsibility, as between the parties, for the failure to reach a negotiated settlement. Both parties solemnly accepted the Council's tender of Good Offices and I think the time has now come for the Council to know how it is that this particular method of settlement which seemed admirably suited to the circumstances, failed to produce the desired results.

"Under the present circumstances in Indonesia it will doubtless take the Committee some little while to prepare a report of this nature. Meanwhile, armed conflict is taking place there. The simple, massive fact is that the Council's own order of August 1, 1947, has been contravened. This is a matter with which the Security Council must deal immediately and without awaiting any further reports from the Committee. As I said earlier, this is not a situation in which there can be any uncertainty as to whether there has in fact been an outbreak of hostilities. It seems to me that the Council is obligated under the Charter at this stage of its deliberations immediately to order a cessation of hostilities in Indonesia and to require the armed forces of both parties immediately to withdraw to their own sides of the demilitarized zones which are delineated in detail in the truce agreement of January 17, 1948. I must reiterate my Government's view that the Council's cease-fire order of the 1st of August 1947 continues to be binding on both parties and that it has been violated by the recent armed action taken by the Netherlands authorities in Indonesia.

"It is hardly necessary for me to emphasize the seriousness with which my Government views a failure, by either party, to comply with the Council's cease-fire order. It is our considered view that the renewed outbreak of hostilities in Indonesia may prove to be a grave threat to international peace. Accordingly, in concert with Colombia and Syria the United States has submitted a draft resolution to the Council today. I hope it will adopt it with a minimum of delay.

"It will be noted that the final paragraph of the draft resolution calls upon the Good Offices Committee to make further reports, including an assessment of responsibility for the outbreak of hostilities. It may seem to some members of the Council that this paragraph is unnecessary in view of the very excellent reports which have already reached the Council, including one which has just been distributed as Document S/1138. Nevertheless, since members of the Committee have informed us that it has not yet been

possible for the full Committee to meet together and since the Council has not yet formally requested reports of this nature, I believe that it would be helpful to the Committee to have the Council record its desires as expressed in this last paragraph."

Comments on the Early State Constitutions

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. COLMER. Mr. Speaker, at a time when the United States Constitution is under fire from so many angles and at a time when so many efforts are being made to bring within the framework of that great document legislation of a border-line nature and even foreign to the intents and purpose of that document, it might be appropriate to consider some of the early State constitutions. To that end, under leave to extend my remarks in the RECORD, I submit herewith a very learned treatise on the subject of our early State constitutions by a very learned member of the bar of my own great State of Mississippi, Judge D. M. Graham, of Gulfport, Miss. Judge Graham is one of the outstanding members of the Mississippi State Bar. He has practiced law in south Mississippi for more than 40 years. He presided over the Circuit Court of the Second Judicial District of Mississippi for some 10 years. In addition to being a great constitutional lawyer, he enjoys the confidence and respect of all who know him.

The following address was delivered some time ago before the Mississippi State Bar Association at its annual meeting at Laurel, Miss., and was subsequently published in the Constitutional Review. The address follows:

THE EARLY STATE CONSTITUTIONS

Mr. President and members of the Mississippi State Bar Association: if I should say anything of interest it would not be because it is new, but because it is old; for I am to comment on the early State constitutions—i. e., the first, the oldest constitutions framed by independent sovereign States on republican principles known to the modern world. Reference to these early documents will necessarily be scant for all of 14 original States, except Rhode Island and Connecticut, framed organic laws and set up State governments thereunder prior to the adoption of the Federal Constitution, and manifestly 12 separate documents cannot be discussed in detail at one time. The statement that there were 14 original States perhaps calls for an explanation since the general impression is that there were only thirteen, and there were only 13 original States recognized as such, but the little State of Vermont, as early as 1771 declared her independence, not only from Great Britain, but also from New York and the other States which claimed her territory, and erected a written constitution on republican principles, claiming to be a free and independent State, and under this constitution her people lived and fought through the Revolutionary War, and under this constitution, with slight amendments, was admitted to the Union in 1791. There is a bit of interesting history connected with this little State, but time forbids discussion of it at this time. Of the 12 State constitutions referred to, 5 were adopted prior to the formal Declaration of Independence, New Hampshire leading the way with the first written constitution on this continent; the methods pursued in the drawing up of the various documents under consideration were, of course, irregular and revolutionary, and in only 2, that of Delaware and Massachusetts were they framed by regularly organized conventions summoned for this purpose; but they were generally approved by the people and no point was ever made on the regularity or validity of their adoption.

It is far from the truth to state that these documents were framed out of nothing because their authors drew heavily from their experience in colonial days, and it would not be the truth to state that any of them were perfect frames of government, but, taking them as a whole, I believe it can be safely said that there is not a fundamental principle of republican government contained in subsequent constitutions that cannot be found in one or the other of them. The historian, Beard, is authority for the statement that these "Documents prepared by plain citizens were translated into French and widely circulated in Europe, and served as a guide and inspiration to generations of constitution makers in the Old World."

These 12 early State constitutions were not similar in all respects, but they had many things in common concerning the essentials. In the first place, they were all framed upon the grand idea, then new, that all governmental powers were vested in and consequently derived from the people, and most of them contained expressed provisions to that effect. In all of them the general idea of the separation of governmental powers into the three departments of legislative, executive, and judicial was prevalent. For instance, we quote the following from the Maryland Constitution of 1776: "The legislative, executive, and judicial powers of government ought to be forever separate and distinct from each other"; and from the Massachusetts Constitution of 1780 the following: "In the government of this Commonwealth the legislative department shall never exercise the executive and judicial powers, or either of them; the executive shall never exercise the legislative and judicial powers, or either of them; the judicial shall never exercise the legislative and executive powers, or either of them, to the end it may be a government of laws and not of men." Incidentally, this is the first appearance in print of that much-quoted expression, sometimes erroneously attributed to Chief Justice Marshall: "This is a government of law and not of men."

This general idea of division of governmental powers, which Mr. Bryce calls a dogma of the American people, had been in the forming for many years prior to the days about which I am writing, and at that time was fairly well rooted in the minds of the people. It is apparent, though, that the idea of independence of the departments was not so well understood as it is today, as you will observe as we proceed.

It is manifest from a mere cursory examination of these early constitutions that the legislative department was preeminent in the minds of the people of those days; this department was considered the grand depository of all democratic principles. The legislature was, in all the 12 States except Georgia, Pennsylvania, and Vermont, divided into two branches; the names given to these branches were not uniform in the various States—the upper house was styled the senate in most of them; the lower or popular branch of the legislature was designated by different names, as, in Maryland, the house of delegates; in Georgia, the house of assembly; and in New Hampshire, the house of representatives. New Hampshire, therefore, was not only the first State to form a written constitution, but was the first to name the popular branch of the legislature, the house of representatives. The members of the legislature were, of course, elected by the people, but suffrage was limited in those days to property holders, and only a small percent were qualified to vote. The term of members of the popular branch of the legislature in all of them, except South Carolina, was for 1 year. The upper house or senate was, as a rule, elected for a longer term and was always a smaller body. Each house elected its own officers and provision was made in most of the constitutions that each house should be judge of the return, elections, and the qualifications of its members, and that the proceedings should be made public, and that the yeas and nays upon all questions should be entered upon the journal; that neither house could adjourn without the consent of the other, except for short intervals, etc.

In most of these documents a provision was made that all bills for raising revenue should originate in the popular branch of the legislature, and in some of them the senate was without power to amend, but had either to accept the bill or reject it in toto; in others, revenue bills could originate in the lower house only, but the upper house could propose or concur with amendments as in other bills; this seems to have been considered of some importance by the early constitution builders, the idea, of course, coming from the British Parliament. But this is not considered of so much importance today, because the senate or upper branch of the legislature, is quite as responsive to public opinion as the lower house. This provision was in the first and second constitutions of our own State, but there is no such provision in our present constitution, nor was it in the constitution of 1868. The provision on this subject in the Massachusetts Constitution of 1780 was copied verbatim into the Federal Constitution. In most of the constitutions under consideration the lower house of the legislature was given the power to impeach all civil officers for misconduct in office, and trial of them was provided for by the senate, and punishment of removal from office only was stipulated, just as we find in the present-day constitution.

A census was provided for in several of the constitutions so that representations would be apportioned according to population.

Several of the States, and this is interesting, provided a classification of the senators; for instance, New York, the constitution of 1777 provided that immediately after the first election the senators should be divided by lots of four classes—No. 1, 2, 3, and 4—so that the seats of the members of each class would be vacated at different intervals, to the end that the fourth part of the senate might be chosen annually; others contained similar provisions.

We find an interesting provision in the Constitution of Pennsylvania of 1776, which would be entirely unnecessary today, to this effect—"The house of representatives of the free men of this Commonwealth shall consist of persons most noted for wisdom and virtue."

THE EXECUTIVE DEPARTMENT

In most of the States the executive powers were vested in a governor and executive council, although in three of the States, New

Hampshire, Pennsylvania, and Delaware, the chief executive officer was called the president. As already indicated, the constitution builders in those days had an abiding faith in the legislative department, and we, consequently, find the powers of the executive department curtailed. This was, of course, the result of the experience of the people during colonial days with the tyranny of royal governors; in fact, the governors, or the presidents, had very little power except in conjunction with the executive council; a study of these executive councils in the various States and in the colonies, is of absorbing interest for the reason that in them we find the United States Senate in embryo. To illustrate how the executive acted under the early constitutions, we quote from the Constitution of Georgia of 1777, "The governor shall, with the advice of the executive council, exercise the executive powers of government according to the laws of the State and the constitution thereof, save only in the case of pardons, which he shall in no instance grant, but may reprieve until the sitting of the legislature." And again, "the governor, with the advice of the executive council, shall have power to call the house of assembly together upon any emergency, etc." In and through all of these constitutions you find the governor or the president acting only with the "advice and consent of the executive council," just as the President of the United States makes treaties, appoints judges and ambassadors, "With the advice and consent of the Senate." Mr. Bryce has said that the United States Senate is the masterpiece of our Federal Constitution and, as already indicated, it is the lineal descendant from these early executive councils. In the early days of our Government the Senate of the United States was considered almost exclusively an executive body to advise with the executive; and for 5 years after the organization of the Federal Government its sessions were held in secret, but in the course of time, as everyone knows, the character of this body has changed from executive to legislative in character; the idea of advising the President, as originally was done, has long since been abandoned, but this important part of the machinery of our Government is still able to exert some of its old-time executive power if a President attempts to appoint to an important office a man objectionable to the country at large; as for instance, the rejection of Mr. Warren as Attorney-General of the United States.

In only three States, that of Massachusetts, New York, and New Hampshire, were the executives elected by the people; in all the others the executives were elected by the legislature. As already stated, in most cases impeachment trials were held by the senate, but in Pennsylvania, and perhaps two or three other States, the executive, with the executive council, was authorized to try impeachment cases, taking the advice of the justices of the supreme court.

In the State of New York it was the duty of the governor under the constitution of 1777 to inform the legislature at every session of the condition of the State, and to recommend such matters to their consideration as shall appear to him to concern its good government, welfare, and prosperity.

In Massachusetts alone the veto power was given to the governor, a copy of which was inserted almost literally into the Federal Constitution and, indeed, every State in the Union has followed this form.

The pardoning power was, as a rule, vested in the executive "with the advice of counsel," although in a few this power was vested in the legislature. The executive was the commander in chief of the army, but it was provided in most of the States that he was not to command in person without the advice of the executive council. Contrary to the original idea, the public today likes a strong executive.

THE JUDICIARY

The judiciary erected by these early State constitutions were modeled very much after colonial judiciary which had for many years administered the statutory law of the colonies, and the common law of England, but they were new in this; they were placed, not under the executive nor legislative but alongside of them, upon a footing of perfect equality with them. Mr. Hamilton in No. 81 of the Federalist, arguing for the ratification of the Federal Constitution by the States, and answering those who contended that the Federal judiciary was a new and untried experiment, has this to say in regard to the early State constitutions on the subject of the judiciary:

"The considerations teach us to applaud the wisdom of those States who have committed the judicial power in the last resort, not to be a part of the legislature, but two distinct and independent bodies of men. Contrary to the supposition of those who have represented the plan of the Convention in this respect as novel and unprecedented, it is but a copy of the Constitutions of New Hampshire, Massachusetts, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia, and the preference which has been given these models is to be highly reccommended."

None of these constitutions conferred express authority upon the courts to declare an act of the legislature in conflict with the constitution and, therefore, void: But several of the State courts, before the adoption of the Federal Constitution, decided they had the power to pass upon the validity of laws and to declare them void if they contravened the State constitutions.

In 1782 the Court of Appeals of Virginia, in what is said to be the first case in the United States where the question relative to the nullity of an unconstitutional law was ever discussed before a judicial tribunal, decided an act to be unconstitutional which took from the chief executive of the State the power which the constitution of the State conferred upon him; and the firmness of the judges, particularly of Mr. Wythe, was highly honored and will always be applauded, it having incidentally fixed a precedent whereon a general practice, which the people of this country think essential to their rights and liberties has been established.

In 1784 the Mayor's Court of New York held a statute of that State void and, as a result, a public meeting was called and the decision denounced. In 1786 the Superior Court of Rhode Island decided that an act of legislature of that State was void. In 1787 the Supreme Court of North Carolina held an act void, which deprived a person of a jury trial when property rights were involved.

The decision in each of these cases created great excitement in the respective States, and the judges were severely condemned. In the Rhode Island case, mentioned above, the judges were impeached as criminals and, although they were not removed on account of their impeachment, they were not reelected at the expiration of their terms.

We mention these early decisions of the State courts for the reason that most of us, I believe, give credit to Chief Justice Marshall for announcing the doctrine of the right of the court to declare a legislative act unconstitutional and void; and this great judge did, in the famous case of *Marbury* v. *Madison*, without citing authority, declare an act of Congress void because in violation of the Constitution, but he was by no means the first to announce this distinctly American doctrine. We do not cite these early State cases with the view of lessening the admiration which every lawyer has for this great jurist; he was not only a great judge, but he had at least one quality of a great lawyer. In arguing before the Virginia State Convention, of which he was a member, for the ratification of the Federal Constitution, he took the position that the court had the power to declare a law unconstitutional; but in his argument of the case of *Ware* v. *Hilton* (3 Dallas 211) he challenged the power of the court to pass upon the validity of legislation, contending that judicial authority should have no right to question the validity of a law unless such a jurisdiction is expressly given by the Constitution. Seven years following this argument he delivered the opinion in the *Marbury* v. *Madison* case to the effect that the authority of the court to declare an act of Congress void was unquestionable, without mentioning his former arguments.

I dwell upon the question because of its importance, and because it is peculiarly an American doctrine. The English courts do not possess the right to pass upon the validity of legislative acts, and it is asserted in Black's constitutional law that there is not a European court that has the authority to declare legislation void because it violates the constitution of the country; but in England a committee of eminent lawyers, called the committee of revision, examines all bills submitted to Parliament. If the committee approves the bill and it passes, its constitutionality is not questioned by the court.

As stated, this power was not expressly given in any of the early State constitutions, nor was it inserted in the Federal Constitution, and no attempt was made to secure the insertion of language in the Federal Constitution which would confer such powers upon the courts. In the Randolph plan, however, there was submitted to the Federal Convention the following: "That the executive and a convenient number of the national judiciary ought to compose a council of revision, with authority to examine every act of the National Legislature before it shall operate, and every act of a particular Legislature before a negative thereon shall be final, etc." This idea was rejected and the reason given in opposition thereto was that the judiciary had the power to declare an act of the Legislature void if it contravened the Constitution.

Incidentally, this proposal in the Randolph plan, in substance, was the same as the provision in the Constitution of New York of 1777, providing for a council of revision, consisting of the governor, chancellor, and the judges of the supreme court, to which all bills were submitted. And incidentally, also, this is the basis of the suggestion of Mr. James M. Beck, Solicitor General of the United States, who stated a short time ago that if Congress should be dubious about the constitutionality of an act pending before it, it might request an opinion from the Supreme Court of the United States as to the validity of such legislation.

The judges were appointed, as a rule, during good behavior in some States by the executive, with advice of the council, as in New Hampshire and Massachusetts; in others, as in Virginia, they were appointed by the legislature.

Having mentioned briefly some of the provisions and characteristics of these early documents, in reference to the three departments of government, I take the liberty to mention a few other things which I have found of interest, and then I close.

Pennsylvania and Vermont had provisions creating a council of censors whose duty it was to inquire whether the constitution had been preserved inviolate in every part; and whether the legislative and executive branches of the government have performed their duties as guardians of the people, or assumed to themselves, or exercised other or greater powers than they were entitled to by the constitution, giving such council the right to publicly censure and order impeachments of any officers violating their duties, and to call a convention to amend the constitution, etc.

The newspapers of today really occupy the position of censors of the public officials who control the government.

Each one of the early constitutions contained a bill of rights as full and complete as any that can be found in any constitution of today, in which is declared the right for freedom of speech and debate, the liberty of the press, the right to keep and bear arms for the common defense, the right to peacefully assemble and consult upon the common good, and to petition for redress of wrongs, the right of trial by jury, the right to have recurrence to the laws for injury or wrongs to his person, character, or property without denial or delay, the right of religious freedom, the right of protection against unreasonable searches and seizures, etc.

I would like to read all the provisions on searches and seizures in these documents, since the subject is of interest today, but I have selected as a sample the provisions in the Massachusetts Constitution, which is as follows: "Every subject has his right to be secure from all unreasonable searches and seizures of his person, his house, his papers, and all his possessions. All warrants, therefore, are contrary to this right if the cause or foundation of them be not previously supported by oath or affirmation, and if the order in the warrant to a civil officer, to make search in a suspected place, or to arrest one or more suspected persons, or to seize their property, be not accompanied with a special designation of the persons or objects of search, arrest, or seizure; and no warrants ought to be issued but in cases and with the formality prescribed by the laws."

The right of trial by jury was cherished by our forebears more than we seem to cherish it today; to illustrate their belief in this ancient institution I quote the following from the New Hampshire Constitution of 1784:

"In order to reap the fullest advantage of the inestimable privilege of the trial by jury, great care ought to be taken that none but qualified persons shall be appointed to serve; and such ought to be fully compensated for their travel, time, and attendance."

Ladies and gentlemen, if you demand an excuse for this paper, I offer the following from the Vermont Constitution, which is identical with that of Pennsylvania as follows: Frequent recurrence to fundamental principles (of Government) and a firm adherence to justice, moderation, temperance, industry, and frugality are absolutely necessary to preserve the blessings of liberty and keep the government free."

The Blockade of Berlin

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "The Blockade of Berlin," published by the American Association for a Democratic Germany:

THE BLOCKADE OF BERLIN

"We fight not only for Berlin and Germany, we fight for a better, peaceful, democratic world." (Franz Neumann, chairman of the Berlin Social Democratic Party, at a mass meeting held July 15, 1948, to protest the Russian blockade.)

The 3-year battle for Berlin reached its climax when, late in June 1948, the Russians stopped all land and water traffic between that city and western Germany and all deliveries from their occupation zone to the American, British, and French sectors of Berlin. Some 2,000,000 inhabitants of these sectors were threatened with starvation, and the position of the western powers in the city—an isolated outpost in the eastern part of the Soviet zone—seemed untenable. But a fortnight later American and British cargo planes appeared likely to defeat the Soviet effort to conquer Berlin by starvation.

Originally, the Russians had been sole rulers of the city by virtue of General Eisenhower's action in halting American troops 60 miles away to give the Red Army the honor of conquering Berlin. While quadripartite control of the former German capital was discussed earlier, the actual arrangements for it followed a bargain by which the Russians received Saxony and Thuringia.

Food for Berlin had normally come primarily from the surrounding area. But the Russians now insisted that the western powers take the entire responsibility for supplying their sectors. A compromise was eventually reached by which all four powers helped to supply the entire city. The Russians also agreed to give the western powers full facilities for bringing in supplies from their zones. These facilities turned out to consist of one single track railway line and an auxiliary line for the return of freight trains to the west, one Autobahn (these, however, remaining under Russian control), and the use of some canals. A number of incidents arose as a result of Russian searches of British and American trains, until armed guards were placed on these with instructions to bar any Russian troops. But there was a general tendency to assume that practical problems would all be ironed out in the spirit of Big Three harmony.

It was not long, however, before rifts in the harmony began to appear. Unintentionally and even against their will, the Western Powers found themselves competing with the Soviet Union for the allegiance of the German people. In this they were hampered by the negative and punitive spirit which dominated American occupation policy under Joint Chiefs of Staff Directive 1067. But they were aided by the behavior of the Russian army. In Berlin, where the majority of the people had at first been ready to welcome the Red Army with enthusiasm, the Western Powers were greeted as liberators after 9 weeks of Russian occupation.

BERLIN CHOOSES FREEDOM

In an attempt to recoup the political losses which the Communists had suffered through association with them, the Soviet authorities demanded the formation of a single workers' party by a merger of Communists and Social Democrats. In the Soviet zone proper they were able to accomplish this by a combination of terrorism and bribery. In Berlin, although a majority of the Social Democratic Executive Committee capitulated, a rank and file revolt preserved the independence of the Social Democratic Party. While this revolt could not have succeeded without the presence of the Western Powers, the latter only gave it grudging support at the last minute, regarding Berlin as a part of the Soviet sphere where the triumph of "Eastern Democracy" was inevitable.

This attitude began to change as the Berlin Social Democrats showed their capacity for resistance and as world-wide relations between East and West began to deteriorate. Although their aid to the Social Democrats was negligible compared to the assistance Soviet authorities gave the Communists, the Western Powers did see to it that the democratic parties had some opportunity to present their point of view in Berlin. And their presence made possible the free municipal elections of October 20, 1946, in that city. These resulted in a victory for the Social Democrats, who received 48.6 percent of the vote, against only 19.8 percent for the Communist-controlled Socialist Unity Party.

These elections were a major setback for the Soviet Union in its efforts to win the allegiance of the German people. At the same time, they were a signal triumph for the western democracies—albeit one which they had achieved almost in spite of themselves.

But in large part the social democratic victory was a hollow one, despite its political importance. In their short period of sole control, the Russians had placed Communists in most of the key positions of the municipal administration. Now, by means of their veto in the Kommandatura, they blocked the efforts of the anti-Communist majority in the municipal assembly to reorganize the city government. The most spectacular case in point was their refusal to permit the installation of Berlin's elected mayor, the Social Democrat Ernst Reuter. But perhaps even more important was the continued Communist control of the police, reinforced by the not infrequent action of the Soviet authorities in kidnapping anti-Communist Berliners and deporting them.

THE PARTITION OF GERMANY

Meanwhile it became clear that the unity of Germany, provided for in the Potsdam Agreement, was not in fact being realized. The Soviet zone was being incorporated, politically and economically, into the Russian sphere. Hence the Western Powers began to think seriously about organizing western Germany as a going concern. But this required an acceptance of the Germans as partners.

At Stuttgart on September 6, 1946, Secretary of State Byrnes called for the formation of a provisional German Government with primary responsibility for the conduct of German affairs and proposed the return of some of the eastern territories occupied by Poland. These two proposals made the Stuttgart speech the most effective anti-Communist campaign document in the Berlin elections of the following month. But more important in its practical consequences for the German economy was Byrnes' declaration that if German economic unity could not be obtained, the United States would join its zone with any other. For the moment, he said, only the British had accepted the offer.

A nominal economic merger of the two zones—which it was emphasized had no political implications—took place on January 1, 1947. Russian and Communist quarters immediately charged that it was a violation of the Potsdam agreement and a partitioning of Germany which might destroy the function of the Allied Control Council and the basis for the presence of the Western Powers in Berlin.

But for the moment no real crisis occurred. The Russians still hoped for German unification on a basis which would give them a share in the control of the Ruhr, as well as its production, and a dominant influence on the central German government. This hope faded in the face of increasing evidence that the Western Powers were not willing to pay again—at least on such exorbitant terms—for a German unity which they thought they had already bought at Potsdam. In August 1947 the British and Americans adopted a revised Level of Industry Agreement, designed to let their zones eventually become self-supporting. And with the promulgation of the Marshall plan, steps were initiated for the economic integration of western Germany with western Europe.

LONDON AND AFTER

At this point the Russians apparently decided the western plans were a serious challenge to their position. Largely on their initiative, a meeting of the Council of Foreign Ministers was called for November in

London. In preparation for this conference the Soviet occupation authorities and the German Communists launched a tremendous propaganda campaign around the theme of German unity. In Berlin the Communist-controlled Socialist Unity Party (SED) called for the evacuation of Germany by troops of all four powers and the immediate election of a central government. It did not, however, explain how these proposals could be realized, in view of the existing dictatorial regime in the Soviet zone. But it proposed the holding of a plebiscite to determine whether the German people wanted unity.

The identification of the SED with the Soviet military authorities made it a somewhat ineffective instrument for this type of propaganda. It therefore attempted to set up an all-party German people's congress, to submit German proposals for a peace treaty. At first, several prominent members of the non-Communist parties signed the call for the Congress. But they were quickly repudiated by their parties in Berlin and the west.

Perhaps even more devastating in its effect was the refusal of Jakob Kaiser, leader of the Christian Democratic Union in Berlin and the Soviet zone, to participate. After an unsuccessful attempt to induce Kaiser to resign "voluntarily," the Russians ordered his removal as leader of the CDU in the Eastern zone, despite a surprising demonstration of support for him by the local CDU organizations. The Berlin CDU remained solidly in back of Kaiser and refused to recognize the Russian-dominated CDU of the eastern zone. And in the Liberal Democratic Party, where the zonal leader Wilhelm Kuelz had been completely subservient to the Soviet authorities, the Berlin organization now declared its independence. The People's Congress was now clearly nothing more than a front for the Socialist Unity Party.

With the break-down of the London conference, the Western Powers could no longer delay plans for the integration of their zones. But inevitably, if two-thirds of Germany were united—and particularly if this unity were accompanied by significant economic improvement—the Soviet zone would be subjected to powerful pressure. As a countermeasure, the Russians found it more important than ever to emphasize the idea of a united Germany. But to set up a government in their zone which could claim authority over all of Germany, they needed sole control of Berlin.

Demands for the departure of the Western Powers from Berlin and hints of action to enforce it began to appear almost daily in the Russian-controlled German press, in Moscow newspapers and over the Russian radio, and in the speeches and statements of Soviet Military Government officials and German Communists.

In March, on the hundredth anniversary of the revolution of 1848, which had sought as its twin goals democracy and the unification of Germany, the People's Congress reassembled. It elected a People's Council, which it was generally assumed was intended as the nucleus of a new Russian-sponsored German government. It also launched a petition asserting Germany's unity in phrases from the Weimar Constitution.

It was the purpose of the Communists to present themselves as the only legitimate heirs of all Germany's democratic traditions, as well as of the striving for national unity, which had occupied so central a position in German political life for over a century. In this they were aided by the traditional desire of France for a weak and divided Germany, as well as by the "States' rights" approach which characterized American military government in the first 2 years of the occupation. In their appeals to the working class they also made use of the efforts of some American officials to block socialization.

THE BATTLE FOR LABOR

Yet the Communists made little headway with the workers, either in Berlin or in western Germany. It was the Social Democrats and the bulk of the trade-unionists, indeed, whose loyalty to the principles of democracy formed the firmest obstacle to Communist penetration. The significance of this becomes clear when we realize that in every country in which a Communist coup has been successful, control of the organized workers has been decisive.

In the western zones, the unions had never been Communist-led. In Berlin, however, the Russians had entrusted the formation of unions to the Communists as soon as they entered the city. When, at the beginning of 1947, elections for a new leadership were finally held, the self-appointed Communist leaders manipulated the election machinery so as to preserve their control, although outvoted in most major factories.

But in the succeeding year the anti-Communists in the Berlin unions organized themselves as the Independent Trade Union Opposition (Unabhaengige Gewerkschafts-Opposition, or UGO). New elections in the Berlin unions took place from March to May of 1948. In the western-occupied sectors of Berlin the UGO was overwhelmingly victorious. Nevertheless, the Communists held control of the electoral machinery, and attempted to bar a number of the anti-Communist delegates from the city convention at which a new executive was to be chosen. The result was a split in the trade-union movement of Berlin, with both the Communists and anti-Communists claiming to be its legitimate leaders. In the Soviet sector, of course, only the Communist leadership was recognized. The western powers, for their part, weighed the claims of both groups for 2 months, and in July finally accorded recognition to the anti-Communist leaders. A joint delegation from the American Federation of Labor and the Congress of Industrial Organizations also visited Berlin shortly after the split and gave its support to the UGO.

THE BLOCKADE BEGINS

But Berlin was too important a prize for the Russians to surrender it merely because they had failed to win the support of its people. If increasing Soviet pressure met with ever-increasing resistance on the part of the Berliners, it was equally true that the more Berlin resisted, the greater the pressure the Russian authorities applied. And one of their most potent weapons was the threat that, whenever the Western Powers left Berlin, those in that city who had been responsible for thwarting the U. S. S. R. would pay for their rash obstinacy.

It was therefore the purpose of the Soviet authorities to make the position of the Western representatives in Berlin untenable at least in appearance and if possible in fact. Russia's control of all surface communication between Berlin and western Germany furnished a ready-made instrument for this purpose. And at the end of March it was put to use, when the Soviet authorities demanded the right to search all military transport of the Western Powers. The latter refused to submit to the new regulations, and for some days no British or American military trains went through. The United States began to use planes to meet the needs of its forces in Berlin. Then, as suddenly as they had been introduced, the new regulations were withdrawn early in April.

The March attack on Western channels of communication with Berlin was still a part of the war of nerves, rather than an all-out attempt to force a western withdrawal. As long as the Russians did not hinder the "German" trains which brought in supplies for the people of Berlin, it was easy enough to fly in the needs of the Western garrisons.

But if the Soviet authorities could block official military trains, they could stop all trains. And they also had other weapons with which to speed the parting West. At the end of March, the Russians had broken up the Allied Control Council. If they also broke up the four-power Kommandatura which governed Berlin, that city would be split into four occupation sectors. But Berlin had not been planned as four cities, but as one, and its various parts were interdependent. Most of the electricity and water for the British, French, and American sectors came from sources under Russian control. What happened in March seemed only too likely to be a mere foretaste of troubles to come.

"THIS IS NOT PRAGUE"

In June, the troubles came. As a first step in the rehabilitation of western Germany agreed on by the Western Powers at London in that month, a currency reform was decreed for the three western zones. The Russians replied by independently introducing a new currency in their zone. All four occupying powers had long agreed on the need for all-German currency reform, and there had been hope that it might be possible in spite of the division of the country's economy. This finally foundered over the question of whether currency was to be printed only in Berlin under four-power control, or also at Leipzig in the Soviet zone.

But separate currency reforms for eastern and western Germany threatened to divide Berlin. The Russians immediately announced that Berlin belonged to their zone, and only its currency would be valid for the city. The Western Powers were willing to agree either to the simultaneous use of both currencies, or to the sole use of the Soviet zone's—provided that its introduction in Berlin was under four-power supervision.

When the Russians rejected both proposals, the Berlin City Assembly voted to reject any unilateral Soviet orders. The assembly's defiance was particularly courageous, in view of the fact that it met in the Russian sector and in the presence of a Communist mob of several hundred. These Communist demonstrators, brought to the scene in Red Army vehicles, had held up the beginning of the assembly session until its president, Dr. Otto Suhr, had threatened to transfer the meeting to the American sector. And after the assembly adjourned, many members were physically attacked by the mob while the Communist-controlled police stood by. One of the Social Democratic leaders, Jeanette Wolff (a survivor of the Auschwitz extermination camp), was jeered at as an "old Jewess." The next day, after receiving a great spontaneous ovation from a crowd of 60,000 at a protest rally, she declared: "This is not Prague, this is Berlin. We shall not bend till freedom is secure!"

The Berlin Communists could assemble mobs. But they lacked the popular support which would have made them an effective instrument of Russian policy. Thus, they did not dare to call a general strike against the introduction of West German currency in Berlin, because they knew the workers would not respond. Hence the Russians had to act directly.

This they did by clamping down a complete blockade on all land and water transport from the west to Berlin. At first, their pretext was that it was necessary to prevent the smuggling into the Soviet zone of German money made worthless by the western currency reform. Later they declared that "technical difficulties" made the road, railroad, and canals all unusable. Of course, this simultaneous break-down of all means of transport under Soviet control fooled no one. (The newspaper Abend, published in the American sector of Berlin, suggested that the air lanes might have to be closed because United States and British planes were using up all the oxygen in the Soviet zone so that its inhabitants were gasping for breath.) But it did afford the Russians a possible avenue

of retreat, if allied resistance became too strong, since they could then assert that repairs had been completed.

Instead of withdrawing from Berlin, as some inspired rumors indicated they might in the face of a Russian blockade, the Western Powers met the Soviet challenge by bringing in supplies by air. So far, they have been able to keep up food stocks in this manner, although coal and other necessary goods are falling short. But the air lift can be and is being expanded, so that while there is no possibility of its serving as an adequate substitute for other forms of transport, it can almost certainly permit the importation of essential minimum supplies for an indefinite period.

Berlin's resistance to Soviet pressure has, in the words of its elected but uninstalled Mayor Ernst Reuter, "set a frontier to the Russian power." It has also made it impossible for the Western Powers to withdraw from that city, short of war, without hopelessly compromising their position in the eyes of these democratic forces which have rallied to them not only in Germany, but elsewhere.

Restoring German Government

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. WEICHEL. Mr. Speaker, in an effort to solve the many problems of the armed forces in restoring the government of the German people, there have been suggestions of town hall meetings, and I am calling attention to meetings between city and rural groups which have been long fostered in the United States under the plan called rural-urban coordination, by C. S. Hunsinger, of Flat Rock, Ohio, which I am including herewith:

RURAL-URBAN COORDINATION

(By C. S. Hunsinger)

FOREWORD

This booklet has been written by one who has lived in a rural community for almost 50 years, and after more than 30 years' practical experience in community work. It is therefore a description of actual accomplishment.

Always interested in improving the community life, the author found the need for some simple, practical organization in order to get projects accomplished. This led to the organization of the Flat Rock Public Committee for the unincorporated village, then the Thompson Township Council and later the Four-Township Council, which represented all of the rural districts around the local shopping-center city of Bellevue, Ohio. The Rural-Urban Coordinating Council is the latest development and is recommended as the most practical and efficient organization of all for the mutual interests of both the city and country. With these organizations, more than 100 public projects have been accomplished, all of which are typical of the needs of the average rural communities of America. It is a rural plan that has been worked out by the rural people themselves.

The author wishes to take this opportunity to express his deep appreciation to all the public-spirited people in both the city of Bellevue and the five surrounding townships, for their patience and cooperation throughout the years.

C. S. HUNSINGER.

ACCOMPLISHING RURAL COMMUNITY WORK

Life in the country can be made either rich or poor. It all depends upon the extent that the people make use of the advantages which are available for rural communities.

The majority of the comforts, conveniences, and blessings of the cities can be secured if the rural people really want them. And the next generation of country folks will have these modern conveniences, because the young people of today, who will be the farmers of the future, will want them.

Each year, more and more city people are moving to the suburbs. This is indeed very complimentary and should make the rural people feel that we have a good place in which to live, after all. However, the suburban folks have brought with them the best things from the cities and have combined them with the good things of the country. Should this not be a splendid example for the villagers and farmers to do the same and thus make their homes happy and content?

Perhaps the first question will be: "Yes, but that takes money," so it will be the purpose of this book to show that the majority of these improvements which are desired and needed in rural communities, are possible of attainment through a new cooperative, community effort—for have not most of the conveniences of the cities been made available through the principle of cooperation?

What are the advantages of rural life?

A most happy and successful life can be lived in a progressive rural community when the following advantages are considered:

The restful atmosphere, which is quieting to the nerves, permitting complete relaxation.

Wholesome food, fresh, and of the best quality.

The privilege of dressing comfortably.

Complete home-life with all the family present.

Beautiful natural scenery—for "only God can make a tree."

Proper exercise and recreation, out-of-doors in the clear air and direct sunshine, next to the earth.

Privileges of owning homes and land. Reasonable prices make them available for the average family.

Real economy, for a dollar goes so much farther in the country.

City conveniences are generally available: Electricity, telephones, newspapers, mail delivery, public libraries, hospitals, etc.

Spare-time for everybody to enjoy pets, hobbies, and the companionship of friends.

Healthful children. The average country child lives from 6 to 7 years longer than the city child.

The privilege of working with nature in the flower and vegetable gardens, as well as in the fields.

What are some of the disadvantages?

Let's face them frankly, for they are generally overrated.

The lack in some communities of conveniences and services—but most are possible. Lack of popular entertainment and opportunities to earn money; isolation and lonely life; hard labor; lack of sanitation, health facilities, etc.; weather conditions; lack of tools.

How shall the standard of living be measured?

Everything depends upon viewpoint.

Everybody judges other people from their own personal standards; do they not?

The cultured judge others by their education. Attractive folks look for beauty. The bank accounts appeal to the wealthy. The religious are attracted by character. The good dresser judges other people by their clothes. The owner of a beautiful home looks at the property of others. The owners of Packards ask what automobile is driven. The large landowner considers the size of other people's farms, etc.

But what are the real standards for a rural community?

The real standards of living should not be measured by outside show, but the general appearance of farms and homes, as to neatness and good taste, is usually a good index.

However, a look at the inside of homes gives a much better impression.

After all, isn't it the character of people that counts for most? Their integrity, industry, religion, and public spirit? Therefore the church attendance, the school program, the home life and care, recreation and social activities, the public conveniences, etc., are of most value in ascertaining the real standards of a community. And, of course, the community will be known by the children they raise—"by their fruits ye shall know them."

What is the most practical way of raising these standards?

In order to raise the standards of a community, a practical, definite and extensive program is necessary—one that will reach into every home in a helpful way. The following viewpoints should be considered: Give people high ideals and discourage low standards.

Help people to earn money and to spend it wisely.

Influence the home life of the people and assist in raising the best kind of boys and girls.

Encourage proper social activities and the use of leisure.

Develop the cultural side of the people.

Secure the very best governmental service.

Arrange cooperative services and public conveniences.

And, foremost of all, cooperate with the churches of the community, for a real faith in God and belief in Jesus Christ will help the people more than in any other way.

Possibilities of raising the rural standards

When the people of a rural community unite in a definite program, with a list of definite projects to be accomplished by definite individuals, it is surprising what can be done.

Give the people the viewpoint that it is possible to get what they want. Give them a vision, an ambition, a definite aim, and their time, talents, and funds will be found available.

Such a definite program is the object of this book. It is possible because it has already been tried out and found successful in a typical rural community.

Specimen of yardstick form used by our council—What do the people want?

Every citizen of this community has in years past undoubtedly said, "We ought to have (this or that)" or "Somebody ought to do (this or that)" but perhaps these things have not yet been accomplished.

The Rural-Urban Council has been organized in order to secure some of the comforts, conveniences and services that the people want, and this letter invites every citizen to send in a list of the projects which they desire.

Community needs can usually be grouped into the 12 classes shown below. Will you please list your ideas and suggestions under these various projects and give your advice on how each of these community needs could be improved?

These requests will be the basis of the council program and your advice will be very much appreciated.

In your opinion, how can each of the following public services be improved:

1. Protection: Fire, police, elimination of dangers, etc.

2. Public utility services: Electricity, telephone, newspapers, transportation facilities, etc.

3. Governmental services: Township, county, State and National.

4. Educational advantages: Schools, library service, adult programs, etc.

5. Religious and charitable services: Church service, Christian influences, nonsectarian programs.

6. Economic advantages: Markets, buying and selling, credit, taxation, local resources, etc.

7. Leisure time program: Recrcational facilities for all age groups.

8. Business and professional services: Efficient markets, reasonable prices, etc.

9. Health program: Cooperative hospitalization, Red Cross services, health programs.

10. Social program: Wholesome, interesting, and helpful.

11. Cooperative services: Community auction sales, machinery exchanges, etc.

12. A general plan for the community using the above projects as a basis.

What general plan for community development would you advise, or what would you like to have in your township 10 years hence?

Please list any special ideas or suggestions of your own, which are not covered by above subjects.

A YARDSTICK FOR RURAL COMMUNITIES

What constitutes the ideal rural community? Where everybody is wealthy, healthy, happy, wise, honest, industrious, moral, etc.—"a heaven on earth, utopia"?

If there would be such a perfect community in the United States, what a constant job it would be with the influx from other communities until they too would be "idealized." Therefore, the ideal standards of a rural community will be given as goals to be worked toward—just as Christians should not be expected to be perfect, but credit should be given them for their real attempt.

Twelve definite goals will be suggested for the average rural community to adopt as their program—general objects which are generally needed in every community. And, if the people will adopt this program, through a centralized organization, they will certainly have the opportunity to get them accomplished.

By keeping such a definite program constantly before the people, they will unconsciously learn to expect and want the improvements and will not be satisfied until they are made available. It must also be borne in mind that it usually takes much time and effort to entirely complete the usual public project and generally needs the backing of individuals and organizations with an abundance of patience and public spirit.

Protection

Rural communities are as much entitled to fire and police protection as are the cities, and it is possible to secure it. First-aid appliances and service should be encouraged, but the local officials should provide really adequate fire equipment and service so it will be available for use by any citizen in need. Such service is a real necessity in the average rural community.

Public utility services

If the community is lacking any of the modern public conveniences or services, such as telephones, electricity, railroad, bus or truck delivery service, they can usually be supplied if the people will really use it. Public demand is a powerful appeal and if it is concentrated through a strong, public organization, it will usually receive the utmost consideration.

Complete Government services

The local township trustees, village officials, boards of education, etc., have exceptional advantages to serve their communities. If they are progressive and if a public-spirited organization cooperates with them tactfully, many public projects can be readily accomplished.

The county officials can also serve in a remarkable way if they are consulted and cooperated with closely, also if they are given proper credit for their projects and service.

And what a wonderful service the State and National Governments have available for the asking, through a local contact person as will be suggested later.

Educational advantages

A comparison of the present local school system with the facilities offered in other communities in the State is undoubtedly the best method of checking the local advantages and disadvantages. Cooperate with the local school authorities on this project and give them the opportunity to first secure the advantages or correct the disadvantages before appealing to the public. Public library service and similar educational projects should be included in this program.

Religious and charitable work

The fundamental values of farm life are mainly spiritual and the life of the people of every rural community will be enriched immeasurably with sincere religious services.

The church should work closely with the schools, library, and other organizations, and the pastors made members of a central organization to assist in the general community program. It should be emphasized that, after all, the very best way to help people is to assist them to get a better faith in God and Jesus Christ.

Economic conditions

A rural community that sponsors projects which will increase the income of the people, and provide ways and means for them to spend it wisely, is performing a vital service. An organization similar to a chamber of commerce would be profitable in sponsoring a better handling of the local crops and products, making a study of local taxation, etc. A definite economic program would aid communities in a remarkable way.

Leisure-time program

Leisure time is becoming more and more important, and a definite program will certainly be a good investment. However, it should be planned for all ages instead of for just the children and a public organization sponsoring such a project will reap rich dividends for any rural community. Close cooperation with the local services, the schools, churches, clubs, lodges, etc., demands a central organization on this project as suggested in a later chapter of this book.

Business and professional services

The business and professional people conduct a valuable service for communities. True, they make a profit out of it, but their goods and services are absolutely necessary. They are usually large contributors to local projects and their personal community work is usually progressive and valuable. Their contacts can add much to the economic life. This section should also include the local newspapers.

Health and sanitation

Are there unhealthful conditions in your community? Undoubtedly, many people have said, "Somebody ought to get that cleaned up," but no individual is willing to brave the battle. An organization elected by and representing all the people such as will be suggested later, can easily tackle such ticklish jobs and get them done. There is an abundance of material available for health projects—all waiting to be requested and distributed.

Social program

There are usually sufficient social programs in rural communities. What is needed mostly is a general plan in order to avoid overlapping and all the public organizations joined together in one group will overcome this feature. The young people of all ages—the most wonderful "crop" of every community—is the group mostly affected, so their viewpoints should be considered and a wholesome program provided.

Cooperative services

There are so many cooperative services available for rural communities that a special section should be donated to them. Cooperative agreements between farmers for the use of special machinery can be worked out easily. Cooperative markets and agencies for the purchase of necessities should be included. The national cooperative societies have wonderful services and plans to send to progressive communities. However, the local businessman should receive careful consideration in such a program.

Community plannings

Secure the viewpoints of the people on the subject What Kind of a Community Would I Like to Live in 10 Years Hence. This might well be the subject of a prize essay contest among the local high-school students, because 10 years hence the majority of these students will be married and raising families of their own. What more could be asked than for them to be willing to settle down in the local community and thus reap the benefit of their suggestions? If a committee would study a general plan of this kind for 6 months or more, then work out a definite and practical program, your community would have an ideal project—not socialistic, but really practical. A central committee, representing everybody in the community, on this project can handle it most satisfactorily.

THE GENERAL NEEDS OF RURAL COMMUNITIES

What is the reason that the majority of rural communities still lack some of the public services and conveniences that the cities have enjoyed for years?

There are several reasons: Perhaps the most applicable is the lack of a central organization which is capable of handling any of the various public projects which have been needed.

True, each rural community has its regularly elected board of trustees and other officials, but these bodies are limited to governmental projects and cannot sponsor public needs, such as: Telephone, newspaper, health, recreation, moral, and similar projects.

The boards of education attend to the needs of the schools, but usually leave the clubs, lodges, churches, and other groups or individuals to attempt the social, economic, and other community problems.

Each public organization sponsors the improvements in their particular line of endeavor, but do not feel adapted to attempt a general program of community work, and, of course, no individual would feel authorized to go ahead. All these organizations are undoubtedly doing splendid work, but how much more they would be able to do, if they could secure the cooperation of all the other constructive forces and secure the backing and support of the people?

And the public-spirited individuals who have the best interests of the community at heart—how they would welcome a central organization in the community, to which they could submit their ideas and have the hope of getting them considered by the people.

A wonderful community spirit could be developed if all the people could get together and pool their ideas and talk over their local problems in a give-and-take relationship, similar to the New England town meetings where all citizens gathered in the town hall on election day. Here, each had the opportunity of proposing for consideration anything he believed to be for the general good. Each man had a right to be heard and after a full discussion a vote was taken. All had equal rights and there was the utmost freedom of speech.

What profitable projects could be accomplished in such a frank, open-and-above-board relationship.

If some special group of citizens could be appointed to make a definite study of the needs of the community; the educational, social, moral, economic, etc., and submit a general plan of progress for the community for a period of perhaps 5 years and if they would be asked to approve this definite program—what a worth-while goal it would be.

Perhaps one of the most common excuses in rural communities is the small number of people affected by each project, so small that the community leaders feel, "Oh, What's the use; there are so few people that will be affected," etc. And thus so many worthwhile projects are left undone. They seem to underestimate the quality of the small quantity—for even if just a few young people are helped to make the world better by some local project, it does become worth-while.

For the encouragement of community workers the following facts are given with the hope that it will help them overcome an inferiority complex:

"It is practically impossible to get 50 percent of the ordinary population to do any given thing, no matter how important. To get as many as a hundred out of any miscellaneous thousand to make any response whatever to any offer is unusual. To get fifty people per thousand is doing well and 1 percent is not bad."

The organization that is recommended in the next chapter represents the entire township or district instead of a single section or community and thus represents more people—thereby giving a crowd after all.

If there is a ticklish problem that has remained unsolved for perhaps years, or one that has been holding back the community because no single organization or individual has felt willing to undertake it, it shows the need of a central organization to handle it. Is such an organization possible? Yes; and it is the object of this book to describe it.

A community automobile

Nearly everything seems to be done successfully with machines these days, so why not build a community automobile to get your rural community work accomplished?

All the constructive forces in the average village or township can be readily assembled and function as efficiently as a modern auto.

A motorized organization of this kind has since 1935 been tried out in a northern Ohio community, and it actually gets things done, easily and efficiently. There are a number of plans of this character throughout the country, but this one is different because it "just grew," step by step, out of the common needs of a typical rural community. It is a down-to-earth program.

After 25 years of community work, the inventor of this community automobile, as it is sometimes called, became impatient with the delays in securing public improvements in his home town. A public meeting had been called to discuss fire protection, and finally a committee was appointed to continue the discussion, which usually meant delay and death to the project, so he asked the people to try something different. And the township council organization is the result.

The plan is a very simple one. It is not just another organization, but an organization of all the other organizations in a community. All the constructive forces; the schools, churches, local government, lodges, granges, the women and young people's societies—all united into a single group that functions like a modern automobile.

It is named a township council and as it is authorized by a public vote of the citizens it is free to discuss any community needs and take action on them. It is nonpolitical and nonsectarian. The permanent personnel consists of the presiding officers and representatives of the organizations and groups named below:

Board of township trustees, township board of education, superintendent of public schools, the pastor of each church, president of the farmers' institute, chairman of farm bureau, director of vocational agriculture, president of parent-teacher association, superintendent of each Sunday school, president of Future Farmers of America or 4–H, president of Future Home Makers of America (giving the boys and girls a representation), a representative farmer, a representative businessman, a representative housewife, a representative young woman, a representative young man.

Perhaps the following illustration of a typical township council compared with a modern automobile will better show what a really practical plan it is and can easily become. It is compared in this way to emphasize the fact that if all the parts or all the public-service organizations unite, that the body will really function as a unit and thus be able to accomplish projects that would ordinarily be impossible.

In practically every community it seems there are some public projects that the people have been talking about accomplishing for years. What improvements have they meant when saying:

"Somebody ought to take that up. It should be done," etc. Do they mean adequate fire protection, public library service, more efficient telephone service, lower power rates, more shade trees or playground equipment? Have the people been waiting to "let George do it"? A real George organization, patient, capable, and efficient, is found in a township council of this kind, so if there are community problems which need action, simply organize a council and "let George do it."

Perhaps the chief advantage of a council of this kind is the simplicity of organization for practically everything, members and all, are always available and it only requires the leadership of a few public-spirited men or women to arrange for it.

The established organizations in a community; the schools, lodges, churches, granges, etc., are entirely capable of taking care of the community work in their own line of endeavor, but there are always a number of projects needed in every township which are too general in scope for some one group to handle successfully. This is where a council can succeed because it is officially authorized by a public vote, as will be shown later, and can also secure the cooperation of the other organizations.

A meeting of all these leaders of a community is most impressive, and unconsciously gives the members and people a new enthusiasm, confidence, and ambition to get things done. And it is an organization that grows in power and influence—one that will last for years. It breaks down the spirit of rivalry and substitutes a real cooperative feeling which is an asset to every community.

It eliminates the overlapping of activities and the duplication of work. It provides a definite program instead of haphazard efforts and uncompleted tasks. It is capable of accomplishing jobs that no other single organization would attempt.

The expenses of such an organization are very, very low and even these can easily be met in connection with the various projects.

Another advantage is the opportunity it gives the women and young people of the community. Their enthusiasm, willingness, and ability is well known and a council gives these groups a voice and vote for community betterment. Perhaps the men have had the community work under control to a larger extent than they realize and this will give the women a "break" and the young folks an opportunity to tell what they want. Even the boys and girls are represented in a council of this kind. After all, aren't these three groups the ones that the men really live and work for?

This organization gives the community workers, those who have been working for public spirit alone and not for salaries, the opportunity to control public problems that have perhaps been holding back some community project for years. These public-spirited men and women, leaders in all the constructive forces, are generally the very best type of citizens and a council of this kind gives them the opportunity to really build a better community. In some cases, the regularly elected public officials: the board of trustees, board of education, etc., will resent the organization of a council, thinking that it infringes upon their rights and duties, but after they work with this plan they will soon realize it to be a wonderful asset. It relieves them of the "kicks" and selfish demands of individuals which is the worry of all boards of this kind, and acts as a clearinghouse for public opinion. The council is organized for the benefit of the entire community and on public questions can easily ascertain for the public officials just what the majority of the people want. These boards are seldom willing to initiate public projects and will welcome the services of a council in arousing public sentiment for them. It acts as a buffer between them and the taxpayers. County and State officials also welcome such an unselfish public-spirited organization, for they realize it is concerned about the best interests of all the people and favors no special section or group.

A council provides a channel of contact between the community and the nearby cities, the county, State, and National Government departments and the hundreds of foundations and service departments throughout the country which are more than willing to assist progressive communities.

A township council will at once attract public attention and advertise the community as wide-awake and progressive. The projects that it accomplishes will really increase the value of the farms and make a better place for the entire families in which to live.

Are you the public-spirited citizen who is willing to act as the starter of this community automobile? Then, simply show this plan to some of the other leaders in your community and talk it over with them informally. Also discuss the various public projects that are most needed in your local community, for a council provides the opportunity to accomplish them if anything can.

(A complete procedure showing how easily a township council can be organized will be given in a later chapter.)

Your _____ township council automobile is now ready to go. If the people will fill the gas tank with enthusiasm, the board of trustees adjust their carburetor, telephone company check the wiring, electric company turn on the headlights, parents pump up the tires to support the children's wheels, the churches have their oil ready to make the machine run smoothly—pull out the businessmen's choke, turn on the council's switch key, step on your starter, and the council automobile is running. By stepping on the accelerator and leaving in the optimistic clutch, asking your local newspaper to blow the horn, your truckload of public projects is on its way to accomplishment.

The following suggestive list of public projects have actually been completed with a council automobile. Select those that fit your local needs and you will be surprised at the speed and efficiency of your program:

Community survey of needs, adequate fire protection, township library service, sponsorship of township industries, farm-naming campaign, Red Cross emergency service, township address system, study of local taxation, services of national Government agencies, general 10-year plan of improvements, lone Boy Scout program, a farm machinery repair shop, securing cooperation of county officials, cooperation with local churches, local government services, cooperation of the

home-town newspaper, township communication, naming of rural roads, care of aged, invalids, and neglected, encouragement of local talent, adult educational classes, township employment bureau, a community hobby show, township nature and garden club, reforestation program, highway beautification, electricity available for all, community health program, group travel trips, shipping facilities, general township improvement fund, community exchange, transportation facilities, running water in every home campaign, rural gas services, rural beautification campaign, a year 'round recreation program, a national cooperative agency, cooperative service outfits, general children's program, township soil survey, history of the community, community homecoming service, local police protection, National Bureau of Standards service, cooperative purchasing agency, county and State extension service, community bulletin board service, community and school playgrounds, cooperation with school program, township publicity program, community calendar of activities.

How to organize a township council

The public-spirited citizen who wishes to organize a township council will find it to be a most interesting project and one that will receive an enthusiastic reception.

Simply describe to some of the other leaders in the community the general plan of having all the heads of the various public service organizations and groups, united in a special body, comparing the assembly with a modern automobile, as illustrated in another chapter. Also talk over the possible projects which such a council might well attempt in your community.

After several weeks of personal discussion and consideration, interview these men and women again and if they are willing to cooperate simply write to the Rural-Urban Coordinating Council, at Flat Rock, Ohio, for complete plans and counsel.

Then arrange for a meeting of all the logical members of such a council to discuss the organization. Also invite other influential citizens and have the meeting open to everyone.

At this public gathering, arrange for a community-builder, in whom the people have confidence, to give a detailed description of the council and include a general discussion of the popular projects that are needed in the district. The community council automobile will assist in dramatizing this program.

After the proposition has been thoroughly presented, ask for a rising vote to decide if a public vote should be arranged for or not, explaining that a ballot similar to the one shown herewith should be voted upon by all the citizens. If this public meeting approves this procedure, request that a temporary committee of three be appointed to arrange for the proper wording, distribution, and method of voting. Also decide at this meeting upon the list of organizations to be invited to participate and secure the nominations of three citizens to represent the businessmen, farmers, housewives, young men and young women, and the boys and girls, whose names are to appear on the ballot, one of which is to be elected to represent each group. However, if the citizens wish, they can vote to have the council organized without taking the public vote.

If the election shows approval of the council, the temporary committee will call a meeting to officially organize, elect a president, vice president, secretary-treasurer, and an executive committee of five. At this meeting the officers should take charge and arrange for the initial projects to be sponsored. It is well to appoint a director to take charge of each project with full authority to proceed and report to the council meeting. These directors should also become members of the council. This plan of appointing one individual instead of a committee will be found very satisfactory.

A suitable constitution and bylaws, specimen of which is suggested herewith, should be adopted. It should also be decided if the local newspaper or a special printed council bulletin, similar to the specimen shown herewith, should be used. If the bulletin idea is decided upon, simply request the county farm agent or auditor for a complete mailing list of the township, and with this complete coverage it will be an easy matter to solicit sufficient advertising to cover the costs of printing and mailing of each issue, and for suitable stationery, which should also be provided out of this advertising fund, for it will aid much in the further work of the council. Specimens of letterheads, survey forms, notification slips, etc., are shown herewith.

Your township council automobile is now loaded with the initial projects, the machinery running smoothly. Gradually leave in the optimistic clutch, step on the accelerator, enthusiasm, and act as if it is impossible to fail. Success to you.

COUNCIL PLAN FOR SMALL INCORPORATED TOWNS

In the majority of rural districts there are some incorporated towns and so many of them really need a council organization of this kind to get things done. This township plan has therefore been changed to fit this condition. Practically the same constitution and method of organization can be used as in rural districts, but some changes in the personnel are necessary, which are indicated below.

The manufacturers should represent the engine.

The city council the carburetor.
The gas company the fuel pump.
The service director the radiator.
The professional men the fan.
The YMCA, Boy Scouts, etc., the bumper.
The hospital the muffler.

Attention is also directed to the council plan for the unincorporated villages in rural districts, shown as a supplement in the form of a public committee instead of council. So we have now suggested a practical organization for all the classes of rural communities.

Ballot

Shall we have a _____ township council?

It is proposed that the presiding officers of all the following organizations: (list names) be organized as a _____ township council in order to unite these constructive forces for community betterment. It shall be nonpolitical and nonsectarian and organized for the sole purpose of accomplishing public projects similar to the following: (names of popular projects). Each citizen of voting age is requested to indicate their wishes below and bring or send this ballot to the sealed box at the (centralized school or other public building) not later than _____.

☐ I approve of the above council organization.

☐ I do not approve of the above organization.

(Sign if you wish) _____

Constitution

Article I. Name: The name of this organization shall be the _____ township council of _____ county, _____ State.

Article II. Object: This council is an organization of all the constructive forces in the township, so they may be brought together for cooperative discussion and action.

Article III. Authority: This council has been authorized by a public vote of the citizens of _____ township on _____ (date). The council will consider itself free to discuss any community need and to take action either directly as a community organization or through the cooperating forces in the council. The council shall be nonpolitical and nonsectarian.

Article IV. Membership: The permanent personnel of the council shall consist of the presiding officers of the following organizations and representatives of groups: (list).

Article V. Duties of members: Each member will represent in the council the interests of his or her organization or group and shall enlist their cooperation in council projects. Each member shall vote as directed by the organization represented.

Article VI. Officers: The officers shall be a president, vice president, secretary-treasurer, and an executive committee of five members. The president of the township board or trustees and township board of education shall be permanent members of the executive committee, also the president of the council. Officers shall be elected at the first meeting of the calendar year by a majority vote of the members present.

Article VII. Meetings: Meetings will be held at the call of the president or upon written request of five members. The presiding officer may consider any number of persons a quorum. The meetings shall be conducted according to Roberts' Parliamentary Rules of Order, and will be open to the public.

Article VIII, Amendments: The constitution and bylaws may be amended by a two-thirds vote of the entire membership.

Bylaws

Section I. Officers: Any officer of the council who is not reelected as presiding officer of his or her organization shall complete the term of office in the council.

Council projects

If the council will follow the suggestions given in the yardstick for rural communities and other chapters of this booklet, a complete general program will be available for the year's work, comprising the real needs of the community. If a pithy description of each of the projects is published throughout the year, the public will have their attention called to them so often that almost unconsciously they will begin to want them accomplished and will not be satisfied until they are completed.

If a special committee is appointed to handle each of these projects, the members will be able to shift the responsibility to the others. The following procedure is therefore recommended to eliminate this complaint: Let the council appoint one individual as a director of each different project, to serve until it is either completed or until he or she resigns. The names of the directors should be published beneath the name of each project, so the people will know who is responsible and can give the encouragement and credit for all the good work they accomplish, or the opposite.

This plan will save time in holding committee meetings, arguing, etc., and will get things done. Try it.

Supplementary material available

A special supplement covering the detailed handling of rural community projects will be made available in a size to fit this book, so that additional helps can be included from time to time.

A complete bibliography service will also be maintained, covering the helps available on each project. National associations, agencies, governmental departments, periodicals, etc., are constantly extending valuable assistance and all of this material is filed in a project scrapbook by the National Township Council, for the use of township councils, or any rural organizations. Any of the supplementary booklets will be forwarded upon receipt of 5 cents each to cover postage and mailing expenses.

Specimen council bulletin, Rural-Urban Coordinating Council of the City of Bellevue and Surrounding Townships

Rural council

Rural coordinator: C. S. Hunsinger, Flat Rock, Ohio.

Government: Lyme Township, Joseph Lawler, chairman; township officers and county officials.

Education: Thompson Township, W. C. Garland, chairman; all superintendents of schools; presidents, board of education, library and PTA associations.

Religion: Sherman Township, Reverend Taunero, chairman; Flat Rock Public Committee, Rev. O. W. Matzke, all pastors, Sunday school superintendents, and heads of Christian groups.

Economics: Groton Township, Harlow Stahl, chairman; heads of all farm bureaus and cooperatives, farm groups, and public utilities.

Social: York Township, H. L. Seaman, chairman; heads of all granges, 4-H clubs, and social groups.

City council

Bellevue coordinator: H. B. Wright, Bellevue, Ohio.

Government: Mayor J. F. Shannon, chairman; service director, State patrol, Red Cross, hospital.

Education: Superintendent of Schools S. D. Swigert, chairman; president, board of education, PTA association, librarian.

Religion: Ministerial association, Reverend Euler, president; all Sunday school superintendents and heads of Christian groups.

Economics: Booster club, W. M. LaSalle, chairman; and heads of all labor organizations, industries, public utilties, and newspapers.

Social: YMCA secretary, John Slater, chairman; heads of all clubs and lodges and social organizations.

Publicity: Paul M. Callaghan, chairman.

Projects accomplished: The following projects of interest to our rural people have been completed through our organization. Most of them were accomplished with the cooperation of the Bellevue Coordinating Council and it is very much appreciated.

Adequate fire protection now available

The initial public project which really started our community council organization is now entirely completed with the purchase of the two new fire apparatus trucks recently provided by the city of Bellevue.

The township trustees of Lyme, Groton, York and Thompson have all signed contracts with the city of Bellevue making their city fire department services available to everyone. The Sherman Township trustees are now negotiating with the city council for similar protection.

Bellevue library service

All of the rural people surrounding Bellevue except those living in Groton Township can now enjoy all the privileges of the Bellevue Public Library free of charge and we hope to soon include Groton Township in a contract. Over twenty thousand books are available, and rural people are invited to enjoy the reading rooms whenever in Bellevue and also take out books.

Baseball game

For a number of years the Bellevue Booster Club have taken their city boys to a league baseball game in Cleveland. Last summer they presented our council with one hundred tickets and three busloads of our farm boys had a good time.

Community picnic

The Bellevue Boosters gave a special invitation to our folks living in "Greater Bellevue" to attend their annual community picnic at Cedar Point and many of our people enjoyed it.

Fireside telephone service

For many years the people living near Fireside have had to pay tolls in order to telephone to Bellevue. This was one of the original projects of our council, and we are glad to announce that the Ohio Public Utilities Commission has recently approved the sale of the Ohio State Telephone Co. to the Northern Ohio Co., which will give free service to and from this area. The value of this project will be more and more appreciated in coming years, as it makes 2,152 additional telephones available for our rural subscribers.

Local community fairs

Community fairs in our various township centralized schools have become problems for a number of years. This council therefore called a meeting of all the interested groups and made plans for the future which we trust will be of mutual benefit.

City playgrounds made available

The Bellevue Boosters interceded on our behalf and made arrangements with the city council and schools for our country boys and girls to be welcome at the city's playgrounds. The Girl Scouts, YMCA, and other social organizations have also extended invitations, so our young people have clean places of amusement available for them when they go to town.

YMCA rural campaign

It has been the program of this council to make all the public services of the city of Bellevue available to our rural people. This winter the five chairmen of our organization were invited to participate in the annual YMCA campaign, and quite a number of our rural young men are now members. Swimming teams are now being organized in each township, so we won't have to use the 'ole swimmin' hole any longer.

Special rural-urban edition of the Bellevue Gazette

Our council was especially honored last August with a 24-page special rural-urban edition of our home-town newspaper. The business and professional men of Bellevue generously supported this movement, and we now feel that we must make good in some way.

Fire-extinguisher service

All soda-acid fire extinguishers should be recharged at least once each year. Arrangements have therefore been made for the Bellevue Fire Department to render this service to our rural people at actual cost of materials. Simply take your extinguisher in on one of your shopping trips each year.

State highway signs

This community, located at the extreme corner of four counties, has always been somewhat neglected in many projects. Our council has therefore requested the State highway department to erect a number of signs to meet local needs and they have been very willing to do so.

United States mail service

When railroad service was abundant many years ago, the United States Post Office Department arranged RFD service according to the railroad schedule at that time. As everyone knows, most of these trains have since been abandoned, and some of the small surrounding towns have very inadequate service available which causes serious delays to the mail of these rural people.

The city of Bellevue has six trains and four star routes in and out each day and many of our rural people have asked us to secure Bellevue mail service for them.

The United States Post Office Department has advised us that they will consider such rerouting if the people want it.

A separate letter will therefore be included with this circular to all residents who receive their mail from other than the Bellevue postoffice and we will be glad to receive your decisions and take the matter up with the postal authorities.

Collection of taxes in Bellevue

For many years the people of Thompson, Reed, and Adams Townships, also Groton, Lyme, and Sherman have had to send or take their taxes to their respective county seats. Our council has made this service available for these taxpayers through the cooperation of the Union Bank & Savings Co. The taxpayers of York Township may pay their taxes at the First National Bank at the prescribed dates.

State zoning law available

An organization such as our council provides many contacts with State and National projects which would otherwise be lost. We have been interested in removing the eyesores in our townships, and when a State zoning law was introduced this council put a lot of pressure on our State officials. We at least helped to have it passed and all our county commissioners will now appoint a zoning board with whom we can cooperate.

Railroad-crossing protection

When Editor Meiers, of the Gazette, introduces his public-spirited projects from time to time he requests the cooperation of various organizations and we were glad to back him up in the project of securing signal flashers at the Nickel Plate Railroad crossing on Route 4 east of Bellevue. They are now installed and will undoubtedly save lives.

Employment

The officials of the General Electric Co. requested our council to recommend young women from the country for employment in their factory. Just at this time we will recommend an additional list. If interested, get in touch with your township council chairman.

Township chairmen: Groton township, Harlow Stahl; Lyme Township, Joseph Lawler; York Township, H. L. Seaman; Sherman Township, Rev. Taunero (co-chairman, Albert Geiger).

Our yardstick

What other projects do you want accomplished? List them under these suggestive headings: Protection, public utility services, complete government services, educational advantages, religious and charitable work, economic conditions, leisure-time program, business and professional services, health and sanitation, social program, cooperative services, and community planning.

Sample list of public services made available by a rural-urban council

The Bellevue Public Library: The residents of all townships except Groton are now entitled to the services of this library free. Over 20,000 books are available. Simply ask for your library card.

State highway patrol station: These patrolmen are authorized by State law to make arrests for trespassing on farms or rural property. Simply call phone 90 for such protection.

The Bellevue Hospital: An efficient, progressive hospital service, made convenient for the emergencies of all rural people.

Fire protection: The services of the Bellevue Fire Department are now available for rural calls on a contract.

Telephone services: Over 2,000 homes of friends and relatives, business and professional firms are connected—ready for calls at any minute. Rural people are only a minute away from Bellevue with a telephone.

Newspaper service: Keep acquainted with each other through our home-town newspaper. It is our common meeting place for community news.

YMCA., Girl Scouts, etc.: Rural young people are welcomed to join these organizations.

Electricity: Prompt, efficient and reasonable service made available.

Rural-mail services: Efficient mail services are available out of Bellevue.

Profitable markets: If other towns pay more, please advise. Bellevue is favorably located for disposing of produce and grains.

Clubs, lodges and other organizations: Memberships are always welcomed from rural residents.

Transportation: Efficient railroad, express, truck and bus lines.

RURAL-URBAN COORDINATING COUNCIL

This rural-urban coordinating council presents the most complete and efficient organization that has actually been tried out and found practical in a typical community.

This unique development is not a city plan, but was initiated by the rural people themselves in order to secure fire protection, library services, and other public conveniences. Instead of the individual rural communities endeavoring to take care of themselves, it was found best with this plan to group all the rural districts or townships around their natural shopping-center town. This provides an efficient contact with all the constructive forces of the city as illustrated in the accompanying letterhead.

As will be noticed, this organization unites all the government agencies, schools, churches, business and social organizations of the entire trade area and provides a definite contact with the corresponding organizations in the city where all of these rural people transact business and enjoy the various public services. The cities and rural districts need each other to their mutual advantage and this plan provides such a contact.

Rural sociologists claim that the real problem of rural communities is lack of leadership. This plan not only develops leaders by giving the country people the inspiration and confidence of working with the city organizations, but by grouping all the country districts surrounding the city, it gives the enthusiasm of numbers and naturally provides a spirit of competition in securing more and better public services.

Every rural community has public problems of some kind awaiting solution such as: Unsanitary conditions, inadequate fire or police protection, public-utility services, library, playgrounds, etc. But so many of the rural people have an inferiority complex and lack the real desire for improved conditions because they are used to doing without. They do not seem to realize that they are as much entitled to the blessings and conveniences of life as are the city folks.

Single township or small village communities are too narrow in scope for efficient effort. They need the contact and enthusiasm of larger numbers of people in the adjoining communities as well as the constructive forces of their trading-center towns. Such a contact will help the small communities to get out of their ruts and will give them new vision, new ambition and enthusiasm.

The most public-spirited citizens of the cities are usually members of the chambers of commerce and other service clubs, and, being business and professional men, they are naturally more than glad for the opportunity to extend their public work and projects to their rural patrons as well as to their customers in the city—providing an effective contact can be arranged and this is exactly what this rural-urban coordinating council plan does, easily and efficiently.

A rural council should always be under the leadership of rural men but the city club may well give them the information concerning the plan, which will bring new life to all the surrounding rural communities. It will also give these rural leaders positions of prestige in both the city and country, and the backing of the service or commercial clubs insures real success.

After these rural leaders have carefully studied the plan and have found a number of local public projects that are needed they simply invite to a public meeting the following rural people from all the trading area of the natural shopping-center town: Presidents of all the township boards of trustees, each superintendent of schools, each rural minister, the master of any granges, chairmen of farm bureaus, presidents of parent-teacher associations, presidents of the FFA and FHA and 4–H clubs (giving the boys and girls a chance), and a representative farmer, businessman, and housewife (giving the women a voice), young man and young woman from each township—usually making about a dozen citizens from each community or between fifty and seventy-five of the most public-spirited rural people of the entire trading area. Representatives of the city service and commercial clubs should also be invited. At this meeting the rural-urban coordinating council plan can be described and thoroughly discussed in connection with the suggestive list of possible projects, but a vote on the organization should not be made because rural people should not be rushed. Simply ask them to go home and talk the matter over in their respective groups and organizations.

Several weeks later another public meeting should be called to vote on the organization. All of the groups and organizations should be especially requested to have their representatives present at this meeting. If the council is approved, regular officers should be elected for each separate township council, because the township lines should be maintained for the purpose of handling projects peculiar to local conditions. Then an executive committee, composed of the president of each of the individual township councils, should be created to serve as the officers of the rural-urban coordinating council, who should then appoint the necessary general committees as suggested by the accompanying letterhead.

After the rural council is completed, the executive committee can well approach the chamber of commerce or other dominating service or commercial club in their trading-center town and request a similar contact organization of all the constructive forces in the city. The set-up shown in the letterhead shown herewith suggests a comprehensive, yet simple and practical contact. By grouping all these organizations into the five general committees it will be found very effective, although each city will have some civic organizations not found in others and it will of course be necessary to adapt the idea to the conditions. Perhaps it will be necessary to enlarge the urban council or consolidate still further, but our specimen list of organizations will provide a suitable contact needed for an effective rural-urban coordinating council. The dominating city organization can tactfully appoint such a city council by simply inviting all the city organizations to cooperate and it will be found to the advantage of all to be included in such a cooperative program.

Although this urban council was requested in order to provide a suitable contact for the rural councils, it has also proven to be a great boon to the city itself because such an organization of all the constructive forces of the city is powerful, enthusiastic, and efficient. The members do not vote as individuals (like politicians) but as representatives of their respective organizations and this gives them both the ambition and confidence to get things done. Such an organization of public spirit would be a power for good in any city.

It will be noticed in the letterhead that the five general committees: Government, education, religion, economics, and social, group both the rural and urban organizations so they can work directly or through the general meetings of the council. Both the city and rural councils elect their own coordinator, through whom all contacts are made. This enables them to efficiently coordinate the projects as has been found in the handling of the extensive list of public projects in our specimen program. The power of such a council can be visualized when one realizes that every constructive force in the city and country is united together into one coordinating body. Even the most ticklish of public problems can be attempted with such a public-spirited organization. When such a coordinating council meets together, selfish viewpoints disappear and there arises a feeling of sincerity and enthusiasm for the common good. At first the politicians may resent such a set-up but after working with such a group they usually find it to be a powerful asset as a buffer between them and the public.

The council is such a versatile organization and capable of adjustment to meet local conditions. It will also fit the individual methods of the leaders, whether they like to do the work in public meetings, through committees or by individual effort. Each council will undoubtedly be somewhat different, but the basic idea of getting the heads of all constructive forces of the community to work together with those of the city will be found practical. It is a streamlined organization that really works.

There is practically no expense to the operation of such an organization and causes no disruption of existing groups, but simply unites them. It builds public spirit by enlarging the size of the community and provides spirited but friendly competition among the various organizations of the surrounding townships. It inspires the various township trustees to provide equal public services to each township and gives them opportunities to cooperate in purchasing machinery and other material.

The farm people living in the outlying sections of each trade center are really the forgotten people of the rural communities and are most in need of the public services that are available. This rural-urban council idea reaches these folks because they live in the competitive trade territory—a fact that the urban business and professional men will instantly recognize. This also makes the city civic leaders conscious of their duty and opportunity to their rural customers.

A rural community map and rural address system, shown herewith, makes a splendid initial public project for a rural-urban council as it not only provides a picture of the community but gives a definite address for every farmer, who is usually so hard to locate. It also gives an opportunity for a council to raise a fund of several hundred dollars for some public project. The business and professional men will welcome such an address system as it will enable them to locate their customers for the sales and service calls, also for physicians, police, fire departments and other public utilities. Instructions for making such a map can be secured from the author.

The printed stationery of such a council gets attention and results from city, county, State, and national organizations and it is surprising how much help there is available for the asking. Public spirit in rural communities is not dead, but it is apparently dormant in most of them. These councils awaken this spirit which can transform the community to new life, enthusiasm, and ambition. It is a permanent organization. Once started the membership is always available. Like a fire department, it is always ready for emergencies of all kinds.

Just one public-spirited man in each rural community can readily start such a progressive movement which will transform the community life. It will also prove to be an unusual opportunity for such a man to gain a position of prestige and influence, as a rural coordinator, in his community.

Rural council

Government: Lyme Township, Joseph Lawler, chairman; township officers and county officials.

Education: Thompson Township, W. C. Garland, chairman; all superintendents of schools, presidents, boards of education, library, and parent-teacher associations.

Religion: Sherman Township, Reverend Taunero, chairman; Flat Rock Public Committee, Rev. O. W. Matzke, all pastors, Sunday-school superintendents, and heads of Christian groups.

Economics: Groton Township, Harlow Stahl, chairman; heads of all farm bureaus and cooperatives, farm groups, and public utilities.

Social: York Township, H. L. Seaman, chairman; heads of all granges, 4–H clubs, and social groups.

City council committees

Government: Mayor J. F. Shannon, chairman; service director, State patrol, Red Cross, hospital.

Education: Superintendent of Schools S. D. Swigert, chairman; president, board of education, parent-teacher association, librarian.

Religion: Ministerial sssociation, Reverend Gillette, president; all Sunday-school superintendents, and heads of Christian groups.

Economics: Booster club, William Nyerges, chairman; heads of all labor organizations, industries, public utilities, and newspaper.

Social: Y. M. C. A. secretary, Herbert Lorenz, chairman; heads of all clubs and lodges, and social organizations.

The Rural-Urban Coordinating Council of the City of Bellevue and Surrounding Townships: Rural coordinator, C. S. Hunsinger, Flat Rock, Ohio; Bellevue coordinator, J. F. Shannon, Bellevue, Ohio.

Specimen of letterhead which gets action on projects.

A SUBURBAN COORDINATING COUNCIL

Suburban communities usually built around various institutions, industries, airports, country clubs, etc., invariably have many public problems. And it is not commonly recognized how many outlying communities surround the average city until a definite survey is made.

Many city people are building beautiful, modern homes in the country and have all the comforts and conveniences possible, yet become distracted with various public problems because they are compelled to deal with township trustees and other rural officials. Annexation with the city sometimes becomes a temptation in order to secure the public services to which these people are accustomed.

However, in order to retain the assets of country living and minimize the liabilities of living outside the city limits, a happy medium presents the best solution—that of a suburban coordinating council.

Such an organization provides a definite contact between the public services of both the city and country in a simple, practical, and effective manner. Instead of a single suburban district attempting this connection it will be found much better to secure the representation of all the suburban areas surrounding the city, because it will then become really powerful.

The suburban coordinating council is practically the same as the rural-urban council which is fully described in another part of this booklet. The only difference is the change in boundaries which would be necessary in each different suburban district. In organizing a suburban council it will be well to consider the advisability of including the entire rural trading area, and then use the name rural-urban coordinating council. This will not only give more prestige to your group but will enlist the cooperation of the various rural organizations and in turn secure for them the public services which are accomplished.

Suburban readers of this booklet who are interested in these community projects therefore have three suggestions to consider: The organization of a public committee for his individual community as described elsewhere in this booklet, a suburban coordinating council for all the suburban districts surrounding the city and a rural-urban coordinating council for the entire suburban and rural trading areas of the city. The directions given for the organization of the rural-urban council will also apply for a suburban coordinating council.

A public committee plan for unincorporated villages

There are thousands of small towns and villages in America that are unincorporated and thus do not have a really satisfactory local government. There is a general need for some public organization of these people which will enable them to cooperate with the township trustees or district supervisors, in a simple, practical, and efficient manner.

After more than 25 years' experience in rural community work, the author has found two solutions to this problem. One is the organization of a public committee for the smaller, individual communities, and the other a suburban or rural-urban coordinating council. The latter is best for entire suburban areas or all the rural areas surrounding the shopping-center cities.

The organization of a public committee for the individual communities is very easily accomplished and becomes very effective because it is operated by public spirit. Members receive no compensation of any kind and can therefore feel free to vote on projects as they deem best.

In order to start this committee, a public meeting of all the adults of the community should be held to discuss it, inviting both men and women. A publicity campaign in the local newspaper will arouse interest, and the leaders should prepare to include several public projects that are certain to be popular.

If a decision is made at this public meeting to organize a public committee, ballots should then be distributed for the nomination of at least 25 citizens to appear on a general ballot for the election of 12 members to serve as the public committee. This plan has been found to be entirely fair and satisfactory.

These 12 members should be elected to serve for 1 year each and an annual election held thereafter. They elect their own officers and meet monthly or at the call of the chairman or at least three members. It should also be understood that all meetings be open to the public.

FIFTY RURAL-URBAN PUBLIC PROJECTS

The 50 projects described in the following pages are not theories because all of them have actually been accomplished by the author or under his supervision in his home community.

Practically all of them represent typical needs in the average rural areas of America. They are common grass-root needs, many of which are overlooked by national agencies. Some of them may appear to be small but they are vital to the enrichment of rural life.

The author has been active in rural community life for more than 30 years, first in his own neighborhood, then in the township and eventually in the entire trading area, where he found that it was much easier to accomplish local community projects by including all the rural area instead of just a small neighborhood. It was also found to be much easier to get things done when the cooperation of the constructive forces in the city were available.

These suggestive projects are therefore written from the viewpoint of chambers of commerce, service clubs and other civic organizations of cities because they are always interested in including their trade areas with their public projects. The author recommends the organization of a rural-urban coordinating council (which is described in his book Rural-Urban Coordination) to accomplish these projects because it provides such a close contact with the rural area, but any of them can easily be handled by any public service group.

All of these projects will be found to be splendid good will builders and it will be surprising to find that most of them can be accomplished with little or no cost whatsoever. This is possible because it is only necessary for the organization to make contacts for the rural areas, with various public service agencies.

The author is available for further assistance in the handling of these projects or in the organization of a rural-urban coordinating council.

Public library service

The same sort of free library service should be available for rural people as is provided for the city people, and if Andrew Carnegie were alive today, he would undoubtedly be willing to extend the services of the public city libraries to the country districts as well.

In most States the laws provide for the township trustees or boards of education to arrange for library service of some kind if there is a public demand for it. Would it not be a worthy endeavor for some service club to ascertain the local needs and possibilities along this line and report the matter to some organization or council to put through.

It is suggested that the services of the city library be made available to the residents of the trade area. Sometimes county boundaries deprive rural people of this service so arrangements must be made with the county authorities. The very best type of library service is for the rural folks to be able to borrow books from the city library when they come to town for their groceries and to enjoy the reading rooms while waiting for the other members of the family.

Detailed instructions on how to accomplish this library project are available from the Rural-Urban Coordination Service, Flat Rock, Ohio.

Newspapers

The success of many campaigns and projects depends upon the publicity given by editors and publishers, and they will usually be found more than willing to use their space for projects of value to the community.

Anything that keeps people interested in each other is valuable and the home-town newspaper is an ideal channel for this work. If some local individual accomplishes something really worthwhile he certainly deserves the public commendation, and if he does something dishonorable he should accept the disapproval from his friends and neighbors. The home-town newspaper provides the opportunity to keep the standard of the local community high.

The people of the township should be urged to subscribe to the home-town paper so the local community may be cemented closely together. When practically everyone in the community reads the home-town newspaper, the announcements of the local organizations, the news of public projects, the marriages, births, deaths—joys and sorrows of life will be known to the friends and neighbors whose sympathy, appreciation, and encouragement mean so much.

It is suggested that the complete mailing list of the township be secured from the county authorities and offered to the local newspapers with the understanding that sample copies will be sent to everyone on the list. The sponsoring organization will be doing a service, if it publicly recommends that everyone in the community subscribe. It is also suggested that the issue which is mailed as sample copies to the complete mailing list contains articles in regard to some of the current rural-urban public projects.

Fire protection

Every farmer is just as much entitled to adequate fire protection as the businessman of the cities, for every farmer has just as much invested as the average storekeeper. Every rural resident should first be urged to maintain the best possible fire equipment and to keep his premises as fireproof as possible. He should then be assured of immediate service from the city fire equipment in case of fire. It is one of the chief duties of the township trustees to provide adequate fire protection. It is just as important as their road-building programs.

If there is no definite fire protection program arranged for in your community, it would be a very worthy task for council to take it up as the initial project. There is an abundance of material available from the various fire protection agencies, Government bureaus, and State officials. Appoint a committee to start such a project and you will be providing a very popular program. (Write the author for detailed instructions covering this project.)

Recreation projects

Yes, "all work and no play, makes Jack a dull boy"—so, a year 'round recreation program is a fine thing for every community and for everyone in the community. Young and old. Are you using the natural recreation facilities in your countryside? Are you providing the sort of entertainment that will keep young folks at home and older folks from becoming stale?

Playgrounds

Blessed be the individual or organization in any community whose hobby is playgrounds. They seem to be needed everywhere. Yet there are vacant lots galore—growing up in weeds—which might better be used to grow boys and girls instead. Would it not challenge the members of some lodge or other organization in your community if some individual would present the local needs to them. Let someone try it.

The board of education should have the cooperation of the people in providing ample equipment for the school playground and in boosting athletic activities in every way possible. If there are any small towns in the township a public playground would make a good hobby for some service club.

Let someone buy a carload of sand and then offer to sell it out in small sand-pile lots at cost and the kids in town will wear a path to the door with their little red wagons. Write to the Recreation Department of the Russell Sage Foundation, 130 East Twenty-second Street, New York City, for their wonderful bulletin on home-made playground apparatus.

Will your club, lodge or other organization be willing to sponsor a definite program? Cities have playgrounds and our country children should also. If not possible to build them in the country arrange for the rural children to be made welcome at all the recreational facilities in the city.

Communication projects

It is good for the people of each community to have contact with each other and with the world in general. Anything that can be done to improve these facilities in a community will be a good work.

Telephone service

Perhaps the local telephone service is the most important. If a survey shows a lack of telephones in the community, the efforts of the local company in soliciting should be encouraged through newspaper items and public mention. Surely the company will profit, but if a larger number of neighbors and friends have phones it will add greatly to community unity. It should be pointed out that the value of a telephone should not only be measured by the number of outgoing calls but also by the number of times your friends and business associates call you.

If there happens to be several different telephone systems in your community which require a toll charge, efforts should be made to get local companies to cooperate in making their services more available. If this has no effect, you are now at liberty to take the matter up with the State public utilities commission. If sufficient pressure is shown by the people to warrant a formal protest, the commission will undoubtedly do all they possibly can to adjust the condition.

Telegraph service

Is it generally known in your community that telegraph messages can be sent, received and settled for over the telephone lines? A rural map showing where everyone lives should be filed with the local telegraph company so all your people can feel that they can be reached promptly through their nearest neighbors, by anyone in the world.

Radio

Anything that can be done to encourage your people to tune in radio programs which are really the most helpful would be a fine piece of work for some special committee. The suggestions could be published in the local newspaper or through some other channel.

Elimination of danger spots

Some safety-conscious man can perform a worth-while service to the trade area by conducting a campaign, preferably through the local newspapers, for the elimination of public danger spots. Simply request the public to submit their own observations of such conditions and after investigation they can be turned over to the responsible authorities for action.

A special study might be made of the dangerous railroad crossings in the area, enlisting the cooperation of the State public utility commission.

Prompt snow removal

Are the rural people in your trade area or community assured of the prompt removal of snow from the roads? If not, the pressure of the rural-urban coordinating council can be brought upon the county, State, and township authorities for the adoption of an efficient, coordinated program so there will be no delays or passing-the-buck excuses. Rural people are entitled to this service.

Community-chest campaigns

Are the rural people in the surrounding trade areas included in the various public campaigns for funds for the city hospitals, YMCA, recreational agencies, etc.? They enjoy these services and will be glad to contribute when included in the campaigns, by appointing rural leaders to solicit.

Rural address system

There are several methods of arranging a convenient address system in rural area but undoubtedly the best is described below:

The author has patented a rural-urban zone address system which provides a convenient, easily located address for all the rural people in the trade area and suburbs. This makes one of the very best initial projects for a rural-urban coordinating council as it makes the rural people feel that they belong to the city. This feature is especially valuable for the farmers living in the competing trade areas of surrounding cities. Write to the Rural-Urban Coordination Service at Flat Rock, Ohio, for a detailed description of this zone-address system.

Such a map should be furnished the fire department, ambulances, physicians, and other businessmen, together with an alphabetical list of residents and their addresses by zone numbers. It will also be handy in arranging for contact persons throughout the township. Simply appoint one person in each section as the representative with a chairman of the surrounding sections. When some campaign is on it will only be necessary to get in touch with the chairman of each of these sections, who can in turn conveniently contact the representatives in each of his adjoining sections, as they will be his neighbors.

Home-improvement projects

Country homes can now be just as modern as those on First Street—the only thing necessary is the willingness to invest some money in the home, where people will get more for their money than anywhere else.

The closer the rural-urban contacts, the more improvements and conveniences will be found in the rural homes. If the local merchants will cooperate in a display of modern fixtures showing how city conveniences can be made available to farm homes, it will be found to be a splendid good-will-building project.

Calendar of activities

School superintendents, ministers, and organization workers will appreciate a community calendar as it will aid their work greatly. Simply ask all the organizations to present their regular schedules of times of meetings throughout the year and publish this calendar periodically, after the conflicting dates have been adjusted between organizations. A calendar of this kind might also be printed together with a yearly pad, telephone list, and other local information so the people would be encouraged to post them in their homes for ready reference. This makes a splendid good-will-building proposal.

Bulletin boards

Several large, well-painted bulletin boards placed at popular places in the township will make a splendid place for community events to be advertised. A portion of the boards should be painted black so such notices can be lettered in chalk; another portion should be made available for posters and handbills of the public organizations of the township. You might even use a portion at the bottom as a for sale, wanted, and to exchange department and make a charge of 10 cents per item per week in order to pay some individual for the bother to maintain the bulletin board. In order to secure the original money for this project, space might be sold to a few permanent advertisers.

The county and township officials should be consulted as they can assist in providing suitable signboards and authorize their setting. Have them as well made and attractive as possible.

Publicity program

Cities have their chambers of commerce, and rural communities also need something of the kind in order to advertise their assets and to get outlets for their products. A careful survey of your area will show any wide-awake man the possibilities of attracting some profitable industry or the raising of some special crop for which the areas might become noted and then advertise, advertise, advertise—both in nearby newspapers and locally with handsome signs along the highways entering the township.

Let some progressive businessman handle this project.

Homecomings

Former residents are always glad for the opportunity to come back home if they can be assured of meeting their old-time friends. This can be arranged through a homecoming celebration. If one of the larger organizations in the community were to sponsor a homecoming day it should be able to earn a nice sum for some public project. In addition to the meeting of friends, there would be many benefits of the community from such a homecoming. It would advertise the township, give an opportunity to secure the interest of former citizens in projects, and would arouse residents to take more pride in the upkeep of their homes, etc.

Publicity projects

A history of the community: In practically every community there is some gifted person who is well-fitted to write up a history of the local area and who would be glad to do so. Why not take advantage of such talent and request each organization to furnish this person access to their old records, addresses of members, and so on.

Such a history could be printed in booklet form under the auspices of the council and sufficient advertising solicited to pay all publishing costs. This book might well be prepared in connection with a homecoming program and the program included with it. Those who attend would gladly pay a small sum for such a booklet, especially if it contained pictures of scenes familiar in their youth. Such a history would be the best kind of publicity for your community.

Government agencies

If a letter is written to all of the State and National Government departments asking for a list of the services and help they have available for your citizens, everyone will be surprised to find what wonderful services are available. Do not forget to ask your Senator and Congressman. After all this material is received, arrange for a public display of it and let it be the start of a reference library.

Many people, for example, do not realize what a wonderful service the Bureau of Standards in Washington gives. A letter of inquiry to this department will bring sufficient information to make some local person enthusiastic enough to apply their service to the local people. Before purchasing material for local projects, write to this Bureau for their specifications and recommendations and it will enable your committees to get real values.

The churches

All the fire protection, telephone, electricity, library, recreation, and other services which can be provided for a people will not help them as much as will a real faith in God. It surely pays to try to cooperate with God instead of trying to fight Him. Therefore, everyone should be urged and encouraged to cooperate with the local church programs. The churches are the most valuable, constructive force in the community.

A council should be strictly nonsectarian—let the people themselves decide for themselves which church to attend—but it should cooperate in getting them to go somewhere. If favorite denominations are not located in the country, let them be made welcome in the city churches of their choice.

Adult classes

There are ambitious men and women in every community who are eager to learn new things, new methods of doing their work, etc. The centralized school gives an opportunity for evening classes of all kinds. The vocational teachers in the schools will be glad to cooperate, also the extension departments of the agricultural college in holding cooking schools, sewing schools, etc., for the ladies, and farmers' institutes for the men. The field and opportunities are unlimited.

Encouragement of talent

How many boys and girls or older folks in your community who have a real talent along some line which should be encouraged You should find out, for talent many times dies because of the lack of encouragement locally, and the world loses something worth while. What a worthy work it would be for some community worker to become a real talent scout, making your gifted known to the community and perhaps to the world. And if it's done through something like the amateur hours on the radio, it will provide real entertainment for all.

Extension services

Is your community taking advantage of the wonderful service available through the extension departments of the State and National Departments of Agriculture? It will keep one man busy in his spare time to keep informed on all the help that is available entirely free of charge. Have a display of all this material made in some store or other public agency.

Cooperation with the schools

Every teacher feels the need of a closer cooperation between the home and school and would welcome a real spirit along this line—not just the visiting wind of interest but an active personal interest. The parent-teacher association seems to be the most logical agency for obtaining and distributing the wealth of literature available on this subject. It is a real job to be president of this association and takes more than just arranging the monthly programs—it needs the spare time of the officers throughout the school months. A cooperative, united rural-urban school program would be a splendid goodwill building project.

Children's program

The children of a community are the most important group as all parents well realize. Therefore, why not spend some time on them and provide the best things possible for them? Arrange for some progressive mother to head a group of women in the task of building a definite program of assistance to children, including prenatal care, baby clinics, preschool examinations, nurseries, playgrounds, boy and girl scouting, and all other activities for the benefit of the citizens of the future—those who will take over the public work when we retire.

Community service projects

Taking care of our own: In practically every community there are folks in need and it is the time-honored custom of rural folks to look out for their neighbor's welfare. Let us help retain this grand reputation by appointing some individual to maintain a list of all the aged, invalids, and neglected folks in the township, then enlist the cooperation of the churches, lodges, and other organizations to make certain that the needs are supplied. This project might well be inaugurated on Christmas, Mother's Day, or some other special occasion by sending baskets or flowers to everyone on the list. Such would be a wonderful work for some individual in every township but he would need some funds, so let the club arrange for it so that your community will be known as one that takes care of its own.

Employment bureau: A complete list of those who are jobless or available should be maintained. It should give their names, how they can be reached and notes about their experiences and aptitudes. The chairman of this project can contact the nearest office of the United States Employment Service and cooperate with them in their wonderful work of matching jobs and men and women, which is done at no cost to the employer or employee.

Cooperative purchasing agency

When there is some special need for articles which will benefit everyone in your community, such as home fire extinguishers, lightning rods, paint, shade trees, running-water systems, etc., appoint some businessman to secure the lowest possible quotations on these articles in quantities and then, in order to induce his customers to make these improvements, offer them these special prices.

There are many ways to cooperate in order to get worth-while things accomplished. One noteworthy task for communities would be the cooperative purchase of machinery such as spraying outfits, heavy machinery for repair shops, cooperative refrigerator plants, etc.

Naming of farms

Every farm is really a business and is entitled to be named. If only a few farmers have their names painted on their barns and mail boxes perhaps some may criticize but if a farm-naming campaign is conducted this criticism will be overcome. The people will take much pride in selecting suitable names. Displaying these names will likely lead to a general sprucing up.

The person who is interested in promoting this effect can start an article in the paper suggesting a long list of names. If a man doesn't care for a general name, urge him to name his farm after himself. Such names as "The Royer Farm," "The Smith Farmstead," "The Matz Stock Farm," are always good. Remind him that a farm is a real industry and should be named.

The services of a good sign painter might be secured on a cooperative basis. Or the use of a stencil machine or outline alphabets might be offered.

Garden clubs

There is an opportunity in every community it seems for a common gardener's club or a "dirt" gardener's club, with practically no dues except the willingness to cooperate with the other folks who love flowers. One of the requirements should be that each be willing to share the beauty of their own garden with the other members and be made to feel welcome to visit the displays in the gardens of other members. The club might sponsor an annual flower show, and its gardens would make your community more beautiful.

Nature clubs

There are undoubtedly many nature lovers in your community who would enjoy getting together for study and field trips. Some of the things they might foster are a bird sanctuary (established by cooperating with the Audubon Society), a humane society for the prevention of cruelty to animals, a dog show, nature trails, and trips, etc.

Boy and Girl Scouting

Many country boys and girls do not seem to be aware of the fact they can become real members of the Boy or Girl Scout organization which every ambitious youngster seems to want to join. They can become Lone Scouts in these noteworthy organizations and the ones who go through all the classes as Lone Scouts will get much more out of it than the city boys and girls.

Any boy 12 years old or older can become a Lone Scout and any farm boy from 9 to 12 a Lone Cub, by writing to the Rural Scouting Service of the Boy Scouts of America, 2 Park Avenue, New York City. And girls can write to the Girl Scout Headquarters, 14 West Forty-ninth Street, New York City.

Both of these organizations offer men and women who like to work with boys and girls, the opportunity to become counsellors and to organize Lone Scout Tribes and become real scoutmasters.

Highway beautification

Perhaps it is not generally known, but on national highway projects, one-tenth of 1 percent of general road contracts is supposed to be used for highway beautification. So, if there are national highways in your

communities you should be able to get some nice plantings. If the club takes the matter up with the county and township road authorities, they will undoubtedly be glad to cooperate on worthy beautification projects.

An antibillboard and antisign campaign might also be waged to make the highways more attractive. Ask county officials to give a list of the eyesores they eliminate each year and write them up to publish in the local newspapers.

Reforestation program

Everyone dislikes to see the trees of the community disappear as rapidly as they have in most districts. If the people could be made tree-conscious for a few years they could be interested in planting trees in every available spot.

The State and National Departments of Agriculture are always glad for the opportunity to cooperate in such a program and will in many cases furnish seedlings to anyone who will promise to care for them. This work would make a wonderful hobby for some interested person. He would become the Johnny Appleseed of your community. The program might also include the planting of fruit trees and local nurserymen would be glad to quote low prices on quantity orders.

Beautification projects

Public eye: Are there any eyesores in your township? If there are old buildings, make a proposition with some man to purchase and tear down these old structures. He can resell the large timbers for the framework of new buildings and old boards for sheeting of roofs, etc. He can afford to pay well for the eyesore and resell the timbers, etc., for a profit. Ask any building wrecker about this.

If there is rubbish that spoils the landscape in your community, make arrangements with the owner of some abandoned quarry, sinkhole, basement, or depression of some kind and announce a clean-up week for the public to fill the hole. Arrange for some boy or man to haul rubbish for a reasonable amount and you will have made a bargain for everyone.

Write your Senator or Congressman for copies of the Government bulletins Landscaping Farm Homes, etc., distribute to everybody.

Also advise your township trustees that the council will publish a list of all the eyesores which they eliminate during the year from the township highways, and they will be glad to cooperate for this publicity.

First aid and health

The American Red Cross has arranged for a rural emergency service that every rural community should take advantage of. Interview your local Red Cross chapter for information and you will find them willing to equip an emergency station in their usual thorough fashion. The only provision is that two persons take the Red Cross course in first-aid care so that one or the other may be available for duty at all times.

Government cooperation

County officials: There are many services that county officials are able to render the people that many do not know about. A splendid project for a council is to invite all the county officials to attend a public meeting in the community house, giving each one a 10- or 15-minute period in which to tell of his work, problems, plans and needs. A period of questions and answers should also be allowed. Such a program would acquaint the county men with the needs of the local people and would enable them to give better service. (Try to arrange for this meeting after the elections in order to get away from politics.)

Police protection: Rural districts are in need of better police protection and some informed man should be placed in charge of this project to report all possibilities to the council which could then request the county or township authorities to arrange for the improvement recommended. The township constable should have a telephone so he will be available at all times. Deputies should also be appointed whenever necessary. The State highway patrol requested for cooperation and the county sheriff consulted.

It is sometimes possible to provide the police protection of the city by arranging for the establishment of a protection district, similar to a fire protection or water service district. Write the author for details.

Contact persons: In order to put over some projects it is necessary to secure signatures to petitions, etc., or to get word to every citizen in the township. Some townships have appointed the most public-spirited resident in each mile-square section who has a telephone to act as contact person for the other residents in his section. Such a service will be found useful in many ways.

United States mail service: Each council can secure a complete mailing list from the county authorities of every citizen in the township. This list will represent a complete coverage, and businessmen will find it a good advertising medium so they can be appealed to for advertising space in council bulletins to promote the various public projects. Such revenue will pay for the costs of printing and mailing.

Local government agencies

There are a number of township, county, State, and National Government services and agencies which should be made more convenient for rural people.

A local collection agency for tax collection will save many taxpayers trips to the county seat. This might be made available by requesting the county officials to mail statements showing the amounts of taxes so that everyone could mail checks or money orders.

Auto tags should also be obtainable in each local community. If a local citizen were authorized to distribute them it would give him some revenue. Such a system would group the numbers by townships for identification purposes and save the people trips to other cities. Auto drivers' licenses might also be handled in the same manner.

Hunting, fishing, dog licenses, etc., notary public, justice of the peace, constable, and the various inspection services should be made convenient.

Better business projects

Rural industries: Appoint several progressive men and women to act as the chamber of commerce in your rural community. By making a study of the local advantages they will undoubtedly be able to find some new business opportunities. To advertise your community, they might urge everyone possible to make a specialty of raising some certain crop.

Hobby clubs

There's no more satisfying recreation than hobbying. Why not promote a hobby club for the whole community? And once a year you can have a big community hobby show in the centralized school building. Hobbies are so varied that everyone in the community will find something to interest him.

A general plan

To build a better rural community, a general plan of action is necessary. Month-by-month plans are better than none at all, and a yearly plan is splendid; but if all the leaders in a community would get together in planning for the kind of a community in which their children would like to live 10 years hence, would that not be still better?

Such a movement would take months of careful study, investigation of the good things that other townships have, close cooperation with the township trustees and county commissioners, but the results would be worth it. One of the first essentials would be to get all the public organizations in the township started in listing the things they would like to have accomplished some years hence. With their ideas expressed, naturally, their ambitions would be aroused in order to achieve them.

Let the churches, schools, lodges, farm organizations, township trustees, and all cooperate, and sufficient work and needs would thus be found to really arouse the community. One splendid plan would be to request all the pupils in high school to write competitive essays—make a contest out of it—on the subject The Kind of Community in Which I Would Like To Live Ten Years Hence, because parents are more interested in building a future for their children than in anything else and would like to have them settle down nearby. The township trustees and county commissioners could be asked to present a 10-year road-building and other service program.

Too idealistic? Just try it, and you will not only be surprised but enthusiastic about the prospects.

Community health program

There are so many ways of helping people with their health, and it would be a real job for some individual or organization to take up this work and devote spare time to it throughout the year.

Local physicians, hospitals, the Red Cross, foundation, and other organizations have an abundance of material on many diseases which is available for the asking. Consult your local physicians, and they will usually be glad to help conduct clinics, programs, etc. Examination of school children by township health authorities, prenatal information, preschool examinations, lectures on various diseases, inoculation campaigns, etc. Let this be a professional service.

Transportation projects, railroads

During the past 10 years the services of the railroads have generally been curtailed in the smaller communities, but now they are very anxious to give every service possible. Their new delivery arrangements, c. o. d. privileges and prompt shipments are commendable. If there is proper service still lacking in your community, a letter from your council to the management will receive every consideration. Ascertain the amount of local taxes paid by your railroads and it will generally be surprising. Railroads are township assets.

Express

The express companies are now managed by the railroads and the services extended in many ways. Rates have been lowered on many farm products and the opportunities are presented to market direct to customers in the cities. Request the local express office to describe the services which are available. Also the post office.

Bus routes

Most rural people have their own cars but at times several members of the family need to go places at the same time. If there is a bus route established through your township, but without a station, an appeal to the bus company, showing the need of a central station in your township, will receive every consideration.

Shipping facilities

Rural folks need prompt and efficient shipping facilities. Some individual or company should be encouraged to offer a complete trucking service, equipped to haul all kinds of products, livestock, etc., and make regular scheduled trips or provide central station facilities for trips to the nearest market. Possibly a cooperative proposition might be worked out to advantage.

If there is a special need in your community, such as the handling of a special crop, a letter to the commercial departments of the local railroads, express companies, or the Post Office Department will bring real cooperation. These departments will even

use their facilities to find a market for your products, entirely free of charge.

City conveniences

Running water: In order to have a thoroughly modern township every home should be encouraged to have a running-water system. Your council should let the community know that for the same amount of money people living in the city pay for water rent over a period of 5 years, it is possible for the average country home to have a running-water system installed. There are modern systems available at such reasonable cost that people living in the country can have running water for the same amount of money or less than city people and have soft water in the bargain.

To further this campaign, a cooperative buying agency might be arranged in order to secure large discounts on quantity orders. What housewife would not be interested in a bargain announced something like "Running water—hot and cold—installed in your home for only $10 per year?"

Gas service: Rural housewives can now have gas service which is the equal of that in the cities. There are several types of plants available that are really satisfactory. A special service campaign on this subject will be a good-will building project.

Nonpolitical projects

Local taxation: Has anyone ever made a careful study of your local taxation? If not, it would be an interesting and profitable study. Let this chairman go to the county seat and get all the local information and statistics along this line for some years past. These statistics will be available upon request of some community organization such as a township council and a complete report of this survey will be very profitable.

Surveys and plans

Survey: Before starting projects, it is well to have an authentic survey of the township or community made in order to ascertain the real needs. This is a project in itself since practically every public organization will be able to use this information to advantage, so the survey should be very thorough.

How many homes in your community have running water? How many have electricity? How many live on unimproved roads?—First you'll want to go over such questions as these to find out just what statistics are needed for the local work, then make a simple form to fill out. And you'll get a better return on your questionnaire if personal visits are made.

The results of such a survey will be of special value to the business and professional men of the trading center.

A rural soil survey

Your State department of agriculture may have made a soil survey of your township which is available. If not, request this service and apply the results for use among your farmers. There are so many such services of the Government which can be used by the farmers and it would be a worthy job for some man to look after this work.

Marking rural roads

When strangers visit the people in your township, do they find a convenient system of road signs or do they have to stop at various farm homes to inquire their way?

Cities have their streets marked and it is a good plan to have the rural roads named or numbered conveniently. This is easily possible if someone will make a study of the complete map of the township and arrange a system which will help strangers to easily find their way in your township. Request the township or county offices to install these signs.

Group travel trips

In order to arouse interest in certain projects which are needed in communities, it is often a wise plan to simply show your people what other communities have done. This can be arranged by staging a demonstration trip. Either charter a bus, with a low rate for each passenger, or engage a number of local autos to make the trip together—as an excursion, planning for eats, entertainment, etc.

There are so many interesting and profitable things to see in America and in each State, that it is a shame that more do not see them. Couldn't your organization arrange travel trips to these places?

As soon as the places are decided upon, an inquiry to the local railroads or bus lines will give all the necessary information and cooperation. You will be surprised what low rates will be possible under the group plan. Several trips of this kind might be arranged for each year.

Farm machinery repair shop

If there are some of the old one-room school buildings standing in the various parts of the township or other unused buildings, some might well be put to good use by all farmers in each section cooperating in installing hoists, lathes, forges, etc., for the general repair of farm machinery

Public roads

So many of the local roads are built according to the number and "weight" of complaints and the plans of township trustees are many times changed by the individuals who do the most kicking. In order to overcome this condition it is suggested that the council appoint a special committee of progressive yet consistent men and request that they arrange for a meeting of the township trustees, county commissioners, and perhaps the State highway department and sponsor a 5-year road-building program after a careful survey and study is made by all concerned. Such a plan would be welcomed by township trustees because it would eliminate one of their chief troubles. The township would then be assured of the best roads possible.

Legislative Program of the National Grange

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1949

Mr. WHITE of Idaho. Mr. Speaker, agriculture is the most important of our basic industries. One of the greatest farm organizations of our country—the National Grange—has recently met in a national convention and adopted a legislative program which it is my privilege to submit for the consideration of the Members of Congress:

LEGISLATIVE PROGRAM FOR 1949 OF THE NATIONAL GRANGE

(Summarized by J. T. Sanders, legislative counsel)

1. THE GRANGE PROGRAM FOR AGRICULTURE

Principles underlying Grange programs

A few principles are basic to the formulation of nearly all Grange programs. A brief statement of these fundamental principles will, therefore, contribute to full understanding of our policies and programs.

The American family-type farm is far more important to the preservation of our democracy than most people think. Farmers constitute about 20 percent of our people but receive a net income that varies from only 5 to 10 percent of our national net income. They use a total capital value of land, buildings, and equipment of around $103,000,000,000, or more than the combined capital structure of all major manufacturing industries in the United States. American farmers operate the largest private business in the world.

Our faith in the permanency of the family type farm is unshaken, since increased mechanization has strengthened it, rather than weakened it, by increasing the percentage of all needed labor that is supplied by the farm family. The family farm is the very foundation of all Grange policies and programs, and we believe it is our Nation's strongest bulwark of freedom and democracy.

The average family farm, which produces the great bulk of our raw products, operates with around 75 percent fixed costs, including the family and operator's labor. In depressions these fixed costs cannot be reduced by reducing output. The average American industrial concern operates almost entirely with hired labor and with only 25 percent total fixed costs, or 75 percent of variable costs, which can be greatly reduced in a depression. In like circumstances managers of industry reduce costs by cutting their hired-labor force and other variable costs, thus greatly reducing their output in contrast to the behavior of farm managers.

In depression industry operates on a scarcity of output principle and agriculture on an abundant output basis. In short, the family farm is in reality the only truly continuously abundantly producing portion of our economy.

This unfailing abundant production of the farm has saved democracy from utter wreck time after time. Had farmers reduced their total output by a half in the early thirties, as did all industries on an average, and had urban workers been reduced to both an unemployed and starvation status, no power could have prevented revolution.

The heart of the farm problem

The Grange believes that the so-called farm problem is in the main a result of the failure of industry to keep its output in balance with the abundant output of farms and the failure of prices of agricultural products to remain in proper balance with the prices of goods and services of other groups. This over-all unbalance is caused by reduction in industrial output and not by changes in farm output. A permanent solution of the farm problem will not be found in restricted output from our farms but in large part from reasonably full stabilized production and employment in industry, and in the establishment of a program of equitable and equalized values of goods produced and services rendered by all groups in our national economy. Based on these beliefs we subscribe wholeheartedly to the following three Grange guide posts:

1. All prosperity springs from the production of wealth.

2. The compensation of each should be based on what he contributes to the general welfare.

3. The prime purpose of Government is to protect its citizens from aggression—both physical and economic.

Objectives of the Grange farm program

The objectives we seek for agriculture are:

1. A stable, abundant production of farm commodities at prices which are fair to both producers and consumers.

2. The preservation and strengthening of the family-owned and operated farm unit.

3. The conservation and most efficient use of our basic soil, water, forestry, and mineral resources.

4. A constantly rising standard of living for all farm families.

5. The opportunity for youth to climb rapidly the ladder to farm ownership and security.

6. A marketing and parity price structure that will maintain agriculture on a satisfactory, self-sustaining, and stable basis.

7. Maximum advisory participation of farmers in all programs designed to aid agriculture.

To achieve these objectives farmers on their part must assume the responsibility of efficient operation of their farms but must be able to maintain productivity of their soils, and must have permanent and dependable markets and fair prices.

A well-balanced, complete, and permanent farm program will provide four major lines of attack:

1. Adequate conservation of land and water resources.

2. Adequate income support based on a sound parity formula.

3. Sound production and consumption adjustment.

4. Maximum advisory participation by farmers in all farm programs.

Conservation program on farms

Conservation is essential if we are to maintain an adequate diet and produce those products that may be required by domestic industry and export trade. Adequate conservation will be attained if we:

1. Maintain and expand the Soil Conservation Service as an independent and separate governmental agency within the Department of Agriculture, with sole responsibility to develop soil-conservation programs.

2. Provide adequate educational and technical assistance to farmers.

3. Recognize that conservation on a farm benefits not only the farm land but other property values at lower levels in the drainage area and apportion conservation costs between the farmer on the farm and the public on the basis of benefits of each.

4. Encourage sound land use and conservation in leasing contracts.

5. Assure farmers adequate credit to enable them to carry out sound soil-conservation work.

6. Include public lands, public highways and public utility lands in the coordinated soil-conservation programs.

7. Provide land-use regulations to protect resources when approved by a two-thirds majority of the landowners in soil conservation districts with local control of policies of imposing regulations and taxes for conservation.

8. Continue the Reclamation Service program with greater stress on storage of water as near its source as possible with emphasis on early completion of flood-control projects.

A sound forestry conservation program

We should supplement farm conservation by strong and effective conservation of our forestry resources to safeguard watersheds, and increase timber growth by including the following measures:

1. Technical advice and assistance to private owners in establishing and managing farm forests and in utilizing, harvesting, and marketing forest products.

2. Public aid for protection against fire, insects, and disease for owners.

3. Adequate credit on terms and conditions suitable for forestry purposes.

4. Cooperative associations for achieving good forest management.

5. Adequate forestry research.

6. Tax laws that encourage the growing and selective cutting of timber.

7. Adequate reforesting, reseeding, and conservation programs on public lands.

Coordination of soil conservation, flood control, and watershed development

A complete conservation program requires a thorough job of coordinating the work of all agencies, such as the Army Corps of Engineers, the Interior Department, the Department of Agriculture and State agencies, engaged in soil and water conservation and flood control at the Federal and watershed levels. To accomplish this, we recommend:

1. Effective democratic means for coordinating the soil and water resources work of the various Federal and State agencies engaged in this work, established for major watershed areas and at the national level.

2. Limiting measures or projects to those where a sound appraisal of all the benefits shows benefits in excess of all costs.

3. That any agency of the Federal Government to effectuate and administer coordinated resources development be required to use only the professional, technical, and engineering staffs of presently constituted Federal or State agencies qualified to do watershed development work.

4. That Federal and State watershed programs be coordinated.

Parity income for farmers

To deal with the domestic farm price and income disparity problem the Grange has three lines of defense. The first is to make full and effective use of our present marketing facilities by pushing the sale of products in surplus supply and sparing those in short supply. The second line of defense is a flexible price support to be lowered or raised sufficiently to induce necessary adjustments in production. The third defense is a stop loss or disaster prevention floor price below which prices would not be permitted to fall.

In the case of those crops, of which we normally produce a surplus for export, means must be available for moving the surplus through international commodity agreements or a multiple-price program.

The parity formula

The Agricultural Act of 1948 contains almost the exact modernized parity formula which the Grange has advocated for several years. Although this formula will go a long way toward eliminating many inequities that were in the old parity formula, we reiterate our belief that further improvement is possible through use of an income parity formula that gives prime consideration to the full output–full employment nature of agriculture.

We believe that a modernized formula for calculating income parity price, implemented by flexible floors, would be responsive to changes in costs and to technical improvements and trends in demand, and this would make necessary a minimum of adjustments in farm production by other governmental means.

Provisions of a sound farm-income program

There is no simple solution to the farm-income and price-support problem. The farm income program must be broad enough to enable the producers of any commodity to develop a plan and set up the machinery for handling the specific problems of the commodity.

There are available and needed a number of means of paying the individual farmer market prices and parity income; which means are self-financing and do not interfere with the individual farmer's independence of judgment and operations. We will support the following programs:

1. With proper legal sanction, organized marketing efforts of distributors, processors, and producers, can sell many seasonal surpluses of farm products without serious losses to producers and to the advantage of consumers.

2. We favor strengthening cooperative marketing and purchasing associations.

3. We favor the use of a dual or multiple price system as means of facilitating price support. We favor the use of any practical two-price or multiple-price device such as the export debenture plan, equalization fees, or a parity support certificate plan as means of price support. These should be supplemented by safeguards which would protect domestic producers from imports that would destroy the American market.

4. We favor making section 22 of the Agricultural Adjustment Act applicable to any farm product for which price-support programs are authorized. This section gives the Secretary of Agriculture authority to prevent the imports of a farm product if such imports tend to destroy the effects of a price-support program on domestic prices. We also favor setting aside all funds received from duties on imported farm commodities under section 32 of the Agricultural Adjustment Act for use by the Secretary of Agriculture in implementing any authorized support program.

5. We favor the use of flexible price supports under farm prices, between a "stop loss" level and parity, to be administered by the Secretary of Agriculture or an agricultural commission. We also favor a "stop loss" or disaster floor price below which farm prices would not be allowed to fall. A flexible floor support system for export crops and for domestic crops will need variable rates. Also the flexible scale may need to vary as between perishable and storable crops.

6. We favor an expanded use of marketing agreements for all commodities on which they can be effectively used.

7. Crop insurance must be considered as a necessary part of a well-rounded program to promote agricultural stabilization, and to protect farmers against the hazards of weather and other conditions beyond their control.

8. We oppose subsidies on food products to keep price ceilings intact. Such subsidies benefit the consumer, but the stigma of drawing money out of the Treasury attaches to the farmers. They also operate to increase the amount of our national debt and are in themselves inflationary.

9. We favor the improvement of our international trade relations whereby commerce can flow between nations without serious injury to any important segment of American business, labor, or agriculture. We favor the use of international agreements for individual commodities to help bring this about.

10. We favor the creation of a Federal Farm Commission clothed with ample powers to administer provisions of laws dealing with price supports and surplus removal of farm products.

11. We recognize that any proposed parity formula may not apply equitably to some of the highly specialized minor crops. We favor parity adjustments for such minor crops when these adjustments are necessary to establish an equitable price.

12. In case of urgent need we sanction the use of marketing quotas, when need is indicated by public hearings, and when approved by two-thirds of the growers voting in a referendum.

Policies and programs for adjusting consumption and production

1. We recommend to the Congress adequate appropriations for the Research and Marketing Act of 1946. We believe that in making full use of the authority of this Act the Department of Agriculture should coordinate work by private and commercial agencies with Federal and State agencies to the end that better marketing services may be established: First, by improving private marketing system and, second, by the development of new and expanded uses for agricultural products.

2. We favor the expansion of consumption and use of farm products in order to bring relatively high standards of living and health to all American people.

We favor the school-lunch program, the food stamp, as a practical relief plan, encouragement of industrial uses for farm commodities, direct distribution, intensified

educational campaign to improve our food habits, and technological improvements in our marketing processes such as quick freezing and prepackaging.

3. The dislocations caused by war render it necessary that we should produce domestically various commodities which we normally import. We favor appropriations to develop new crops to meet existing and probably future strategical needs.

4. We favor Federal and State guidance and assistance in the development of sound long-range adjustment programs for areas where changes in agricultural production have created serious social and economic problems.

Farmer participation in programs at State and local levels

1. We favor the establishment of farmer-elected county advisory committees composed of at least five members who shall be elected for staggered terms. The duties of these committees should be to keep themselves informed on all Federal and State agricultural matters in the county; to advise with all agencies relative to conflicts or lack of coordination in programs; and to suggest means of elimination of duplication and conflicts and ways to establish needed coordination. All agencies and their advisory boards should be required to advise with these committees. When these committees fail to get satisfactory results from county agencies their views should be carried to the State advisory council as set up below.

2. We favor the establishment of State councils of agriculture of not less than five members, elected for 5-year staggered terms by members of the county committees, with provision for the appointment of an executive officer by the council. The duties of this council should be to advise and assist in the coordination of the work of the Federal, State, and local programs of the agencies within the State. The head of the State department of agriculture and the dean of the State College of Agriculture should be members of the council by virtue of their offices.

3. We favor housing all agricultural agencies as far as practicable at one location in each county.

TVA fertilizer distribution

The present method of distribution of fertilizer by TVA should be investigated and any changes that will insure distribution without discrimination against or in favor of any farm organization or group should be made.

Expansion of Market News Service

We favor improvement of the Market News Service, both local and national, and that appropriations be increased as needed to give farmers this improved service.

Reclamation acreage limitation

We believe the recreation-acreage-limitation provision gives protection to the home-owning type of farmer and reaffirm our support of it.

Lumbering rights on Forest Service lands

We oppose contracts between the United States Forest Service and large lumber companies which will exclude smaller timber operators from acquiring lumbering rights covered by such contracts.

Bailer twine

We favor elimination of the 15-percent import duty on bailer twine.

Commodity exchange control

We endorse the general principle of control of farm commodity exchange market margins by the Secretary of Agriculture, and other practical means of curbing excessive and damaging speculation in grain and other farm commodities.

II. POLICIES AND PROGRAMS ON PUBLIC LANDS AND RESOURCES

Public power policies

Electric service in the farm home and in farm operation has proved to be of inestimable benefit to farm families and farms. It should be supplied at the lowest possible economically sound cost and, this service should be extended and supplied at the lowest rate as rapidly as possible to every area where such service can be placed on a sound economic basis.

We reiterate our previous stand that all natural power sites should be retained in public ownership; that the power resources of such sites be developed under Federal appropriations; and that such power development should be fully coordinated with the best and soundest practical use of the water for power, irrigation, industrial, navigational, and other uses, and with the most effective and sound flood damage prevention on the entire drainage area.

Revenues from power on a public project should be considered as a source of income which may be applied as partial payment for any portions of the project except navigation, flood control, recreational, and other public benefit aspects.

We will support, when justified by fiscal feasibility, adequate Federal appropriations for the building of all economically sound facilities for power generation; for the transmission of publicly generated power to load centers of the region at a uniform rate which will encourage the widest possible use, with preference to be given to cooperatives and public bodies; also we will support adequate appropriations to develop sound irrigation and flood-control measures; to assist in soil-conservation work through public funds; and to provide for other works and facilities that are an essential part of a coordinated development of a drainage basin. We are opposed to building any privately owned power plant on a dam owned by the Federal Government.

We believe that a majority of the members of each administrative board established to coordinate the development of a major drainage area should be composed of residents of the area and the remainder should be representatives of the principal Federal agencies responsible for development work in the drainage area.

We are opposed to elimination of the preferential clause for cooperatives, public utility districts, and cities in purchase of power from Federal projects, and provisions that would provide for delivery of power from Federal projects at the bus bar only.

Tideland resources

We believe the decision of the Supreme Court of the United States, which declared all oil in the tidelands of the United States and all oil in what is known as the Continental Shelf, to be the property of the Federal Government, was wise and sound; and we are opposed to legislation proposed in the Eightieth Congress to turn these lands over to States. We insist that the Congress pass no law to set aside the decision of the United States Supreme Court.

National parks boundary adjustment

The present boundaries of some of the National Parks appear to include lands chiefly valuable for agricultural purposes and lands of little park value. We ask Congress to provide for the readjustment of such National Park boundaries by a disinterested, scientific commission with due regard to the best use of all lands in such parks for park purposes, for timber culture, agricultural possibilities and preservation of the rights of people residing in the area.

Interstate river rights

We favor legislation that will make it possible for the United States Supreme Court to adjudicate disputes on water rights between States.

St. Lawrence seaway and power project

We have for several years endorsed the St. Lawrence seaway and power project as a self-liquidating undertaking. And we request that there be no further delay in appropriating Federal funds to begin construction of this important strategical joint Canadian-United States project.

Payments in lieu of taxes on Federally owned lands

We favor requiring the Federal Government to make payments, in lieu of taxes, to local governments equal to, but not in excess of, the taxes lost from the Government ownership of the land.

Antiquities Act of Federal memorial parks

The Grange urges the repeal of the Antiquities Act which permits of setting aside areas as memorial parks by Executive orders. We oppose the establishment of Federal memorial parks unless by specific act of Congress and if the area is not largely in its natural state, does not contain expensive privately owned productive pasture or crop land, and is not favored by the government of the State in which it is located.

Releveling land that has been strip-mined

We favor legislation to provide for releveling of land after strip-mining and gold-dredging operations to restore productiveness of the soil.

III. POLICIES AND PROGRAMS ON COOPERATIVE ACTIVITIES

Taxation of cooperatives

We oppose the taxation of patronage refunds of cooperatives. We agree that reserves which reflect and increase in equity should be taxed either as income of the farmer or as income of the cooperative.

Investigation of NTEA and NAB Inc.

We are in favor of requesting Congress to investigate the organization and financing of the National Tax Equality Association, The National Association of Businessmen Inc., and other organized groups fighting cooperatives.

Rural electrification

REA service should be extended to districts wherever the extension of lines is economically sound, and adequate funds should be provided for this purpose.

We favor liberalizing the regulations of REA so as to permit cooperatives to employ competent engineering bids or permit construction by force account under regulations designed to be adequate.

Cooperative telephones

We favor legislation giving REA authority to put up self-supporting telephone systems in conjunction with REA power, or as separate systems, and favor an energetic program by private or cooperative telephone systems to extend telephone service and to make available the latest inventions in telephone communications, particularly those inventions utilizing power lines for the circuit.

Farm Credit Administration

We favor the administration of the farm credit agencies under an independent farm credit board; and maintaining the independence of Federal land banks to market their own bonds, and are opposed to requiring them to get their funds from the United States Treasury.

We favor retirement of all Government capital from credit agencies without impairment of their functioning as soon as practical.

We favor setting up a retirement system for all employees of the farm credit agencies and a discontinuance of the Federal civil-service retirement system in such a manner that no employee loses any value in his retirement account.

Farmers Home Administration

We pledge our support of adequate appropriations for sound credit for the Farmers Home Administration where such credit is not available elsewhere for assisting capable farm youth and tenants to become owners.

IV. TRANSPORTATION AND COMMUNICATION POLICIES AND PROGRAMS

Freight-rate increases

No additional blanket increases in freight rates should be granted without extensive and complete hearings by the ICC showing the full effects of such raises on business and agriculture in the Nation.

Railroads

We favor extensive consolidation of railroads designed to effect economies in operation and assure adequate rail service to all areas on a sound basis.

Study of all transportation agencies

We favor a thorough study of all means of transportation under the Research and Marketing Act of 1946 on the following phases: (a) rail rates, (b) working conditions, (c) methods of taxation. (d) influence of transportation policies on agriculture and general welfare and (e) effects of Bulwinkle bill.

Auto and truck transportation

1. We favor uniform motor vehicle laws in all States, these laws to conform to the provisions of the Uniform Vehicle Code.

2. We favor uniform size and weight laws for commercial vehicles for all States.

3. We are opposed to all diversion of State motor vehicle fees and State gasoline taxes to nonhighway purposes, and recommend the adoption in all States of amendments to State constitutions guaranteeing dedication of highway user taxes to highway purposes only.

4. We oppose the use of Federal funds for the construction of toll superhighways and further recommend that all public roads be built free of tolls.

5. We are opposed to the integration of the various types of transportation and recommend that competition and private ownership should be maintained.

Farm-to-market roads

We recommend:

1. That a careful examination of the roads specifications set-up by the Bureau of Public Roads be made and that such revision be made that will permit the use of the farm-to-market road funds where they were intended to be used—on feeder roads and not on main or principal secondary roads.

2. That provisions be written in the law which will require that State highway departments cooperating with county highway officials set up preliminary 5-year plans for building farm-to-market or feeder highways in each county.

3. That these preliminary plans be published and public hearings be scheduled and held after ample public notice.

4. That preliminary plans be revised on the basis of these hearings and that expenditures of Federal funds be based on the revised plans for the current year.

5. That these 5-year plans be revised annually as outlined above and serve as guides for expenditure of each annual road appropriation.

6. That an extensive research on the cost of various types of roads and their value and influence on the social and economic aspects of agriculture be made by appropriate Federal and State agencies.

Postal service

We will vigorously support appropriations for the expansion of highway post office service wherever needed to replace the lost or crippled railway mail post office service resulting from the abandonment of branch railroads and the curtailment of railway operations.

Radio clear channels

We reiterate our previous demand that there be no further break-down in the number of clear-channel radio stations; and we oppose any legislative measure which would take the authority to control the power under which radio stations operate away from the Federal Communications Commission.

V. LABOR-MANAGEMENT AND SOCIAL-SECURITY POLICIES AND PROGRAMS

Conference of labor, management, and agriculture on a balanced economy

We believe that the establishment and preservation of a balanced economy are essential if our free competitive enterprise system is to be preserved. We recommend that the representatives of the great economic groups, business, labor, and agriculture, get together for the purpose of trying to develop price, wage, and profit policies that will reduce friction to a minimum and stimulate a greater spirit of cooperation and understanding among all of our people.

Grange policy on labor-management relations

We present the following as our statement of basic labor-management relations policy. We believe:

1. That free enterprise and democracy depend upon an economy of reasonably full production, and freedom from monopolistic practices for labor, industry, and agriculture alike; and that there is a sound social, moral, and economic basis for these views.

2. That management of industry should place a policy of high output and reasonably full employment above high prices and profits; and should be prohibited from using coercion and intimidation in its relationship with labor.

3. That labor unions have a useful place in the Nation in order that the combined economic strength of industrial and professional workers may offset the power of organized or big industry and finance.

4. That organized labor has most to gain by adopting as its primary objective the maintenance of reasonably full employment and an economy of full production, a principle which applies equally to all economic groups and can be made a basis for cooperation between all groups.

5. That we uphold the right of labor to strike and to organize on an industry-wide basis, especially in industries dominated by a few large units.

6. That when a strike, or threatened strike, becomes a serious menace to public health, safety, and the general welfare, the use of the injunction and compulsory arbitration is justified.

7. That the Grange does not condone such restrictive practices as the secondary boycott, sympathetic and jurisdictional strike, slow-downs, any unjustified reduction of the work week, and feather-bedding by labor.

8. That mass picketing which results in intimidation is unfair, but that all workers of a struck plant should be protected in their right to picket peaceably.

9. That a majority of the workers in a plant must vote favorably by secret ballot before giving union-shop privileges to any labor organization; and that we oppose the closed shop.

10. That we recommend to organized labor the adoption of a parity wage automatically adjusted semiannually to the cost of living. By this we do not mean to preclude labor from bargaining collectively through representatives of its own choosing to improve its working and living standards or obtain an increased share of the national income.

Taft-Hartley Act

We believe the enactment of the Taft-Hartley Act has had a corrective effect on labor and management disputes. We favor such modifications in the act as may be necessary to correct abuses or weaknesses that are shown to exist.

Unemployment compensation

The Grange opposes any increase in unemployment compensation until means are made effective to minimize existing abuses.

Social security

Social security should be extended to include the farmer and farm worker, insofar as it applies to old age and retirement benefits, and other benefits should be extended to farm operators if and when a practical means can be found to make it work.

VI. TAXATION AND FISCAL AFFAIRS

Principles and policies of taxation

We set forth the following statements of principles determining the Grange's tax policies:

1. The tax load should be distributed on a broad base of taxpayers.

2. The tax load should be levied on ability to pay and benefits derived, and should fall equally on all persons of like circumstances.

3. Receipts from taxes levied upon property values should be equalized on local or State levels; and from income derived from property on State and National levels.

4. The tax system should impose the least necessary restriction upon production and employment and the launching of new private enterprises.

5. Taxes should be adequate to meet the cost of Government and maintain confidence in the public credit.

6. Losses on agricultural operations should be deductible only from income derived from agricultural operations.

7. Most of the reduction in income taxes should come from a reduction in the tax rate of the lower- and middle-income groups, and not in increased exemptions.

8. Every possible effort should be made to gain economy and efficiency in Government and eliminate useless and unnecessary agencies and projects.

9. Foreign aid should be held to a minimum, consistent with recovery and humanitarian considerations, and should be contingent upon the country's making a maximum effort to help itself.

10. We strongly urge repeal of all Federal automotive and related excise taxes.

11. We urge adequate Federal payments in lieu of taxes lost where high proportion Federal ownership of land exists.

12. Double taxation of the same income by any taxing unit should be eliminated.

13. Taxes should not be levied primarily as a means of social reform.

14. We favor a policy of retirement of the public debt from tax receipts during periods of high employment and income; and we oppose any increase in exemptions or lowering of rates in the lower brackets while present high levels of income prevail.

15. Since certain soil and water conservation practices are of definite value to society but often do not return their cost to the landowner through income, we believe that such costs should be made deductible expenses in computing net income from agricultural operations for tax purposes.

Oleomargarine Tax

We favor the removal of all the taxes on oleomargarine if and when effective means are taken to prevent its sale in imitation of butter.

Inflation

To curb inflation we recommend: (a) maximum production; (b) maintaining strong Federal tax program and sharp reductions of national debt while we have large national income; (c) encourage savings and investments in Government securities; (d) credit restrictions to divert expenditures to productive purposes.

The inflationary effect of foreign aid is recognized on our national economy but such aid is justified as a means of curbing world-wide inflation by making increased production possible.

Monetary commission

We urge the oppointment of a congressional monetary commission adequately financed, with agriculture represented on it, to conduct a searching investigation of and report on the ways in which the management of currency, bank credit, installment buying, speculation, and Government fiscal policy affect the economic cycle.

VII. NATIONAL SECURITY, PEACE, AND FOREIGN AFFAIRS

National security

In a world that is still unsettled and without an effective and positive peace maintenance machinery, we reaffirm the following national security measures:

1. America must do everything in its power to avoid war, but not at the cost of our traditional freedom and way of life.

2. Recognizing that totalitarianism is a threat to the peace of the world, and that war may come in spite of our own peaceful purposes, we approach the problem of national security with an open mind, determined only to do that which we believe is best for our country.

3. We recognize the necessity at this time particularly, both for our own safety and as a contribution to world peace, of maintaining adequate armed services, and backing them up with a strong National Guard and civilian reserves.

4. We believe that if certain reforms are carried out, such forces can be raised through voluntary enlistment, and that in time of peace such a system is preferable to conscription as a means of providing for our military requirements.

5. We agree that our national security must rest fundamentally on: (1) a strong, educated, healthy population; (2) increased emphasis on scientific research; (3) faith in and vigorous support of the United Nations.

6. We believe that, in addition to taking all necessary and reasonable precautiohs for our own national safety, our best defense lies finally in an effective demonstration of what a free people can do in helping others while remaining strong at home.

Equalizing war burdens

The National Grange believes, that any Federal legislation requiring the service of individuals, should also set up controls of prices and wages and impose the highest practical personal income tax on individuals and profit taxes on business to prevent inflationary prices and hold profits to the lowest possible minimum.

Federalized militia

We oppose federalization of the National Guard or any of its component parts during peacetime, and insist that it be continued as State militia with the governor of each State as the commander in chief.

Communism

We need to be constantly on guard, against the paid propagandists and saboteurs who seek to create confusion, chaos, and destruction in order to promote and spread this insidious doctrine. We recommend that the agencies of our Government take the necessary steps to deal effectively with those persons who seek to destroy our Government and its free institutions.

The Marshall plan

We endorse the principles of the Marshall plan based upon the following conditions:

1. That aid to a needy country be given only when the recipient shows willingness to help himself.

2. That the standards of performance in terms of production be set up and that the price of aid be the reasonable attainment of these goals.

3. That the limitations of our own resources and our own needs be considered in granting aid.

4. That proper publicity be given to the people of aided nations relative to the source of aid received.

The United Nations

We are convinced that our policy should be one of wholehearted support of the United Nations and that we should do everything in our power to build it and strengthen it as an instrument of peace. A strengthened United Nations would undoubtedly provide a legislative body to enact laws related to world peace, with some practical and equitable system of weighted representation, a world court to interpret the law, and a world police force to enforce it. We recommend:

1. That the United States take the lead in securing such revision of the United Nations Charter as may be necessary to give it strength commensurate with its task.

2. That the veto be modified so as to limit it to actions which clearly relate to the internal affairs and sovereignty of nations.

3. That consideration be given to making the General Assembly of the United Nations a legislative body provided that some practical and equitable system of weighted representation can be developed.

4. That consideration be given to establishing a world judiciary system with compulsory jurisdiction, applying laws to individuals found to be violating the program of the United Nations, with due regard to protecting the sovereignty of nations.

5. That an international police force be established with a program of armament limitation subject to international inspection and commensurate in any country with the preservation of world order.

6. That until we have solved the problem of maintaining the peace, the authority of the United Nations be limited to those matters related to world peace and security.

Control of Atomic Energy

We favor permanent civilian control of atomic energy by the United States Atomic Energy Commission in the interest of humanitarian causes, and approve the international control of the atom bomb along the lines recommended by our own Government.

Refugees and displaced persons

We recognize the seriousness of the displaced-person problem and need for action. We recommend:

1. That all of the countries of the world cooperate in providing settlement opportunities and greater fianancial backing for resettlement purposes.

2. That the resettlement of family groups be considered in all recruitment plans, and that training or retraining of displaced persons be related to their ultimate destination.

3. That international sanctuaries for the sick and elderly be set up under an international organization.

4. That displaced persons be allowed to return to the countries of their origin when that is their desire.

5. That industrial level of European countries including Germany be increased in order to support their populations and for the sake of European recovery.

International exchange of students

The exchange of students between nations is one of the best methods known to promote friendship among all peoples. The National Grange goes on record as favoring the exchange of students in agriculture and other subjects as means of promoting better international relations.

IFAP

We support the International Federation of Agriculture Producers, now having as members independent farm organizations in 21 nations.

We believe that the organization of farmers throughout the world will give them a voice in world affairs and enable them to work out trade programs in the interest of both producers and consumers.

Headquarters for FAO and IFAP

We urge that Washington, D. C., be selected as the permanent location of the FAO and the IFAP and that Congress take such steps as may be necessary to assure satisfactory sites and adequate housing facilities for offices of the FAO.

Foreign policy

We recommend that the legislative and executive branches of our Government develop a practical working arrangement which will recognize both the need for prompt decisions and the safeguard of congressional approval in all foreign policy actions.

Reciprocal trade agreements

We will support an extension of reciprocal trade treaties under the following conditions:

1. That Congress establish a definite policy on tariff based primarily upon the difference in economic costs of production between home and abroad.

2. That the administration of the tariff policy be definitely determined by the Congress and the administrators stay within the policy thus established.

3. That before any proposed tariff rate changes or any reciprocal trade agreements become effective, they should be submitted to the Congress where they should lie for 30 days. If the Congress should not disapprove of the treaty within 30 days, it would become effective.

VIII. NATIONAL EDUCATION, HEALTH, AND MISCELLANEOUS

Federal aid to education

We approve Federal aid for education on elementary and secondary levels on the following conditions:

1. States receiving Federal aid would be required to meet certain minimum standards such as are now required in the case of Federal aid for teaching of vocational agriculture.

2. That all Federal funds for any State shall be expended as determined by State or local school officials without interference by control by Federal agencies or officials.

3. We favor the use of the equalization principle between the States in the allocation of Federal aid funds for schools.

Library services in rural areas

We approve and will support the extension of library service to all rural areas.

Separation of extension from all farm organizations

We approve the findings of the Joint Investigation Committee for the Land Grant College and United States Department of Agriculture recommending prompt divorcement of the Extension Service from all farm organization control. We insist that the Extension Service be separated from any and all farm organizations and that this Service be supported entirely by public funds.

Hospitalization and health

We recommend that:

1. The principle of contributory health insurance be the basic method of financing medical care for the large majority of the American people, accompanied by such use of tax funds as may be required to (a) furnish services which are public responsibilities; (b) supplement health insurance as necessary to provide adequate services for the whole population.

2. Voluntary prepayment group health plans be organized on a community or collective-bargaining level, embodying group practice and providing comprehensive service by every practical means.

3. The removal of legal restrictions upon voluntary insurance plans on a cooperative basis such as now exist in a number of States.

4. People with comprehensive voluntary health service be exempted from any plan for compulsory health insurance should such a health program be established.

5. The use of public or private funds to supplement family funds where the rural people cannot afford to pay the total cost of adequate medical care.

6. Prepaid nonprofit hospitalization, medical care, and the development of cooperative hospitals.

7. The establishment of adequate public health program and services in every rural section to improve sanitation, prevent and control disease, and promote good health, and the expansion of medical and dental research programs at the Federal, State, and local levels.

Liquor and temperance

We favor local option for control of liquor, State and local research programs on alcoholism, State monopolies where sale is legalized, a comprehensive temperance educational program, and Federal legislation banning liquor advertisements from interstate commerce.

Movies

The Grange takes a strong stand in opposition to immoral and questionable movies, recommending:

1. Continued efforts to get producers to clean up the movies, and if this fails, will support Federal censorship.

2. Elimination of block booking by the industry and if this fails, consideration to Federal prohibition should be given.

3. Granting certificates of merit to producers of high-grade films.

Term of President

We endorse the proposed constitutional amendment that Congress has submitted to the States for ratification which would limit the President and Vice President to two terms of office.

Election of President and Vice President

We favor a constitutional amendment allocating the presidential and vice presidential vote of each State in proportion to the popular votes cast for each candidate, but retaining the present method of determining the number of electoral votes for each State as equal to its number of Senators and Congressmen.

Daylight saving

We urge the early strengthening of the Federal Standard Time Act so as to make standard time mandatory in each time zone in the United States for all times during the year.

Radio Census

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. DOLLIVER. Mr. Speaker, today I have introduced a bill to authorize the Bureau of Census to include radio and television sets in its decennial enumeration. This great and new industry would be served, and so would the whole American people, by authorizing this counting of radio sets. I hope the bill will receive careful and favorable consideration by the committee to which it is referred; and subsequently by the Congress.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter sent me recently by Mr. Samuel Rothschild, president of G. Levor & Co., Inc., Gloversville, N. Y., one of the largest tanning concerns in the country. Mr. Rothschild is a personal friend of mine and I believe the membership of the House will be interested in the contents of his letter, as follows:

G. LEVOR & CO., INC.,
Gloversville, N. Y., January 6, 1949.

Congressman BERNARD W. KEARNEY,
Washington, D. C.

DEAR PAT: I want to get a few of my thoughts to you, as regards the welfare of business, which in turn means that of our workers, the local community, and the Nation as a whole.

I am an advocate of the Marshall plan, but I must confess that it is now with reservations. It requires checks and balances which heretofore has been overlooked and creates a boomerang. You are familiar with what happened in aluminum. We gave foreign countries money to help their economy so they bought the metal for $25 and resold it to us for $45. This may be considered smart and shrewd but made suckers out of us.

Now in our particular line of business, we, under the Marshall plan, give them our money and having no confidence in their own, they go all over the world and buy all the raw skins they can lay their hands on and pay a premium, again with our money, so that we are compelled to meet these high inflationary prices, which our economy does not permit. Some countries buy almost a year's supply again with our money and we can't obtain 4 months' to keep going. This thing is getting serious. They should be held down to a few months' supply and not disturb world markets and make them more inflationary. The President in his message dwelt largely on inflation and he and Congress are responsible to the extent that they do not come out and limit the price competition of Marshall-plan recipients and this requires at once action.

Now all this attack on profits of big business can have terrible repercussions. Do they want to kill the goose that lays the golden eggs? The Government gets its substantial take, business needs a cushion for future operations. We just completed a new power plant that cost as much as the original mill and are adding a new three-story addition. That means more and steady employment at high wages. If they go haywire on business taxes, people will naturally take less risks and they will be inviting a recession or worse. If profits recede by virtue of business attacks, the Treasury will get much less in spite of increased rates and labor will not be as steadily employed. It requires a lot of sound judgment in the Eighty-first Congress and that's what I mean by the goose that lays the golden eggs.

Kind regards to you and Lill.

Yours sincerely,
SAMUEL ROTHSCHILD.

Mr. Speaker, further bearing on this subject, I wish also to include the following newspaper clipping date-lined January 13 from Toronto, Canada:

TORONTO, ONT., January 13.—Hide supply is at best adequate, Harold Connett, president of the Surpass Leather Co., Philadelphia,, said in his address at a luncheon meeting of the third annual convention of the Canadian Shoe Retailers Association held in the Royal York Hotel here this week.

He blamed misguided governmental control in those countries normally big exporters of this commodity for present shortages. The ultimate scurce of Government restrictions, he said, is the lack of balance of currencies and the gray market exchange. He expressed hope the Marshall plan would solve the problem by creating confidence in the basic currencies of the nations involved.

Tanners in the United States, though backing the Marshall plan, are unhappy seeing ERP dollars buying the world hides and skins at higher prices than United States manufacturers can pay. Regarding the general trade conditions, Mr. Connett said that though postwar inflation was to be expected, the period of readjustment is definitely here, and further inflation will have serious repercussions on the trade as a whole.

President Truman's Inaugural Address Urges World Front Against Communism

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. DOYLE. Mr. Speaker, various appraisals have been made of all and of parts of the inaugural address of President Harry S. Truman, but I have seen no written comment about the portion of his speech which related to the European recovery program and to his emphasis upon the fact that our American way of life is based upon the proven experience that individual man has an inalienable right to govern himself and be governed with reason and justice than that which appeared in the editorial of the Long Beach Press-Telegram, of Long Beach, Calif., January 21, 1949. It also appraises the President's appropriate remarks about communism. The Long Beach Press-Telegram is one of the two daily newspapers published in my home city of Long Beach, Los Angeles County, Calif., and I take pleasure in commending this editorial to the reading of every Member of Congress and to every reader of the CONGRESSIONAL RECORD:

PRESIDENT TRUMAN'S INAUGURAL ADDRESS URGES WORLD FRONT AGAINST COMMUNISM

Perhaps because he had explored at length the country's internal problems in his state-of-the-Union message, his annual economic report and his budget message, President Truman devoted his inaugural address to world affairs. It probably is the most extreme statement of international cooperation ever to be made by a responsible American statesman. It also contains blunt notice to the Soviet Union that it will not be permitted to dominate mankind.

The inaugural address does not even argue against the isolationist point of view. Isolationism is assumed by the President, at the beginning of his term as the Nation's elected Chief Executive, to be dead. However, it may not be out of place to remark that the death of isolationism in the United States was accomplished by the bipartisan policy of United States participation in international cooperation. A strict observance of

the bipartisan policy is the best insurance against a resurrection of isolationism.

Mr. Truman probably has the earnest approval of nine-tenths of his fellow countrymen of all parties when he says: "We will continue to give unfaltering support to the United Nations and related agencies, and we will continue to search for ways to strengthen their authority and increase their effectiveness."

The President likewise pledges that "we will continue our programs for world economic recovery. * * * We must keep our full weight behind the European recovery program."

The so-called Marshall plan will be continued.

"We will strengthen freedom-loving nations against the dangers of aggression," President Truman said, with specific mention of the north Atlantic security pact and the similar Western Hemispheric defense pact embodied in the treaty of Rio de Janeiro.

All of this is notice to the American people of heavy loads to be borne. They expect to carry the burdens for relief of needy nations and building up their strength to stand against totalitarian aggression. What they ask is that something like 100 cents of value be obtained for each dollar spent.

The most striking section of the President's address is that in which he, with a series of deadly parallels, compares communism and democracy. "Democracy is based on the conviction that man has the moral and intellectual capacity, as well as the inalienable right, to govern himself with reason and justice.

"Communism subjects the individual to arrest without lawful cause, punishment without trial, and forced labor as the chattel of the state. It decrees what information he shall receive, what art he shall produce, what leaders he shall follow, and what thoughts he will think."

There is no choice for an American. As the President's inaugural address makes clear, the duty of the United States is to hold its place as leader of the nations upholding, at any and every cost, human freedom.

Mr. Truman's words are sufficient refutation of those who thought that his choice of a successor to General Marshall as Secretary of State might indicate a weakening of the American attitude toward the Soviet Union. There is no sign of appeasement. There is determination for the United States to be equal to any emergency. Yet, the President seeks peace. In spite of the Communists' belief in inevitable war between communism and what they call capitalism, President Truman declares in his inaugural:

"In due time, as our stability becomes manifest, as more and more nations come to know the benefits of democracy and to participate in growing abundance, I believe that those countries which now oppose us will abandon their delusions and join with the free nations of the world in a just settlement of international differences."

Roosevelt Day

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. KLEIN. Mr. Speaker, I have today introduced a bill which would make January 30 a legal holiday dedicated to human freedom and dignity and to be known hereafter as Roosevelt Day.

I believe that the great heart of the world will be deeply enthusiastic about this measure.

I believe that its observance will spread to all parts of the world, wherever those ideals of human freedom and dignity which animated our great and fallen leader are held dear.

Franklin Delano Roosevelt was born on January 30. For many years past his birthday has been fittingly observed as a time of fund raising for the benefit of other victims of polio. During his lifetime propriety forbade any more formal recognition of his natal day.

However, the time has come to mark this day each year as a time of dedication to that noble spirit which animated the founding fathers, which breathed life and fire into the Declaration of Independence and the Constitution, which inspired the Monroe Doctrine and the Emancipation Proclamation, which made possible the United Nations and the "four freedoms" and a bloodless revolution in American politics.

I am myself a Roosevelt Democrat, an unreconstructed New Dealer, with profound faith in the democratic processes of self-government. I recognize in Franklin D. Roosevelt the authentic tradition of American progress. He was not by any means the only true prophet of American democracy; perhaps he was not, in the wide sweep of history, the greatest; but he certainly was the greatest exponent of democracy in our time.

The holiday I propose to mark his birthdate is small tribute indeed from a grateful people.

I know that this proposal is not new to many Roosevelt admirers; I cannot consider myself unique, though I have long planned this bill. Therefore, under leave, I wish to include in my remarks two editorials from the current issue of the Machinist, the weekly publication of the International Association of Machinists, expressing a vigorous plea for Roosevelt Day.

In the three terms that Franklin Roosevelt served as President of our country, more was accomplished on behalf of the plain people than in any other time in our history. Next Sunday, January 30, would have been Mr. Roosevelt's sixty-seventh birthday. On that day every sincere trade-union member will pause to pay homage to that great American whose unflagging faith in the majority will forever inspire our struggle for freedom and justice. (Harvey W. Brown.)

WHY NOT A NATIONAL HOLIDAY TO HONOR F. D. R.?

Today Franklin Roosevelt occupies a place in our history beside George Washington and Abraham Lincoln as a leader who came to the American people in a time of great crisis and led them through.

We observe the birthday of Washington in every State and that of Lincoln in 31 States. Roosevelt's birthday, January 30, should be added to those two.

Most of us are not too young to remember the stark fear that faced this Nation in 1933. The United States was in the throes of a crisis unprecedented in time of peace. Most of all, we needed something to restore our confidence. Franklin Roosevelt did that, and more. He pulled us out of the crisis by main force. As one historian has written, "The 99-day session of the Seventy-third Congress that began on March 9, 1933, witnessed the most daring Presidential leadership in American history."

He followed in the middle thirties with a program of social legislation—social security, labor relations, home loans, bank deposit insurance, rural electrification, minimum wages—to name a few of the great New Deal laws. Roosevelt gave the common people of America the chance for security and self-respect.

During the second half of his administration, when we were plunged into the worst war in our history, Roosevelt led us to victory.

The "Forgotten Men" whom Roosevelt fought for can lead the way in making his birthway a national day of remembrance. National holidays can only be suggested by Congress. They must be officially proclaimed by State governors and local mayors. Any group of citizens has the right to petition a governor or mayor to proclaim a holiday.

Observance of Washington's and Lincoln's birthdays came slowly. Three months after Washington's death in 1799, Congress adopted a resolution urging a public noting of February 22. A few cities followed the suggestion in succeeding years, but it was not until the one hundreth anniversary of Washington's birth in 1832 that the entire country made the day a holiday.

Almost the same held true in Lincoln's case. In 1866, a year after his assassination, Congress adopted a resolution urging observance of Lincoln's birthday. The idea grew but again it was not until 1909, the one hundredth anniversary of the great emancipator's birth, that the observance became a national custom.

For 10 years we have been observing Roosevelt's birthday as National Infantile Paralysis Day. But his birthday must be remembered far more than the great personal handicap which he overcame. Working men and women will gladly honor him on his birthday as one of the greatest friends they ever had. For more than that we must remember him. Roosevelt was one of America's beloved leaders. His ideals deserve to be remembered by every American this year and every year.

Here Are Some Interesting Facts About the Eighty-first Congress

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. McDONOUGH. Mr. Speaker, everyone is interested in the new Eighty-first Congress and wants to have information about it and know how it compares with previous Congresses. The following excellent digest of facts and figures appeared recently in the Congressional Quarterly and answers many of the questions that are being asked about the Eighty-first Congress:

THE EIGHTY-FIRST CONGRESS CONVENING IN JANUARY 1949

It will be the Eighty-first. The First Congress served 1789–91, during the first administration of George Washington (65 House, 26 Senate Members).

It will be the tenth Democratic-controlled Congress elected this century, the seventh elected in the past 16 years. Since 1900, 13 Republican-controlled Congresses have been elected; two Congresses have been split, with opposing parties in control of House and Senate.

It will be the same size, in both House (435 Members) and Senate (96 Members), as all Congresses since March 1913 (62d Congress, 1911–13, had 92 Senate, 391 House Members).

It will have the largest Democratic majority in the House (263) of any Congress since the Seventy-seventh, of 1941–43 (267).

Largest Democratic House majority in any Congress was in Roosevelt era Seventy-fifth, of 1937–39 (333). Smallest Democratic House membership in any Congress since start of the Civil War was in the Thirty-seventh, of 1861–63 (42).

It will have the smallest Republican House minority (171) since the Roosevelt Seventy-seventh Congress (162).

Smallest GOP House minority since Civil War was in Fifty-second Congress, 1891–93 (88). Largest GOP House majority in history was in Sixty-seventh Congress, of 1921–23 (300).

It will have nine more Democratic Senators than Eightieth Congress, but three fewer than in Seventy-ninth Congress.

Largest Democratic Senate majority in history was in Seventy-fifth Congress (75). Smallest Democratic Senate minority since outbreak of Civil War was in Thirty-ninth Congress of 1865–67 (10).

It will have nine fewer GOP Senators than in the Eightieth Congress, but four more than in the Seventy-ninth Congress.

Smallest GOP Senate minority since start of Civil War was in Seventy-fifth Congress (17). Largest Republican Senate majorities in history were in Sixtieth Congress, of 1907–9, and Forty-first Congress, of 1869–71 (both 61).

It will also have 9 women Members—1 less than the record (10) in the second half of the Seventy-ninth Congress, but the same as for all other Congresses since the Seventieth, of 1927–29.

It will have 301 lawyers (in both Houses). This is the largest vocational category. The number is 6 less than that for the Eightieth Congress.

It will have a total of 27 ex-governors—26 in the Senate, 1 in the House.

It will have 26 former House Members in the Senate.

It will have two ex-Senators (HUGH MITCHELL, Washington; JAMES W. WADSWORTH, New York) in the House.

It will be 1 year older (in average age of Members) than the Eightieth Congress. The average age for both Houses will be 53.8.

VOCATIONS

Sixty-six percent of the Senate Members, 54 percent of the House Members will be lawyers. The ratio will be:

Vocation percentages

	Senate	House
	Percent	*Percent*
Agriculture	6	6
Banking	2	3
Business or insurance	12	14
Medicine or dentistry	1	2
Politics or civil service	6	7
Journalism or publishing	4	7
Law	66	54
Teaching	3	7

OLDEST, YOUNGEST

Five oldest Members of the Congress will be:

1. Representative ROBERT L. DOUGHTON, 84, Democrat, of North Carolina.

2. Representative ADOLPH J. SABATH, 82, Democrat, of Illinois.

3. Senator THEODORE FRANCIS GREEN, 81, Democrat, of Rhode Island.

4. Representative CHARLES A. EATON, 80, Republican, of New Jersey.

5. Senator KENNETH MCKELLAR, 79, Democrat, of Tennessee.

Five youngest Members of the Congress will be:

1. Representative LLOYD M. BENTSEN, JR., 27, Democrat, of Texas.

2. Representative HUGO S. SIMS, 27, Democrat, of South Carolina.

3. Representative JOHN C. DAVIES, 28, Democrat, of New York.

4. Representative JAMES E. NOLAND, 28, Democrat, of Indiana.

5. Representative JOHN BELL WILLIAMS, 29, Democrat, of Mississippi.

Youngest Senator will be RUSSELL LONG, Louisiana (he was 30, the minimum age, on November 3, 1 day after the elections).

The ranking Republicans, in period of service, will be ARTHUR H. VANDENBERG, Michigan, in the Senate; DANIEL A. REED, New York, in the House.

The ranking Democrats will be KENNETH MCKELLAR, Tennessee, in the Senate; ADOLPH J. SABATH, Illinois, in the House.

SABATH, his service dating from March 4, 1907, will have the longest service record of any Member of the Eighty-first Congress.

CONGRESSWOMEN

Feminine representation in the Congress will consist of one Senator and eight House Members. Five are incumbents who will continue in office. The Senator will be an ex-Representative. One of the new House Members served a previous term—in the Seventy-ninth Congress. Two are new to Capitol Hill.

Women in Congress

	Total (both Houses)
81st Cong	9
80th Cong	9
79th Cong	10
78th Cong	9
77th Cong	9
76th Cong	9
75th Cong	9
74th Cong	8
73d Cong	9
72d Cong	8
71st Cong	9
70th Cong	5
69th Cong	3
68th Cong	1
67th Cong	4
66th Cong	0
65th (1917–19)	1

First woman ever to become Member of Congress was Miss Jeanette Rankin (Republican, Montana), elected to the Sixty-fifth Congress House in 1916. She served one term and was elected again in 1940 to the Seventy-seventh Congress.

WOMEN MEMBERS, EIGHTY-FIRST CONGRESS

Mrs. MARGARET CHASE SMITH (Republican, Maine) will be the only woman Senator. She is a veteran of 9 years in national politics. Former teacher and businesswoman, she was a Member of the House in the Seventy-sixth to Eightieth Congresses, representing the Second Maine District.

Newcomer to the national scene, Representative REVA BECK BOSONE, Democrat, of Utah, is no freshman in politics. Municipal Court Judge of Salt Lake City and a former member of the Utah State Legislature, she defeated William A. Dawson, incumbent Republican.

A Republican national committeewoman long active in Indiana politics, Mrs. CECIL M. HARDEN, Republican, of Indiana, will be new in Congress. She replaces Representative Noble J. Johnson, resigned.

When Mrs. HELEN GAHAGAN DOUGLAS, Democrat, of California, won election to Congress in 1944, she was already in the national limelight as a Hollywood actress. She was reelected to the Eightieth Congress and again to the Eighty-first Congress by a 2-to-1 margin over her Republican opponent, Wallace Braden.

Mrs. CHASE GOING WOODHOUSE, Democrat, of Connecticut, served previously in the Seventy-ninth Congress. Mrs. EDITH NOURSE ROGERS, Republican, of Massachusetts, and Mrs. MARY T. NORTON, Democrat, of New Jersey, have been members of the House since the Sixty-ninth Congress.

Mrs. FRANCES P. BOLTON, Republican, of Ohio, was elected to the Seventy-sixth Congress to fill the unexpired term of her husband, CHESTER C. BOLTON, and since has been repeatedly returned to office.

Wealthy businesswoman of stylish Tuxedo Park, N. Y., Mrs. KATHARINE ST. GEORGE, a Republican, was reelected this year to serve her second term in the House.

End of Oriental Exclusion?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the Far Eastern Survey, written by Robert M. Cullum, who was area supervisor under the War Relocation Authority, with direct responsibility for resettlement of Japanese Americans in a number of States. The article discusses my bill to remove all discrimination on a basis of race from our immigration and naturalization laws.

END OF ORIENTAL EXCLUSION?

(By Robert M. Cullum)

Mr. Cullum was area supervisor under the War Relocation Authority, with direct responsibility for resettlement of Japanese Americans in a number of States.

Under the pressure of the exigencies of war the Seventy-eighth Congress of the United States breached the long-standing policy of oriental exclusion by granting the privilege of citizenship to persons of Chinese descent and by placing immigration from China on a quota basis. The Seventy-ninth Congress followed in 1946 by granting essentially the same privileges to persons indigenous to India and to Filipinos. While the Eightieth Congress passed no major legislation of this sort, it permitted American soldiers to return with Japanese brides, if marriage took place within a narrow time limit. It also removed racial criteria in the consideration of deportation, a change which accrued with greatest benefit to Japanese treaty merchants left stranded by abrogation of the treaty of 1911. Finally, it began serious consideration of the Judd bill (introduced by Representative WALTER H. JUDD, of Minnesota, of H. R. 5004 in the 80th Cong. and reintroduced as H. R. 199 in the 81st Cong.), a measure which would end all racial discrimination in American laws pertaining to naturalized citizenship and would place immigration from all parts of the world on a quota basis. There are sound reasons for believing that, prior to adjournment of the Eighty-first Congress, the Judd bill, or a measure of similar import, will become law.

The importance of this measure as a means of removing the stigma of second class from resident Asiatic aliens and their children cannot be exaggerated. Before looking at the content of the Judd bill and outlining the specific problems it seeks to meet, an examination of evidence supporting this belief will be worth while.

PRESENT RESTRICTIONS AND ATTITUDES

Present American law permits the naturalization, and in consequence the quota immigration, of persons tracing their ancestry to China, the Philippines, and India, which together account for fully three-fourths of the billion and a quarter inhabitants of Asia. In addition to those of the Asian colonies of the great powers, the peoples of 12 geographical and political entities in Asia and the Pacific Ocean area remain barred from naturalization and hence fall under the exclusionary provisions of the 1924 Immigration Act. Of these areas the largest is Japan. Similarly, of the 87,942 persons resident in the United States and enumerated in the 1940 census as ineligible to citizenship, 84,653, or nearly 97 percent, were of Japanese origin, the remainder, except for 145 Polynesians and other Asians, being Korean.

The first reason, then, for optimism that there will be an early termination of oriental exclusion is the fact that no new policy is involved—only the extension to all Asian and Pacific peoples of a policy already enunciated, an extension which has been progressively implemented by each succeeding Congress.

A second and most important factor, since persons of Japanese descent form so large a part of those permanent residents of the United States who are barred from citizenship, is a demonstrable conviction that Americans of Japanese descent most abundantly proved their right to full status in America by their contribution to victory in World War II. Not only citizens, but many aliens of Japanese descent, participated directly. Simple justice requires removal of bars to citizenship for those who have so long and so honorably lived here.

Evidence of the acceptance of this view is the passage of H. R. 3999, which sets up machinery in the Department of Justice to meet claims arising from the wartime west coast evacuation. In September 1948 the California department of the American Legion, in convention, approved elimination of racial restrictions to naturalization.

During public hearings on the Judd bill before the Subcommittee on Immigration and Naturalization of the House Committee on the Judiciary, testimony to this effect was legion. Impressive, and certainly startling to those thinking in old patterns, was direct evidence of a change of sentiment on the west coast, for so long the incubator of antiorientalism in general and of anti-Japanese feeling in particular. Resolutions memorializing Congress to pass the Judd bill came from the boards of county supervisors of both Los Angeles and San Francisco. California Representatives GEORGE P. MILLER, a Democrat, and BERTRAND W. GEARHART, a Republican, urged adoption.

The third reason for optimism about the bill lies in United States international relations, and is not unrelated to the contest between the United States and Russia to win friends and influence peoples.

Thus W. Walton Butterworth, Director of the Office of Far Eastern Affairs in the Department of State, giving the hearty endorsement of the Department of State to the original Judd bill, testified that "for many years the maintenance of normal and friendly relations between the United States and oriental countries has been impeded by the racial discrimination present in our immigration and naturalization laws. The provisions which excluded Asiatics from admission into the United States * * * were highly offensive to the peoples of Asia and the Pacific and were the basis of much foreign propaganda against the United States. * * *

"Mr. JUDD's bill has the hearty endorsement of the Department of State. It very much hopes that Congress will act promptly so that it may be passed at this session, for it is of key importance to our relations with the great peoples of the Orient."

Former United States Ambassador to Japan Joseph C. Grew strongly supported this view:

"It is my considered opinion that American relationships in the part of the world this bill defines as the Asia-Pacific triangle can never be expected to become entirely sound until this country eliminates the humiliation inflicted by our exclusion laws.

"The present is a time of great movements among these [far eastern] people, of realinement and choosing of friends. Burma is newly independent; Indonesia is seeking a new status; everywhere there is receptivity to new ideas. Nowhere is this more evident than in Japan, where a new leadership is emerging under our tutelage.

"It seems to me to be the height of folly to ask the support of democratic elements in these countries, yet at the very point where our democracy comes to test, to back away. If we want to hold our friends, we must support them. The ending of exclusion now would provide concrete proof of American good faith at a time when it is most important that new leadership be oriented in our direction. The matter of Japan warrants particular attention.

"There can be no question whatsoever that the passage of the Immigration Act of 1924 undercut the position of liberal Japanese statesmen whose policy was based on friendship for America. And I knew many of them myself in the old days—men who were giving up everything they had to develop good relations with our country, to stem the tide of militarism, who risked imprisonment—doing everything they could. Those are the people who need our support.

"In the sense that friends of this country were weakened, while the extremists were given a potent weapon with which to exacerbate Japanese-American relations, the policy of exclusion contributed largely to the final crisis."

* * * * *

EVOLVING THE JUDD BILL

The phrasing of the Judd bill presented a major technical problem, one, indeed, which many had thought to be insoluble.

By the passage of the Immigration Act of 1924, the direction of American immigration policy was established; that direction was severely restrictionist. In addition, there is without question a general aversion to any large-scale immigration by Asian peoples, to "competition from cheap labor," and to large-scale settlement by peoples whose social backgrounds differ from the European cultural origins of the great majority of our people. Whether this latter is a practical consideration is immaterial; it is part of our body of opinion.

To be successful, a measure seeking equality in naturalization and immigration must recognize these basic facts in public—and congressional—opinion. Because of wartime experience and the Chinese, Indian, and Filipino precedents, the question of removing racial bars to citizenship is largely outside the realm of controversy. Immigration is another matter.

Three possible lines of approach were explored. That of placing all Asian peoples on a par with European and African immigrants, which might result in their large-scale immigration, had already been rejected by Congress when the Chinese Immigration Act was passed. The basic problem is posed not by those persons who continue to reside in an independent country of birth but by the children of those who have immigrated—to South America, for example—and of those who were born in the colonies of the great powers. Thus, if chargeable to the country of birth, persons of Japanese descent born in Brazil might enter the United States quota free, and a Chinese person born in Hong Kong would enter under the British quota. Without doubt the potential of Asian immigration would be very large under such an arrangement.

At the opposite pole, a bill which dealt only with racial bars to citizenship would inevitably reemphasize and call new attention to the vestiges of our oriental exclusion policy, a prospect which the Department of State could not face with equanimity.

The third course, chosen by Congress in 1943 when writing the Chinese Act, eliminates all restrictions upon citizenship and permits use of normally computed national-origins quotas, but is more restrictive than the regular quota law since determination of the quota to which an individual is chargeable is made on the basis of ancestry rather than of country of birth. Thus a Chinese born in England who immigrates to the United States is charged to the quota of China. * * *

Within this framework there remained the problem of finding a suitable description of the peoples to be covered. This was solved by devising an Asia-Pacific triangle, within the boundaries of which are to be found all peoples indigenous to the geographical area "situate wholly east of the meridian 60° east of Greenwich, wholly west of the meridian 165° west, and wholly north of the parallel 25° south latitude." Put another way, this area includes all peoples who, prior to rescission of Chinese exclusion, were racially ineligible to citizenship, and includes no other peoples, with the incidental exception of those from Afghanistan. The latter, it may be noted, has never contributed largely to the stream of immigrants to the United States and present no real problem. Fourteen persons born in Afghanistan entered the United States in the decade 1938–47.

THE BILL'S PROVISIONS

Under the Judd bill, peoples of all ancestral lines born within this triangle are chargeable to the country of birth; those of Asian ancestry born in a colony are chargeable to a special Asia-Pacific quota of 100. An immigrant "who is attributable by as much as one-half of his ancestry to a people or peoples indigenous to" the Asia-Pacific triangle, but who was born outside the triangle, is chargeable to the country of ancestral origin or, if of colonial or mixed Asian derivation, to the special triangle quota.

Total annual immigration of persons of Asian ancestry now authorized under law amounts to 505 if Pakistan is included (China, 105; Afghanistan, India, Pakistan, and the Philippines, each 100). The Judd bill would add authorized quotas usable by indigenous peoples in the number of 985 (Japan 185, Butan, Nauru, Nepal, New Guinea, Pacific Trust Territory, Siam, western Samoa, and the special Asia-Pacific triangle quota, each 100), with the probability of an additional 400 at such time as quotas are proclaimed for Burma, Ceylon, Indonesia, and Korea. The total thus may come to 1,890 quota authorizations, nearly half of which would be established for remote areas from which immigration is hardly to be expected. Actual Asian immigration of less than 1,000 a year is a very safe estimate if the Judd bill is enacted.

The above provisions, plus repeal of all racial restrictions on naturalized citizenship, form the heart of this measure. In the course of its legislative history, a number of additions were made to it.

The first of these, desired by the Department of State, changes the general basis for computing quotas from the present national-origins ratio, which works out to 0.-001675854857 of the persons of the various national origins enumerated in the census of 1920, to a straight one-sixth of 1 percent. This will result in an over-all annual reduction of quotas by 635 numbers. By way of

comparison, the British quota of 65,721 will be reduced to 65,361, the Greek quota of 307 to 305. Another interpolated provision of the bill restricts immigration from non-Asian colonies to 100 per year under mother-country quotas.

In the course of the hearings, the fear was expressed that political fragmentation of the Far East might result in a great multiplication of minimum quotas, which are uniformly set at 100. India might break up into 600 sovereign entities, this argument ran, and thus receive total quotas of 60,000 annually. This problem was met by providing that the total of all minimum quotas shall not exceed 5,000, with a progressive diminution of the size of minimum quotas as the number of minimum-quota areas exceeds 50. In terms of the present world political situation, this provision may best be described as arising from an abundance of caution, with no foreseeable practical effect.

Another series of changes is of more serious import. Under present law, Chinese wives of American citizens may enter the United States as nonquota immigrants. Filipinos not only have this privilege but their children may come in on a nonquota basis as well—indeed the Filipino is on a complete par with Europeans in American immigration law.

The original Judd bill preserved these privileges, and extended nonquota immigrant status to husbands, wives, and children of American citizens born anywhere within the Asia-Pacific triangle. This provision was struck out in committee, and in addition, in the interest of uniformity, the present bill now places Filipinos in the same status as other Asians and requires that Chinese wives of American citizens enter on a quota basis. This the bill accomplishes without racial discrimination, since it provides that the section of the Immigration Act of 1924 providing nonquota status for the husband, wife, and child category shall not apply to any area having a quota less than 200. The list of 41 minimum-quota areas, too long to enumerate here, includes Australia, New Zealand, and the Union of South Africa.

The Judd bill as it now stands is highly restrictive in the field of immigration. In several particulars the bill might be improved by returning to the original version, but as it stands it is a bill that can be passed. It solves the larger issues brought about through an indefensible total-exclusion policy. It provides complete equality in naturalization, and ensures that, without regard to race, any individual who is qualified under general immigration laws may, on securing a quota number, enter the United States as an immigrant.

Taxes on Transportation and Communications

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. DOLLIVER. Mr. Speaker, I have today introduced 2 bills in the House, one to remove the excise tax on transportation of goods and passengers; the other to remove excise taxes on communications. Both these taxes are wartime taxes. At the time they were enacted there was an implied promise to the American people that they would be repealed 6 months after the close of the shooting war. The shooting war has now been over for nearly 4 years, and yet these taxes which are a drag and hindrance to American business, remain on the statute books.

These taxes, contrary to the ideas of some people, are not paid by the transportation or communications companies. They are paid by the public. They are a burden upon the pocketbook of every American. These taxes are part of the cost of living. They impede the free exchange of goods commodities all over this country. Especially do they have a heavy import upon the remote parts of our country, parts far from the sea coasts and from water transport. They impede interstate commerce. They should be repealed.

Reciprocal Trade Treaties

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. MACK of Washington. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include the following statement which I made today before the Ways and Means Committee of the House when that body was sitting in a hearing on reciprocal trade treaty proposals:

Mr. Chairman and gentlemen of the committee, I am not opposed to the theory of reciprocal trade treaties. Reciprocal trade treaties should be negotiated by our State Department where it is clearly shown that such treaties will stimulate world recovery or be advantageous to our American economy.

However, I would like to warn that reciprocity can be carried too far, and in going too far, bring ruin to some American industries and unemployment and misery to the thousands of the workers employed in those industries. Therefore, it is my considered opinion, that no reciprocal trade treaties should be entered into without the State Department first putting itself in possession of the fullest information about industries likely to be adversely affected by such treaties. Also, no such treaties should be entered into without the management and workers in industries likely to be harmed by such treaties being provided the greatest possible opportunity to be fully heard at public hearings.

I take this opportunity of calling to the attention of the committee three industries on the Pacific coast that might be irreparably damaged by the negotiation of reciprocal treaties, affecting their products. These are the crab fishing industry, the plywood manufacturing industry and the filbert nut raising industry. The facts concerning these industries are:

Crab fishing—Prior to December 7, 1941, the Japanese sold 85 percent of all the canned crab marketed in the United States. Most of this crab was caught by the Japanese in waters off the American coast and canned aboard cannery ships operating off our shores. The Japanese dumped this crab almost duty free into American ports. American fishermen and American cannery workers could not compete with the low wages paid Japanese fishermen and Japanese cannery workers. Although our American coastal waters were stocked with enormous quantities of crab few Americans could afford to fish them.

For example, in the years preceeding Pearl Harbor, American crab fishermen seldom landed more than 20,000 dozen crabs a year at the fishing port of Grays Harbor, Wash. Last year, the Grays Harbor crab landings totaled more than 360,000 dozen for which the fishermen were paid more than $1,000,000. Because of the removal, after Pearl Harbor, of the low-wage Japanese competition our Grays Harbor crab-fishing industry volume expanded eighteenfold or increased 1,800 percent.

The same was true in other Pacific coast crab-fishing ports.

If, under reciprocal trade treaties, Japan should be permitted to recapture the American canned crab market our Pacific coast crab industry will be knocked into a cocked hat, and the investment of millions of dollars which American fishermen have made in fishing boats and which food processors have put into canneries and canning equipment would become largely worthless.

Plywood manufacturing: During the past year, large eastern building material jobbing houses, hoping to profit by becoming agents for Canadian and Mexican concerns, have made a strenous effort to persuade Congress to remove the present tariff on Canadian and Mexican plywood.

Were this plywood tariff to be reduced, more than 13,000 American plywood workers who are employed in 43 plywood plants in Oregon, Washington, and California would be the principal sufferers.

The wage rates paid by Canadian plywood manufacturers are about 60 percent lower than those prevailing on the American side of the line. Also, log prices in Canada are much lower than in the United States. The differential between Mexican labor and American labor is even greater than that which exists between Canadian and United States labor.

If tariffs on plywood should be reduced, more foreign plywood will invade the American market, our American plants will be forced to curtail operations, or our American plywood workers eventually will have to accept lower wages in order to meet this foreign competition.

None of these eventualities should be permitted to happen. Our American plywood industry has been doing a good job in increasing production—in meeting building-material demands.

In 1945 the production of fir plywood in the United States was 1,200,000,000 square feet; in 1946 it was 1,400,000,000 square feet; in 1947 it was 1,600,000,000 square feet; and in 1948 it was an estimated 2,000,000,000 square feet. It is now contemplated that the plywood output for 1949 will be 2,700,000,000 square feet, or about two and one-half times the production of 4 years ago. Certainly, with such a record, the plywood industry has done a good job.

The plywood-industry's management and workers should not be penalized by the adoption of new tariff policies in plywood—certainly not without giving the industry and its workers the fullest opportunity to be heard.

Filbert-nut industry: For the last half century the western halves of Oregon and Washington have been a one-industry region, dependent almost solely on one industry—forest products. This dependency upon one industry frequently has led to severe booms and busts. To overcome this disadvantage, our people have sought with vigor and intelligence to diversify their economic structure. Among the new diversified industries which have been developed are

cranberry raising, bulb growing, and filbert raising.

Within recent years 850 filbert orchards have come into bearing in western Washington alone and more orchards, of later planting, are reaching year by year the bearing stage. These filbert orchards have progressed so far toward meeting the domestic demand for these nuts that the price on filberts, which was 27.5 cents a pound to growers in 1945, by 1948 had declined to 13.5 cents a pound, or less than half the price of 4 years ago.

If, under reciprocal trade treaties, the duty on filberts or other nuts sold in competition to them were to be lowered, many of these orchards would be cut down and the trees, which required years of cultivation to reach a productive stage, would be converted into fuel, with tremendous financial loss to the orchardists and unemployment for their employees.

This brief statement on the problems confronting these three Pacific coast industries makes it crystal clear, I believe, that no reciprocal tariff treaty should be entered into without the most careful and searching inquiry for all the facts involved.

Every change in tariff-making policies of the Government must be weighed and analyzed with the greatest of care to safeguard against possible economic dislocations that might result in curtailed working hours, unemployment, or reduced earnings for our American workers.

I therefore strongly urge that we maintain the Tariff Commission as an investigatory agency, to study the probable effect of any reciprocal treaties upon specific industries, to the end that our American industries and our American workers will be given maximum protection against being sold down the river to low-wage, low-living, standard foreign competitors.

Hon. Francis E. Walter, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Herman A. Lowe, from the Philadelphia Inquirer of January 22, 1949:

AT LAST A PENNSYLVANIAN NEAR THE TOP IN THE HOUSE

(By Herman A. Lowe)

WASHINGTON, January 21.—They inaugurated President Truman for his second hitch at the Presidency yesterday. But he isn't the only man to whom the laurel wreaths were being tossed this week and last.

In the House of Representatives, a lean, gray, sad-looking citizen of Easton, Pa., was practically labeled "Mr. Pennsylvania of 1949." He is FRANCIS E. (better known as TAD) WALTER, a smart sober-sided lawyer, highly respected and trusted by his Democratic and Republican colleagues.

After 16 years of coming up the congressional ladder the hard way, the guy tried on Cinderella's glass slipper last week and the darned thing was a perfect fit. He couldn't have done better if he had guessed the mystery tune on Stop the Music.

In a matter of a few days, Easton's perennial gift to Washington was elected chairman of the Democratic caucus, and appointed chairman of the House Democratic Patronage Committee. Then he was selected by Speaker SAM RAYBURN for the delicate task of keeping the Un-American Activities Committee's nose clean. Underlying all these honors, of course, is his position as ranking Democrat of the important House Judiciary Committee; thus he would become chairman in the event EMANUEL CELLER is elevated to the Federal bench.

WALTER's weakness is that he is one of the unspectacular people of the world. Unlike some Members of Congress, he doesn't know how to do small things with a flourish of trumpets nor large ones with a 21-gun salute, massing of the colors, and calliope music.

So Pennsylvania has given him less recognition than he deserves. But now the Commonwealth should know the man who, during the Eighty-first Congress, will be carrying the ball for it in the House.

As chairman of the Democratic caucus, WALTER has become one of the two elected party officials in the lower chamber, the other being the majority leader. He will preside over all the behind-closed-doors sessions of the party legislators, and will also be one of the little group of men from Capitol Hill who confer with President Truman on policy matters.

Chairmanship of the patronage committee, although an honor, means plenty of headaches. It is the job of cutting up slightly more than 200 House jobs among 262 Democratic Congressmen. The fact that Speaker RAYBURN picked him for the job means WALTER is regarded as a man of tact and judgment who can keep the party's legislators happy, even while turning them away empty handed.

Most ticklish of all is WALTER's position on the Un-American Activities Committee. The House leadership believes there is a need for a sane, balanced committee to dig out subversives. But, if the committee were not lifted out of the morass of disrepute into which it has been sinking, there is a real chance it would be abolished.

So TAD WALTER was the man chosen to make with the cleanser, to scrape off the barnacles and turn the committee into something shiny and spotless. Quite a chore, but they say he can do it.

Finally, he will head subcommittee No. 1 of the House Judiciary Committee, the subcommittee in charge of antitrust legislation and the creation of new judgeships. His subcommittee probably will also handle all measures dealing with corporate reorganization. And WALTER will be a member of the Subcommittee on Immigration and Naturalization.

Because of his inability to beat the big drum, there is little realization of the amount of legislation he has fathered and pushed through to become law. The quantity is very substantial.

And although he is an administration stalwart, he has shown surprising independence at times.

For instance, during the war when the powerful administrative agencies were making the word "bureaucracy" a stench by their imperious and even despotic rulings against individuals and businesses, WALTER shoved a bill through Congress providing a fair code of operation for the agencies. It included the right to appeal to the courts. The administration was against it, and Franklin D. Roosevelt vetoed it.

A couple of years later WALTER tried again. This time the bill became law. The American Bar Association gave him an award in 1946 for what he had accomplished.

In this connection, it is an interesting coincidence that he is now saddled with the chore of creating a fair-practice code for the Un-American Activities Committee.

They say TAD will do it, too. He is efficient.

Relaxing the Antitrust Laws and Overruling Decision of the Supreme Court in the Cement Case Neither Necessary Nor Desirable

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. EVINS. Mr. Speaker, recently several statements have been made on the floor of both the House and the Senate concerning the basing-point decision made by the Supreme Court and the effect of the continuance of the basing-point practice of pricing as this system affects the public and the continuance of delivered-price system in possible violation of the Sherman Antitrust Act, the Federal Trade Commission Act, the Robinson-Patman Act, and other legislation. In this connection, the Honorable Ewin L. Davis, former Member of Congress and presently member of the Federal Trade Commission, made a statement before the Subcommittee on Trade Practices of the Senate with respect to the decision of the Supreme Court and the practice of industries engaged in interstate commerce employing the so-called basing-point system of pricing. Mr. Speaker, I ask that the statement of Judge Davis which was made in this connection be printed in the RECORD, and I commend the reading of this statement to the Members of Congress and others interested in this question as an authoritative statement for those seeking information on this matter.

The statement of Commissioner Davis is as follows:

STATEMENT OF EWIN L. DAVIS, COMMISSIONER, FEDERAL TRADE COMMISSION, PREPARED FOR DELIVERY BEFORE SENATE SUBCOMMITTEE ON TRADE POLICIES, MONDAY, JANUARY 24, 1949

Mr. Chairman and gentlemen of the subcommittee, I am appearing before you today in response to an invitation from the chairman. I am glad at any time to discuss with your committee or the members thereof any pertinent questions relative to the Federal Trade Commission or its enforcement of the acts of Congress in respect to those matters over which the Commission has jurisdiction.

In order that the members of the committee may be informed as to my background and experience I shall state for the record that after practicing law in my home State of Tennessee I served as judge of the Seventh Judicial Circuit of Tennessee for 8 years. I later was a Member of the House of Representatives of the Congress for 14 years and served for 2 years as chairman of the House Committee on Merchant Marine, Radio, and Fisheries. I have been a member of the Federal Trade Commission for almost 16 years.

I am confident that all the members of the committee will agree that our political and economic systems are based on the premise of a competitive economy which of necessity is based on competitive pricing of commodities or services. To state it simply the primary purpose of the antitrust laws was and is to provide a system of regulation by Government so that a buyer and purchaser alike

may have the benefits of competitive pricing. This system of regulation to be effective must be constantly nourished by an awareness of the public interest and changing economic conditions by those charged with enforcement of the antitrust laws. The members of the Federal Trade Commission must not view the problems of enforcement solely in the light of the special interests of any geographic or economic group, large or small. The antitrust laws are general regulatory statutes for the benefit and protection of all and not for the special benefit of particular groups. The measure of the success of the antitrust laws is the extent of their contribution to the public interest and the general welfare. In my opinion that contribution has been substantial.

Since the enactment by the Congress of the Sherman Act in 1890, with only one dissenting vote, there have been recurring discussions as to the necessity of amending the antitrust laws. Except for certain exemptions as to specific groups, the considered judgment of various Congresses however has been that the antitrust laws as generally applied should be strengthened—not weakened. For illustration, the Federal Trade Commission and Clayton Acts were passed in 1914 and the Robinson-Patman Act in 1936. Notwithstanding the enactment of these laws, the tendencies toward monopolies in business have increased due mainly to certain loopholes in these laws and to the shortage of funds for enforcement. The Federal Trade Commission has devoted its best efforts with the resources and tools at its command to the fostering of competition in our economy and to the prevention of monopoly and other restraints of trade. Because of its limited personnel and funds, the Commission might be criticized by adversely affected parties for not proceeding against all violations of the law which it administers. However, any criticism that the Commission has proceeded too far in too many cases is to say the least not a realistic view of the true situation at this time.

I recognize of course that after the decision in the Cement case (*FTC* v. *Cement Institute et al.* (333 U. S. 683), last April, widespread misapprehensions developed as to the implications of that decision and of other recent decisions. Many businessmen were sincerely confused and their confusion was intensified by the fact that some interests who were directly affected by those decisions were advocating modification of the antitrust laws. However, this confusion has already begun to abate, and if Congress should determine that the laws are not to be changed at this time, much of the confusion which remains will in my judgment disappear. In testimony before this subcommittee at the last session of Congress four members of the Commission indicated that they regard the basing-point cases as merely aspects of the Commission's frontal attack upon price-fixing conspiracies and devices which eliminate competition. On October 12, 1948, the majority of the Commission released to the public a policy statement addressed to its staff in which the legal implications of geographic pricing practices were discussed at length. On January 12 of this year, less than 2 weeks ago, the majority of the Commission approved and made public a letter by its secretary which contains answers to various questions submitted by the Chamber of Commerce of the State of New York as to the meaning and implications of the above described October 12 statement. I believe that these various statements have in large measure explained the views of the law by the majority of the Commission and have dissipated substantially the earlier confusion. If in the future it appears that any significant points are still obscure the Commission will consider issuing an additional public statement. However, there is obviously a limit beyond which the Commission should not go in issuing in its quasi-judicial capacity interpretations of the laws which it administers apart from its decisions in litigated cases. The question presented in these cases is whether or not the effects of certain pricing practices are injurious to competition. It required thousands of pages of testimony and other evidence in the Cement case to determine the facts as to the pricing policy in that industry and the effects on competition of that policy. It is for that reason that while the Commission may, when the public interest requires, make a general statement as to its interpretation of the law, it should not give ex-parte opinions on a given statement of alleged facts.

Much of the public discussion relative to the recent cases decided by the Commission has been in reference to the basing-point system of pricing and the resulting practice of freight absorption by the concerns parties to that system. The Commission acting pursuant to section 5 of the Federal Trade Commission Act has challenged basing-point systems when these systems have been used by groups in an industry to establish identical prices at each point of delivery, These are just another and perhaps more complex variety of the familiar collusive price-fixing cases. They constitute violations of the Sherman Act as well as the Federal Trade Commission Act. In these cases the basing-point system was an instrumentality used by concerns to fix prices. When the Commission challenged the fixing of prices by means of the basing-point system it did not necessarily challenge the use of the basing-point method of pricing. The Commission has not in a single case challenged the use of the basing-point method of pricing per se separate and apart from collusion. The Commission has not challenged freight absorption per se. The Commission has not required f. o. b. mill pricing. The Commission has not challenged the legality of the use of uniform delivered prices by an individual concern.

It should be emphasized that the Commission does not see a violation of the law in every basing point pricing case which comes before it. Positive and irrefutable proof of this is contained in the fact that the Commission has closed without prejudice matters under consideration in which the facts revealed unmistakably the existence of basing point pricing which, however, was not accompanied by evidence of collusion in violation of the Federal Trade Commission Act or competitively injurious discrimination in violation of the Clayton Act.

For example, in two specific cases the Commission investigated charges that a basing point type of pricing was being followed and that it resulted in a violation of the law. In these cases the facts after investigation revealed unmistakably that a basing-point method of pricing actually was being followed. Investigation also however failed to disclose sufficient evidences of collusion or discrimination to constitute violations of the law. Consequently, the Commission closed without prejudice each of these cases and no complaint was issued despite, and I repeat despite, the fact that basing-point systems of pricing were followed. These cases reveal that the mere existence of basing-point pricing in and of itself does not constitute in the opinion of the Commission a violation of any of the laws administered by the Federal Trade Commission.

The Commission has not required any concern to use any particular method or methods of pricing. Each seller may choose his own method of pricing, provided that he does not conspire or agree with his competitors and provided that he does not discriminate in price in the manner prohibited by law and thereby injure competition or tend to create a monopoly. A seller may absorb freight or absorb part of his manufacturing costs or any other costs in order to in good faith meet an equally low price of a competitor. This price, however, must be a competitive price, not one fixed by agreement, express or implied, from all of the facts, and it must not injure or prevent competition among his customers. The United States Circuit Court of Appeals for the Seventh Circuit stated in its opinion (*Milk and Ice Cream Can Institute* v. *F. T. C.* 152 F (2d) 478, 481) upholding the Commission's order against respondents using a so-called freight-equalization system, as follows:

"It is argued, perhaps correctly, that such a freight system had long been employed by industry so that members thereof might deliver their product at the same price. In fact, the Commission recognizes that this freight-equalization plan was used by petitioners prior to the organization of the institute. Such being the case, the fact still remains that it was employed by petitioners for the purpose of fixing the delivered price of their product, and by such use price competition was eliminated or, at any rate, seriously impaired. On the face of the situation, it taxes our credulity to believe, as argued, that petitioners employed this system without any agreement or plan among themselves. Any doubt in this respect, however, is removed by reference to the minutes of the institute and other evidence found in the record."

The basic philosophy and dominating purpose of the antitrust laws is to keep our commerce free from restraints of trade, and thereby to promote and foster competition in industry.

The present law is purposely general and flexible. Conditions change. New practices arise.

When the Clayton and Sherman Acts and the Federal Trade Commission Act were enacted, the single unit enterprise was typical of industry in the United States. When I was elected to Congress in 1918 this condition prevailed.

During the 14 years I served in Congress and the almost 16 years I have been a member of the Federal Trade Commission I have watched and applauded the productive growth of industry. No man appreciates more than I the Herculean task performed by industry in making this country the arsenal of democracy.

I have lived long in intimate contact with these matters. I have observed sometimes with apprehension the giant, complex, ramified enterprise structures which now permeate much of our industrial system. To my way of thinking collusive devices, such as those which have been frequently found to exist in basing-point systems and other restraints of trade, have as their practical effect the achievement and perpetuation of control over prices by monopolistic corporations.

I yield to no one in my desire to see a free competitive economy in the United States survive and to preserve to industry and our people the prosperity and freedom we have achieved under the capitalistic system. Free competitive enterprise is the foundation of our capitalistic system. Whatever weakens that foundation weakens the lifeblood of industry and the capitalistic system.

In a free competitive atmosphere new enterprises arise, grow, and expand production, compete and better their commodities, invent new commodities, and reduce prices. Both management and labor prosper.

Since the establishment of the Federal Trade Commission it has sought court interpretation of points of law in disagreement. The Federal Trade Commission is an independent executive agency set up by the Congress to administer the Federal Trade Commission Act and portions of the Clayton Act. It is the duty of the Commission to seek the interpretation of important legal points at issue and to promote and foster competition in industry.

Mr. Chairman and gentlemen of the subcommittee, it is my considered opinion that amendatory legislation along the line of S. 236 is neither necessary nor desirable.

The Council of Economic Advisers in its third annual report to the President in December 1948 in discussing competitive enterprise and the administered price problem stated in part as follows:

"The extensive consideration which has been given by official commissions and by congressional committees to the problems resulting from the increasing size of business units has not yet led to any clear judgment about the proper national policy.

* * * * *

"Study of the problem must continue, toward the end of creating competitive conditions throughout industry and thereby removing the need for those positive controls which alone could protect the public if it cannot be protected by restored competition.

* * * * *

"As we give further thought to the subject, the business world itself has the opportunity to influence the final decision. Restraint in price policy, courage in expanding facilities to meet the expanding needs of the people, and the display of social responsibility in supporting programs of stabilization in the interest of maximum production and employment, will go far toward adjusting the relations of business and government. This may offer a better solution of the administered-price problem than can be found in legislation."

I am in accord with these views of the council.

In making the above remarks I am speaking only for myself as an individual member of the Federal Trade Commission.

I thank the chairman and gentlemen of the committee for your invitation to appear before you.

Summary of Legislative Recommendations Contained in Economic Report of the President

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a summary of legislative recommendations contained in the economic report of the President.

President Truman, in his economic report to the Congress, as required under the Employment Act of 1946, submitted, on January 7, 1949, certain legislative recommendations which have much significance for maintaining maximum employment, production, and purchasing power, and which required the immediate attention of the Congress. Herein is a summary of some 31 legislative recommendations in the economic report of the President:

SUMMARY OF LEGISLATIVE RECOMMENDATIONS CONTAINED IN THE ECONOMIC REPORT OF THE PRESIDENT TRANSMITTED TO THE CONGRESS JANUARY 7, 1949

1. Increase the Government revenue from taxation by $4,000,000,000 a year. Principal source should be additional taxes upon corporate profits; another source of additional revenue should be the tax upon estates and gifts; study should be directed to increasing the rates of individual taxes in the upper and middle brackets; some excise taxes, particularly on oleomargarine, should be repealed.

2. Increase in social security contributions under existing and extended social insurance programs.

3. Continue maintenance of stability in the Government bond market (no specific legislative recommendation).

4. Provide continuing authority to the Board of Governors of the Federal Reserve System to require banks to hold supplemental reserves up to 10 percent against demand deposits, and 4 percent against time deposits; such authority to be applicable to all banks insured by the FDIC.

5. Continue authority for the regulation of consumer installment credit beyond June 30, 1949.

6. Provide the funds to make a careful survey of future supply and productive capacity in certain critical areas.

7. Temporary extension of the law under which voluntary agreements for allocation of materials in short supply are now permitted, and authorize the use of mandatory allocation powers which may be employed on a selective basis where they prove needed.

8. Continue the priorities and allocation authority in the field of transportation.

9. Selective price control authority should be promptly made available to the Government.

10. Price control authority should be supplemented with a provision permitting the Government to order the withholding of price advances while public inquiry into their justification is being made.

11. Authority (as requested in July 1948) to limit wage adjustments which would force a break in a price ceiling, except where wage adjustments are essential to remedy hardship, to correct inequities, or to prevent an actual lowering of living standards.

12. Continue rent control for at least 2 years, and strengthen its enforcement.

13. Extend existing powers of control over exports, and strengthen the machinery for enforcement.

14. Grant more specific and more adequate authority to prevent excessive speculation or the manipulation of prices of agricultural commodities.

15. Increase benefits under the old-age and survivors' insurance substantially.

16. Broaden the coverage of the Fair Labor Standards Act.

17. Increase minimum wage from present 40 cents per hour to at least 75 cents an hour.

18. Improve public assistance program for relief.

19. It is essential that public power programs be expanded this year, even where this requires use of scarce materials for construction of dams and generators.

20. A start on the St. Lawrence River waterway and power project should be made immediately.

21. Programs in the improvement of river basins should be examined and action taken where needed to provide coordinated development plans.

22. Reexamine existing and proposed farm legislation in the light of the objective:

a. To fit a prosperous and equitably treated agriculture consistently into an economy seeking to operate continuously at maximum levels.

b. To move toward the goal of farm living standards comparable to the rest of the population.

c. To more abundant farm production to supply the industrial and consumer needs of a full employment economy.

d. To encourage shifts in the composition of farm output adjusted to domestic and export needs.

e. To provide adequate storage facilities, the improvement of distribution, and adequate credit facilities.

23. Continue European recovery program.

24. Restore the Trade Agreements Act to full effectiveness, and extend it for 3 years.

25. Immediate passage of the unenacted portions of the comprehensive housing bill with the quota of low-rent housing increased to provide for 1,000,000 units within 7 years, and including substantial Federal aid to the States and localities to enable more rapid progress in clearing slums and in assembling land for balanced redevelopment.

26. Initiate Federal program for aid to elementary and secondary education.

27. Make plans to expand opportunities for higher education through cooperation between the Federal Government and public agencies and private institutions, including a system of general scholarships and fellowships.

28. Initiate a study to determine authoritatively our national needs for educational facilities and the most feasible methods of providing them.

29. Enactment of a program of national health insurance with Federal grants in support of hospital construction, and take steps to overcome the present serious national shortage of medical personnel.

30. Widen the coverage and make benefits more adequate under old age and unemployment insurance systems.

31. Inaugurate a system of insurance against loss of income through temporary or permanent disability.

Vested Interests Major Benefactors of Central Arizona Project

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. POULSON. Mr. Speaker, Congress will have before it in the near future legislation for the authorization of the central Arizona project. It is interesting to note that this legislation is financially supported by the vested interests because they will be the major benefactors.

Arizona power companies, public utilities, and banks are contributing thousands of dollars to promote a reclamation scheme that would cost the Nation's taxpayers an irrecoverable billion dollars.

This is the scheme:

The State of Arizona is asking Congress to appropriate the billion dollars for an irrigation and power project to "rescue" a few thousand acres of land in Central Arizona.

This is not public land. It is privately owned land.

It is not new land that has never been irrigated. It is land that once was irrigated and is now dry because of wanton waste of water, exploitation and indifferent over-development.

The owners of this land that is to be "saved" want the United States Treasury to restore their investments by donating a billion dollars, which the owners do not intend to repay.

To carry out the scheme, Arizona interests organized the Central Arizona Project Association to lobby their bills through Congress.

Who are the contributors to this association?

Here are the names of some of them and the amounts each has contributed:

Central Arizona Light & Power Co., $2,500.

Phelps Dodge Corp., $5,000.

Natural Gas Service Co., Phoenix, $500.

Phoenix Title & Trust Co., $1,000.

Phoenix Clearing House, $5,000.

First Federal Savings & Loan Association, $500.

Republic and Gazette, newspapers, Phoenix, $1,000.

Mountain States Telephone & Telegraph Co., $1,500.

Valley National Bank, Phoenix, $1,000.

Inspiration Consolidated Copper Co., $1,000.

Last year—1948—Arizona interests of all types contributed approximately $73,000 to the project lobby.

Of this amount, 27 private contributors, including those named above, donated approximately $30,000.

Six so-called public contributors—water-users groups and organized irrigation districts—supplied approximately $22,000.

Who contributed the balance of more than $20,000? This remains a mystery as far as records filed with Congress show. I presume this balance also came from private groups or individuals. Thus, a total of $52,000 of the $73,000 came from private contributors.

Why are these utilities, mining companies, and banks supplying this money? If they own land that would be saved by the proposed project, or hold mortgages on it, they would make millions of dollars by investing a few thousand.

Much of this privately owned land is now worthless, because water once available in Arizona has been wantonly wasted through avaricious over-development. It would cost the United States Treasury, using tax money, up to $2,500 an acre to put water back on it through the proposed project.

But if Congress can be hornswoggled into passing the Arizona project bill, the owners of the land will have their investments restored, will make millions of dollars, and will let the people of all the States pay the bill.

Cardinal Mindszenty

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. MULTER. Mr. Speaker, I believe that all of the Members of Congress from New York State received copies of the resolution unanimously adopted by the New York State Assembly and Senate condemning the acts of the Hungarian Government in arresting and imprisoning His Eminence Josef Cardinal Mindszenty, and urging that the President of the United States and the Secretary of State and the Members of Congress use every legitimate means to bring about the immediate release of the Cardinal.

On January 24, 1949, I asked and obtained unanimous consent to include that resolution in my remarks as part of the appendix of the CONGRESSIONAL RECORD.

I am pleased to note that my distinguished colleague from New York, Mr. KILBURN had previously obtained leave to accomplish the same purpose.

I am in entire accord with the sentiments expressed in that resolution and direct it to the attention of this body because I believe that my colleagues are also in sympathy with those sentiments and trust that a similar resolution condemning the conduct of the Hungarian Government will be adopted here.

The Voice of Freedom and Justice

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I desire to include in the RECORD a copy of a resolution adopted by the Essex County (N. J.) Federation of Holy Name Societies on January 22, 1949.

This resolution condemns the injustice and cruel detention of Josef Cardinal Mindszenty. It is the purpose of this resolution to arouse public sentiment against this atrocious crime and to seek the release of Cardinal Mindszenty.

The free people of the world and all peoples who believe in the basic right of freedom speak with one voice in impassioned denunciation against the cruel and vicious acts of the inquisitors of Josef Cardinal Mindszenty.

President Truman in his inaugural address stated that "we believe that all men have the right to freedom of thought and expression and that the American people stand firm in the faith which has inspired this Nation, and that we will not be moved from this faith."

I am sure that those who read the newspapers of the day, that these same inquisitors from the Government of Hungary, in defiance of the provisions of the United Nations Charter, respecting human rights and fundamental freedoms, have deprived the same Josef Cardinal Mindszenty of this fundamental human right, by his arrest and imprisonment—and that their further deliberate persecutions by methods which are entirely undemocratic and inhumane—will say this is a travesty on justice and offensive to democratic ideals of freedom and fair play.

And that, further, it is a glaring example of how communism subjects the individual to arrest without lawful cause, and punishment without trial.

The people of the earth who desire free expression, must surely be shocked and incensed at this treatment, and if the Government of Hungary fails to undo this great wrong, fails to rectify this injustice, then it must surely stand the disapproval of the free peoples of the world.

The resolution is as follows:

Whereas the religious minded people of the world have been shocked by the imprisonment of His Eminence Joseph Cardinal Mindszenty, Primate of Hungary, by the Soviet dictators of his native land; and

Whereas Cardinal Mindszenty's career has been distinguished by his untiring and heroic fight against irreligion as manifested in the atheistic philosophies both of the Nazis and the Communists; and

Whereas the Nazis in their scourge of Europe attempted to silence him by imprisonment; and

Whereas he, who was described as having the last free voice left in Hungary, has now been incarcerated by the tyrannical, atheistic, and Communistic government of that country: Therefore be it

Resolved, That the Essex County division of the Federation of Holy Name Societies condemn the unjust and cruel detention of Cardinal Mindszenty and announce to all God-fearing people our condemnation of his imprisonment; be it further

Resolved, That the secretary transmit copies of this resolution to the Secretary of State at Washington, D. C., our Senators and Representatives, asking them to exert their influence in obtaining the release of Cardinal Mindszenty; be it further

Resolved, That copies of this resolution be sent to the various newspapers and periodicals which would be desirous of being informed and which would exercise their editorial good will in this cause, which cries out to the world for rectification.

No Mandate

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. GOODWIN. Mr. Speaker, appended hereto is an editorial from the Melrose (Mass.) Leader of January 20, 1949, on the subject of compulsory health insurance which I am including with these remarks under leave to extend.

The editorial follows:

NO MANDATE

According to some of the eager beavers in the Government, the election was a mandate for congressional approval of Federal compulsory health insurance. It is to the credit of Oscar R. Ewing, Federal Security Administrator, that he said frankly that no mandate is involved. Mr. Ewing supports the scheme; but, as he pointed out in a speech, too many issues played a part in deciding the election to say that any one was the big factor.

The Christian Science Monitor elaborated on this when it said editorially: "The farm vote which helped to elect Mr. Truman was certainly not motivated by an urge for this compulsory program. Farm sentiment generally runs strongly in opposition. The two leading farm organizations have gone on record against socialized medicine. While organized labor formally favors the plan, it did not rank as a campaign issue nor arouse any driving enthusiasm in the rank and file of the workers."

The truth is that this "people's mandate" business is being overworked by every mi-

nority pressure group in the country. According to these groups, the public is red hot for more and more socialism, more and more Government debt, more and more taxation to pay for the experiments—and, by implication, less and less freedom and independence. Compulsory health insurance is just one example of this. There is absolutely no evidence to make it appear that a large segment of the voters want any part of it.

Return African Colonies to Italian Trusteeship Under United Nations

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter written by me to Generoso Pope, editor, Il Progresso Italo-Americano:

NEW YORK, *January 24, 1949.*

Mr. GENEROSO POPE,
Editor, Il Progresso Italo-Americano,
New York, N. Y.

DEAR FRIEND: I applaud your campaign to prevent the African colonies, formerly controlled by Italy, from being turned over to Great Britain in whole or in part. A sound solution of the disposition of the former Italian colonies would be the return of these possessions to the Republic of Italy. The allocation of these colonies to imperialist Britain would be similar to that of a fool returning to his folly. Britain has been guilty of the foulest aggression in the Middle East—particularly against Israel. Its designs upon Egypt and other countries in that backward and troubled area of the world are far from honorable. Surrendering the Italian colonies to British manipulation would only serve to bolster the imperialistic ambitions of the Empire, which two world wars have sought to erase.

Significantly, Great Britain has failed to join in the chorus of protests against the Dutch aggression in Indonesia. In my opinion, she has refrained for the good and sufficient reason, for her, that she is planning similar excursions.

It is to be firmly hoped, therefore, that when the question of the disposition of Italy's former African colonies appears on the agenda of the United Nations, that the United States Government will take firm measures to have the United Nations assume trusteeship over these colonies and that Italy shall be designated as trustee thereof. Now, more than ever, Italy is suffering from overpopulation. Some economic solution must be provided for the surplus and inasmuch as Italy does not have the material resources or the financial strength to support her many millions, an outlet in the nature of emigration to these colonies would prove most helpful. Under the circumstances, I believe many Italian nationals would be willing and eager to go to these African colonies, relieving the density of population and lessening unemployment.

Furthermore, the purposes of the Marshall plan would be that much more strengthened, as I believe those Italians who do go to these African colonies could become self-supporting in a short period. Much Italian money has been poured into this area previously and it may be possible to salvage quite a number of projects.

I think the Italian people and their administrators have learned many lessons. The evils of fascism have been underscored for the Italian people innumerable times. I am confident that they will never embrace such a devastating dictatorship again and that they will never permit the reimposition of such tyranny upon themselves or any other people with whom they may be associated. I believe they will take every means to insure democratic treatment for the natives in the African colonies and that they will not countenance a revival of fascism or imperialism in this colonial situation. There must be and I am sure there will be developed a political climate favorable to the freedom of these colonials.

I shall be glad to cooperate with you in this matter.

Sincerely yours,

EMANUEL CELLER.

The Weakness in Greece

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Peter Edson that appeared in the Washington Daily News of January 25, 1949:

THE WEAKNESS IN GREECE

(By Peter Edson)

Mrs. Cornelia Bryce Pinchot, widow of Pennsylvania's great progressive Republican Governor and conservationist, has just returned from her second trip through Greece with a report that things there have gone from bad to worse.

She does not minimize the facts that docks have been repaired, roads built, fields fertilized, malaria swamps sprayed, people fed, Communist seizure of the government staved off, the Russians kept from possible occupation of the Suez Canal.

Where the Greek experiment has bogged down, the able-minded and vigorous Mrs. Pinchot declares, is politically. She holds American interference partly responsible.

The inference here is plain. American engineers, doctors, and relief workers know their jobs and are doing them. American political advisers do not have the same degree of competence in their field that the technical people have in theirs.

American political and military advisers sent to Greece will no doubt maintain that they have leaned over backwards in trying not to interfere with the Greek Government. They insisted on Greek army command in the field. They insisted on democratically held elections in 1946. These elections were supervised by United Nations observation teams and were pronounced free and fair.

A parliamentary government was elected and set up.

But under the Greek constitution, as under the American Constitution, members of the cabinet do not have to be elected members of the law-making branch of government. And in picking the Greek cabinet and many lesser officials, the American advisers have interfered plenty.

Loy W. Henderson, then director of the State Department's Office of Near Eastern Affairs, went to Greece in 1947 and personally selected the aged Themistocles Sophoulis as prime minister to head a coalition government. He seemed to be the best man available.

Sophoulis refused the job several times. His reason was that he did not think the coalition would work because as prime minister he was to be given responsibility without the executive power to enforce his decisions. That power was left in the other ministries. And the men chosen to be ministers of foreign affairs, interior, finance, war, information, and labor were all rightists reactionaries opposed to every liberal reform.

Sophoulis finally took the job because he was led to believe that if he did not, American aid might be refused. But the recent downfall of his cabinet is proof of his contention that the coalition government would not work unless the prime minister were given more power.

Sophoulis has again been persuaded to remain as prime minister at the head of a new cabinet. If the new Sophoulis government falls, the next step now being considered is the creation of a nonparliamentary government. This probably means letting the King send Parliament home, then appointing a small super- or supra-parliamentary group to do the lawmaking. The danger here is that the men appointed to this group would become a violently repressive government.

What Greece needs most are certain basic reforms of good government, says Mrs. Pinchot. It needs not a Communist revolution, but a Roosevelt New Deal kind of revolution that will take care of the needs of the Greek common people.

There are many fine young Greeks with real ability to carry out these reforms, Mrs. Pinchot found. The fact that these reforms are not being carried out is what is sending many non-Communist Greeks to the hills in opposition to the Athens government.

As Mrs. Pinchot puts it, the United States has now "invested" $400,000,000 in Greece. But in making this investment, the United States has not always backed the best political elements.

If the American missions in Greece aren't smart enough to give the Greek people the new deal that they deserve, the $400,000,000 we have invested will go down the drain.

United States plans and specifications for a new Greece are good, says Mrs. Pinchot. But in the first 18 months of operations they have not been carried out.

Statement on the New Housing Bills

EXTENSION OF REMARKS
OF
HON. CHRISTIAN A. HERTER
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. HERTER. Mr. Speaker under unanimous consent to extend my remarks in the Appendix of the RECORD, I include a brief statement made yesterday by myself and eight colleagues with respect to the housing bills filed in the House and the Senate by certain Republican Members.

The statement follows:

We believe that the housing bills being filed today in the House and the Senate by Republican Members are a constructive approach to an urgent but highly complex problem. We believe that they offer a better base for final legislation than does the administration proposal. We endorse this move on the part of our colleagues while at

the same time reserving our rights with respect to some of the details pending further consideration of both measures.

CHRISTIAN A. HERTER, Massachusetts; RICHARD M. NIXON, California; HAL HOLMES, Washington; JAMES C. AUCHINCLOSS, New Jersey; JOHN W. HESELTON, Massachusetts; WALTER H. JUDD, Minnesota; ROBERT W. KEAN, New Jersey; CHAS. A. WOLVERTON, New Jersey; EDGAR A. JONAS, Illinois.

Battle for Margarine

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. DOYLE. Mr. Speaker, the Long Beach Independent for January 19, 1949, which is one of the two daily newspapers printed in my home city of Long Beach in Los Angeles County, Calif., printed an editorial on the subject of Margarine. I take pleasure in calling this analytical editorial to the attention of all the Members of Congress and to the readers of the CONGRESSIONAL RECORD.

The Eighteenth Congressional District of California—which I now again have the honor to represent, having also represented it in this House during the Seventy-ninth Congress—is one of the most important dairy sections of our great country. Recently representatives of large dairying interests of national extent have informed me that the dairy interests had withdrawn their objection to the removal of the tax on oleomargarine, but that they wanted margarine prohibited from being colored so as to "imitate the color of butter." Many dozens of letters have come to me prior to the date of this editorial, and almost all of them have protested the Federal tax on margarine.

I feel the reading of the following editorial will prove of value to all concerned:

BATTLE FOR MARGARINE

One major battle in the new Congress will be waged by two powerful forces. It will be the battle waged by the great dairy interests to continue the tax and restrictions on the sale of margarine. The opponents will be manufacturers of margarine, farm groups which raise the soybean from which margarine is made, and consumer groups who resent paying a tax on the product.

The Eightieth Congress repealed the tax and restrictions in the House by a two-thirds vote, only to have the Senate pigeonhole the measure. That was the result of the dairy lobby working on Senators from the Middle West and other dairy States. The fight must now start all over in the Eighty-first Congress now in session. It will be a battle of propaganda and lobbyists. Consumers who wish to express themselves should write direct to Congressman CLYDE DOYLE and Senators KNOWLAND and DOWNEY.

It takes courage for Congressmen to vote against the dairy interests. This is especially true if they have large dairy interests among their constituents. In the Eightieth Congress, Congressman Bradley was faced with this decision and voted to repeal the tax on margarine. He had very large dairy interests in his district. It will now be the problem of his successor, CLYDE DOYLE.

The issue is that there is a Federal tax of 10 cents a pound on yellow margarine. Natural margarine is a pure white color. Thus the tax is on artificially colored margarine. However, most of the butter used is artificially colored to make it a uniform yellow. The issue therefore is why consumers should have to color their own margarine or pay a 10-cent tax to have it colored for them.

There is sound argument for the nutritional qualities of margarine. The council on foods and nutrition of the American Medical Association says: "When margarine is fortified with vitamin A the investigations that have been made lead to the conclusion that it can be substituted for butter in the ordinary diet without any nutritional disadvantage."

Since it is estimated 99 percent of all margarine is fortified with vitamin A, it is probably more regulated nutritionally than is butter, which is dependent upon seasons and feeding of the cows that produce the milk from which it is made. Since margarine sells for a much lower price, it is an important factor in the cost of living of lower-income groups.

Many States have excessive tax laws on margarine in addition to the Federal tax. It is therefore important that California, which is one of these States, also repeal the restriction on sale of margarine. The taxes and restrictions are part of monopoly laws enacted to protect dairy interests from this kind of competition. They are discriminatory laws that should be repealed. It is up to the people to demand of their State and Federal legislators that they take such action if that is the will of the people.—(L. A. C.)

Address of Most Rev. Richard J. Cushing, D. D.

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Most Reverend Richard J. Cushing, D. D., dinner meeting, New England Area Council, Boys Clubs of America, Hotel Sheraton, January 13, 1949:

I am very happy to be present at an occasion on which Mr. Frederic Church and his associates are honored for their work in behalf of the Boys' Clubs. Typical of the others, Mr. Church is one of that small and worthy group of citizens in the community who patterns his life on the principle that no man can live for himself alone. He has demonstrated for many years and in a most constructive fashion his recognition that, even as the community owes us many things, so each of us owes much to the community. Mr. Church has discharged his debt to the community in different ways, but particularly by his work in behalf of the Boys' Clubs. I am very happy to bespeak the admiration of my part of the community for the work which he and his associates have done.

I should like to speak to you this evening about certain tendencies abroad in the land which may easily constitute a future problem for programs like that of the Boys' Clubs and of other privately administered, independently operating organizations. Perhaps I had best introduce my thought by a little parable, since some of my suggestions this evening may strike a note unpopular at the moment among some of the public. The public likes to be pleased and it never likes to learn that things which sound pleasing may sometimes bring with them very unpleasant results.

A story is told of an oriental despot who grew worried about his own future health and life expectancy. He told one of his chamberlains to summon the most gifted soothsayers in the land so that he might discover whether the years ahead were to bring him joy or misery. One of the oldest and most accurate of all the prophets in his realm was brought into the presence of the king. He gazed into a crystal ball and lifted his hands in horror. "O King," he cried, "what great sorrow lies before you, what grief. All of your kinsmen shall die and you shall be left alone in your old age, the last and saddest of your family." The despot was indignant at this unfortunate fate and declared that the lamentable series of deaths might well begin with that of the foreteller of such unpleasant news. Whereupon the aged soothsayer was put to death.

Another, younger and more adroit prophet was introduced and he looked into the precise same crystal as had the prophet of disaster. His eyes danced with delight as he rejoiced the despot wtih this prediction: "Be glad, O King. Thy years shall be multiplied and by the favor of the gods thou shalt outlive all lesser men, thine own kinsmen included, and shall reign unto lengths of days when all others have gone their worthless way." The young soothsayer was rewarded with rounds of applause, a fair share of the king's land, and the hand of his daughter in marriage. They lived happily ever after and the king died when he would have anyway, bereaved of all his relatives but delighted with his own longevity.

In our day the public occupies pretty much the place of the classic despot. It must be pleased at all costs and all unpleasantness must be presented to it by those who depend on its favor in the most attractive possible terms. But whatever names we may put on things or however we may phrase them the realities are pretty much the same—and there are certain realities in the trends of the times which bode ill for traditional independent social programs, realities which are sometimes presented, however, in a very attractive form.

Unless a miracle intervenes or some other extraordinary factor reverses the situation in eastern Europe and Asia, our generation must face the fact that several great nations are doomed to Marxist Socialist regimes. The basic Christian objection to Marxist socialism is, of course, its declared atheism and its complete contempt for all social or personal spiritual values, with a consequent deification of the state and suppression of the person. But Christianity also shares democracy's objections to Marxist socialism. One of these is the objection which free people have always had to any system which destroys private initiative on every level and which tolerates no independent organized action of any kind within the community and apart from the state.

In the totalitarian concept of Marxist socialism all independent works such as those of the boys' clubs are out of the question. They speedily become as illegal as the organized religious action, independent of state controls, of which I am a representative in our community. In Marxist Hungary work like that done by Mr. Church and his associates wolud be eliminated as ruthlessly as the work done by Cardinal Mindszenty so long as it sought to carry on independent of political controls and organized in a private fashion to serve ends and purposes wider than those which free people attribute to the political state. Independently organized social-service works are not merely theoreti-

cally inconsistent with Marxist socialism; they become practically impossible in the regimented life of the totalitarian state. They are ruthlessly eliminated from the life of the unhappy nations presently under the heel of the Red Fascist.

It seems unlikely that this crude atheistic socialism will prevail in western nations like our own. Our political institutions are rooted in social theories permeated by Christian idealism. Our democracy has been nourished by religious and cultural values which have had more free opportunity to disseminate themselves in western Europe, Britain, and here in our own hemisphere, than they may have had elsewhere. So long as state socialism takes any of its color from our moral, political, and social climate, it must necessarily be influenced by spiritual and therefore humane values. It cannot include atheism in its theory and therefore it cannot offend conscience in its practice. It may not always acknowledge God, but it cannot despise Him—and while it may exalt the state, it cannot destroy the dignity of the individual or totally eliminate the person.

But all state socialism, however mild, sooner or later creates serious problems for independent, private interests. It becomes impossible for programs supported by what is sometimes called the charity dollar, the dollar freely given by private persons to support independent organizations, to compete with the so-called tax dollar, the dollar raised by taxation and spent by federal or other state agencies for organized social service agencies, for hospital programs, or for education schemes which are state-supported and state-controlled. The charity dollar cannot long compete with the tax dollar once the tax dollar becomes a weapon in the hands of a Socialist state. In the first place, it is very easy to collect tax dollars. All the prestige and the police power of the state is behind their collection. It is always harder to collect charity dollars—and it becomes increasingly hard, almost to the point of impossible, to collect charity dollars in a Socialist state when so many tax dollars are being collected from the same people to finance increasing state-subsidized and state-controlled community works which, as they multiply, require yet more taxation.

It is a simple, cold mathematical fact which has nothing to do with religious theory or social philosophy; expanding federal support of educational, recreational, social service, and health programs means increased state competition with all private activity in the same fields. Private activity must speedily fall behind in competition with the omnipotent state. It also means enormously increased taxation of every conceivable kind in order to feed the insatiable hunger for support of the Goliath that is the Socialist state. Here, too, private action in the field of youth work and other community services are bound to suffer since the charity dollar, freely given, must lose out to the tax dollar, legally required, and, if need be, taken by force.

I submit that there are certain tendencies in the present social and political thinking of the community which may yet lead to very serious embarrassment for independent institutions and programs, religious or other. I further submit that such difficulties will be difficulties for the American way of life and will constitute a problem for the preservation not merely of free institutions, but of freedom of every kind. Ideas are contagious and they jump from areas of thought and action where they are accepted to other areas where they are least of all expected. If private education, private hospitals, private social service action of every kind suffers from the impossible competition and the mounting costs of state programs, and if socialism, however refined, dominates future planning in these fields, then I and other religious leaders have many and critical problems to face. So have you—and so have all other Americans interested in organization like the boys' clubs. Indeed, there are already signs that many people, even many good people, feel that your works and some of mine should be coordinated or integrated or otherwise brought into line with other like or even unlike projects within a more centralized interlocking community set-up.

I am told, for example, that a recent local survey of recreation services has ventured the suggestion that both tax-supported and voluntary youth programs should be brought together in cooperative youth centers, preferably in tax-supported facilities and operating under leadership described as democratic. The recommendation seems further to say that this coordination should be under the leadership of a specific organization which is definitely sectarian and which is for many reasons nonrepresentative. I think the leaders of the boys' clubs would be well advised to study this survey very carefully and to be on their guard against the threat to their independence of action and their special service which is contained in some of its proposals. Unless you are very vigilant about the keys of your own house these days you are going to wake up some morning and discover that some very strange tenants have moved in to use your silver, open your mail, and bring up your children for you.

It is my understanding that some of your leaders are already familiar with the threat of semi-Socialist concepts to the boys' club work and to like so-called "voluntary" as opposed to tax-supported programs. The word "voluntary," by the way, means "free." It is always better, in the interests of clear thinking on these matters, to use short, familiar Anglo-Saxon words instead of technical jargon. When some one tells you that "tax-supported agencies" are going to "coordinate" the programs of "voluntary agencies" he is simply using technical jargon to tell you that "state agencies," subject to political control, are about to put "free agencies," subject to your control, out of business. You may word it any way you choose, but that is what it means.

I hope you will be alert to the dangers of proposals which would in any way threaten the nonpartisan, nonsectarian nature of boys' club work in our community. It should be clearly understood that any integration of private youth work or tax-supported youth work under the general supervision of the YMCA or the YWCA, such as has been proposed in a recent survey, would be profoundly resented by whole areas of this community. Such recommendations are unrealistic and impracticable.

I think we may go further and say that such proposals, to the extent that they strengthen the hand of tax-supported agencies at the expense of free agencies have within them the seeds of that "integration," another word for which might be "collectivism," which is the heart of state socialism and the complete contradiction of American ways.

I like to think that if the independence of the institutions of my people were threatened, your spokesmen would rally in our behalf. In any case, I am very glad to speak up in behalf of your program because I believe that it deserves the grateful respect of the Boston community which it has well served. This is not the first occasion I have taken to declare my own admiration for the present works of the boys' clubs of Boston. Mr. Church and his associates in the work of the boys' clubs are serving the present and future interests of the community on the level where service is most needed and most effective.

All are agreed that our young people are the most important people in the world. With due regard for the rights and privileges of the aged, the mature and the others of older generations, it remains true that first place should be given in the plans of the community and in the prayers of the church to those who are just starting out—to the young people of the flock. The reason, I repeat, is that our young people are the most important assets we have in the world. The state thinks so when it is looking for citizens to defend it. The community thinks so when it is looking for fresh blood to revitalize it. The church thinks so all the time. So do I. So do you.

Here in America youth traditionally have had a privileged place. The youth of America are the envy of the world. Whatever their racial or religious background, our young people are in a more favorable position than their cousins in any part of the Old World. They are in this favorable position not because of any special merits of their own, not because of something that America has traditionally done for them. America has been a blessed land for the young; with all our mistakes, with all our irregularities, with all our unsolved social problems—I still think it safe to say that no nation on earth has ever given its young people so prominent a place in its social scheme of things and such abundant opportunities to enjoy that place.

And America has been richly rewarded for this wise and generous attitude toward the young. Other nations view their coming generations with fear and misgiving because of the disillusionments and the difficulties which woefully mistaken national policies have created for the young. They fear the forms which resentment may take among young people who are without patriotic faith, material hopes, or social charity because of the utter defeat of political and military schemes which were concocted by an older generation without reference to the interests of the young people who would come after them in their respective nations.

But here in America our young people are the joyful hope of our future. The hope of America is only temporarily in diplomats and in generals. Its permanent plans for security are in the young. That is why the boys' clubs movement here in Boston is doing such an important job for America and doing it in such a typically American way. That is why I am anxious to help as best I can the work of the boys' clubs and why I hope that others will be willing to do the same.

The boys' clubs are a principal channel for bringing to our youngsters the typical advantages that America has to offer. They have none of the regimentation which, as I said, has been the death of youth's dreams in the Old World. They operate in an atmosphere of friendliness and a decent regard for the dignity and the rights of the other fellow. They represent democracy at its best, working through youth and in behalf of youth.

We hear much talk in our day about making democracy a force in the world community. We all have a responsibility as well as an interest in this great problem. But when all is said and done, there is very little the average individual can do on a world scale to promote democracy or anything else. The local community is the normal sphere of influence. And we best serve world interest by promoting community interest close to home.

That is another powerful argument for interest in the boys' clubs. They do right here at home the job for democracy that people tell us must be done in the international order. They teach our young people to work, play, and live together, united on a community basis despite whatever legitimate difficulties may divide them.

We cannot aspire in our lifetime to teach the whole world how to live as one. We cannot even hope to unite all at once the entire United States. But in a city like Boston, where many nationalities, races, and

traditions live, work, and play side by side, we have a wonderful opportunity to demonstrate to all the world the power of American idealism to forge a single, healthy, united community out of groups which would otherwise be in constant conflict. The boys' clubs are trying to do that.

I ask God's blessing on all who help.

Praises Work of House Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. DAVIS of Georgia. Mr. Speaker, every day the importance of the work of the House Committee on Un-American Activities is becoming more apparent. This committee, which has been attacked and smeared by Communists, Communist sympathizers, radicals, and fellow-travelers from one end of the country to the other, has nevertheless proceeded with its task of acquainting the people of America with the dangers of subversive activities in our country, in our institutions, and in our Government.

Notwithstanding the smear efforts of those whom the House Committee on Un-American Activities have brought into the light of day, and notwithstanding the smear activities of the friends and sympathizers of those exposed, the real people of America—the sound-thinking, patriotic people of America—know the good work which the Committee on Un-American Activities has done, and are sincerely interested in preserving this committee. I am in receipt of a letter from Mrs. T. Earle Stribling, of Atlanta, Ga., who is State second vice regent, and national defense chairman of the Daughters of American Revolution, dated January 10, 1949, which I have asked and received permission to insert in the CONGRESSIONAL RECORD.

Under leave previously granted, I insert this letter herewith:

ATLANTA, GA., *January 10, 1949.*

Hon. JAMES C. DAVIS,
House Office Bulding,
Washington, D. C.

DEAR JUDGE DAVIS: I do not feel that it is necessary to urge you to work for the continuance of the House Un-American Activities Committee. You have always supported such measures for the protection and assurance of our American way of life.

Our national society has indicated its approval of the work of this committee and as State chairman of national defense, I have brought to the attention of every DAR in Georgia the part they can play as individuals in protecting our system of government.

Institutions and governments do not preserve themselves. They can be preserved only by the vigilance of those to whom their guardianship has been committed.

We in Georgia feel confident that you will do all in your power to prevent the critics from dissolving this committee. Your support and encouragement are deeply appreciated.

Sincerely yours,
SUZANNE F. STRIBLING.

Rules Committee Curb

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following article by Mr. Herman A. Lowe, one of our outstanding columnists, which appeared in the Philadelphia Inquirer on January 15, 1949:

PROSPECTS NOT ALL ROSY IN RULES COMMITTEE CURB

(By Herman A. Lowe)

WASHINGTON, January 14.—There was dancing in the streets and the joyous beating of cymbals in the land, the other day, because the House of Representatives had terminated the power of its Rules Committee to pigeonhole legislation wanted by the people.

The hosannas were heard even on Capitol Hill among liberal legislators who regarded the classic smacking down of the autocratic Rules Committee as a long step toward injecting more democracy in the legislative processes. Now, if the Rules Committee should balk at giving the green light to a bill, the chairman of the appropriate legislative committee may go to the floor after 21 legislative days and request the House itself to bring the measure up for action.

All this is to the good, but here and there heads are shaking and comments are whispered that maybe the boys were a little hasty in delivering the solar plexus blow. For the first time there are candid admissions that the Rules Committee might not be pure, stygian evil, and that the change in the House rules might bring its quota of headaches.

For example:

In his budget message of last Monday, President Truman anticipated that, despite the enormous Federal revenue, the Nation would run $600,000,000 in the red for the current fiscal year (terminating June 30, 1949).

But just think how much in debt we should be operating this year if it had not been for the Rules Committee. It is estimated that this cold-blooded committee tucked away in cold storage bills which might have cost the taxpayers in the neighborhood of another $25,000,000,000. Yes, billions, not millions.

Consider the Taft-Ellender-Wagner low cost housing bill which, by the way, is back again this session. The purpose of this bill is indeed worthy, but it has been estimated that its cost for the first year or two would run anywhere from $9,000,000,000 to $13,500,000,000, depending upon whose estimate you listen to.

Then there was the Veterans Homestead Act, to provide funds for veterans to buy homes, farms, etc. The cost of this bill in grants and loans is a little vague, but the best available estimates set the tab in the vicinity of $8,750,000,000.

There were such small items as the one for $80,000,000 to subsidize production of critical and semicritical materials. There were even items about whose cost no one had the slightest idea.

One man's research last week brought out that on 18 bills alone shelved by the Rules Committee of the Eightieth Congress, the cost would have been between $22,000,000,000 and $25,000,000,000 if they had become law.

Often House legislative committees have approved bills which would cost the people a lot of money but which make members of those committees big shots among a lot of voters back home. The committees have voted so generously, knowing full well that the Rules Committee would kill the bills.

One of the interesting places to watch this session will be the House Committee on Veterans' Affairs, whose chairman is JOHN E. RANKIN, of Mississippi. The powerful veterans' lobby concentrates upon this committee, and the committee generally obliges by reporting out the desired bills. Many of these measures have died in the Rules Committee which has borne the full onus for its action.

RANKIN, a leading Dixiecrat, has no use for the administration and is roaring mad at being stripped of his place on the Un-American Activities Committee. The guessing here is that he will push some expensive, elaborate veterans' legislation through his committee and toss it into the lap of the Rules Committee. If the Rules Committee should refuse to O. K. it, RANKIN can take to the floor after 21 legislative days and call upon the House to act anyway.

Few legislators have the desire or the courage to vote against benefits for veterans, so it is figured RANKIN will get his bills through.

Well, you may say, there is always the Senate. The Senate will block any extravagant spending.

In case you don't know it, many Members of the House say sneeringly that "they call the Senate the upper chamber because they always up appropriations there."

The Rules Committee in the past has been an adjunct of the Speaker's office, killing legislation he did not want and which Members of the House did not wish to stand up and be counted on.

It looks as though those days are over. And it looks as though it will cost money.

Forked Snag in Japan

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial that appeared in the Christian Science Monitor of January 26, 1949, as follows:

FORKED SNAG IN JAPAN

Americans who have looked on postwar Japan as their pet democratic preserve have had a rude lesson. The resounding victory of the extreme right wing in this week's election, though not unexpected, is not reassuring. The surprise gain of the Communists from 4 to 35 seats in the Diet is even more shocking to sensibilities conditioned to accept a reactionary but not a revolutionary Japan.

It is the moderate middle which has taken the real beating—and, with it, American prestige. For, by and large, the occupation found the well-intentioned though inexperienced party of the center the most useful instrument for projected reforms. Toyohiko Kagawa, the famous Japanese Christian leader, has listed the earlier emergence of the middle-road Social Democratic Party, as one of the greatest achievements of the postwar democratic revolution. Now the party is tainted with a too willing collaboration with the Americans, and the public wants none of it.

The twin aims of American policy in Japan have been social reform and economic

revival, with the emphasis increasingly on the latter. The reforms have not been sufficient nor deep enough to satisfy the acutely dissatisfied, who are now apparently more impressed by Communist promises. The revival has put power back into the hands of the prewar conservatives, who know how to run business—and elections—in the tried and tough Japanese fashion.

If Americans learn from this that they can't buy democracy cheap in the Far East, they may be willing to listen more carefully to what their Pacific allies have to say about Japan.

Reds Delay Crisis in West in Order To Concentrate on Orient in Plan of World Conquest

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include an extraordinarily illuminating and alarming article on the inside actions and plans of the Kremlin and its world operations. It is one of a series appearing in the Toronto Evening Telegram, written by Lt. Col. Grigori A. Tokaev, until recently Soviet jet and air research expert who carried out secret tasks for the Politburo and was privy to the innermost counsels of the Kremlin. Disillusioned and dismayed, he fled his country to find freedom in Britain. He is rendering an invaluable service to the United States of America and to humanity by telling us the truth about Communist machinations around the world. They are concentrated in China just now—as a step toward the next victims. When will we begin to heed the warnings?

REDS DELAY CRISIS IN WEST IN ORDER TO CONCENTRATE ON ORIENT IN PLAN OF WORLD CONQUEST

(By Lt. Col. Grigori A. Tokaev)

The most important fact about the U. S. S. R. that you of the west must get into your heads is that Stalin means business. By business I mean world domination by any means, including war. There would in all probability already have been war, or at least a red-rod incident, over Berlin, but for three facts:

1. American monopoly of the atomic bomb.
2. Anglo-American air superiority.
3. Widespread discontent inside the USSR, not only in the armed forces and the population, but also in the ruling circles.

The last fact was perhaps the most important of all, and needs a little explanation. The Politburo made a number of promises to the population during the war, but immediately the urgent need for popular backing was past, it became evident that these promises would not be kept.

QUIETED BY LIQUIDATION

The immediate reaction of the Politburo to the widespread discontent which became manifest was a large-scale purge in all the spheres of Soviet life, and in particular a thorough purge of the intelligentsia under the personal supervision of the late Zhadanov, one of the most hated of Soviet leaders.

The ultimate aim of Soviet policy is the creation, by armed conflict if necessary, of a universal Soviet Union. The argument is stated repeatedly in primer-clear language in all the principal works of bolshevism—and no more forcefully than by Stalin himself. Stalin said: "The theory of the dictatorship of the proletariat is not a specifically Russian theory but a theory compulsory for all countries." The temptation in the west is to put down bolshevism's fantastic ambitions as sheer claptrap, but the Soviet Union is rearming as fast as the Politburo can drive the exhausted, disenchanted, and unhappy people in its power.

TEMPO IS FEVERISH

Preparations for the struggle proceed at a feverish tempo in every branch of Soviet life.

No single event since the revolution itself—not even the sudden German onslaught in 1939—ever caused more consternation among the members of the Politburo than the dropping of the first atom bomb on Hiroshima. The realization that the most powerful of the capitalist countries had come into possession of a weapon which at a stroke had outmoded all the war machines of Communist politics was a stunning blow.

CHANGE IN STRATEGY

Since 1945, by Stalin's specific orders, Soviet strategy started to be completely overhauled to accord with the potentialities of the so-called American experiment. For 3½ years Soviet science has been striving to solve the atom problem in a practical way. Everything connected with the problem commands super top priority. Great numbers of workmen and the brains of the leading physicists and technologists are concentrated upon this single objective. If all goes as at present, a practical, as distinct from an experimental, atomic bomb will not be in possession of the Soviet Union before 1951–53.

DATES STILL HELD

Those dates were still the basic planning dates in Soviet policy when I left Soviet service some months ago. Since a war with the United States on anything like equal terms was unthinkable without the atomic bomb, the Politburo was compelled to take a number of strategic and tactical steps in order to avoid a direct hot war. The outstanding example of one of these steps is the war now being waged in southeast Asia. I do not say that war will necessarily come in 3 to 5 years, but I warn you that Stalin will be ready then. Stalin is the same old Stalin. Mr. Roosevelt failed to charm him, and Mr. Churchill to move him. The fantastic burgeoning of western power has temporarily puzzled and frustrated him. But as a Marxist dialectician he will undoubtedly take any chance which may present itself in any future crisis and/or upheavals in the capitalist world provided the atom-bomb problem is solved.

POLITBURO POLICY

The next question is: Where is Soviet policy headed right now? There is no such thing as Soviet foreign policy. There is only a politburo policy. The 13 men who stand at the summit of power inside the Soviet Union conduct its foreign affairs. Looking out from Moscow, Stalin and company visualize the Soviet revolutionary destiny in terms of two immense tasks. Task 1 is Europe generally, beginning with Germany, task 2—Asia, beginning with China. For obvious reasons, Europe was in the beginning, and still remains, task 1.

The collapse of Germany, leaving an apparent vacuum in Europe, presented the Politburo with an incredible opportunity. It concentrated at once on task one, confident that in a matter of a few years, possibly by the end of 1950, it would be master of the European Continent. However, many things went wrong.

DRIVES FAILED

The failure of Communist drives in Italy, France, and Germany; the inherent anti-Communist cast of British labor; the defection of Tita; the fact that western Communists exposed themselves as closely linked with the Kremlin; the return of United States power to Europe in the form of the Marshall plan—all these combined to bring the drive westward to a temporary standstill. These difficulties compelled a reappraisal of strategy. It was conceded by the Politburo that the struggle for Europe would prove much harder than had been assumed, and it would be dangerous to attempt to pursue it to conclusion so long as task two remained unmastered. Therefore the Politburo decided to shift its attention to Asia—with consequences now plain to everybody.

MASTERING CHINA

They have so far failed in Europe, but they are on the verge of mastering China. The Politburo has achieved in China success on a scale that the west has not yet even begun to realize. There is a popular theory that the next world war will start over China. No matter what happens elsewhere, the Politburo is basing its strategy upon the assumption that the war will be decided in Europe. As soon as task two approaches completion—perhaps in the next few months, perhaps in another year—then the Politburo will return, with whetted appetite and confidence, to Europe. Therein lies the true significance of China's collapse. From the Soviet strategic point of view, the fact that Mao Tse-tung has finally all but brought Chiang Kai-shek down after two decades of incessant struggle is only of incidental importance.

REAR IS PROTECTED

The great thing is that the ever vulnerable rear of the Soviet Union is in the process of being secured; China's open door is closing against the west which first pried it ajar. The collapse of China has advanced with a speed which must have surprised even the most optimistic Soviet military experts. Two mistakes have obviously helped to bring on the avalanche. The lackadaisical attitude of the West to the Soviet grip on outer Mongolia, which has since become the main Soviet arsenal in Asia, is the first and most outstanding reason for the present collapse of China. The second mistake was that through General Marshall's efforts to impose a coalition government, the United States, in effect, championed the Chinese Communists as true agrarian liberals and contributed to the undermining of the established government. The attempts of General Marshall to reconcile Chiang Kai-shek with Mao Tse-tung proved that the Americans have not yet clearly understood the basic principles of communism; that is, the fact that never, under any conditions, would Communists accept loyal collaboration with non-Communists.

SOVIET AMAZED

Inside the Soviet Union, Marshall's strange efforts to divide Chiang Kai-shek's power with Mao Tse-tung's Communist regime were followed with incredulous satisfaction. For one intoxicating moment it almost appeared that the distinguished American would actually succeed where even Vanming, a member of the central committee of the Chinese Communist Party, an outstanding Comintern personality and a close friend of Stalin's, had failed. Though Marshall's coalition scheme finally broke upon the rock of Chiang's opposition, his withdrawal from China, accompanied by a virtual cessation of all United States aid to the Chiang Kai-shek government in effect represented a strategic victory for Fao against Chiang. It cleared the way for the current Communist offensive. With Chiang left to his fate, the way was open for a Soviet thrust into Asia at practically no risk. Soviet arms and military might flowed into the vacuum, and Chiang's unsupported armies were brushed aside. It would seem now that another mistake is to be added to the previous ones.

WOULD AID REDS

Mr. Hoffman, of the Economic Cooperation Administration, has been quoted as saying in Shanghai that even in the event of the Communists coming into control of the government, United States economic aid to China would continue. Is it possible that the western diplomats have not yet understood that any kind of compromise with the Communists is a danger to world peace?

There is a myth, fostered with consummate skill and assiduity by Soviet propagandists, that the Chinese Communists, far from owing allegiance to theoretical Marxism or the Cominform, are only simple oriental agrarians hungry for land and democracy.

I have also heard the hope expressed by otherwise intelligent people in the West that Mao Tse-tung, though a self-avowed Communist, is really an agrarian nationalist, who, if pressed hard by the Kremlin, would rebel as Tito has done.

Concerning the Chinese masses enlisted under the Red banner, it can be confidently stated that their views will have no more influence upon Mao's decisions than is the case under other Communist dictatorships.

A TRUE BELIEVER

Mao himself is a dedicated Communist—a true believer. He has never deviated from the party line and was the first of the non-Soviet proconsuls to denounce Tito's heresy.

If his victories continue he will certainly go down in Asiatic history as the Lenin of China.

Chu-teh C-in-C of the Chinese Communist armies is a talented military leader. A highly placed Soviet general described him in the following terms: "He could without any further training be put in command of any Soviet front, and would carry out his duties as well as any Soviet marshal."

Chu-teh is not only a revolutionary Communist but also an officer who went through the "correspondence course" of the Soviet general staff academy.

He is supported by good Soviet staff officers, the greater part of whom are the Chinese nationality.

I saw him for the first time in Moscow in or about 1934, but I know that he visited the USSR quite often, and I also know that he commands unbounded authority among the Soviet military leaders.

WORKS WITH SOVIET

I could name a number of Soviet officers of all ranks who have been working under him for the past 10 to 15 years.

The adroitness with which Chu-teh has maneuvered his armies during the past years suggests a special aptitude for managing mass armies.

He and Mao complement each other. They form a powerful combination, the most dangerous pair now tramping the Asiatic stage, and are the revolutionary barometer in Asia.

But to assume that they have produced these colossal results themselves as many do, is to miss the whole point of the struggle for Asia.

I myself never went to China for the Soviet Government, but I have served with officers who knew the situation well, and I have also studied the question thoroughly.

The Chinese Communist army is some 2,300,000 strong. (The Chinese Communist party has 2,800,000 members.)

The higher staff posts are held by Soviet officers of Chinese, Korean, and Mongolian nationalities. Many of these were recently serving in the Soviet army, went through the Soviet military academies and colleges, or else commanded Soviet military formations in the east.

EASILY OBTAINED

No one can estimate the number of Soviet officers now holding high-ranking commands or staff posts in Chu-teh's and Mao Tse-tung's armies. One thing is certain. There are many more of them than is realized in the west.

One must also remember that there are a great many Chinese, Koreans, and Mongolians in the U. S. S. R.

Finally, one should also bear in mind the existence of the Mongolian People's Republic under Choi Bolsan.

The basis of the higher political personnel in the Chinese Communist Army was made up of graduates from the Communist University of the Workers of the East (KUTV) in Moscow, and also from the Institute of the Peoples of the East in Leningrad, plus various workers' faculties, institutes, and universities in the U. S. S. R.

The largest political training centers are at Vladivostok and Khabarovsk. The political schools of the Northern Shensi are staffed by Chinese, Mongolians, Buryatts, and Koreans, as well as Russians from the U. S. S. R.

PLENTY OF WEAPONS

The Soviet areas of China now possess their own armament factories, most of which were built under Soviet direction. But there are not enough of them for the needs of the Chinese Communist Army.

After the defeat of Japan the Chinese Communists received masses of Japanese arms from the Soviet; in addition they are getting great quantities of arms of Soviet manufacture, but stamped with foreign markings.

These include automatic weapons, artillery, machine guns, grenades, pistols, mortars, etc.

The Chinese Communist Army has a large number of Soviet aircraft, mostly obsolescent. Radio equipment is practically wholly Soviet, except for that captured from Chiang Kai-shek, which is American.

Paper used by Chinese Communists is practically all from the Soviet Union.

An odd fact is that, according to a treaty of June 1945, the Soviet Government agreed to supply Chiang Kai-shek's government with arms. (This agreement was the biggest and stupidest mistake Chiang ever made.) The arms never reached Chiang. Mao Tse-tung's forces intercepted most of them on the way from the Soviet Union to Nanking.

CALLED WAR BOOTY

In this way the Chinese Communists could always claim that arms of Soviet origin in their possession were not actually supplied by the U. S. S. R. but came under the heading of "War booty." They thus saved any diplomatic embarrassment which might have arisen. The hidden source of power of Chinese communism is Outer Mongolia, now the so-called Mongolian People's Republic. This is the Soviet fortress. It maintains a very large, well-equipped national army which in the higher echelons is almost entirely Soviet-officered. Besides this, a purely Soviet formation, comprising all types of arms—air force, artillery, tanks, infantry, etc.—is quartered in Outer Mongolia. Soviet formations are being sent there quite openly for duty as they are sent to any other part of the Soviet Union. There was no demobilization of this force after the war—a significant fact.

CHIANG'S NEEDS

Chiang has been discredited as a military leader, but he still retains some political influence. What Chiang always lacked was a clean-cut, progressive policy and slogans which would rouse the people to his support in a struggle. In order to remedy the present situation, special attention should be paid to what I have just said. Chiang also needs strong military advisers capable of appreciating the present serious situation. But all this will not be sufficient if Chiang does not get immediate support in arms, supplies, and technical equipment. If he falls and China passes under Mao's control, the rest of the Asiatic pot, now simmering, will boil over. The unexpected opportunities for mischief now opening to the Politburo in Asia are almost unlimited. Rehearsals have already taken place in Indochina, Burma, Malaya, and the Netherlands East Indies, and the Politburo has a stern picture of the situation there. The Politburo will now do everything possible and even strive to do the impossible in order to make the western powers disperse their armed forces in all the corners of the world—thus striking a mighty strategical blow. It is vital to the West to understand this. Stalin would then consider task 2 as under control. He could then turn to task 1 (Europe) with relatively free hands. If the West fails to challenge and check him in the East, the inevitable show-down in the West will almost certainly come much more quickly and under conditions increasingly to Stalin's advantage.

The Truman Victory

EXTENSION OF REMARKS

OF

HON. WILLIAM T. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. GRANAHAN. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the following article by Columnist John M. Cummings, which appeared in the Philadelphia Inquirer on January 18, 1949:

HOW DID IT ALL HAPPEN—JUST ASK H. S. T. HIMSELF

(By John M. Cummings)

The proof of the pudding is in the eating; and the proof of a Presidential election is in the inauguration.

It is true, as all citizens are aware, that long ago, as far back, in fact, as the early hours of November 3, the country knew Harry S. Truman had been elected President. It is also true that Mr. Truman's victory came as a surprise to a large segment of our people, Democrats as well as Republicans.

The visible proof of the victory we shall see at noon Thursday when the Man from Missouri takes the oath for a full term in ceremonies at the National Capital.

Behind that victory there must be a reason or a whole series of reasons. Certain it is that in the course of a few weeks Mr. Truman emerged from the shadow of the eight ball to enter the bright light as a triumphant political gladiator.

Senator FRANK J. MYERS knows the reason for the Truman victory. The pundits may argue and the barroom debaters may disagree, but to Senator MYERS the answer is simple: The Truman campaign speeches.

To this desk, from the Public Affairs Press in Washington and through the courtesy of the Democratic city committee, has come a compilation of the Truman speeches and his message to Congress. In this volume you find everything from the warning against ingratitude on the part of labor and the farmers, which was uttered in his acceptance speech, to the final sentence of the Democratic platform which the candidate accepted to the last nail.

The foreword to the book is by Senator MYERS. Therein he concludes the answer to "How did he do it?" is to be found in the speeches in which was set forth the Truman program. In fact, that's the title of the book, "The Truman Program."

Senator MYERS was a good choice to write the foreword. He was one of the few Democratic faithful who pinned their hopes on Mr. Truman long before the convention. While the Hagues and the Roosevelts and

the O'Dwyers and the Arveys and the Phil Murrays were hoping against hope that a man on a white horse would appear, the little group that included MYERS stood steadfastly by the President.

Maybe some felt in their bones they were enlisted in a lost cause. No matter. They'd go down fighting, knowing that in honorable combat there is glory even for the loser.

"What the experts failed to recognize was the fact, now clear, that the American people have reached a new level of political maturity," says Senator MYERS in his foreword. "They demonstrated in the 1948 election that they were determined to keep liberal progressive government in America in the Roosevelt New Deal tradition.

"Mr. Truman convinced them in his campaign and in his record that he was indeed the true inheritor of the Roosevelt mantle of liberalism. And that is why, although lacking the glamor of Roosevelt, plain-spoken Harry Truman was elected."

Certain members of the Roosevelt clan might take objection to some of the Senator's conclusions. And the labor leaders may feel let down because the Senator did not go out of his way to give them credit for the victory.

On our own part we are disposed to agree with the Senator that Harry did it all by his little self. The book, of course, was compiled long before the recent state of the Nation speech. Naturally there is no comment in the foreword on the Truman suggestion that the Government might find it advisable to go into the steel business. This is getting to be quite a topic and already it has generated within the administration enough heat to operate a blast furnace.

Senator MYERS is the majority whip. He is second in command on the Senate floor. He is close to the administration. It is interesting, therefore, to note what he expects the administration to accomplish.

"The Truman administration," he says, "will restore the reciprocal trade agreements to the full vigor of the Cordell Hull dream; it will launch a colossal home-building plan which will renew and expand the slum-clearance and low-rent program initiated by Franklin D. Roosevelt; it will remove the specter of ruin in the midst of abundant harvests for agriculture; it will curb inflation and bring sanity back to the American economy; it will translate prosperity into terms of decent living standards for all of our people; it will replace the repressive Taft-Hartley Act with legislation in the spirit of the Wagner Act; it will support the Marshall plan out of conviction rather than mere political expediency; and it will continue patient and determined efforts to make the United Nations effective in preventing wars and in eliminating the frictions which lead to war. * * *

"Moreover, the President's courageous civil-rights program, fundamentally a geographic rather than a political issue, will become the law of the land if Republican Members in Congress, particularly in the Senate, are sincere in their party pledges of full support for the goal."

Well, there it is. Paste it in your hat for future reference.

Resolutions of Georgia Senate

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. DAVIS of Georgia. Mr. Speaker, Hon. George D. Stewart, secretary of the Senate of the State of Georgia has forwarded to me two resolutions adopted by that body. Under leave previously granted, I insert these resolutions herewith:

Senate Resolution 16

Whereas there has been pending in the Congress of the United States a threat to invade the sovereign rights of the several States under the guise of a so-called civil-rights program; and

Whereas were such a program adopted it would tend to break down every traditional law and custom of the State and tend to destroy the constitutional rights preserved for the States; and

Whereas for many months a courageous and successful opposition to these measures has been tirelessly and relentlessly waged by southern Congressmen and Senators under the leadership of our own United States Senator RICHARD B. RUSSELL. In this fight he has been greatly aided to the fullest extent by our United States Senator WALTER F. GEORGE, and by every member of the Georgia congressional delegation in the National Congress; and

Whereas we believe that our Senators and Congressmen have the wholehearted endorsement and backing of the great majority of the people of this State in this great fight against such overwhelming odds: Therefore be it

Resolved by the Senate of the State of Georgia (the house of representatives concurring), That it be the sense of the General Assembly of the State of Georgia that United States Senator RICHARD B. RUSSELL, United States Senator WALTER F. GEORGE, and our entire congressional delegation be extended the thanks and gratitude of the people of the State of Georgia through their duly elected representatives in the general assembly for the courageous spirit that they have exemplified in presenting our fight against this program; be it further

Resolved, That through this resolution we commend them and encourage them to carry on this fight in the name of the people of the State of Georgia and in the name of the sovereign rights of our State, assuring them of our constant and wholehearted confidence in them and adherence to this cause; be it further

Resolved, That upon the adoption of this resolution a copy of the same, under the signatures of the officers of both houses, be immediately transmitted to both United States Senators and to each member of our congressional delegation.

Read and adopted January 18, 1949.

S. MARVIN GRIFFIN,
President of Senate.
GEORGE D. STEWART,
Secretary of Senate.
FRED HAND,
Speaker of House of Representatives.
JOE BOONE,
Clerk of the House of Representatives.

Senate Resolution 19

Whereas Georgia is predominantly an agricultural State and two-thirds of our population are on the farm, dependent directly or indirectly upon success of farming as their livelihood; and

Whereas the products produced by our farmers must be sold at a profit in order that our farmers earn their livelihood, which in turn means the success of all other business and Government support in this State that is dependent upon our agriculture; and

Whereas Hon. Tom Linder, Commissioner of Agriculture of the State of Georgia, is the only elected official in this State charged with the duty and authority to speak for, represent, and disseminate information on behalf of our farmers, to look after their interest, and to aid them in every way in securing such prices for their products that will assure them of a living profit; and

Whereas Hon. Tom Linder has made a good commissioner of agriculture and has not shirked the duty imposed upon him to speak and work for higher prices for the products of the farmer and that in carrying out this duty imposed upon him by the laws of the State of Georgia he has been persecuted; and

Whereas realizing the need of representation to speak for our farmers in Georgia and in Washington: Be it

Resolved, That a copy of this resolution be transmitted by the secretary of the senate to each Senator and Congressman from the State of Georgia requesting that their support is hereby requested to back up our commissioner of agriculture in his fight for higher prices for the farmers.

Read and adopted January 20, 1949.

S. MARVIN GRIFFIN,
President of the Senate.
GEORGE D. STEWART,
Secretary of the Senate.

What's Ahead for the Merchant Marine

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. HAND: Mr. Speaker, I am glad to have the privilege of including in the CONGRESSIONAL RECORD an address by Capt. Willis W. Bradley before the Baltimore Rotary Club, entitled "What's Ahead for the Merchant Marine." Captain Bradley's distinguished service in the American Navy is well known. His life-long familiarity with maritime problems, emphasized by his service in this House on the Merchant Marine Committee, gives weight to whatever he chooses to say on the subject of maritime affairs.

The address follows:

Prediction of what's ahead for the merchant marine may be somewhat presumptuous, yet I shall undertake it in some small degree in the feeling that a fair knowledge of the past, plus recent participation in legislative matters pertaining to the merchant marine, will make my observation worth while.

Hindsight in merchant-marine problems is valuable in that it high lights certain seeming facts which must be kept in mind if we are to keep our ships sailing the seas. Let me state some of my own conclusions.

The American people are not a maritime nation in the same sense as the Norwegian, the British, the Portuguese, the Dutch, and other European and Asiatic races. Americans do not need to suffer the hardships of the sea to earn a living.

Americans do not like discipline, whereas foreigners are accustomed to a large degree of it. Reasonable discipline is one of the fundamentals of any successful ship. Without good discipline, neither passengers, nor crew, nor the ship itself, can be secure.

Americans are not ship-minded—that is, they have not been vividly impressed with the necessity of American-flag shipping. We have a vast country; only a few know they are vitally concerned with the movement of goods in American bottoms; the rest realize vaguely that the world's cargoes do move and that satisfies them.

Almost everything in America is protected from too much foreign competition—protected by tariffs, by quotas, by support prices,

by subsidies. American-flag ships in foreign trade must meet the passenger and freight rates offered by cheap-labor foreign competitors. This simply can't be done except in a few isolated instances without Government aid while paying officers and crew on a scale demanded by the American standard of living.

The American Government as a whole is not merchant-marine minded. Some agencies strive mightily to build up the merchant fleet. Others seem to be bent on its destruction. This is well illustrated by current efforts of the ECA to circumvent the 50-percent carrying provision of the European Recovery Act passed by the Eightieth Congress.

These, then, are some of the conclusions logically reached after reviewing the history of our merchant marine, yet we know that we must have an adequate fleet of merchant vessels available immediately in the event of war or national emergency. The problem is: How are we to get this fleet and how are we to keep it in being under the American flag?

I have come to the conclusion that we must revise our conception of the merchant marine as being concerned primarily with the carrying of commercial cargoes. We must place primary emphasis on the merchant marine as an integral part of the national defense set-up. I do not indicate that the merchant marine should become an adjunct of the Department of Defense or that the Government should take over and operate the merchant fleet, but rather that the whole should be so enmeshed with other components of the national security establishment that the ships needed at the outbreak of hostilities, for trade, for overseas military transport, and for naval auxiliaries, will be built in accordance with specifications suitable for the purpose for which they are intended in event of mobilization, and that they will be kept in active operation so as to be ready for service. This would cost the Treasury some money but it would seem to be money well spent—money which would provide a substantial return to the nation in employment, both ashore and afloat, while maintaining a powerful factor in the security of the state.

The Merchant Marine Act of 1936, now the law of the land, was framed with something of this conception in mind. It is a good law but needs some modernization to include consideration of happenings of the past decade. It should be amended so as to bring some additional phases of the domestic water-borne trade within its legislative provisions, for these segments of the industry—reasonably alive when the law was enacted—are just about extinct. The mere fact that they have died within the lifespan of the Act of 1936, indicates that they cannot operate unaided in this current industrial era.

Now accepting the premise that the merchant fleet must be tied to the national defense if it is to continue in sufficient strength and readiness to safeguard the nation, it becomes pertinent to ask—How many merchant ships and what types of such ships does the United States need? I shall not attempt to answer that question for I do not know the answer. Rather, I shall state that the answers should be obtained through a study of the requirements of merchant vessels for the Department of Defense, the capabilities of vessel types, the practicability of commercial employment in times of peace, the capacity of building yards to construct new ships rapidly, and the repair and conversion facilities available to the industry. Such a study should be more or less continuous in order that marked changes in world conditions or in naval architecture will be kept in the foreground. I have no doubt but that the Department of Defense, assisted by the Maritime Commission and by industry representatives, is now doing just about what is here suggested.

The minimum merchant ship tonnage for immediate national defense requirements is around twelve millions dead weight. This includes both tanker and dry-cargo categories.

With our ever-expanding tanker fleet (largely owned by the petroleum industry) the problem of sufficient tonnage in that category is relatively minor. Just now, the Government's main problem in tankers is to see that new construction embodies national defense features such as high speed, long-cruising radius, additional structural strength for gun-mount foundations, etc. This is being accomplished under current laws.

When we consider passenger and dry-cargo ships we are in a field where it is recognized generally that those in foreign trade must have Government aid both for construction and operation. Our laws now provide for such aid on a rather restricted basis. However, the domestic services which do not enjoy aid for either construction or operation have, in the past, been a most valuable source of ships in emergency. They have been the reservoirs from which the whole number of ships engaged therein has been available in a matter of only a few days, without the probability of loss through enemy action or of internment in foreign ports. These reservoirs are now practically empty and they are not being replenished due to high construction costs, difficulties with labor, high wages, and other factors with which you gentlemen are very familiar.

Yet it seems essential to the national security that a reasonable number of merchant vessels be available in home waters at all times. I believe that conditions which will permit private industry to build and operate such vessels must be provided, or that the Government must soon step in and build the minimum required for its safety. I know that certain interests oppose any governmental aid to ships not engaged in the offshore trade, and I say candidly that I believe they are being short-sighted even for their own best prospects. Rather than oppose any help for domestic shipping, these interests should give intelligent consideration to what is necessary for minimum national security requirements and should then make efforts to keep that minimum in the hands of private operators. A course of blind opposition is likely to lead to Government ownership and operation.

The act of 1936 provides for both a construction subsidy and an operating subsidy, under certain circumstances, for vessels in the foreign trade. Let me show the justification for these subsidies.

First, consider the construction picture. The law provides that a construction-differential subsidy may be granted to offset higher cost of construction in American shipyards as compared with foreign yards. It is not easy to get accurate figures on foreign construction costs, but I give you figures, in round numbers, which I have just obtained from the Chairman of the Maritime Commission and which cover recent investigations made in connection with contracts for building two American export passenger-cargo ships for the North Atlantic-Mediterranean service, and three American President passenger-cargo ships for the round-the-world trade.

The low bid on the American Export ships was $23,116,000 each, conditional on being awarded the contract for building both ships. The Commission estimated that equivalent construction abroad would cost 55 percent of the low American bid, that is, that the cost per ship abroad would be $12,713,800. Thus the cost for construction in America exceeds that abroad by $10,402,200 for each ship or $20,804,400 for the two vessels.

The low bid on the American President ships, smaller and slower than those for the American Export, was $10,671,000 each. The Commission's estimate for equivalent construction abroad was 55.95 percent of the American bid, or $5,970,424 for each vessel. The cost, then to build these three ships in America will be $14,101,726 more than if built in a foreign yard.

I think these figures should demolish thoroughly any argument that construction subsidies are not justified. Certainly an American operator could not stay in free-for-all world trade with a capital investment for ship costs some 45 percent greater than his competitors. Fortunately the Maritime Commission has recognized this fact and is meeting the issue fairly and squarely.

Now let's glance at the operating end of our foreign trade. Comparison of American and foreign costs is difficult because foreign costs vary widely. They have one outstanding thing in common; that is, they are all far below our own. Also, one cannot say that present-day comparisons will be good next year. The fact is they are not likely to be good then, for the position of the foreigners should improve in the near future as more stores and materials become available in their own ports.

The following comparison was furnished to me by the President of the National Federation of American Shipping. It is accurate within reasonable limits. Considering American and French Liberty type vessels in the North Atlantic coal trade, between United States ports and France, on a 50-day turnaround, we have total costs for the American $95,571, for the Frenchmen $63,675. This means $31,896 more for the American every 50 days. No American operator could stand such competition without Government aid. For the voyage mentioned, American wages are $24,201, as against French $8,253. It may be simpler to note that French wages were only 34.1 percent of American for the same service.

Wages of other foreigners vary somewhat. The best paid among seagoing foreigners appear to be the Greeks, with 43.3 percent of the American scale—the lowest in European brackets, the Italians with 22.3 percent.

Right here seems an excellent place for me to give my views on the pay of shipboard labor—both licensed and unlicensed. I believe in good pay for seagoing personnel. I believe they should receive pay commensurate with that paid for the same grade of labor ashore. I cannot understand why some should expect Americans to go to sea for little pay just because our foreign commerce is in direct competition with ships having low wage scales. If the ships must be operated by Americans (and I, for one, am convinced that the national security demands they be so operated), then Americans going to sea should be treated on the basis of equality with those in industry ashore, and the Federal Government should make up the differential in wages, charging it off to the national defense.

I have stated that the Merchant Marine Act of 1936 is a good law but that it needs some modernization. In general, the major cause of the postwar setback of the American merchant marine has been lack of implementation of the act of 1936 through failure to supply the Maritime Commission with sufficient funds, and through certain restrictive administrative regulations imposed on the Commission by superior authority. You who are familiar with present legislative processes understand that the President controls governmental affairs largely through his Bureau of the Budget. Funds required by the Maritime Commission are provided by the Congress, but, in such matters, the Congress does not usually go beyond the recommendations of the Bureau of the Budget, and the budget is a creature of the President. It is my hope that the President will ask sufficient funds to implement the present law to its fullest extent, and that restriction on the Commission's freedom of action will be removed.

I mentioned previously that some agencies of the Government seem bent on the destruction of the merchant marine. I do not want to leave you with the impression that these agencies do anything deliberately to sabotage American shipping, but rather with the thought that in any tremendous set-up such as ours there are a thousand and one ideas on almost every subject, and that personnel vitally interested in one phase of government seldom gives sufficient consideration to the possible repercussions of their acts on other phases.

Let me give you some examples of how this works insofar as the merchant marine is concerned.

Time after time, during the Eightieth Congress, I remarked on the attitude of the State Department in connection with the merchant marine. It seemed to me that officials of the State Department with whom I came in contact always considered the foreigner more deserving than the American—that they were more interested in restoring foreign fleets than in keeping American ships on the high seas. In fact, I came to the conclusion that our own State Department is one of our greatest obstacles in the way of building and maintaining a strong American merchant marine. I think very definite evidence of this came in the proposed European recovery plan legislation wherein the State Department proposed the gift of an additional 200 ships to foreigners and the bareboat chartering of 300 more to these same foreigners. You gentlemen who follow shipping will recall the congressional battle which eliminated these provisions and thus saved our merchant fleet from a near mortal blow. I do not believe that individuals in the State Department are in themselves enemies of American shipping. I think they are just so wrapped up in their own concepts of what seems best to advance their own particular objectives that they brush other things aside—and the merchant marine is always one of those other things.

Now at the same time the Congress struck the ship-transfer provisions from ERP legislation, I had the pleasure of offering an amendment in the House to require 50 percent of the goods bought in the United States with ERP money be shipped abroad in American vessels. This amendment, which had been previously accepted by the Senate, was approved by the House and written into law. It seems entirely fair to me to give our own ships and our own seamen a 50-percent break in this export traffic. After all, we are paying for the whole program; workers ashore are getting the benefit of high wages; the factory owner is receiving substantial orders; railroads and trucks are hauling the goods to the seaboard and receiving good rates for their services. Why then should Americans who own ships and Americans who sail ships be pushed completely out into the cold just to give more benefits to foreigners? But just recently, we were treated to the interesting ECA argument that the Congress didn't realize what it was doing when it passed this amendment. Therefore, ECA, taking advantage of a legal opinion based on a proviso in the law, determined that the amendment should not be enforced after January 1. Fortunately, however, a sufficient hubbub arose so as to cause ECA to postpone this action until February 1 to give the new Congress an opportunity to express itself.

Then we have the Panama Canal tolls picture. Costs of Canal operation have gone up tremendously—largely because of improved working conditions, expansion of social services, etc. So in 1948 the Department of the Army asked that tolls be increased to the maximum allowed of $1 per ton, regardless of the fact that commercial traffic is more than paying its way. The President issued a proclamation making this increase effective early in 1949. Protests were sufficiently effective to get the date postponed for 6 months so that Congress can look into the matter. Tolls should not be increased as the cost of the Canal should have been written off the books years ago as a national-security investment. Commercial shipping should not be forced to pay for what was basically a means of getting warships from one ocean to the other.

And right here I want to invite your attention to current efforts to get the Congress to authorize a sea-level canal at Panama. I believe the ultimate cost of such a project, with defenses, would be in the neighborhood of $5,000,000,000. If it should happen, shipping will likely find itself compelled to pay sharply increased tolls to offset a part of this great expenditure.

I am regarded as an arch enemy of the sea-level canal project. That is wrong. I am not an enemy of the sea-level canal; I am only an arch enemy of spending all these billions of the people's money unless the sea-level canal can be shown to be absolutely essential to the national safety. This has not yet been shown.

But regardless of what action may be taken by the Eighty-first Congress, I think these incidents bring out clearly the point I wish to make, which is, that Government agencies seem quite willing to sacrifice American shipping when they believe they can advance the interests of their own particular activities thereby.

One frequent criticism of the shipping industry is that methods of handling cargo are still the same as in the days of our grandfathers—that stevedores, whips, and winches still prevail, whereas, other industries have made revolutionary changes in ancient practices and have thus cut costs materially. It is not a simple task to work out any method better than the conventionalized boom hoist, except in specialized traffic. The best of talent has struggled with this problem for years and has come forth with self-loaders and unloaders for bulk cargoes such as coal, iron ore, and grain; with conveyors for bananas, boxed goods, and parcels; with sea trains for transporting loaded railroad cars from port to port. Now the truck and trailer age has given birth to another development—the handling of loaded trailers by fast ships operating between terminals several hundred miles apart. This development has great promise and should receive enthusiastic support from shippers, truckers, and the users of our main highways, for it proposes to take hundreds of heavy trucks and trailers off the highways and deliver them at some distant ports for less than operating expenses over the road. It is expected that the first real test of this system will be made on the California coast between the great metropolitan centers of Los Angeles-Long Beach and the San Francisco Bay cities. If successful, this service might well be the first stone in rebuilding in part at least, the coastwise commerce of the United States.

Now in closing, let me give you a few predictions of what I believe is ahead for the American merchant marine.

By 1952 profitable operation in freely competitive foreign-trade areas will not be practicable except for subsidized vessels, those serving specific industries (such as United Fruit or Standard Oil), or those sailing to the account of subsidized operators in excess of authorized voyages.

The number of subsidized ships under the American flag will be increased materially.

The tie-in between the Navy Department and the Maritime Commission will be strengthened considerably so military influence on the merchant marine, while not marked on the surface, will be an important factor in both design and operation.

An operating fleet will be maintained approaching as near as practicable the immediate requirements of the Navy Department in event of emergency. If this fleet can't be built and operated by private industry, with reasonable Government aid, then it will be built and operated by the Federal Government itself, even though such a move would be a distinct step on the road toward nationalization. In this connection I invite your attention to proposed legislation just announced to establish Government owned and operated service between our northwestern States and Alaska. We have been struggling for over 3 years to establish satisfactory steamship service, privately owned, between Seattle and Alaskan ports. We have not been successful.

The domestic steamship services must be revived for these are the best sources from which to obtain ships immediately in event of national emergency.

Specialization in ships—novel methods of cargo handling such as sea-train and trailer-carriers—will be pushed to reduce Government costs in the maintenance of an adequate merchant fleet.

Minor forms of Government aid, such as reduced interest rates, accelerated depreciation, etc., will be extended to domestic shipping.

The American merchant marine, our shipbuilding yards and our repair establishments, are not going to fold up—but neither are they going to enjoy wartime activity or find themselves in a position to pay excess profits taxes.

The American merchant marine and its allied industries must achieve and maintain reasonably harmonious relations among their various components, and they must exercise American ingenuity in solving the problems which confront them.

Yesterday the American merchant marine was on all the maritime battle fronts of the world. Today, it is a major factor in our industrial life and in the national security. Tomorrow, it must be ready once more to defend the principles which Americans hold sacred for the survival of freedom of mankind.

Franklin Delano Roosevelt

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. McCORMACK. Mr. Speaker, the death of our late beloved President, Franklin D. Roosevelt, brought great sorrow throughout the world. Many fine tributes were paid to the immortal Franklin D. Roosevelt after his death.

I have just had called to my attention one of the finest tributes and editorials written at the time of President Roosevelt's death by Miss Mary O'Brien, now Sister Mary Colombiere, a professed novice of the Dominican Order at Sinsinawa, Mich., and now a sister-teacher at St. Patrick's School, Rockford, Ill.

The editorial appeared in the April 23, 1945, issue of The Journal, the official newspaper of St. Joseph's Academy High School of Saint Paul, Minn. It follows:

REQUIESCAT IN PACE

(By Mary O'Brien)

The passing of our great leader, Franklin Delano Roosevelt, is so tragic that as yet we cannot properly evaluate the effect of his death on this Nation and the world.

Coming into power in one of America's blackest hours, he addressed his countrymen with the words, "There is nothing to fear but fear itself." Whereupon, hearts frozen with anxiety for tomorrow took courage.

As the Nation emerged slowly from the shadow of depression, it was faced with another disaster—the most appalling war in the history of man.

When America was attacked, President Roosevelt united his people by the forcefulness of his personality. He welded the ideals of peace-loving nations into a solid bulwark of Christian principles.

Carrying this tremendous burden for 12 years was more than the human body could stand. With the goal of victory in sight, but with the mighty task of planning the peace only begun, he quietly "slept away."

President Roosevelt is dead, but his soul, his indomitable spirit still lives. His great love and human kindness, his understanding of the little people, his trust in God are as imperishable as time itself.

Generations yet unborn will revere his courage and the ideals for which he stood.

Civil Functions of Army Engineers

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. BROOKS. Mr. Speaker, I am one of the Members of Congress who served in the old Military Affairs Committee of the House of Representatives and I am now the ranking Democrat of the Armed Services Committee of the House. Both of these committees have had jurisdiction of the Army and consequently of the Corps of Army Engineers. These committees have had full opportunity to study the manner in which the Army has been run and the work of the Army engineers.

I think it will be a serious blow to national defense to consolidate the civil functions of Army engineers with those of any other department of Government. The civil defense work provides experience and training for our young engineer officers. It gives these officials in time of peace an opportunity to train themselves in the work of handling a large organization, the work of using great machines such as bulldozers, drag lines, cranes, and other heavy dirt-moving equipment, which machines are needed in both peace and war. It is true that the Army engineers have the normal military construction work of the Army Department in times of peace. At the same time, if we take from the Corps of Army Engineers its civil functions authority, we will strip this great organization in the Army Department of its best opportunity for training and experience in time of peace for emergencies which lie ahead.

I know from official experience on the battle front how urgently important it is to have a skilled, well-trained Corps of Army Engineers. It means a saving of countless lives, much precious time, and huge amounts of wealth and I, for one, do not want to see this country make a serious defense mistake, especially at a time when our foreign affairs are so uncertain and so chaotic.

Even our people at home sense the situation and, Mr. Speaker, I am presenting here in the RECORD telegrams from numerous organizations and individuals, all protesting any reorganization plans by this Congress which include the Corps of Army Engineers. I join wholeheartedly in these active protests.

BATON ROUGE, LA., *January 25, 1949.*

Hon. OVERTON BROOKS,
Member of Congress,
House Office Building:

McClellan bill now being heard by House Executive Expenditures Committee provides the President with blanket authority to exercise any and all parts included in the Hoover Commission report. Respectfully suggest your favorable consideration of an amendment thereto exempting the United States Corps of Engineers from being divorced from flood-control matters and all other civil functions so long and so ably handled by the Army engineers.

J. LESTER WHITE,
Director, Department of Public Works.

TALLULAH, LA., *January 25, 1949.*

Congressman OVERTON BROOKS,
House Office Building:

Our people are very much perturbed over the reorganization bill of 1949 now before the House Committee on Expenditures in the Executive Departments which would eliminate the Corps of Engineers from civil functions. We respectfully request you use your best efforts in amending the bill leaving the Army engineers in status quo.

A. T. SHIELDS,
President, Board of Commissioners, Fifth Louisiana Levee District.

NEW ORLEANS, LA., *January 25, 1949.*

Hon. OVERTON BROOKS,
Member of Congress,
Washington, D. C.:

As a parish which borders Mississippi River St. Bernard vitally interested in Mississippi River flood control and opposes reorganization bill of 1949 now before the House Committee on Expenditures in the Executive Department which would eliminate the Corps of Engineers from civil functions because to take authority from United States engineers over Mississippi River flood control might mean disaster to the entire Mississippi River Valley area.

THOMAS W. SERPAS,
President, St. Bernard Parish Police Jury.

NEW ORLEANS, LA., *January 25, 1949.*

Hon. OVERTON BROOKS,
Member of Congress,
Washington, D. C.:

The Plaquemines Parish police jury, in behalf of citizens and propertyholders of Plaquemines Parish, are deeply interested in protection from Mississippi River floods. Army engineers have done excellent job in flood control work. Oppose reorganization bill of 1949 now before the House Committee on Expenditures in the Executive Departments which would eliminate the Corps of Engineers from civil functions.

EMILE MARTIN, Jr.,
President, Plaquemines Parish Police Jury.

NEW ORLEANS, LA., *January 25, 1949.*

Hon. OVERTON BROOKS,
Member of Congress,
Washington, D. C.:

United States Army engineers have always handled Mississippi River flood control expertly and efficiently. To take away flood control from them and to give it to some new bureau without previous experience would endanger the lives and property of the people of the entire Mississippi Valley area. Therefore, strenuously oppose reorganization bill of 1949 now before the House Committee on Expenditures in the Executive Departments which would eliminate the Corps of Engineers from civil functions.

MARINE GERICA,
President, Grand Prairie Levee Board.

NEW ORLEANS, LA., *January 25, 1949.*

Hon. OVERTON BROOKS,
Member of Congress,
Washington, D. C.:

Board of Commissioners of Buras Levee District realizing the cooperation and efficiency of the United States engineers in the many years in which they have had authority over Mississippi flood control strongly oppose the proposed reorganization bill of 1949 now before the House Committee on Expenditures in the Executive Departments which would eliminate the Corps of Engineers from civil functions which would take away control by Army engineers and give same to some inefficient and inexperienced bureau.

PHILIP WARREN,
President, Buras Levee Board.

NEW ORLEANS, LA., *January 25, 1949*

Hon. OVERTON BROOKS,
House Office Building,
Washington, D. C.:

The Lake Borgne Basin levee district, comprising the entire Parish of St. Bernard and part of Plaquemines Parish east of the river is very much concerned with Mississippi River flood-control problems and realizes the efficiency and expertness with which the Army engineers have always handled flood-control problems in the past. Therefore to enact into law reorganization bill of 1949 now before the House Committee on Expenditures in the Executive Departments which would eliminate the Corps of Engineers from civil functions might mean disaster to the people of this area as well as all of the people of the Mississippi Valley.

ADAM NUNEZ,
President,
ROLAND BERGERON,
Secretary.
Lake Borgne Basin Levee District.

RAYVILLE, LA., *January 26, 1949.*

Hon. OVERTON BROOKS,
House Office Building,
Washington, D. C.:

Urge that bill be amended to exempt United States Corps of Engineers from being divorced from flood-control matters and all other civil functions so long and so ably handled by the Army engineers.

T. E. HICKS,
President, Board of Commissioners of the Tensas Basin Levee District.

SHREVEPORT, LA., *January 27, 1949.*

The Honorable OVERTON BROOKS,
Member of Congress,
House Office Building,
Washington, D. C.:

We insist that the civil-functions activities of the Corps of Engineers in the Government's national program of flood control and rivers and harbors work be exempted from any and all contemplated reorganization plans such as Senate bill 526 and H. R. 1569. It is our firm opinion that any change in the Nation's policy in this respect would be disastrous and foolhardy for the Nation's security. The Corps of Engineers having served the country over 100 years in this vital work are held by the people as a brilliant example of efficiency, ability, and integrity.

HOMER H. HARRIS, Sr.,
President, Red River Valley Association.

SHREVEPORT, LA., *January 26, 1949.*
Hon. OVERTON BROOKS,
House Office Building,
Washington, D. C.:

We urgently request that McClelland bill be amended to prevent United States Corps of Engineers being divorced from flood-control matters which they have handled so efficiently in the past, and have the training and experience to carry on flood control with a greater degree of success than any other agency.

W. E. GLASSELL,
President, Board of Commissioners, Caddo Levee District.

DONALDSONVILLE, LA., *January 26, 1949.*
Hon. OVERTON BROOKS,
House of Representatives,
Washington, D. C.:

You are urgently requested to give your aid in amending the McClelland bill now before committee to exempt United States Corps of Engineers from being divorced from flood-control matters and all other civil functions so long and so ably handled by the Army engineers.

LAFOURCHE BASIN LEVEE DISTRICT,
E. C. HANSON, *Secretary.*

ALEXANDRIA, LA., *January 26, 1949.*
Hon. OVERTON BROOKS,
House Office Building,
Washington, D. C.:

We respectfully urge that McClelland bill now being heard by House committee be amended to exempt United States Corps of Engineers from being divorced from flood control and other civil functions. The importance of the United States engineers particularly with respect to flood-control matters here in Louisiana cannot be overemphasized. In every crisis of this nature our first thought is to turn to United States engineers. The whole-hearted cooperation of the Corps of Engineers with the various levee boards of our State has been very gratifying indeed and has redounded to the incalculable benefit of all of the people of our State.

Respectfully,
E. LEROY CHANDLER,
President, Board of Commissioners of the Red River Atchafalaya and Bayou Boeuf Levee District.

Housing

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mrs. BOLTON of Ohio. Mr. Speaker, in joining with a group of House Republicans in introducing this housing bill, I do so with the conviction that only Federal assistance can bring about the erection of homes for our low-income groups. No private builder could possibly afford to build homes that must house those whose living costs have to be reduced to such low minimums, the present cost of both material and labor preventing. The congestion, unsanitary and shocking in its effect upon both adults and children, cannot be permitted to continue. This is no reflection upon our builders but it is a challenge to every American.

In drafting this bill we have tried to present a balanced program for all elements in the community. The administration's program deals almost entirely with public housing and slum clearance. This bill sets up a limited public housing program which should not touch the field in which the private housing industry functions. In addition it contains certain extension of FHA which should very materially increase the possibilities for this industry. It also provides loans to cooperatives and limited dividend corporations which will give those in the lower middle-income group opportunity to build.

It is not an attack upon free enterprise, rather is it a method to meet the needs of our least fortunate in an American way.

1948 Business High Lights

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. McDONOUGH. Mr. Speaker, the phenomenal achievement of American business and industry under our system of free enterprise continues to be the central beacon of light in a world still ridden in too many parts by false ideologies which preach the destruction of individual freedom and the rights of property in favor of the modern Frankenstein which rose in the wake of the chaos and confusion of the First World War under the banner of Communism.

In our Nation industry and labor have united in 1948 to smash many production records of 1947. This was accomplished in the face of continued shortages of materials in many fields and without compulsory Government rationing controls. It was accomplished under free enterprise. No nation where the people have become the slaves of government under communism can equal the production records of the United States where the government is created by the people as a servant of the people.

The following figures released by the United Press present an informative survey of American achievement in production for the year 1948:

Aircraft: 1948 total production 9,970 planes, against 17,707 in 1947, of which 2,300 were military planes in 1948 and 7,670 civilian. In 1947 military plane output was 2,102 and civilian, 15,605.

Anthracite: 53,250,000 tons produced in 1948, against 54,176,000 in 1947.

Automobile: 1948 production of cars and trucks a record of 5,250,000 in U. S., plus 263,000 units in Canada, for an over-all total of 5,513,000 cars and trucks against 5,045,835 in 1947.

Bank clearings: 1948 estimated total $711,500,000,000 against $667,603,000,000 in 1947.

Bituminous coal: 1948 estimated output 585,000,000 tons, against 563,000,000 in 1947.

Cigarettes: Estimated 1948 volume 353,795,505,746 units, up approximately 12,000,000,000 from 1947.

Commodity prices: United Press-Dun & Bradstreet Index (1930-32 equals 100) hit record high at 308.82 on January 16 and dropped to a low of 269.45 on November 1, compared with 1947 close of 304.62. The 1948 close was slightly above the low for the year.

Commercial, industrial, agriculture, and consumer loans: Reached a record high on November 15 of $15,583,000,000.

Construction: 1948 total of $18,750,000,000, up 5 percent from the 1947 level of $17,800,000,000.

Currency circulation: Dropped to around $28,000,000,000 from $29,111,000,000 in 1947. The all-time high was $29,163,000,000 in 1946.

Dividend payments: Record $6,000,000,000 against $5,338,000,000 in 1947. In 1929 the total was $5,823,000,000.

Electricity: Production f 1948 estimated at a record high of 336,000,000,000 kilowatt-hours against 307,000,000,000 in 1947.

Employment: Reached a record high of 61,615,000 in July 1948, before declining to 59,400,000 at end of year.

Failures: 5,161 in 1948 against 3,476 in 1947.

Food index: Dun & Bradstreet wholesale index of 31 foods touched record high on July 13, 1948, at $7.36 but declined sharply as year waned, falling below $6.50. The 1947 close was $7.24.

Foreign trade: 1948 exports $17,400,000,000 and imports $10,000,000,000 against $19,600,000,000 and $8,300,000,000, respectively, in 1947.

Gasoline: Production in 1948 estimated at 890,165,000 barrels, against 814,841,000 in 1947.

Gold: Stocks at year-end exceed $24,000,000,000, record high, compared with $22,764,000,000 at the end of 1947.

Insurance: Ordinary life insurance in force at end of 1948 was a record $130,400,000,000, against $123,021,705,000 in 1947.

Inventories: $46,443,000,000 at end of 1948, against $53,491,000,000 at close of 1947.

Labor: Estimated 2,000,000 workers involved in 3,200 strikes that lost 34,000,000 man-days. Record was 116,000,000 man-days lost by 4,600,000 workers involved in 4,895 strikes in 1946.

Lumber: Production 38,000,000,000 board feet in 1948, up 5 percent over 1947.

Petroleum: Production in 1948 rose to 2,017,274,000 barrels from 1,856,107,000 in 1947.

Railroads: Net profit in 1948 was $694,800,000; carloadings, an estimated 43,000,000, against 44,503,000 in 1947.

Retail trade: A record in 1948 at $130,000,000,000, against $118,500,000,000 in 1947.

Shoes: Production for 1948 approximately 468,000,000 pairs, against about the same output in 1947.

Steel: Production in 1948 a peacetime record 88,300,000 tons, against 84,894,071 in 1947. Wartime peak in 1944 was 89,641,600 tons.

Wholesale trade: An estimated $98,000,000,000, against $87,646,000,000 in 1947.

GI Housing Plan

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Advertiser, Huntington, W. Va., of January 22, 1949, one of the leading newspapers of my State. I have discussed this

bill—H. R. 841—with national representatives of the largest veterans' organizations of this country, and they enthusiastically approve it. I feel sure that this House is vitally interested in improving housing conditions generally and in particular for veterans. Having worked for a number of years with these younger veterans and having been called upon to give them advice in regard to their problems, I have personal knowledge of the need for improvement in their housing. I have discussed with them domestic difficulties arising out of their forced sharing of quarters with other families. I hope that this bill will bring about better domestic tranquility.

The editorial follows:

GI HOUSING PLAN

H. R. 841, a bill introduced the first day of the Eighty-first Congress, by Representative E. H. HEDRICK, of West Virginia's Sixth District, incorporates what has come to be known as the West Virginia plan to expedite housing for war veterans.

This plan received the endorsement of the American Legion in its national convention in New York in August 1947 and the West Virginia Bankers Association meeting in Wheeling, October 26, 1947.

Briefly, it puts loans guaranteed by the Federal Government for housing for GI's on a par with loans the Government guarantees under the FHA plan. It provides the same maturity period and the same rate of interest now provided for FHA loans. The West Virginia plan also provides a guarantee of 100 percent of the loan as is the case with an FHA loan.

The GI loan at present is handicapped by the smaller percentage of the loan the Government guarantees, compared to an FHA loan, also a lower rate of interest allowable. Obviously, FHA loan carries a greater appeal to lenders. It sells easily and quickly, whereas many GI loans go begging.

Already in operation in a number of States the West Virginia plan has worked satisfactorily. In justice to our veterans, for whom we have done a shabby job of housing, Mr. HEDRICK's bill should be enacted and the loan paper of the GI's put on an equality with FHA commitments of the Government.

Communist Tyranny

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks, I am inserting the following radio address by Reuben H. Markham, member of the editorial staff of the Christian Science Monitor, recently broadcast over radio station WSPR, Springfield, Mass., as one of a series of such speeches sponsored by the western Massachusetts branch of the Polish American Congress, Inc.:

As I speak to you now, memories of the Christmas season press upon me. And I am sure they press upon you, too.

Undoubtedly you have had pleasant experiences—you have been happy to be with your families, to share greetings with old friends, to hear the beautiful Christmas message.

And I am sure that many of you also have been very sad. You were made sad by thoughts of eastern Europe, of Poland, and of other countries there. You felt sad as you looked beyond the soft glitter of Christmas trees and the benign glow of church lights to the black cloud of tyranny that has settled upon a large part of the earth.

And I know, ladies and gentlemen, that the expressions black cloud and tyranny are not mere words to you. I am certain you have friends and relatives across the sea who are personally suffering from this tyranny. During recent months you have undoubtedly received letters from them or heard personal reports regarding them, or at least read articles describing the regimes under which they live.

You know personally that this was the saddest Christmas which many of them ever experienced. Indeed, it was one of the saddest Christmases in modern European history.

I know that personally. I have many friends over there especially in southeast Europe. Though born in the State of Kansas, I have spent most of my adult life in Europe. Consequently many people there are almost as close to me as my own family. I often receive letters or reports bringing me intimate news about them. I got many such reports during the Christmas season. And here is one of the things I learned:

A very dear friend of mine with his wife and two children were arrested by the Communist police during December and sent into exile. I know about this tragedy as intimately as though it had happened to the family with four little girls that lives next door to me in Boston.

Police came to the home of my Balkan friends on a recent cold morning and ordered them to leave town forever. They were given time to pack a few clothes and gather a number of meager belongings, after which they were taken away under police escort to a distant wretched village.

They have no jobs, no money, no source of income, no place to live, almost no hope. They are as Hagar who was sent into the wilderness to perish. They have been marked for destruction. A so-called people's government is liquidating them. Such is the system.

I could tell you of another friend of mine in another city whom I have known since his childhood. He is now the father of three small children. Though within 10 miles of a mine they have no coal in the house and no prospects of getting any. They haven't had butter or cheese or meat or lard for many, many months. They live largely on corn bread, though in an agricultural land.

Their property has been stolen by the Communists. Their clothes are in patches and no more are available. Their shoes are worn out. There is not an overcoat left in the family. The regime is slowly extirpating them.

These condemned friends of mine have taken no part in politics, they are free from every crime or misdemeanor. Their only fault is that they are not Communists. They believe in democracy. They have a high regard for the American way of life, therefore they are being murdered—father, mother, and little children.

They typify eastern Europe. They are victims of a system of Bolshevik tyranny that is oppressing 100,000,000 men and women who 10 years ago were free.

A gigantic conspiracy is directed against them all. A small network of plotters centering about the Kremlin is deliberately wiping out my friends along with hundreds of thousands of others. These conspirators are robbing scores of millions more and planning to bring them all into a state of bondage.

Ladies and gentlemen, I am solemnly telling you of things about which I know personally. I can vouch for what I say with just as much assurance as you could tell me of the postman bringing Christmas mail to your doors.

The year 1949 will be the saddest that Europe has seen for centuries. All churches in the Communist-ruled lands there are being terrorized, reduced to base subservience, or closed. Protestant, Roman Catholic, Greek Catholic, Eastern Orthodox clergymen who were personal friends of mine passed this Christmas season in prison. As you rejoiced about your well-lighted trees, they sat in cold, dark cells. In Romania, a whole Christian denomination, as large, for example, as the Congregational Church in the United States, was wiped out; its property was confiscated. And all by a simple Communist decree.

As you know, the head of the largest church in Hungary, Joseph Cardinal Mindszenty has been arrested by Communist dictators and this moment is in jail. Also in jail near him is the head of the Lutheran Church in Hungary. All Sunday schools and religious youth organizations have been liquidated in a number of countries. Practically every religious publication in central and southeast Europe that has not been stopped is under strict Communist control. All clergymen in those countries which do not actively serve the regime are in danger of arrest. Church-supported schools in most of those lands have been liquidated.

I must also add, ladies and gentlemen, that minorities in most of those countries are being more bitterly repressed than for many decades. Security laws have been decreed which threaten dire punishment to anyone who would so much as report how many sandals were being made at a shoe factory or how many potatoes are shipped on the railroad.

In addition to all this, Communist governments there have announced that during 1949 they are going to destroy the independent peasants, take away land from scores of millions of others, and force them all into cooperative farms resembling medieval feudalism.

Every kind of thought expression through schools or papers or books or meetings is being more rigidly controlled than at any time for centuries.

Such are some of the aspects of the new year which is beginning in eastern Europe.

However, ladies and gentlemen, there are also reasons for hopefulness. I can sincerely assure you that there is good news. It is that men and women throughout the whole world are awakening, especially in America, the last great fortress of freedom and the last great source of light.

Our mighty Nation is being aroused. It has begun to see what Communist tyranny means. American Christians in every State and in every church are renewing their faith and devotion.

Workers are throwing out Communist leaders. Teachers are receiving a new vision of what freedom means. American youth in many places are rejecting totalitarian aberrations.

The American press throughout the whole country is displaying a higher devotion to the ideals that keep men free. American women's organizations, service clubs, the whole vast network of societies that covers our country are laying aside complacency; they are boldly studying ways to do their duty in the present mighty struggle.

America, the mightiest nation in the world, is visibly reconsecrating itself to government of the people, by the people, for the people. I assure you, American friends, that we are receiving a new baptism of freedom.

As we enter the most momentous year in our history I take the liberty of urging you all to renew your faith, to increase your de-

votion, to make every sacrifice for the preservation of the heritage which we have received. I feel certain if we all do this, we shall not only preserve our own light but shall rekindle lights that have gone out in parts of the world, very dear to us all.

State Control of the National Guard

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. DAVIS of Georgia. Mr. Speaker, on January 17, 1949, Alderman L. O. Moseley, of the City Council of the City of Atlanta, introduced a resolution declaring the opposition of the mayor and the General Council of the City of Atlanta to federalization of the National Guard of this country which would remove the same from the control of the States. This resolution was adopted by the general council and approved by the mayor of the city of Atlanta on January 19, 1949. It presents facts and statements which I am sure will be of much interest to the Members of Congress, and under leave previously granted, I am inserting this resolution herewith for the information of Members:

Whereas the National Guard is a constitutional organization authorized and provided by the Constitution of the United States to protect and serve the States of the Nation during times of peace under direction of their respective commanders in chief, being the governors of the various States and Territories of the United States; and

Whereas the National Guard of the State of Georgia has long been an outstanding well organized and trained component of the armed forces of the United States and has rendered the State of Georgia and many cities thereof much-needed and valuable service in time of trouble and disaster; and

Whereas the various local units of the National Guard are manned and commanded by capable and competent local personnel of the many communities in which National Guard units are authorized and activated throughout the State of Georgia providing much desired training and equipment in the interest of national defense and security of the State of Georgia; and

Whereas the National Guard of Georgia has a long and interesting record of service and accomplishments for which the citizens and members thereof are proud. The States and the guard have given the Nation a great force in being. The country may be assured that the guard of today, if properly equipped and supported, will give in peace and war the same great service which the guard of World War I and World War II rendered; and

Whereas it has come to the attention of the mayor and General Council of the City of Atlanta that an effort is being made to federalize the National Guard thereby taking away States' rights and privilege to maintain the same as in the past; and

Whereas we do hereby oppose the federalization of the National Guard which would remove the same from control of the States: Therefore, the premises being considered, be it

Resolved by the mayor and General Council of the City of Atlanta, That the Senators and Congressmen in the United States Senate and Congress representing this district be furnished a copy hereof by the clerk of council and that they be used to oppose any legislation in the United States Congress that would federalize the National Guard of the United States, more particularly, the National Guard of the State of Georgia.

Approved by the mayor, January 19, 1949.

CHAS. M. FORD, Jr.,
Clerk of Council.

The Year 1949

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier of January 3, 1949.

THE YEAR 1949

The year 1949 is now under way. It is bound to be an important, perhaps a decisive, year in determining the future of the American people.

We are in the one hundred and seventy-third year since American independence was declared, the one hundred and sixtieth year since the American Republic was created by the Constitution, the eighty-fourth year since the Civil War made us one Nation rather than a cluster of States, and the twentieth year since the world-wide depression shook the American people's faith in their basic institutions.

A great deal of American history focuses on the next hundred-day period.

THE ISSUES

Our National Government is coming to grips with incredibly important issues. What we do about them, especially in the early stages of the present session of Congress, will have inconceivably great bearing on the lives, prosperity, opportunities, happiness, and liberty of many generations to come.

Three major issues are at the critical stage. Whereas in the past we have had freedom of choice, we have had a chance to correct mistakes after they have been made, henceforward we stand to be bound by our course, with no second-guessing possible. Any turning-back time is about over.

These three great issues revolve around the following:

A. Inflation.
B. The future of the cold war.
C. Free government.

If we are to conquer inflation before it conquers us, certainly now is the time to do so. The build-up is for one more round of pump-priming before we become realistic about inflation.

Just as definitely as one can commit himself to a policy without calling it by name, President Truman has committed himself to continued inflation as the basis of his forthcoming administration.

He has promised bigger Government spending, higher taxes, larger subsidies, increased wages, and controls which will merely accelerate the speed of the inflationary cycle.

He emphatically has not promised to stabilize our watered currency, to protect Government credit, to discourage the top-heavy growth of private credit, to end the fantastic waste of Government spending, or to do anything else which would strike at the roots of inflation.

One more dose of pump priming and we will be fully committed to the boom-and-bust credit and currency inflationary cycle which has wrecked so many nations in the past.

COMMUNISM

Inflation has greatly accelerated by the cold-war maneuvers which the Truman government has been conducting in foreign fields. The cost of these has been growing by leaps and bounds; they have risen to somewhere between a third and a half of Uncle Sam's spending.

What have we to show for them? Peace is further off than ever. We have established no meeting point with Russian ideology. Our European allies frankly admit they are going along with us solely for what they get out of it. Virtually all of our spending on the European Continent is to build up socialistic governments which are followers of concepts essentially hostile to our own—concepts identical with those which created the dictatorships of Hitler, Mussolini, and Stalin.

In the Pacific area Russia appears about ready to pick up and walk off with the biggest single piece of booty in the world—the vast nation of China, with its millions of population, its incalculable natural resources, and its dominant position at the crossroads of two oceans.

The Truman administration, which lost the peace, is now steadily losing the cold war, yet it proposes to continue this war as a sort of rear-guard action and thereby risk losing also the home-front war against inflation.

The Truman administration has been losing another war, this in the field of ideology; it has been losing the war against communistic infiltration, spying, propaganda, and sabotage within our National Government. The Red fifth columnists at Washington are in their strongest position yet as a result of the Truman reelection.

FREE GOVERNMENT

This Nation was created as a representative republic. That is the one form of government which has consistently kept its citizenry free—so long as they have vigilantly guarded their liberties.

The essence of our Government is the existence of three independent branches, each with its own powers and its own duties. These three branches are executive, legislative, and judicial.

The manner in which republics in the past have broken down, and drifted into dictatorship, has been generally the same; a strong executive branch would seize the powers of the other two branches. This already has happened in this Nation with regard to the judicial branch. The Federal judiciary and the United States Department of Justice now has been packed with political partisans who openly decline to stand up for the constitutional rights of the American citizens, as opposed to the wishes of the executive branch.

Constitutional guaranties becomes a joke when those who should enforce them either voluntarily or involuntarily become unable to do so, and thus give the Government dictatorial power over the citizen.

Mr. Truman is the first President in American history to be elected on the proposition that Congress should be stripped of its law-making and tax-assessing powers; and that it should be what Hitler made of the Reichstag (before he abolished it entirely) a body with no functions other than to approve whatever the chief executive recommends.

Congress was created by the Constitution as the people's own branch of the Government—superior even to the President, in a show-down; since Congress has power to impeach and remove a President, whereas a President cannot under ordinary circumstances even adjourn Congress, let alone abolish it or remove it from office.

If Congress is defeated in its fight to uphold its constitutional powers, or if it voluntarily surrenders, then this Nation will no longer be a representative republic—regardless of whatever the Constitution may say on the subject.

More to the point, the American people will thereupon have lost the one agency through which they can ever hope to keep control of their National Government—their representatives in Congress. Popular sovereignty will be dead, and with it, of course, free government.

WHERE DO YOU STAND?

It is appalling that the American people seem to be unaware or indifferent to the dangers in the present situation.

Their government is flirting with bankruptcy. It is gambling with atomic warfare that could wreck civilization. It is steadily whittling down both the liberties and the future of the American citizens. Yet everywhere "business as usual" is the watchword, "take it easy" is the slogan.

The two greatest political prizes of all times are the national credit of the United States and the industrial plants built by private ownership in this Nation. There is no constitutional limit on the amount which can be borrowed against public credit by whatever band of political plunderers gets in power in Washington. Already political adventurers have borrowed on public credit far more than the total of all American assets—and spent the bulk of it to stay in power.

The next target here is the one now under fire in England—the looting of private industry to satisfy political greed.

The present generation inherited what its predecessors had built up—a system of free government, a national economy that was both strongest and largest in all the world, and the biggest, most generous industrial structure ever put together.

All these three American institutions are being raided and destroyed before the American people's eyes. Their inheritance is being squandered. Within their lifetimes, what is happening to them was done to the Germans by Hitler, to the Italians by Mussolini, to the Russians by Stalin, and is being done at this moment to the Britons by their Labor-Socialist government.

Yet with all these examples under their noses, thus far there has come no mass protest from the American people against being herded down the dark alley of socialism.

Principle or Expediency

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, whether we here in America shall retain a form of government which has given the individual the greatest degree of liberty, of prosperity and happiness known to any people at any time or anywhere, made the Nation the richest, most powerful of any known to history, depends upon whether the individual citizen and those who are in a position to speak the truth have the courage to make known the facts, preach adherence to our constitutional form of government. While we are spending billions of dollars and dissipating our natural resources to fight communism abroad, we have been coddling it here at home. While we fight communism abroad, we furnish the money to maintain a socialistic government in England—and that is the next thing to communism—and swallow, without inspection, socialistic ideas which ignore the principles, disregard the processes, which have given our citizens prosperity and happiness, guaranteed our national security.

We have been so blessed that we have come to assume that no matter what we do, how foolish, how extravagant, how indolent we become, we cannot lose our precious heritage but "pride goeth before destruction, and an haughty spirit before a fall." "Pride and weakness are Siamese twins." It is always earier to follow the broad and easy way than to follow the hard and rocky road but human experience has demonstrated the truth of St. Matthew's statement that "wide is the gate and broad is the way that leadeth to destruction, and many there be which go in thereat; because strait is the gate, and narrow is the way, which leadeth unto life, and few there be that find it."

Today the easy way to popular approval is to ignore truth, principle, natural laws—to disregard the warning to "beware of false prophets, which come to you in sheep's clothing, but inwardly they are ravening wolves."

Work, thrift, frugality are old-fashioned we are told and the Government, State or Federal, can give to us without cost, the things our forefathers were accustomed to earn for themselves.

This country today needs more individuals, more editors in the little weekly and daily papers, scattered throughout the country, who have the mental integrity to recognize and the courage to condemn false doctrines which in the end can but destroy the liberty of the citizen, the security of the Nation.

There are many such editors in the Fourth Congressional District of Michigan and from the Editors' Notebook of the January 13, 1949, issue of the Allegan Gazette, let me quote an editorial written by Leo W. Hoffman whose integrity of thought and courage, I take pleasure in commending:

THE GAZETTE STANDS UP TO BE COUNTED

In his message to Congress last Wednesday Truman fufilled the direst predictions of last Monday's Gazette.

He demands $4,000,000,000 more in taxes to launch his plan to eventually put every man, woman, and child on the dole. He states that the increased levies should be aimed at business and the middle class, and in the same breath pleads with business to expand and increase its capital investment. He asks Congress for "stand-by control," in brief, he wants the power of a dictator over our economic life.

He calls his program a redeal and confidently expects that Congress will again become a rubber stamp.

Already people are beginning to compare him with his predecessor, but there is a difference. Never during Roosevelt's tenure in office did he ever propose such legislation to Congress without first excusing himself on the ground that it was necessary because of an emergency. After 18 years of teaching the people of this country to become dependent upon Government subsidies, and doles, Truman no longer feels that it is necessary to save his face by any such pretext. The dole system operates as a drug. At first the recipient is a little ashamed and must have an excuse, but after a time he accepts it as a matter of course, and in fact cannot live without it. Now that many of us have become dependent upon Government charity, some because they are shiftless, others because of misfortune, and still others because, under the present tax system, they cannot save against adversity, it is much easier to convince the people that they have a right to Government charity.

You can call it by any fancy name you choose, but it's dole and socialism, and every time you get a dollar from the Government you give up to the Government some of your freedom and independence and, what is worse, you force others who wish to remain independent to become dependent because it is so much of his money you are taking from him.

If the ordinary average citizen could save his income tax against the future he would in the end be further ahead, both financially and spiritually. But the Government no longer will permit the free, independent citizen to handle his own money. They take an ever-increasing part away from him and throw it into a common pot. Out of that common pot the State first pays the vast horde of Government parasites who handle our money and then with what is left and what the State must borrow they pay the subsidies and doles.

If the Democrats, both in Congress and in this State, put into effect the program proposed by Truman and copied by Williams, we will have become a socialistic country.

So that all may know where we stand we add that this is a reactionary, conservative Republican paper. We will henceforth regard any renegade Republican called liberal by his fellow Democratic New Dealers as betraying his trust. We add that any attempt on the part of so-called Republicans to effect any kind of a bipartisan policy as repudiation of his oath of office and will treat him as a renegade.

The people that believe in this policy of tax, spend, and give, remind us of the village idiot who, for 20 years, polished the cannon in the village square.

Each Saturday he would meet with the council and collect his pay. Finally he handed in his resignation and when asked why, told the council that he had saved his money and was going into business for himself. When one inquisitive councilman asked him what he was going to do, he replied: "Gentlemen, I am going to buy my own cannon."

We are due for a vicious fight in this country and the time has come to stand up and be counted.

Are you for our constitutional form of government or are you for socialism?

The boy is practicing his profession, but for some—to me—unknown reason, is disposed to speak his mind; hence, the above.

German Giant Revived—Report on Ruhr Industrial Gains Gives United States Opportunity To Recast Policy

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I wish to include the following article by Thomas L. Stokes that appeared in the Washington Evening Star of January 20, 1949:

GERMAN GIANT REVIVED—REPORT ON RUHR INDUSTRIAL GAINS GIVES UNITED STATES OPPORTUNITY TO RECAST POLICY

(By Thomas L. Stokes)

The German industrial giant, meaning the Ruhr, is alive and kicking again. Production is back to three-quarters of what it was before the war when it was the arsenal of Nazi aggression. Some German industrial figures and interests identified with the Nazi war program are back in places of influence and intrigue.

New dispatches relating all this and more, based on first-hand surveys by American correspondents in Germany, come simultaneously with new pressure on President Truman to take a second look at the revived German giant.

The pattern of restored German dominance in Western Europe may be too well fixed already so that nothing can be done now but watch it closely and control it. Control of it now is in a figurative handful of American and British officials and entirely inadequate, according to the consensus of on-the-scene reports, both press and private. This control is to be transferred eventually to the new international Ruhr Authority recently authorized. It will have a formidable task.

FORESEEN BY DEVELOPMENTS

What has happened may have been foreseen from successive developments, beginning immediately after the war with the setting up of technical committees to plan for Germany. Those were infiltrated with representative of big American finance and industry whose connections with prewar German industry and finance were spelled out at the time. Their influence continued in the organization that was transposed to Germany. Some had little apparent sympathy with our Government's policy of breaking up the German cartels, one of our pledged war aims, and that has virtually been abandoned.

Big business influence has continued in development of ECA plans for Germany. A striking example was in the commission appointed by Paul G. Hoffman, ECA administrator, to investigate the reparations problem. Represented on that are interests that were formerly involved in the German economy.

The chairman is George Humphrey, president, Mark Hanna Co. of Cleveland, which has connections with the heavy steel and machine tool industry in the United States. The other members are Charles E. Wilson, president, General Motors, which owned the Auto Opel Works in Germany; John L. McCaffrey, president, International Harvester, which also has a large subsidiary in Germany; G. A. Price, vice president, Westinghouse Electric, which had tie-ups with German concerns, and Frederick V. Geier, director of Proctor & Gamble.

The Commission's report, submitted to the State Department, was awaiting action from Under Secretary Robert A. Lovett when he resigned recently. It recommends removal from the reparations list of still more steel plants and restoring them for production to Germany, which would still further expand Germany's steel capacity. The level already has been lifted from 10,000,000 to 14,000,000 tons. Now it is being proposed to lift the ceiling entirely.

OFFERS POLICY OPPORTUNITY

The Humphrey report offers President Truman an opportunity to denote a new direction on German policy. Though not a great many plants proportionately are involved, he is being urged to reject it. Both Britain and France are growing anxious about the scope of German rebuilding, which is of concern to them, both from the standpoint of defense and economically in their own struggles for recovery.

This would seem to be a good time, before it is too late, to review and, if necessary, recast our German policy so that a program to make Germany self-sufficient and helpful to the general European economy does not run wild into something dangerous. Advocates of a "strong Germany," who have been most effective, have been assisted by other developments that also have conveniently diverted public attention.

Foremost, of course, is Russia. Her tactics have given ammunition to those who would rebuild Germany as a bulwark against Russia, as was done after World War I, but with no guarantee that a revived Germany will be on the side of the western powers, her traditional enemies. A diverting factor is the argument that building up Germany "will take her off the American taxpayer's back" which sounds fine until you consider what the American taxpayer might get on his back in exchange, a restored Germany again ready for war. Also the squabbling among the war allies has been capitalized cleverly by Germany to play them off against each other to her gain.

Menace of Communism in China to Freedom and to Religion

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. JUDD. Mr. Speaker, those who set out years ago to destroy the Government of China and bring that great section of the world and of humanity under the Kremlin's control are encouraging continuation of the myth that Chinese Communists are interested primarily in land, peace, and food for the downtrodden, are merely democratic heroes struggling for freedom for all, not anti-religious, in fact not really Communists.

This fantastic myth, this opiate which has lulled so many Americans to sleep, is exposed as the dangerous falsehood it is in the following authoritative address by the Most Reverend Richard J. Cushing, D. D., archbishop of Boston, given on January 9, 1949, at the communion breakfast of the Holy Name Society of St. Brigid's Parish, South Boston:

I think it appropriate to select this time and place to direct your thoughts to the Far East and to beg your prayers for China. There is something very strange about the general moral paralysis and ominous silence in the fact of what is happening in China. The apparent moral paralysis is preventing any effective action in behalf of the free Chinese people and their legitimate Government. The ominous silence bids fair to prevent public discussion of one of the most cynical, sinister, and dangerous developments in the march of Red imperialism across the prostrate forms of liberty-loving nations. Both the moral paralysis and the disturbing silence about what is happening in China flow from a dangerous form of defeatism, a defeatism on the part of our leadership which will cost China dearly in the next few months and for which America herself will have to pay an appalling price both at home and abroad before the final chapter of Red fascism has been written.

I think I should take a little of your time this morning to talk to you about China. I am not speaking for any particular Chinese regime so long as it be truly Chinese. I am not pleading for any particular Chinese leader so long as he be genuinely acceptable to free Chinese. In one sense, in speaking up for China as against the Red Fascist Imperialists, I am not speaking for China alone; I am speaking for free people everywhere and I am speaking for America.

It must be perfectly clear by now that the destruction of freedom and the overriding of decency in any part of the world are simply the preludes to like crimes on a universal scale. Twenty years ago some of the people who are now keeping silent about China professed to understand that perfectly well in the case of Europe. Some of the people who are now keeping silent about Yugoslavia and Poland and Lithuania and Hungary 10 years ago were very clear that when the bell tolls because of the murder of freedom anywhere it is sounding the death knell of freedow everywhere. The world has become so compact, so close-knit, so much "one world" that an explosion of anarchy in one corner of the globe today sets off a chain reaction which speedily brings anarchy to every corner of the world tomorrow. Yesterday it was eastern Europe and everyone said Red fascism will end there. Today it is China and everyone says: "Sit tight. Don't get excited. Wait and see. Red fascism may overrun China but it can never beat China down." Tomorrow it may be here.

You and I still do not know to what extent it already is here. We still do not know to what extent Red fascism has entrenched itself in government bureaus, in channels of popular education and information, in front organizations of one kind and another throughout the United States. The very little we do know is more than enough to put sober men on the alert and to arouse their righteous indignation against all qualified loyalty and obscure conduct in posts of public trust. The little we do know about what has been going on right here at home makes us even more uneasy about what is happening abroad—and about the inaction and silence concerning China.

There are several reasons why I should speak to you about China here at this particular meeting. First of all, as I have said, you and I are citizens of a free nation and in a world where evil travels so quickly and corrupts so totally, when we hear that freedom is under fire anywhere we should lift up our voices the minute we hear it and begin the battle against it at the very spot on which we find ourselves. When Red fascism gains a point in Budapest we should build another rampart against it in Boston. When Red Fascists defame a man in Zagreb his name should be proclaimed and his virtues honored in every city and town of free nations wherever they may be. When Red Fascists are on the march along the shores of the China Sea, Massachusetts Bay and all our communities the menaced.

You and I should think about China this morning because we are Catholic Christians, met for purposes of worship, meditation, and the preservation of the Kingdom of God on earth. That kingdom is under attack in China and Catholic Christians will be among the first victims of a Red Fascist victory over free China. I don't know whether you realize how many Catholic Christians there are in China. Perhaps I can put it to you this way: There are more Catholics in China than there are in Ireland. Moreover, over and above the four and one-half million Catholic Chinese there are several million other Chinese Christians. In the total population of China, these may not seem like many, but they are a valiant people

and they occupy a place of no little prestige in Chinese life and affairs. The Chinese constitution, a remarkable document of authentic democracy was adopted a very few years ago on Christmas day in part, at least, as a tribute to the ideals of the Prince of Peace. I need not tell you what will happen to that constitution or to those ideals if and when the Red Fascists achieve their murderous designs on both. Faith and freedom in China will be martyred together when the commissars of Red fascism take over.

As Catholic Christians you have an obligation to know what your interests in China are. The church there is your church. The faith which it professes is the faith which you profess. Its sacraments are the sacraments which you received this morning. Its cardinal archbishop is a member of the Sacred College which elects your Pope. Many of you saw him when he came to Boston as a cardinal 2 years ago. Its other archbishops, bishops, and priests are in one sense as fully your fathers in Christ as are the priests and prelates of the church in America. Its schools and colleges are staffed by the same religious who teach your children, who preach missions in your parishes, who serve the church in your community. The great Catholic University of Peking, threatened with extinction if the Reds gain the day, was established by American Benedictines, just such men as teach at Saint Anselm's here at home; in later years it has been staffed by the Fathers of the Divine Word whose retreat house and seminary at Miramar, here in the Archdiocese of Boston, are so well known to you all. Hospitals, orphanages, schools, social centers of every kind, as well as places of worship, are staffed and served by nuns like those whom you know and love here in Boston. I shall mention only the Franciscan Missionaries of Mary, adorers at our Eucharistic Shrine of St. Clement's in the Back Bay, religious beloved by the Chinese people wherever the Sisters have had foundations in free China.

You have a right to know what is happening to your religion in China. You have a right to know what is being done in its behalf. As a matter of fact, you have a special right to ask me particularly to lift my voice against the rape of China by Red fascism and the abandonment of China by the free nations of the world. I happen to have sent some of your sons and daughters and many of your neighbors to China and like places to work for your church. During a quarter century I have taken from you and from others in the archdiocese of Boston, but particularly from people like yourselves, literally millions of dollars—millions of American dollars—given in Christian charity in behalf of Catholic works in China. If I kept silent about the destruction of those works, if I fell victim to the general shivering and fear in the face of the enemies of those works, if I failed to speak up for you in protest against the treatment of your missionaries and of the good people among whom they are working—you would have every right to ask me by what title I presume to recruit your sons and daughters and friends, by what title I ask the support of your money and prayers. By what title, you might ask me, if I do not think enough of them to cry out in their defense when everything for which they stand is being desecrated by the Red Fascists in China today.
